LIST OF ILLUSTRATIONS

1. Paracelsus (*aet.* 45). Engraving by Augustin Hirschvogel, 1538. (Pictorial collection of the Central Library, Zurich.)
2. A Tribute to Paracelsus—Apparently a Kind of Broadside. German woodcut on a single page, by an unknown artist, sixteenth century. The likeness is from an engraving by Augustin Hirschvogel. (Pictorial collection of the Central Library, Zurich.)
3. Paracelsus. Detail from title-page of Crollius, *Basilica chymica* (*op. cit.* for fig. 6).
4. Einsiedeln in 1577. Contemporary woodcut. The house with the weathervane on the roof, to the right of Devil's Bridge, is supposedly the birthplace of Paracelsus. (Pictorial collection of the Central Library, Zurich.)
- 4a. First page of *Der grossen Wundartzney . . .*, Augsburg: Heynrich Steyner, 1536. [This is apparently an earlier edition of Steyner's 1537 volume listed in the Bibliography. The 1536 volume is in the New York Academy of Medicine Library. According to a bibliographical notation pasted in the volume, it is a second edition, with author's corrections, the first having been printed by Varnier at Ulm in the same year.—EDITOR.]
5. Signature and impression of the signet ring of Paracelsus. Facsimile of the original in a letter to Amerbach in Basel. From Archbishop Raimund Netzhammer, *Theophrastus Paracelsus*, Einsiedeln, 1901.
6. A Group of Great Alchemists and Physicians: (*reading down, left*) Raimundus Lullus, Morienus Romanus, and Hermes Trismegistus; (*right*) Geber (Djabir), Robert Bacon, and Paracelsus. Title-page of *Basilica chymica*, by Oswald Crollius (d. 1605), physician and alchemist. Woodcut, 1626. (Pictorial collection of the Central Library, Zurich.)
7. Creation. Woodcut by an unknown master, *c.* 1510.

LIST OF ILLUSTRATIONS

8. The Creation of Adam. Woodcut from Schedel, *Weltchronik*, Nuremberg, 1493.
9. The Stages of Nature. Woodcut from Carolus Bovillus, *Liber de intellectu*, Paris, 1510.
10. The Hermaphrodite. Woodcut by an unknown master, from Leonhard Thurneysser, Ritter zum Thurn, *Quinta essentia*, Leipzig, 1574. Thurneysser (b. 1530, in Basel; d. 1595), a physician and alchemist, was a pupil of Paracelsus.
11. The Man of the Zodiac. Woodcut from *Eine neue Baden-fart*, Strassburg, 1530.
12. Creator and Creation. Woodcut from Carolus Bovillus, *Physicorum elementorum libri*, Paris, 1512.
13. Adam and Eve (*Coniunctio*). Woodcut from the *Rosarium philosophorum, secunda pars alchimiae de lapide philosophico vero modo praeparando*, Frankfort, 1550.
14. The Creation of Eve. Woodcut from Schedel (op. cit. for fig. 8).
15. Venus. Woodcut from *Practica Teutsch aufs 1537. Jahr durch den hochgelehrten Doctorem Paracelsus beschrieben und gemacht*. Reproduced from Sudhoff-Matthiessen, Vol. 11 (see Bibliography).
16. The Seed. Woodcut from *Pandora*, "i.e., the noblest gift of God, or the precious and salutary philosophers' stone, with which the ancient philosophers as well as Theophrastus Paracelsus improved the perfect metals by the power of fire, and drove out all kinds of harmful and unsalutary diseases, internal and external. A golden treasury . . . particularly for the lovers of Paracelsian medicine . . . printed by Hieronymus Reysner," Basel, Henricpetri, 1588.
17. The Caesarean Section. Woodcut from Suetonius, *De vita duodecim Caesarum*, Venice, 1506. Probably one of the earliest illustrations of this type of surgical intervention.
18. The Holy Virgin with the Child, as Patron Saint of Sailors. Title-page woodcut from Aristotle, *Problemata*, Paris, 1514.
19. The Ten Commandments: "Thou Shalt Not Commit Adultery." From *Seelentrost-Büchlein*, Augsburg, 1478.
20. The Ten Commandments: "Thou Shalt Not Covet Thy

LIST OF ILLUSTRATIONS

- Neighbour's Wife." Woodcut by Hans Baldung Grien, Strassburg, 1516.
21. Heaven and Earth. Woodcut vignette from *Hori Apollinis selecta hieroglyphica*, Rome, 1597.
 22. Man and Heaven. Pen drawing from a fifteenth-century astrological treatise. (National Library, Vienna.)
 23. Man and Zodiac. Woodcut from Henricus Cornelius Agrippa ab Nettesheym, *De occulta philosophia libri tres*, Cologne, 1533.
 24. Man and Zodiac. Woodcut from *ibid.*
 25. Man in Equilibrium. Pen drawing, study in proportions, by Leonardo da Vinci, 1510.
 26. Astrolabe. Woodcut from Regiomontanus, calendar book, Frankfort, 1531.
 27. Barber Shop: (*left*) a blood-letting; (*right*) the assistant dispenses a remedy against a skin disease and explains how to apply it. Woodcut, early sixteenth century.
 28. Autopsy. Woodcut from Bartholomeus Anglicus, *Le Propriétaire des choses*, Paris, 1510.
 29. Medical Implements. Woodcut from Hieronymus Brunschwig, *Chirurgia*, 1497.
 30. Barber-Surgeon at Work. Woodcut, sixteenth century.
 31. The Forerunner of the Dentist: he extracted teeth with his fingers. Woodcut, sixteenth century.
 32. The Doctor. Woodcut by Jost Amann, from Hans Sachs, *Beschreybung aller Stände*, Frankfort, 1568.
 33. Cardinal Points and Seasons. Woodcut border by Hans Weiditz, from Elimithar, *Schachtafeln der Gesundheit*, Strassburg, 1534.
 34. An Itinerant Quack. Woodcut, middle sixteenth century. (Collection of Engravings, Berlin.)
 35. Sickness and Celestial Constellation. Woodcut by Hans Holbein the Younger, from Sebastian Münster, *Kalendertafel*, c. 1534.
 36. Blood-Letter. From a wall calendar, Johann Wonecker, physician in Basel, 1499.

LIST OF ILLUSTRATIONS

37. The Sacred Mission of the Doctor. Woodcut, title-page illustration from H. von Gersdorff, *Feldtbuch der Wundtarzney*, 1530.
38. Cranial Operation. Woodcut from an *Artzneybuch*, 1546.
39. The Physician. Woodcut by Hans Holbein the Younger, from the "Dance of Death" series, 1538.
40. Operating on a Cataract. Woodcut from G. Bartisch, *Ophthalmoduleia*, Dresden, 1583.
41. The Physician at the Sick-Bed. Woodcut, title-page illustration from Brunschwig (op. cit. for fig. 29).
42. Blood-Letting. Woodcut vignette from Qualtherus Ryff, *Spiegel und Regiment der Gesundheit*, 1544.
43. Hospital Room. Woodcut, title-page illustration from Theophrastus Paracelsus, *Opus chirurgicum*, Frankfort, 1565.
44. Organs and Parts of the Body. Woodcut border by Hans Weiditz, from Elimithar, *Tacuini sex rerum non naturaliam*, Strassburg, 1533.
45. Blood-Letter. Woodcut from Galen, *De curandi ratione*, Venice, c. 1515. The signs of the zodiac show the time that should be chosen for blood-letting in the various parts of the body.
46. Disease as a Scourge of God. Woodcut from Gersdorff (op. cit. for fig. 37).
47. Liver, Heart, and Diaphragm. Woodcut vignette from Hans Guldenmundt, *Auslegung und Beschreybung der Anatomi*, Nuremberg, 1556.
48. The Apothecary. Woodcut by Jost Amann, from Sachs (op. cit. for fig. 32).
49. Male Herb and Female Herb. Woodcut from *Hortus sanitatis*, Mainz, 1491.
50. The Divisions of the Day. Woodcut border by Hans Weiditz, from Elimithar (op. cit. for fig. 33).
51. Human Conditions. Woodcut border from *ibid.*
52. Bathers. Woodcut border from *ibid.*
53. Prescriptions for Bathing. Woodcut border from *ibid.*
54. Various Grains. Woodcut border from *ibid.*

LIST OF ILLUSTRATIONS

55. Physician and Apothecary. Woodcut from Brunschwig (op. cit. for fig. 29).
56. Physician with Urine Flask. Woodcut from Anglicus (op. cit. for fig. 28).
57. Broadside on Syphilis. Drawing by Albrecht Dürer, *incunabulum*, 1496.
58. Woodcut from Thomas Ochsenbrunner, *Priscorum heroum stemmata*, Rome, 1494.
59. Alchemistic Oven. Woodcut, title-page illustration from Geber, *De alchemia*, Strassburg, 1529.
60. Expulsion from Paradise. Woodcut from Schedel (op. cit. for fig. 8).
61. Lecture. Woodcut from a German translation of the works of Terence, Deventer, 1489.
62. The Astrologer. Woodcut from Sacrobosco, *Sphaera volgare*, 1537.
63. Scholars. Woodcut vignette from *Hori Apollinis . . .* (op. cit. for fig. 21).
64. The Physician in His Study: portrait of the Spanish physician Luis Lobera de Avila. Woodcut by Hans Burkmaier, from *Ein nützlich Regiment der Gesundheit*, Augsburg, 1530.
65. The Garden of Health. Woodcut from *Hortus sanitatis*, Antwerp, 1533.
66. Alchemistic Oven. Woodcut from Geber (op. cit. for fig. 59).
67. Preparation of the Elixir of Life ("*forma furni ad distillandum aquam vitae*"). Woodcut from Philippus Ulsterius, *Coelum philosophorum*, 1553.
68. Astronomers at Work. Woodcut by Peurbach, from Regiomontanus, *Tabulae eclipsisum*, Vienna, 1514.
69. Books. Woodcut vignette from *Hori Apollinis . . .* (op. cit. for fig. 21).
70. Vintage. From P. de Crescentius, *Opus ruralium commodorum*, Strassburg, 1512.
71. Chemical Dissolution of Bodies. Woodcut from *Pandora* (op. cit. for fig. 16).

LIST OF ILLUSTRATIONS

72. *Illuminatio*: alchemistic-symbolic illustration of the psychic rebirth. Woodcut from *Rosarium philosophorum* (op. cit. for fig. 13).
73. Cosmic Harmony. Woodcut by Albrecht Dürer, from *Prognosticationen des Stabius*, Nuremberg, 1503.
74. Man and the Annual Cycle. Woodcut from Giovanagostin Pantheo, *Lunario perpetuo*, Venice, 1535.
75. Herbs. Woodcut border by Hans Weiditz, from Elimithar (op. cit. for fig. 33).
76. Physiognomics. Woodcut by Albrecht Dürer, from Ludovicus Pruthemius, *Trilogium animae*, Nuremberg, 1498.
77. Chiromancy. Woodcut from Agrippa ab Nettesheym (op. cit. for fig. 23).
78. Man and Planet. Woodcut from *ibid.*
79. The Rose. Woodcut, title-page illustration from Symphorien Champier, *Rosa gallica* ("*omnibus sanitatem affectantibus utilis et necessaria*"), Paris, 1514.
80. Mars and Venus. Woodcut, title-page illustration from *Practica Teutsch auf das MDXXXV. Jahr des hochgelehrten Theophrastum Paracelsum*, Augsburg, H. Steyner, 1534.
81. The Seven Liberal Arts. Anonymous woodcut, broadside, Nuremberg, c. 1594.
82. The Dancers. Woodcut border from Caelius Apitius, *De re culinaria*, Basel, 1541.
83. The Harpist and the Nine Muses. Woodcut by Wolf Traut, from Jacob Locher, *Carmina varia*, Nuremberg, 1506.
84. Magic Sigil. Woodcut border from Albertus Magnus, *Liber mineralium*, 1518.
85. The Poet and the Thinker. Woodcut border by Wolf Traut, from Ulrich Pinder, *Speculum intellectuale felicitatis humanae*, Nuremberg, 1510.
86. Mary with the Child and the Three Kings. Woodcut, Cologne, 1498.
87. The Dreamer. Woodcut from *Prognostication auf 24 Jahr zukünftig durch den hochgelehrten doctorem Paracelsum, geschrieben zu dem grossmächtigsten, durchleuchtigsten*

LIST OF ILLUSTRATIONS

fürsten und hern, hern Ferdinanden, römischen künig, erzherzog zu Oesterreich etc. . . . , getruckt zu Augspurg durch Heynrich Steyner 1536. According to Sudhoff, the woodcuts for this work were drawn and carved under the direction of Paracelsus.

88. The Great Sage: portrait of Hermes Trismegistus. Woodcut, verso of the title-page of Zadith Ben Hamuel (Zadith Senior), *De chemia Senioris antiquissimi philosophi, libellus . . .*, in Schmieder, *Geschichte der Alchemie*, Strassburg, 1566.
89. The Magus. Woodcut by Hans Weiditz, from Francesco Petrarch, *Trostspiegel*, Augsburg, 1532.
90. Magic Sigil Effective against Gout. From Theophrastus Paracelsus, *Archidoxis magica*, Basel, 1570.
91. *Turba Philosophorum* (Disputing Alchemists). Drawing from the manuscript "Rosengarten der Philosophen," by Arnaldus de Villanova, Vadiana Library, St. Gall. Later used as title-page illustration of *Rosarium philosophorum* (op. cit. for fig. 13).
92. Alchimia. Woodcut from Thurneysser (op. cit. for fig. 10).
93. Lion Swallowing the Sun: "the true green and golden lion," symbolic picture of the transmutation of the *prima materia*. Woodcut from *Rosarium philosophorum* (op. cit. for fig. 13).
94. *Mercurius Noster*: alchemistic-symbolic representation of quicksilver, or mercury, as one of the planets which is the source and cause of all transmutation. Woodcut from *Pandora* (op. cit. for fig. 16).
95. Quicksilver. Woodcut from Thurneysser (op. cit. for fig. 10).
96. The Philosophers' Stone: alchemistic-symbolic representation. From *Rosarium philosophorum* (op. cit. for fig. 13).
97. Uroboros, "Serpent That Eats His Own Tail": representation of the hermetic alchemistic transmutation process and symbol of eternity, time, etc. Woodcut vignette from *Hori Apollinis . . .* (op. cit. for fig. 21).
98. The Astronomer. Woodcut from Thurneysser (op. cit. for fig. 10).
99. Astronomy Lesson. Woodcut from Bernardus Granollach, *Lunarium*, Italy, c. 1510.

LIST OF ILLUSTRATIONS

100. Jupiter. Woodcut from *Practica Teutsch* . . . (op. cit. for fig. 15).
101. Blood-Letter. Woodcut from Bartholomeus Anglicus, *Libro de proprietatibus rerum. Hystoria natural* . . . , Toledo, 1529.
102. The Aged Sage. Pen drawing, seated prophetic figure, by Albrecht Dürer, 1511.
103. The Stages of Reality. Woodcut from Bovillus (op. cit. for fig. 12).
104. True and False Wisdom: The fool says, "Thee, O fortune, we make into a goddess, we exalt thee to heaven." The sage says, "Trust in virtue, fortune is more transitory than the waves." Woodcut from Bovillus (op. cit. for fig. 9).
105. The Angel. Woodcut from *Büchlein wider das Zutrinken*, Augsburg, 1534.
106. The Heart. Woodcut vignette from a Spanish edition of Aristotle, *Liber de secretis secretorum sive de regimine principum vel dominorum*, Burgos, 1505.
107. The Scholar. Woodcut from Augustinus Niphus, *De falsa diluvii prognosticatione*, Bologna, 1520.
108. Parental Love. Woodcut vignette from *Hori Apollinis* . . . (op. cit. for fig. 21).
109. The Planet Saturn as Ruler of the Year Brings Ruin and Disease. Anonymous woodcut dating from the end of the fifteenth century.
110. Humility. Woodcut by Albrecht Dürer, 1510.
111. Of Food and Drink. Woodcut from Ryff (op. cit. for fig. 42).
112. The Suppliants. Woodcut from *Pretiosa Marguerita novella de thesauro, ac pretiosissimo philosophorum lapide*, Venice, 1546.
113. The Collector of Precious Stones. Woodcut from Albertus Magnus, *Liber mineralium*, 1518, and title-page illustration from Geber, *Rechter Gebrauch der Alchimey*, Frankfort, 1531.
114. The Beggar. From a series of ten pen drawings by Niclas Manuel Deutsch, 1520. (Public Art Collection, Basel.)

LIST OF ILLUSTRATIONS

115. The Light of the Heart. Woodcut vignette from *Hori Apollinis* . . . (op. cit. for fig. 21).
116. The Creator Blesses the Globe. Woodcut, title-page illustration from Augustinus Datus, *Elegantiolae*, Augsburg, c. 1496.
117. God the Father and the Pilgrim. Woodcut by Hans Burk-mair the Elder, from the *Taschenbüchlein aus dem Riess*, 1510. (National Library, Vienna.)
118. King and Knight. Woodcut from Michael Wolgemut, from Christophorus Glotz, *Prognosticon für das Jahr 1491*, Nu-remberg, c. 1490.
119. Hermit Pursued by the Devil. Pen drawing by Urs Graf, 1512. (Public Art Collection, Basel.)
120. Angel Captured by Devil. Woodcut from *Büchlein wider das Zutrinken* (op. cit. for fig. 105).
121. Concerning the Spirit. Woodcut from Thurneysser (op. cit. for fig. 10).
122. Head of Christ. Woodcut by Urs Graf, from the book *Liden Jesu Christi mit andechtiger klag* . . . , Basel, Henric-petri, 1516.
123. Baptism. Woodcut from Boccaccio, *Il filocolo*, Naples, 1478.
124. Concerning the Soul: Anima. Woodcut from Thurneysser (op. cit. for fig. 10).
125. The Lamp of Eternal Light. Woodcut vignette from *Hori Apollinis* . . . (op. cit. for fig. 21).
126. Souls Weighed in the Balance. Woodcut from *Ars moriendi*, Leipzig, 1493.
127. Wheel of Fortune: an angel turning the sphere of heaven. Woodcut, Leipzig, 1490.
128. The Course of the World. Woodcut, Paris, 1493, repro-duced from Stenlein, *Astrologie und Aberglaube*, Munich, 1915.
129. Wheel of Fortune. Woodcut, sixteenth century, from *ibid.*
130. Hourglass: with skull as symbol of death. Woodcut from Dryander, *Anatomia*, sixteenth century.
131. Death the Reaper. Title-page illustration from Hans Sachs,

LIST OF ILLUSTRATIONS

Ein Kampfgespräch zwischen dem Tod und dem natürlichen Leben, 1538.

132. *Danse macabre*. Woodcut from Schedel (op. cit. for fig. 8).
133. Sundial. Woodcut by Hans Holbein the Younger, from *Historiam veteris testamenti . . .*, Louvain, 1539. (Bibliothèque Nationale, Paris).
134. The Hand of Fate. Woodcut from *Prognostication . . .* (op. cit. for fig. 87).
135. Entombment. Woodcut from Euricius Cordus, *Für die neue, hievor unerhörte und erschrecklich tödtliche krankheyt und schnellen todt, die Englisch schweyssucht genannt*, Strassburg, 1529.
136. The Journey Through Death: symbolic representation of a phase of the process of transmutation. Woodcut from *Pretiosa Marguerita . . .* (op. cit. for fig. 112).
137. Resurrection from Death. (The caption reads: "After my many and several sufferings and great martyrdom—I am resurrected—clarified—and free of all flaw.") An alchemistic-symbolic representation of "purified gold," the end-stage of the process of transmutation. Woodcut from *Rosarium philosophorum* (op. cit. for fig. 13).
138. Toward the Celestial Spheres: Beatrice leads Dante through the sphere of the moon to the firmament of fixed stars, which is surrounded by the eighth and last celestial sphere, the Empyrean, or Heaven of Pure Light. In the centre of the circles is the earth with the planets revolving around it. Pen drawing by Sandro Botticelli (1444?–1510), from Dante, *The Divine Comedy*.
139. Dying Man. Woodcut by Hans Burkmaier the Elder (op. cit. for fig. 117).
140. The Soul Goes to Heaven: the seven angels with the six keys, standing for the six works of charity, with which they open heaven and receive the soul into heaven. Woodcut by Albrecht Dürer, from the illustrations to *Niclas von der Flue*, Nuremberg, 1488.
141. Poverty, Disease, Lust, Death. Woodcut from Brunschwig (op. cit. for fig. 29).

LIST OF ILLUSTRATIONS

142. The Rule of Christ. Woodcut by G. Leroy, from *Die sechs Tage der Schöpfung*, Lyons, 1523.
143. St. John with the Seven-Headed Dragon on Patmos. Woodcut from Floury, *Compendiosa et maxime conducibilis ad perfectam cognitionem methodus*, Paris, c. 1510.
144. Ascension of Christ. Woodcut by Hans Wächtlin, from *Das Leben Jesu Christi*, Strassburg, 1508.
145. The Eye of Consciousness. Woodcut vignette from *Hori Apollinis* . . . (op. cit. for fig. 21).
146. God the Father Blesses the Globe. Woodcut by Hans Burk-mair the Elder (op. cit. for fig. 117).
147. Apocalypse. Woodcut by Albrecht Dürer, Nuremberg, 1498.
148. The Eye of God. Woodcut vignette from *Hori Apollinis* . . . (op. cit. for fig. 21).

FOREWORD TO THE ENGLISH EDITION

THE AUTHOR has asked me for some introductory words to the English edition of her book on Paracelsus. I am more than willing to comply with this request, for Paracelsus, an almost legendary figure in our time, was a preoccupation of mine when I was trying to understand alchemy, especially its connection with natural philosophy. In the sixteenth century, alchemical speculation received a strong impetus from this master, notably from his singular doctrine of "long life"—a theme ever dear to the alchemist's heart.

In her book, Dr. Jacobi emphasizes the moral aspect of Paracelsus. She wisely lets the master speak for himself on crucial points, so that the reader can gain first-hand information about this strange Renaissance personality, so amply endowed with genius. The generous use of original texts, with their vivid, imaginative language, helps to develop a striking picture of the man who exerted a powerful influence not only on his own time but also on succeeding centuries. A contradictory and controversial figure, Paracelsus cannot be brought into line with any stereotype—as Sudhoff, for instance, sought to do when, arbitrarily and without a shadow of evidence, he declared that certain aberrant texts were spurious. Paracelsus remains a paradox, like his contemporary, Agrippa von Nettesheim. He is a true mirror of his century, which even at this late date presents many unsolved mysteries.

An excellent feature of Dr. Jacobi's book is her glossary of Paracelsus' concepts, each furnished with a succinct definition. To follow the language of this physician, this natural

FOREWORD

philosopher and mystic—a language freighted with technical terms and neologisms—is not easy for readers unfamiliar with alchemical writings.

The book abounds in pictorial material which, coming for the most part from Paracelsus' time and from the places where he lived, rounds out and sharpens the presentation.

C. G. JUNG

P R E F A C E

AN anthology is always a hazardous enterprise. Not only because the compiler, however much he may aim at objectivity, is always influenced by the tastes of his time and his own intellectual leanings, but above all because he undertakes to convey the idea of an integrated whole through an arrangement of its separate parts. But just as the cosmos dissolves into a thousand contradictions when we focus our attention on its individual manifestations, so a great personality will break down into seemingly irreconcilable and irreducible contradictions as soon as one attempts to define it by successively describing its different facets. And the greater the man's scope, the more complex and dramatic his career, the truer this becomes.

Paracelsus, who lived at a time of revolutionary changes, is one of the most enigmatic figures in history. This self-willed genius was charged with all the dynamism of an impetuous and turbulent age. Thus any attempt to encompass him in his totality and uniqueness by a selection from his work seems to offer little prospect of success. For this reason, we have deliberately refrained from seeking special texts with which to document each of the widely ramified domains of Paracelsus' thought and activity. We have instead concentrated on the essential and permanently relevant features of this solitary genius. If we discard those elements of his work which have only a secondary or historical significance, we begin to discern that luminous inner unity, in whose revealing light his illogical method of exposition, his lack of conceptual clarity, all the seeming incongruities of his psychology and thought, appear as tributaries to a broad, powerful stream.

If we follow this method, we obtain a certain number of

P R E F A C E

texts in which the Paracelsian conception of the world is summed up. This conception is centred around his basic concern with man's relation to God, which permeates and illumines every sphere of his thought. Paracelsus' entire contribution can be described as a development of this single theme in ever new variations, reminding one sometimes of the mysteriously interlaced and often surcharged late-Gothic ornaments, and sometimes of the clear, noble lines of a Bach fugue. His basic motif is man as the beginning and the centre of all creation. In man all life culminates. He is the centre of the world; everything is seen in terms of man. "In him God and nature meet" (Waltershausen). Since he is the image of God, he holds the highest rank in the cosmos. Through the principle of a hierarchical order of creation, ascending from matter to God, Paracelsus unites all the antinomies of a paganizing mysticism of nature and a pious Christian faith. How asceticism and enjoyment of the world, Christian love and sober experimental knowledge, the spirit of scientific observation and the hope for redemption, keen observation and emotional exuberance, critical reason and volcanic temperament, could be fused in the unity of his personality remains today, to us who are torn asunder, both a mystery and an object of nostalgia. In whatever form he sought apt expression for his great insights into man, God, and the world—whether in the medium of medicine, magic, alchemy, astronomy, or the other aspects of the life and thought of his time—his real striving was always to speak of man, his relations to the Creator and creation, his dignity and his way, his duties and his tasks.

Only a few men before him and hardly anyone after him have conceived an anthropocentric system so lofty and at the same time so rational. In it everything follows logically from one source; it is a system that elevates profession to vocation, trade to art, and science to wisdom. As against this great line, everything else about Paracelsus strikes one as a mass of rank vegetation, withered or in bloom, but

never genuinely relevant to the understanding of his work. Adhering faithfully to our main line, we have avoided specifically medical material, whether of a diagnostic or of a therapeutic nature. We have kept the texts free from the paraphernalia of superstition, which for so long obscured the true image of Paracelsus. Accordingly, we have omitted the often emphasized aspects of the astrologer, soothsayer, sorcerer, visionary, alchemist, maker of amulets and magic seals, etc., etc. Since modern thought has lost touch with the profound truth of which these activities were the vehicle, we are in no position to do them full justice; today we must inevitably misunderstand them. We have become too far removed from those great relationships, which were still very much alive for Paracelsus. But since all the elements of Paracelsus' work are organically interlinked, the main features of the fields we have neglected will be apparent from the material presented here to the more penetrating reader.

For the same reasons we have also omitted all polemical texts, all eccentric and overly subjective passages in the works. Whether these peculiarities can be psychologically interpreted as manifestations of resentment, of over-compensation, or of a volcanic psyche in which the seething contradictions of the age were concentrated, or whether they are characteristic of the coarse language of that time, they have little bearing on the essence of Paracelsus' personality and will. Behind them and untouched by them, there rises the authentic Paracelsus, the dauntless, never weary seeker of God, the humble mortal. This aspect of Paracelsus reflects those values which are and will always be indispensable to our Christian civilization. They constitute the "living heritage," which has at times been ignored, but which today, with the emergence of new intellectual currents, moves into ever brighter light and exerts ever stronger influence. We shall, however, be able to recapture its profound ultimate meaning only when this world, which has so many times been despoiled of its gods,

P R E F A C E

once again rediscovers the path to its true God and His complex cosmic order.

As late as 1924, Hans Kayser, in the preface to his Paracelsus anthology (quite an excellent work of its kind), stated that the world of Paracelsus is "quite alien to our time, and only rarely comes into contact with it." But today, Paracelsus has a greater message for us than he had for our fathers. This does not seem to be accidental; and if there is today increasing understanding of him, there are more cogent reasons for this than the four-hundredth anniversary of his death, in 1941. Like him, we are living in a time of great transition; we, too, are bridges across an impetuous stream, connecting a sinking shore with a shore that is barely beginning to emerge. His predicament is similar to ours, and we can share in his longing. For this reason, the ideas of Paracelsus should not, as was formerly the case, be reserved for the physician, natural scientist, philosopher, or mystic, but should also be made accessible to the constantly growing number of interested laymen of all strata. May this selection from his works impart a glimpse of his immense vision to those who once again have opened their minds to praise of creature and Creator, to those who are on the way to a new reality.

In order to make Paracelsus accessible to the educated layman of all classes, the style has been adjusted to present linguistic usage. Paracelsus' German is often opaque, arbitrary in structure and phrasing, and sometimes deliberately obscure. To transpose it into modern idiom has of course been more than a mere work of "translation," and has inevitably required interpretation. This seemingly bold enterprise will appear justified upon closer examination.* Paracelsus spoke and wrote the High German of his time; however, his own language was extremely personal in character. He himself coined innumerable words based on

* [For the same reason, the present English version is based largely on Dr. Jacobi's modern German texts. The original texts, however, have been consulted throughout.—TRANS.]

garbled Latin or on Swiss dialects. Apparently in order to give sharper and more effective expression to his thought, he never tires of piling term upon term, figure upon figure, and he constantly repeats himself. This verbosity greatly hampers the understanding of his writings. Because he had a new and original vision of the world, he was forced to create his own language, dynamic, racy, and colourful, which suited his purpose better than the abstract, conceptual German or the Latin of his scientific contemporaries. His writings are woven through with passionate outbursts, rhetorical phrases, and queer comparisons, with indistinct ideas, which to him seemed to reflect the actual course of life better than rigid traditional concepts and words. Despite the power that emanates from his works, they often strike one as an impetuous first draft, in which he attempted to clarify and preserve the stream of his thoughts without first reducing them to the essentials—and this may be one of the reasons why his writings have so often been misunderstood.

We have only a few original manuscripts of Paracelsus; our main sources are the editions of Huser, Bodenstein, and others, published long after his death, and this circumstance no doubt accounts for the numerous obscurities that remain in the texts despite the critical work accomplished by such scholars as Sudhoff. For although these editions are based on the original manuscripts, they surely contain many errors and distortions because the handwriting of Paracelsus is difficult to decipher. Moreover, Paracelsus almost always dictated his writings, and this so rapidly "you'd think it was the devil speaking in him," as his pupil, Oporinus, maintained; they were also written down by his pupils from memory, and some were even translated extempore into Latin. That is why almost every one of his works has a different linguistic character, and the reader must attune himself to each one. We cannot, by any stretch of the imagination, call Paracelsus a polished writer. And since we are here interested only in the general and timeless elements of his thoughts, our chief concern has been to

P R E F A C E

capture the meaning of the texts in a language familiar to all. Literal accuracy has often been sacrificed in behalf of a clearer presentation of Paracelsus' ideas and intentions. Our selection makes no scientific claims; our aim has been above all to present a readable introductory survey. In the case of Paracelsus, a free presentation is less subject to misinterpretation by the layman than the original text.*

It was inevitable that in such a "translation" some of the medieval flavour of language and content should have been lost, although we have always respected Paracelsus' figures of speech, and although the cuts we have made have been solely at the expense of the weeds and rough edges, and do not mar the original rhythm of thought. Throughout the book we have attempted to preserve the sharpness and vigour of the Paracelsian language, and have eschewed offensive modernisms.

It is hoped that the numerous illustrations included in this volume will contribute to an understanding of the spirit of Paracelsus' time and will cast further light upon the subject matter of the selections. All the illustrations are contemporary; Paracelsus himself was probably familiar with a number of them. They eloquently testify to the vitality, depth, and creative originality of the art that developed everywhere soon after the invention of printing. Many books of that period are illustrated with excellent woodcuts and engravings. Some of them are mystical or symbolical, others represent scenes from everyday life; in their ensemble they provide a charming cross-section of the ideas and customs of the late Middle Ages. The pictures in this book are in large part the work of the leading illustrators of that epoch, among them several great con-

* [A sample of Paracelsus' original language was contained in the German edition of this work. Dr. Jacobi described it as offering "a picture of Paracelsus in his subjective and perhaps most original aspect, where emotion predominates over ideas." In the present edition it has been translated wholly into English and composes the section entitled "Credo," pp. 75ff. Figure 4a, p. 51, reproduces a page of an original edition of one of Paracelsus' works.—TRANS.]

P R E F A C E

temporaries of Paracelsus, such as Dürer, Leonardo da Vinci, Holbein, Burkmail, Amann, and Weiditz. They will, we hope, not only serve to revive the atmosphere of that time, but also appeal to the reader's artistic sense, and help to orient him in the subject-matter.

The texts were selected from the Karl Sudhoff and Wilhelm Matthiessen edition of Paracelsus' complete works.* For the linguistic adaptation of the texts and the glossary we have consulted the original Huser editions, the editions of Adam von Bodenstein and Steyner, the anthology of Hans Kayser, and a number of other works, which are listed in the bibliography. The biographical sketch preceding the selections is not intended to supply complete data on the life of Paracelsus or even to give a full evaluation of his personality. We hope rather that it will encourage the reader to immerse himself in the numerous available descriptive and interpretative biographies. Some of the more important titles are included in the bibliography. Among the older biographies, those by Strunz and Netzhammer, and among the most recent, those by Betschart and Sticker, are deserving of particular mention; readers interested in religious problems are referred to the work of Waltershausen.†

Illustrations, bibliography, and especially the glossary are intended to serve as guides for the student. The language of Paracelsus does not yield to the usual exegetic treatment. The best way to grasp its latent content—and this latent content is always the most essential in Paracelsus—is to submit freely to the dynamic vigour of its images. Accordingly, our glossary has been stripped of technical ballast, and serves only to clarify certain unfamiliar Paracelsian terms.

* [See Bibliography. The reference numbers after each paragraph of the anthology relate to the Sudhoff-Matthiessen edition, a list of the contents of which, with the page numbers, is in the Key to Sources. The reader thus may locate the source of each selection. The sources of the illustrations are given in the List of Illustrations.—TRANS.]

† [Dr. Jacobi has added new material to the Bibliography of the English edition.—TRANS.]

P R E F A C E

It is hoped that the arrangement of the material around a central idea, the modernized language, and the illustrations will commend the present anthology to the reader. In an index to the Paracelsus literature appended to *Acta Paracelsica*, i-v (1930-32), Karl Sudhoff has listed 1089 items, covering the extraordinarily extensive literature on Paracelsus up until 1930. Publications since then are listed in *Nova Acta Paracelsica: Jahrbuch der Schweizerischen Paracelsus-Gesellschaft*, vols. I-III (1944-46), and in George Rosen, "Some Recent European Publications Dealing with Paracelsus," *Journal of the History of Medicine and Allied Sciences*, vol. II, No. 4 (Autumn, 1947), pp. 537-48. Despite the copious literature on Paracelsus, we hope that the present anthology will prove valuable—particularly in English-speaking countries, where the unique figure of Paracelsus has remained almost unknown to the general reader. One reason for this may be that his difficult, eccentric phrasing and frequently abstruse style make the translation of much of his work nearly impossible.

The only purpose of this anthology is, through the words of Paracelsus, to give modern man in his predicament that strength and faith which radiate from all creative natures and their works—to help the reader to gain new courage from the contemplation of the Paracelsian *compositio humana*, the nobility and dignity with which he endowed the concept of man.

I wish once again to express my sincerest thanks to Dr. C. G. Jung for his assistance in the preparation of the glossary, to him and Mr. Oskar Schlag for permission to use valuable pictorial and literary materials, and above all to Professor Horst von Tschärner, who was helpful

P R E F A C E

to me in the philological clarification of the text. I am grateful also to the book antiquaries Art Ancien S.A., Zurich, who have put at my disposal a number of the illustrations published in this book.

Summer, 1950

JOLANDE JACOBI

NOTE ON THE SECTION ORNAMENTS

The ornamental devices set between the chapter-sections of this anthology are medieval alchemical symbols for gold in its various stages and forms.

Goldmaking—symbol of transforming man and nature, of leading the world to its fulfilment, of purifying the soul that it may partake of the highest stage of wisdom—was a most important problem to Paracelsus, as to the medieval alchemists with their hermetic philosophy. The goals symbolized by goldmaking formed the mainspring of Paracelsus' work. What was in question was not ordinary gold; to quote an alchemistic saying, *aurum nostrum non est aurum vulgi* ("our gold is not the gold of the common herd").

The meanings of the devices used in this work are as follows:°

Chapter I		<i>materia prima</i> , the primary substance from which gold is derived.
Chapter II		<i>aurum foliatum</i> , leaf gold, gold in its dissolved and already purified original stage.
Chapter III		<i>calcinatio auri</i> , the sign for the reduction of gold to powder through heat, an important stage in the process.
Chapter III		<i>aurum potabile</i> , potable gold, gold as mystical, rejuvenating medicine and elixir of life.
Chapter IV		<i>aurum musicum</i> , wire or thread gold, used for the stringing of musical instruments.

° According to G. W. Gessmann, *Die Geheimsymbole*, Berlin, 1922.

NOTE ON THE SECTION ORNAMENTS

Chapter V

aurum, gold as symbol of the sun, suggesting a rotary movement, a symbol for the cyclical nature of the process.

Chapter VI

aqua regis, royal water, nitric acid, in which gold is tested, for all other substances are dissolved by it.

Chapter VII

simplest, most ancient symbol for gold and the sun as the supreme light.

Fig. 3. Paracelsus.

PARACELSUS

HIS LIFE AND HIS WORK

Let no one who can be his
own belong to another.

WE know the life of Paracelsus only in its bare outline. His works, which suggest an almost superhuman achievement, and a few scanty data concerning his sojourn on earth are all the concrete material we have about him. The rest lies enveloped in an imposing aura of myth, which only lends brilliance to the supratemporal aspect of this enigmatic figure. A rather slightly built man, with sensitive, nervous hands, a relatively large, bald skull framed in unruly hair, blazing eyes, deep-set and

mysterious; a man of an easily irritable temper—such is the outward picture that has been preserved. Quaint alchemic kitchens in which he is said to have worked are still to be found at various places; with their strange crucibles, retorts, and other vessels, they are awesomely shown to the curious traveller, who is also told strange tales about the ancient miracle-working doctor. The stations on the path of hardships and struggles which Paracelsus walked from his birth to his death bear witness—in so far as we know them—to an unsettled, tormented career. There are wide gaps in the existing records, and later generations have amply filled them with fact and fancy. And then, towering above everything else, there are his works, the innumerable writings that he left behind; they are evidence of a titanic energy, a creative urge and intellectual force that break open new horizons and stream irresistibly through the ages. These writings are more than a record of ideas; they are by their very nature an image of those spiritual depths in which words and life lie, still undifferentiated, in the woof of myth. As such, they combine legend and statement in a living configuration, which is justified only by itself, which can never be measured by the yardstick of comparison or logic, and even less judged on the basis of analytical dismemberment.

The essence of a man whose mind reaches down to the primordial depths can never be apprehended in the recorded documents of his biography. A man's true personality is always more than his biographical development. For to be a personality means always to possess a mysterious something which cannot adequately be described in words and can be apprehended only intuitively. The essence of a personality is its living core, which draws its sustenance from the fertile womb of the soul's depths; in these primordial depths of the soul there lies hidden the treasure of the eternal images which are the fountainhead of everything creative. And the more a man penetrates into these depths and by reviving them becomes suffused with their mysteries,

the more compelling will be his influence and the stronger the fascination that he gives out. But when this essential kernel of personality is so overpowering that its radiant energy breaks open its solid individual shell and so to speak dissolves it by piercing it a thousand times, analytical descriptions and explanations become inoperative, and the realm of legend and myth asserts its rights. In this realm mediation is no longer necessary, for its language is a language common to all men, and everyone can find access to it in his own soul's depths. In this language, everything individual has room only as a symbol, and in the myth it becomes integrated with the universal. In the myth, the individual destiny is exalted to the domain of the timeless and becomes a symbol valid for all time. Only a man who, looking into the mirror of the symbol, has gained a profound vision of his unique individuality as a part of the perennial human universality can truly entrust himself to the great common life-stream that flows through mankind. Only then can he free himself from his isolation and become aware of his wholeness—which encompasses both worlds, the individual and the collective. Therefore, the periods of spiritual and intellectual stress, when man no longer finds his proper place because he has largely lost the inner connexion with these timeless primordial depths, are also the periods of the birth and flowering of myths. In such periods, life comes forth enhanced from the symbol-pregnant images of myth, and men become particularly receptive to the truths that lie hidden in them. And each time these images are summoned forth, they release an echo of joyful rediscovery, bringing solace and freedom to the solitary soul. Therein, ultimately, lies the mystery of the influence of an individual destiny conceived as a symbol.

In our view this is true of the life and work of Paracelsus.

Philippus Aureolus Theophrastus Bombastus von Hohenheim, called Paracelsus, was born in Einsiedeln, the venerable Swiss place of pilgrimage, in 1493. He was the only

child of Wilhelm von Hohenheim, a Swabian nobleman of the house of the Bombasts, and Els Ochsner, a bondswoman of the Benedictine abbey of Einsiedeln. It is said that Wilhelm was born out of wedlock in an impoverished family of knights, and that throughout his life the circumstances of his birth were a source of unhappiness to him. On a beautiful wooden panel which can be seen today in Salzburg, he appears as a dignified and thoughtful man, with an intelligent, somewhat melancholy expression; in his right hand he holds a carnation, the customary sign of betrothal. Els Ochsner, descendant of a family of peasants living on grounds belonging to the abbey, was, as stated in a contemporary document, "under the authority of the abbot." (According to feudal law, inheritance was determined by the so-called left or weaker hand; that is why the feudal lord, in this case, the Benedictine abbot, had a claim on Paracelsus' estate.) Thus we find at the cradle of Paracelsus medieval chivalrous virtue and aspiration to higher culture on the side of his father, healthy earthiness and deep piety on the side of his mother. This widely divergent heritage no doubt explains to some extent how it came about that his rather weak and fragile body harboured such a profusion of tensions.

The landscape from which the child received his first impressions may have influenced him in the same direction. Surrounded by austere, towering mountains, the little village of Einsiedeln lay as though in a soft, motherly shell, rigidly separated from the surrounding world yet humbly spread open to the sky. Situated in the midst of dark pine forests and green meadows, cut through by the foaming torrent of the Sihl, it was, with its great church, annually visited by thousands of pious pilgrims, a faithful image of the life in which eternity and transience meet in a daily-renewed struggle. Past the Devil's Bridge, near which, according to an old tradition, stood the house in which Paracelsus was born, the pilgrims' path led to the shrine of the Mother of God—of extraordinary symbolic significance for Paracelsus

himself. The bridge itself is symbolic, as linked with his birthplace. For Paracelsus was a true man of the declining fifteenth century, with its deep contradictions, which brought forth such powerful creative personalities as Luther, Michelangelo, Leonardo da Vinci, Kepler, Copernicus, Erasmus of Rotterdam, Dürer, Holbein, and other geniuses.

*Bar Contrafactur des ritz überimpten
Hädno Simpliciu mit saump der geligenheit*

Fig. 4. Einsiedeln in 1577.

This is not the place to outline this epoch and the rôle Paracelsus played in it; such a task may be reserved to more extensive biographies. But without penetrating into the spiritual structure of that critical age, whose revolutionary significance in European history is paralleled perhaps only by our own, and in whose formation Paracelsus himself played such a crucial part, we cannot begin to do justice to the personality of Paracelsus.

Even against the background of his own time, Paracelsus

remains a unique phenomenon, uninfluenced by ephemeral ideas. To classify him under any label is well-nigh impossible. And if his biographers characterize him sometimes as a man of the Renaissance and sometimes as a figure of the Gothic era, this only goes to show that his personality was all-inclusive, and that this very inclusiveness, which integrated all antitheses into a creative whole, constituted his essential nature.

The harmonious marriage of his parents ("In the home of my parents it was quiet and peaceful"), the striving for unity that characterized Switzerland at that time, and the country's eternal religious spirit must have served to counter-balance the great contrasts to which he was exposed by his heredity, his natural milieu, and the critical time in which he lived. They formed the counterweight with the help of which he succeeded in transcending all the contradictions of blood and environment, of intellectual and spiritual, inner and outer limitations, in a higher synthesis.

Paracelsus was only nine years old when he entered upon his great wanderings. After the untimely death of his mother he moved with his father to Villach in Carinthia, "my second fatherland, next to the country of my birth," as he calls it. This father, a physician himself, wanted his son to take up his calling, and christened him Theophrastus in honour of Tyrtamus Theophrastus of Eresus on Lesbos, a follower of Aristotle. Later he gave the blond boy the pet name of Aureolus. From his earliest childhood, Paracelsus saw his father giving medical comfort and aid to visiting pilgrims, and he desired to emulate him. It was his father who first initiated Paracelsus into the wonders of nature, who gave him herbs and stones, water and metals, as friends, and who taught him the rudiments of medicine. But soon the boy was drawn to travel farther in the world, from village to village, from town to town, from country to country, in order to satisfy his unquenchable thirst for learning. There remains almost no historical trace of the road that Paracelsus travelled in his passionate urge for experience and knowl-

edge; we learn something about it only from scattered indications in his writings. From these we also know that at an early date he acquired knowledge of metallurgy and chemistry and an acquaintance with alchemy; however, it was only later that he was fully initiated into its mysteries by Sigmund Fûger of Schwaz in the Tyrol.

In addition to the University of Vienna, he probably attended a number of universities in Italy, where he acquired a thorough professional training in all the contemporary branches of natural and medical science and studied the doctrines of the Greek philosophers as well as the great physicians Hippocrates, Aretaeus, and Galen. In 1515, he won his doctor's hat in Ferrara. At about the same time, animated by a desire to excel in his profession, he adopted the surname of Paracelsus in conformity with humanistic usage. This gesture as well as his noble patronymic of Bombastus (derived from *Baumast*)—which later generations erroneously considered a mocking nickname, because of his extravagant manner of speech—contributed a great deal to his reputation for pride and conceit.

Although he was now doctor of medicine and learned in all branches of science, and could have settled down and practised his profession, he still desired to see more and add to his learning and experience. As though hunted by the Furies he travelled from land to land, and there is hardly a country in Europe that he did not visit. On his path he found war and peace, villages and cities, seas and mountains, poverty and riches. No one was so insignificant or so important in his eyes that he refused to learn from him. "Learn and learn, ask and ask, do not be ashamed," is a call that constantly rang in his ears. Bath attendants and magicians, herb-women and gypsies, monks and peasants, were just as welcome to him for this purpose as learned physicians, pious abbots, knights, princes, and even kings. To learn and to help—in these aims the restless wanderer spent himself. According to his own statements, he must have travelled from Spain, Portugal, France, England, across

all of Germany, as far as Sweden and Moscow, and thence again through Poland, Austria, Hungary, Croatia, and Italy, down to Sicily, Rhodes, Crete, Constantinople, and Alexandria. In 1522 he took part in the wars of Venetia, and later served as army surgeon in the Netherlands and Denmark. The universities of Paris, Oxford, Cologne, Vienna, Padua, Bologna, were stations in his quest for knowledge. One is amazed at his haste; it is difficult to conceive how he could have travelled so far in only a few years' time, considering the state of communications in the sixteenth century—although it was the custom of scholars and scientists at that time to visit distant cities. This feat alone smacks of legend.

Though Paracelsus' life knew no anchor, though it was a constant journeying, all his creative activities are deeply rooted in an immovable philosophical foundation. He was like a mighty oak tree: his unshakable faith in the divine order and its meaningful articulation was the root from which grew the stalwart tree of his work. This work deployed itself in a broad crown of which only the most outward branches and leaves represent his historical life. Paracelsus was a fanatic of experience. In his view, books and universities could impart only a paper knowledge, which inevitably failed when confronted with the realities of life. In his eyes, only what is based on personal experience, on direct vision, has value; that alone is truly trustworthy and is far above all speculation and invention. What treasures of such "experienced knowledge" must have been gathered by this most receptive of men in the course of his endless travels!

Nature and man revealed their most mysterious depths to him. Their harsh cruelty, but also their gentle helpfulness, were daily brought before his eyes. He became more and more keenly aware of the tragedy of human existence, but also of its nobility, and he became more than ever determined to help reduce this discrepancy by an activity that

integrates theory and practice, word and deed, into a single synthesis. For this reason, the practice of medicine was in his eyes a sacred task, a kind of priestly mediation between God and patient, both a duty and a high privilege.

Such a view implies a sacred obligation on the part of the physician to strive for his own perfection. Only if he bears continuously in mind that he is but an instrument of God and that the patient is also God's creature, participating in God through his immortal soul, can the physician undertake a cure. For a materialistic century like the nineteenth, which came close to defining the soul as merely "an effect of hormones," this view was hard to accept; but now that the human person as a whole has again moved into the focus of medical practice, now that we are faced more inescapably than ever with the precariousness of our existence, the Paracelsian conception has taken on new life. For Paracelsus, morality, honesty, disinterestedness, and self-knowledge were basic elements of medical ethics. Cure can come only from the words of the heart, they alone can work miracles. To be a physician means to receive a mission from God and to carry out His orders—or to fail without recourse.

Paracelsus did not yet sense the rift that later opened between science and religion. It is possible that in the depth of his soul he was not unaffected by the schismatic current of his time; but what we know of his philosophy and his activities reveals a grandiose singleness of purpose. In his conception, to explore the wonders of nature is not desecration, to harness its energies is not mechanization, and to describe man's nature as determined by his three "bodies"—the elemental, emotional, and spiritual—is no reduction of man to matter. For in the great integrated totality in which all created things are interrelated, nothing has a life that is absolutely its own: man, the earth, and the cosmos are only meaningful parts of an organic whole, which down to its last particles is ruled by God and His order. Treatment of the plague, of wounds, of syphilis, gout, epilepsy, or any other disease, is a "mission," and so is the preparation

of herb juices, the smelting of metals, or the analysis of mineral waters; for God has created all of these to serve man, the highest of creatures, the most beloved by God. But they can serve him only if he works toward this aim in the right way, that is, in a way pleasing to God. For creation and everything belonging to it were released by God while they were still in an imperfect state. The created world has been given over to man in order that he may fulfil it. More than that: man's original and specific mission is to lead it to perfection; he has been placed in the world solely for this purpose.

The world is enveloped "in a darkness that strives for light" (Strunz)—this idea is of fundamental importance for the whole world-view of Paracelsus. It permeates every field of Paracelsus' activity down to the last details, and only in the light of it does his activity appear wholly consistent. Those aspects that have been decried as superstition, magic, soothsaying, quackery, appear in this light as small mosaic stones of a single great theme—the understanding and fulfilment of the world by man who has been charged with this mission by the Creator. Philosophy conceived as the theory of natural science, and astronomy conceived as the science of interaction between man and the cosmos, are the indispensable prerequisites for the carrying out of this mission. But the very essence of the process of fulfilment is prefigured in alchemy. Without alchemy, everything remains meaningless; to study it, to be versed in it, to practise it, is to rise from the blindness of unconscious life to highest consciousness, is to become seeing. The medieval hermetic alchemy, for which the transmutation of metals was not merely a concrete chemical, material process, but also a psychic and spiritual process symbolically associated with the transformation of matter, is the vehicle of this fundamental Paracelsian idea. The liberation of gold from its dross—i.e., the alchemistic process of the gradual transformation of *materia prima*, the unfinished, nonpurified primal matter, into *materia ultima*, the

purest and most accomplished form of matter—represents a symbolic pattern that is followed by everything that is created. The developmental path of the soul, conceived as the maturation of the personality; the conquest of natural forces by magic; the “preparation” of poisonous herbs for the purpose of extracting their mysterious, healing essences; the treatment of the human body in order to free it from the “impurity” of disease—all these are mere symbols for the same striving.

Paracelsus is today celebrated as the first modern medical scientist, as the precursor of microchemistry, antiseptis, modern wound surgery, homeopathy, and a number of other ultramodern achievements. He is considered a revolutionary figure in medicine, and not without reason was he called *Lutherus medicorum*, the Luther of the physicians, even in his lifetime. A countless wealth of intuitions coupled with insights won in tireless experiments makes the works of Paracelsus a very treasure trove and bears witness to his incomparable creative power. But the principles that Paracelsus applied, whether it be the doctrine of concordance, or correspondence, between the outward and inward, or the principle of the complementary pairs of opposites (“The physician and the remedy belong together like man and wife”), supply the scaffolding of his theoretical edifice. Upon the principles of analogy, identity, and compensation are based chiromancy, physiognomics, his whole doctrine of signatures, and the most various “magic arts,” on the one hand, and his astronomical, medical, and psychological insights, on the other. Today, after four centuries, they strike us as curiously familiar, even though their full significance for Paracelsus could only be understood through a religiously grounded total conception of the world.

For although the basic idea of alchemy—the purification of gold from its dross, i.e., the manufacture of gold from a base metal—permeates this whole theoretical edifice like the conscious design of an architect, it is erected on the foundation of a Christian belief in revealed religion; without

this foundation, it would collapse like a house of cards. The gathering of experience is a mission and a prerequisite; the world has been created to be known and used. In this sense, self-knowledge is also knowledge of the world, and vice versa. God can dwell in him who has known both; such a man can consider himself an "initiate" and pursue the highest goals. But to be initiated, to be knowing, is a gift of God. And the charisma falls only to him who strives, only to the man of faith.

Differing opinions have been expressed concerning Paracelsus' attitude toward Christianity. But most authorities agree that deep religiosity is an essential part of his life and work. There was no doubt a large element of paganism in the mysticism of nature that was then becoming widespread, and that powerfully affected him too; Paracelsus himself admits this. But in his view this kind of mysticism is no more and no less pagan than everything that is natural, everything that is steeped in transient materiality. And we remain pagan as long as we absolutize all this, conceive of it as independent, as severed from the Creator, and deal with it as such. But if it is considered in a meaningful relation to the divine world order, it leads to knowledge of the miraculous works of God.

The fascinating and profound concept of the "light of nature" which the world gives forth as its inner radiation and which is manifested in man as self-revelation of nature, as the gift of consciousness, of the natural faculty of understanding, is only of secondary importance for Paracelsus. Just as human consciousness is sustained by the spiritual spark of divine knowledge, of the immortal light in us, so the light of nature is "kindled" by the light of the Holy Ghost. The light of nature shines to the end that man may "know" in its reflexion, and thus prepare himself to "be absorbed into grace" (Strunz). Goethe's *Faust* concurs: *Wenn Natur dich unterweist, dann geht die Seelenkraft dir auf* ("If nature is your teacher, your soul will awaken"). Paracelsus' animation of nature ("the forces of nature

Augsburg: Heynrich Steyner, 1536.

around me reveal themselves with a mysterious urge") is not animism, and his spiritualization of nature is not pantheism. For the authentic Christian principle of Paracelsus' philosophy is that God's spirit breathes in all created things but indirectly, through the light of nature; only in man does it also live directly, outside the natural light, in the immortal body, which is the very centre of his soul. If we thus bear in mind the whole of this Paracelsian conception and take cognizance of its full scope, we shall be deeply impressed by its greatness and logical consistency from a Christian point of view. We may in the strictest sense call it "catholic," i.e., all-embracing, universal.

True, in matters of dogma, as in everything else, Paracelsus was self-willed, independent, and often even rebellious. In all his relations with authority and tradition he was a "protester." But it was perhaps this very peculiarity of his character that prevented him from becoming a follower of Luther, as many others did at that time. His rebellious nature led a number of eminent Protestants to hope that he would fight on their side. It seems that they even vied with one another for his adherence. But Paracelsus avoided all purely denominational concerns. He was interested only in what lies deeper, in the pure roots of religion. And this, he thought, could never be found within the formalism of earthly institutions. He yearned for a renewal of the church, for a spiritualization and internalization of Christianity. He was forever lashing out, with characteristic impetuosity, against the church's emphasis on ritual, against its alleged rigidity and narrow-mindedness. He stormed against the conceit, the pomp, and the worldly preoccupations not only of his professional colleagues but also of the church dignitaries, and he never wearied of propagating his own conception of the "original gospel," which knows only love, charity, poverty, and humility. He believed in a Christianity of good works, whose communicants would give themselves entirely to the simple stream of faith that flows in every humble heart, and would let all their actions

spring from this source. "Faith without works is dead," he repeated time and again. God does not rejoice in ceremonies, he insisted, but in pure hearts. The sincerity of this conviction is demonstrated by Paracelsus' own life. Although he was poor, harried, and tormented throughout his career, no one ever asked his help in vain. No labour seemed to him excessive when his fellow man was in need of him. In his testament he provided that his few belongings be given to the poor. One is strangely moved in reading a list of the objects he left behind—a few gulden, a few pieces of clothing, some trinkets, a Bible concordance, a copy of the Holy Scriptures with the commentaries of St. Jerome, an edition of the New Testament, a pharmaceutical compendium, and a *Collectanea Theologica*. They form a truly impressive contrast with the tremendous richness of his works.

Equipped with an exploring mind, an unprecedented power of integrating vision, an ardent soul full of faith and helpfulness, and animated by a fanatical consciousness of his calling, Paracelsus began to practise his profession when he was barely thirty years old. He was eager to harness his energies, to carry out in practice the ideas that he had found to be correct and good, and to make a place for himself among men. Is it surprising that he encountered great difficulties? That he reaped mistrust, enmity, and slander? That he remained all his life solitary and self-sufficient, a rolling stone? His fellow men saw only the superficial, disturbing aspect of him; and because the unusual has at all times aroused irritation and resistance, Paracelsus, like countless other great men, was misunderstood and persecuted. But, as he says prophetically, as though referring to himself: "Only he who has known defeat can achieve victory. He who remains alive cannot be victorious, because he has never been smitten. Only he who has been smitten, carries off the victory. He alone has

stood his ground." And he also says: "When I am dead, my teachings will live."

His first attempt, in 1525, to gain a foothold as a physician in Salzburg, the old and venerable city of princes, ended in failure perhaps not without justification he was suspected of having made common cause with the ringleaders in the Peasant War, and was compelled to leave in haste. In 1526, after a number of brief visits to Ingolstadt, Munich, Neuburg, Tübingen, Rottweil, Freiburg, Baden-Baden, and other towns, he settled in Strassburg, this time, as he thought, for good. He was inscribed in the city register as a surgeon, and in accordance with the regulations in force at the time, became a member of the guild of grain merchants and millers. But it was not his fate to lead an orderly burgher's life. Less than a year later, following a call from Basel, he was again on the move. Now at last the upward path seemed open to him. But again it was only a pipe dream. Basel was indeed to be the scene of his greatest tragedy. Here his outward career suffered the grave and abrupt setback from which he never recovered. Only for a short time did he enjoy the worldly fame that his academic position brought him. The treatment by which he succeeded in curing the famous Basel printer Johannes Froben, who had suffered an apoplectic stroke, covered his name with glory. Paracelsus, who was fundamentally asocial, who had wandered from place to place on the highways, who had grown up in a peasant milieu ("By nature I am not subtly spun, nor is it the custom of my native land to accomplish anything by spinning silk"), now suddenly found himself surrounded by an ardent and refined intellectual life. In the home of the artistic printer he met the best minds of the city, among them the brothers Basilius and Bonifatius Amerbach; Oecolampadius, the city pastor and leading Lutheran; Holbein, the greater painter; and Erasmus of Rotterdam, who wrote in a letter of thanks for his medical advice: "I recognize the deep truth of your

mysterious words not by any knowledge of medicine, which I have never studied, but by my simple feeling . . .”—quite a flattering admission from the mouth of one of Europe’s most eminent humanists.

In 1526, the municipal council of Basel appointed Paracelsus city *physicus*, and this carried with it the post of *ordinarius*, or professor at the university. He was relieved from urgent daily cares, and every opportunity seemed open to him—he had as many patients as he could desire and no end of ambitious students to whom he could transmit his knowledge.

In the announcement of his lectures he wrote: “My proofs derive from experience and my own reasoning, and not from reference to authorities.” And in another passage: “It seems imperative to bring medicine back to its original laudable state, and, aside from striving to cleanse it of the dregs left by the barbarians, to purify it of the most serious errors. Not according to the rules of the ancients, but solely according to those which we have found proved by the nature of things through practice and experience. . . . It is not title and eloquence, nor the knowledge of languages, nor the reading of many books, however ornamental, that are the requirements of a physician, but the deepest knowledge of things themselves and of nature’s secrets, and this knowledge outweighs all else. . . . The physician’s business is to know the different kinds of disease, to understand their causes and symptoms, furthermore to prescribe remedies with discernment and perseverance, and according to the special circumstances to help everyone as much as possible. . . . By way of introducing the students to my own methods, I shall now be able, thanks to the generous appointment of the Basel authorities, to explain for two hours daily the manuals of practical and theoretical therapeutics, and of internal medicine and surgery, of which I myself am the author, with the highest diligence and to the great benefit of my listeners” (quoted by Betschart). Among the subjects of lectures that he announced for the summer

term of 1527 were the following: "(1) Propositions on internal diseases and their remedies—stomach and bowel troubles, worms, epilepsy, consumption, rashes, gout, asthma, fevers, headaches, disorders of the womb, toothache, ailments of the eyes and ears. . . . (2) Lessons on general pharmaceutics and prescription of remedies. General introduction into special pathology and therapy. (3) On the treatment of external wounds, injuries, furuncles, ulcers, swellings, growths. (4) During the vacations, particularly the dog days, special lectures on diagnosis by pulse and urine, on purges and blood-letting, an interpretation of Hippocrates' aphorisms and commentaries on Macer's *Herbal*" (quoted by Sticker). There is no doubt that this document reveals tireless intellectual effort and much new, independent, and often revolutionary thinking.

Not only in his content, but also in his form Paracelsus overthrows all traditional ideas. His purpose is to prevent the pruning of all spontaneous growth, "the mutilation of young trees," as he calls it, and to make room for new shoots. In defiance of all tradition, he lectured in German instead of Latin, thus arousing scandal and opposition. True, he was not an orator, and he himself maintained that "I cannot boast of any rhetoric or subtleties, but I must speak in the language of my native country, for I was born in Einsiedeln, a Swiss by nationality." But the ardour of his inner conviction lent him magical power. His assault against established customs, his seeming conceit, his exuberant and self-assured manner of speech—it was in Basel that he seems to have coined his proud motto, *alterius non sit qui suus esse potest*—made him unpopular. But the opposition he encountered only increased his will to assert himself. He was suspected of not having a genuine doctor's title, of being a charlatan; but this made him even more aggressive and violent. He became the butt of all manner of attacks. A lampoon ridiculed him as "Cacophrastus." He retorted with greater passion and fury, answering every word of abuse by sharper abuse. Deeply wounded as a

scientist and man of honour, he could no longer control his irritation. He stormed against every consecrated custom, ridiculed the solemn official dress, the vanity, the "obsolete theorizing and speculations," the sophistry, of his colleagues. He lashed out against all past and present venerable teachers of medicine, called them chatterers, bunglers, fakers, liars, cheats, quacks, and even murderers and thieves. He publicly cast Avicenna's classical book on medicine into the bonfire which the students made in the marketplace on St. John's Day, "so that all this misery may go in the air with the smoke." Nor did he find a single redeeming quality in the apothecaries, whom he regarded as cheats and profiteers. Angered because he had allegedly been swindled out of his fee by the Canon of Basel, and rebuked by the court, he thundered threats in a lampoon against the judiciary, and what was even more unpardonable, he went so far as to attack the town fathers, his own superiors, excoriating them for their bias and pride. A certain bluntness was not at all unusual in the polemics of the day; but Paracelsus exceeded all permissible limits. His mood is made clear in the famous passage from his preface to *Paragranum*: "Avicenna, Galen, Rasis, Montagnana, Mesue, and others, after me, and not I after you! Ye of Paris, ye of Montpellier, ye of Swabia, ye of Meissen, ye of Cologne, ye of Vienna, and those who dwell on the Danube and the Rhine, ye islands on the sea, thou Italy, thou Dalmatia, thou Sarmatia, thou Athens, ye Greeks, ye Arabs, ye Israelites, after me, and not I after you! Even in the remotest corner there will be none of you on whom the dogs will not piss. But I shall be monarch and mine will be the monarchy, and I shall lead the monarchy; gird your loins! . . ."

After less than a year of public teaching—he held his chair from March 16, 1527, to February 15, 1528—he had only enemies in Basel. The whole town surged against him in one great wave of hatred, which washed him away. The authorities issued a warrant for the arrest of the unruly professor; but he had vanished under cover of night. Once

again he sought a home on the highway, his truest companion.

His respectable existence and his academic career were ended for good. A new period of wandering began. But it no longer led him to outward brilliance; only his inner light grew more intense with each new disappointment. Paracelsus became more and more "homeless." No place could hold him longer than a few months, and in most towns he stopped for only a matter of days.

Fleeing from Basel he sought refuge in Colmar. His friend Laurentius Fries received him hospitably. But host and guest diverged in their scientific views, and soon parted company. In 1529, Paracelsus, after countless other stations, was in Nuremberg, where his dammed-up energies found release in a large number of writings. In 1530, however, he was on the move again. This time he travelled southwards. In Beretzhausen he gave himself a short respite, which proved significant for his work; for it was here that he wrote his *Paragranum*. Then he journeyed on to Regensburg, and in 1531 to St. Gallen, where he stayed with Johann von Watt, called Vadianus, mayor and city physician, to whom he dedicated *Paramirum*, another of his fundamental works. Here, and during his extensive wanderings in the canton of Appenzell, which led him to his native village of Einsiedeln, Paracelsus seems to have undergone his deepest spiritual experience. It was here that the way of the hermit took possession of him to the depth of his being, never again to relinquish him. With this period are associated the more than a hundred religious treatises, filled with yearning for God, in which he approached the ultimate metaphysical problems. In his youth Paracelsus, led by curiosity and thirst for knowledge, had turned his eyes earthward, but now, at the age of thirty-eight, he deliberately turned his gaze to the transcendent realm. The stone church of Einsiedeln, which in a sense had presided over his birth, had assumed greater transparency and luminosity

of outline, and had developed into a world shrine. But in the same period, Paracelsus turned away from the world and came to look upon his earthly existence as a brief stopping place, a time of proof and trial. He felt less and less at home in his earthly life, less and less able to cope with it. In vain were all his efforts to prove the gentleness and charity of his soul to men, in vain were all his knowledge and his cures that often bordered on the miraculous. His fame spread to every land; but Paracelsus himself, the man, the weary, struggling wanderer on earth, met with hostile rebuffs, ingratitude and slander, wherever he went. Dissension and struggle, poverty and care, were his constant companions.

His life grew increasingly unsettled. He bitterly complains that he is "again despised," "for the pack that attacks me is large, but their understanding and art are small." Carried away by his own passion, pursued by the passions of his enemies, he was compelled to flee the mountains of his native canton—this time for ever. From Switzerland he went again to Austria, first to Innsbruck, then to Hall and Schwaz in the Tyrol, and then, in 1534, to Sterzing on the Brenner and Meran, which was being ravaged by the plague. He lived like a beggar or a tramp, seldom sleeping two nights in the same bed, as he states in one of his writings. In 1535 he journeyed from valley to mountain, and then back to the valley, up and down, back and forth, in a constant struggle with poverty and inner unrest. He went to the spa of Pfäfers, and proceeded by way of the Vintschgau and Veltlin to the Upper Engadine. In 1536 he was in Bavaria, in Augsburg and Ulm, where he arranged with Steyner and Varnier, two great printers, for publication of his work; in the same year his *Greater Surgery* was printed. But in 1537 he was again on his way eastward. His stations were Eferding near Linz, Chromau in Moravia, and Vienna, the imperial capital. He longed for rest and a permanent residence. He hoped for aid from Emperor Ferdinand I, to whom he dedicated some of his writings

and who seemed well disposed toward him, even receiving him twice in audience and promising him one hundred gulden to hasten the printing of his works. But again Paracelsus was disappointed. Instead of the expected material and moral aid, he received only a new addition to his bitter treasure of experience with the powerful and wealthy of this world.

Was it worth while to continue the struggle? How often did Paracelsus ask himself this question? And how deep must have been his sense of duty to his mission and his work to enable him always to conquer the "slowly strangulating failure" of his career by ever renewed surges of creation! When his continued sojourn in Vienna was made impossible by the machinations of his enemies, he went again to Carinthia. In 1538, while in Villach, he was informed of his father's death—"Wilhelm von Hohenheim, my father, who has never forsaken me," had "died and been buried" four years earlier. Now he too was lost, and Paracelsus' last earthly tie was broken. Had forebodings of his own death already cast their shadow on his heart?

He was now forty-five years of age, and he devoted himself to his work with extreme intensity. From St. Veit an der Glan, whither he had moved from Villach, he went on pilgrimages throughout Carinthia, through the mountains, vales, and lakes that he had loved in his youth. It was a kind of farewell. He felt that he had to expound his creed, to render his accounts, to defend himself; that he must again explain his beliefs and aims. Thus he composed his famous *Defensiones*, his seven pleas in his own defence, which also sum up the bitter and painful experience of a man who reaches the summit only to start on the downward path. To serve as a frontispiece for the *Defensiones*, he had his portrait made by Augustin Hirschvogel, an itinerant draftsman from Nuremberg, first in 1538 in profile, and a second time in 1540. These portraits would seem to disclose his true state of mind at this time. His readiness

to help his fellow man was still unabated—he never left unheeded the call of those in need, and often spent hours and days on horseback, hastening to the bedsides of his patients. His writings of this period, ardent in tone and rich in ideas, suggest no weakening of his vitality. The portraits, especially the later one, are more revealing. The carriage of the head is intended to express undaunted pride and seriousness of purpose, but the eyes are weary, lightless, and as though turned inward. Dark shadows surround them, and his sunken cheeks are seamed with suffering. The tense energy with which his hand clutches the pommel of the sword seems to express convulsive will rather than firm grasp. The millstones of life have worn down the radiance of triumphant vitality. It is only noon, but already the mists of night are descending.

Hardly a trace has been preserved of the last three years of his life. The great silence into which he was soon to enter spread slowly around him. A trip to the Salzburg region via Breslau and Vienna, a written consultation, a visit to the Wolfgangsee—these are all that is known. He was gravely ill. Would he otherwise have declined to visit a patient in Pettau, "because of his weak body," as he wrote in his letter to Baron Sonneck? Had he not always shown his readiness to serve the sick? It seemed as though fate were fastening the last shackles on this "wayfarer," as he called himself. From August, 1540, following a summons of Archbishop Prince Ernst of Bavaria, he was again in Salzburg, the beautiful old episcopal see on the Salzach. As he dwelt in the corner house on the "Platzl," where a tablet today honours his memory, the River Salzach flowed beneath his window like the stream of life; as he gazed heavenward, his eyes met the towering fortress of Hohen-salzburg. Here in Salzburg he may not have found it difficult to gather his thoughts and to prepare for the great last journey.

The harvest was ready for reaping. On September 21,

1541, at noon, he suffered the last stroke. Opinions differ as to whether it resulted from a cancer of the liver or from atrophy of the kidneys. His sickness must have come upon him suddenly, for he suffered the stroke at the Inn of the White Horse, which he was never again able to leave by his own strength. There, in "the little room," sitting on a "cot," on St. Matthew's Day, "the twenty-first of the month of September"—that is, three days before his death—in the presence of Master Kalbsohr, the sworn imperial public notary, and several witnesses, he dictated his testament, "sound in reason, mind and spirit." The man who had always rebelled against tradition and order made a formal will, in order that each should be given what belonged to him. For now he was about to appear before the eternal judge, the supreme physician, and at this point self-made laws were no longer applicable. At this point, the cycle must be completed, and the tragic earthly struggle of perishable human nature with the eternity of divine nature must be renounced.

Paracelsus' will is a moving document of his true humility and humaneness. The five points that it comprises are permeated by the genuine Franciscan spirit. He begins by committing "his life, and death, and his poor soul to the shield and protection of Almighty God, in the steadfast hope that the eternal mercy of God will not allow the bitter sufferings, the martyrdom, and death of our Saviour, Hallowed Lord Jesus Christ, to be fruitless and of no avail to him, a miserable man." He goes on to provide for his burial place and the services to be held for the salvation of his soul, and finally he distributes his poor belongings, bequeathing a few gulden to each his friends and relatives in Einsiedeln. But as his universal legatee he appoints "the poor, the wretched, and the needy people who have no stipend or other provision made for them."

On September 24, 1541, when he was barely forty-eight years old, the light of nature was extinguished in his soul. The path of knowledge came to its end. But the eternal light

which burned in this soul returned to God—as Paracelsus hoped unshakably on his deathbed—to its true dwelling place, to shine more brightly, and “experience joy upon joy, eternity upon eternity.”

Paracelsus the man, who began his career interpreting God’s commandments independently, but who in his innermost heart turned more and more to the laws of Christ, ended as a faithful son of the church and on his deathbed humbly asked for the sacraments, in order to be worthy of salvation. *Vitam cum morte mutavit*—“He exchanged death for life”—states the inscription engraved on his tomb in the cemetery of St. Sebastian in Salzburg, where he found his last resting place among the poor of the almshouse.

About the intimate life of Paracelsus we know even less than about the external vicissitudes of his existence. He himself tells us nothing of his personal affairs. Of simple, human or all-too-human matters, of his parents, friends, and his relations with women, or of himself as a private individual, nothing or next to nothing is said in all his copious writings. His friends are also silent on this score. The few extant references to his way of living, his excessive love for wine, the fears which allegedly made him keep his sword at his side even at night, his aversion to the other sex, are probably the malicious inventions of pupils or colleagues who for one reason or another became hostile to him. He could hardly have had much time for worldly pleasures, and as a rule he had insufficient money. Always on the way, always giving comfort and aid to those in need, driven to his experiments by his urge for knowledge, or absorbed in colloquy with his God, he may well have expended all his strength in pursuit of his mission. His life, his will, his internal driving force, were devoted only to his work. In his writings he often expresses the belief that not every man should have wife and children. For after his prophets and apostles, Christ also appointed his disciples

or stewards—these are, first and foremost, the physicians—and it is their most sacred duty to follow their mission.

Paracelsus' work reveals not only a titanic energy, but also a deep sense of duty to his calling. This work exhausted Paracelsus the man, prematurely consumed his vital energies. Having burst open the prison of his body, his work stands before us with all its contradictions and its marvellous diversity, as an independent, self-sufficient world. Aside from the enormous purely technical and intellectual achievement that it represents, it is also unique in its creative plenitude and passionate ardour. It pours out of him like glowing lava from a fire-spitting volcano, first flooding and burning all old traditional values, and then turning into fertile soil for even richer growth. The volumes thus far published of the Sudhoff-Matthiessen edition comprise more than 8,200 pages.* A number of other works have been lost, and several others are still in manuscript awaiting publication. Paracelsus' written works treat of every domain of life and knowledge. To attempt even briefly to discuss them as they deserve would be to go far beyond the framework of this biographical note. Here we shall merely attempt to cast some light on a few points. The following attempt to arrange his work in articulated segments is undertaken for the sake of greater clarity; it also corresponds to the chronological order.

Until 1525, Paracelsus was chiefly preoccupied with medical and therapeutic problems. Before that year, he wrote his eleven treatises on various diseases, such as dropsy, consumption, colic, apoplexy, worms; a number of works devoted to gout and the tartaric, or stone, affections; as well as the *Herbarius* and other treatises on *materia medica* and mineral springs. To the same early period, however, belong "On the birth of perceptible things in reason," *De generatione hominis* ("On the origin of man"), and *De morbis*

* A list of the contents of this edition will be found in the Key to Sources, pp. 307ff.

amentium ("On the diseases that deprive man of reason"). Though these works embody his first anthropological and philosophical insights, they still suggest the earthliness characteristic of his youthful mind.

In the following years, from 1526 to 1528, which include the period of Paracelsus' academic activities in Basel, the medical element is still predominant. The range of the medical subjects treated is astoundingly wide, comprising surgery, internal and external diseases of all kinds, and the preparation of the most complicated drugs, often involving the art of transforming metals and minerals. Within the same period falls his most important early work, the *Nine Books of Archidoxus*, a manual of the secret remedies, their virtues and forces. This work contains in germ all the mature knowledge of the most deeply hidden causalities of nature, which Paracelsus would later reveal. At about the same time he wrote *De renovatione et restauratione* and *De vita longa*. Both of these are "books of initiation" into the secret knowledge of death and rebirth and are already permeated with the symbolism of hermetic alchemy. With them, Paracelsus, then barely thirty years of age, enters the multiform realm of the Mothers. And in *De vita longa* he states the creed that gave substance to his life in the words: "The striving for wisdom is the second paradise of the world."

Feverish activity filled the next years, in which Paracelsus strove to effect a complete transformation of medical theory and practice. Disappointed by what he had seen of contemporary medical knowledge, Paracelsus rejected all tradition lock, stock, and barrel; relentlessly he attacked the old "humoural medicine" and lashed out against his colleagues who clung to anatomy, "the dead carcass," instead of considering the living body as a whole. He now wrote his treatises on open wounds, on smallpox, paralysis, tumours, cavities, etc., the *Three Bertheonei Books* ("The Little Surgery"), and his basic contributions, written in Nuremberg, to the study of syphilis. But the "purified monarchy"

of medicine, as he calls it, did not seem to welcome his drastic methods, for only a negligible part of these writings found a publisher. Through the intervention of the university authorities, the printing of his book *On the Origin and Derivation of "the French Disease,"* and of others of his works, was forbidden. The world refused to listen to new ideas; officials and dignitaries were just what they have always been. "Whoever stands up against you and tells the truth must die," Paracelsus observes in bitter disillusionment. But such bitterness is not his only or even his predominant attitude. The childlike enthusiasm and piety of his German romantic soul inspire yet another answer, which can be found in his preface to the *Book of Hospitals*, dating from 1528/29. "The supreme reason for medicine is love," he writes. And: "The main substance of the art lies in experience and also love, which is embodied in all the high arts. For we receive them from the love of God and we should give them with the same love."

From 1530 to 1534, Paracelsus was at the height of his creative activities. Although all of his previous writings have a philosophical and metaphysical substratum, the two great books dating from this period, the *Paragranum* and the *Paramirum*, display for the first time the full brilliance of his powerful philosophical vision. In their completeness, they are among the best and most characteristic Paracelsian writings; they are also his best known works. Following his disappointments in Basel and Nuremberg, he intended *Paragranum*—this is shown by its whole tenor—as a settlement of accounts and at the same time as a solemn statement of principles. After several sketchy attempts, Paracelsus in this book formulates "the principles of true medicine" in a grandiose and sharply articulated system. "But because I am alone," he pleads, "because I am new, because I am a German, do not scorn my writings, do not let yourself be drawn away from them." And driven by his anger, but also lifted by his self-assurance, he adds: "That you may henceforth understand me rightly, how I establish the foundations

of medicine on which I rest and will rest, namely in philosophy, namely in astronomy, namely in alchemy, namely in virtue! But just as I myself take these pillars, so you must take them, and you must follow me, not I you!"

Thus the four main pillars upon which he founds his medicine are: philosophy, the science of the material and elemental aspect of creation; astronomy, the science of the sidereal aspect of creation (these two disciplines in their interrelations and their essence are the prerequisites for penetrating the structure of man, who is a microcosm exactly corresponding to the macrocosm, or the whole of creation); alchemy, the science of these natural phenomena and of their inner meaning; virtue (*proprietas*), the fourth pillar, which gives the physicians the support without which the other three could never be solid. In line with his earlier *Opus Paramirum*, in which he describes the five *entia*, i.e., disease-causing active principles—*ens veneni*, *ens naturale*, *ens astrale*, *ens spirituale*, and *ens deale*—Paracelsus now wrote *Volumen Paramirum*, giving a fundamental anthropological analysis of man's structure. Here he expands his thesis on the four basic elements of man and cosmos (water, earth, fire, air) and the three basic substances (sulphur, mercury, and salt); he unfolds all the aspects of his doctrine on the nature of the Matrix, the Womb (here he discusses all the problems of man and woman, sexuality, and related diseases); and he delves into a number of psychic phenomena and diseases.

He often approaches the most recent insights of the modern psychology of the unconscious, and just as his pharmaceutics makes him a precursor of modern chemotherapy, he may well be regarded also as a pioneer of modern psychotherapy. His faith in the "healing word," in the radiating efficacy of the physician's personality, is part of the modern psychologist's indispensable stock-in-trade. But since in Paracelsus each insight is ultimately rooted in ethics and religion, all these questions lead him back to God and the primordial problems of good and evil—he sees each

disease as a conflict between good and evil. In his view the material-elemental body cannot sin, but only the sidereal body, i.e., the soul. Accordingly, only the soul, or its immortal spiritual part, is subject to the last "judgment" and thus has a hope of resurrection. Good and evil are powers created by God, realities, which man must take into account, and which therefore the physician must know thoroughly. Good fortune and good health reside in the just measure and in a harmony that accords with the law of creation: the destruction of this harmony and proportion brings degeneration and disease in its train. Thus Paracelsus' views lead back to the Platonic conception that harmony, beauty, the Good, and the True are identical. Besides these two important books, the writings of this period include treatises on hysteria (*Von den hinfallenden Siechtagen der Mutter*), on falling sickness (*Von den hinfallenden Siechtagen*), on the comets, on the plague, on the mineral springs of Pfäfers, and numerous other minor works. Though they contain many pearls, they seem little more than ornaments surrounding his crowning work.

Paragranum and *Paramirum* are a complete exposition of ideas that had matured for a long time; thus they conclude a period in Paracelsus' development. At the same time, they point ahead to his increasing concern with the problems of the absolute. To this field of knowledge Paracelsus devoted himself wholeheartedly, as is shown by the above-mentioned theological writings, numbering 123, which constitute more than half of all his works. These date from the years around 1533 and reflect a crucial turning-point in his life. Most of them have not yet been published; a small number were included in the first volume of the second part of the Sudhoff-Matthiessen edition, which, it is planned, will have approximately ten more volumes. Of these we shall mention the treatises *De religione perpetua*, *De summo bono et aeterno bono*, *De felici liberalitate*, and *De resurrectione et corporum glorificatione*, which all exist in German, and especially *Vita beata* ("Book of the beatific life"), which is among

the most moving professions of a pure soul. In these works Paracelsus displays an extraordinary knowledge of the Scriptures and of Catholic liturgy. The preface to his *Libell über die Pest* ("Pamphlet on the plague") bears the proud signature "Theophrastus von Hohenheim, professor of Holy Writ, doctor of the two medicines." The treatises on the Last Communion, on the Holy Mother of God, on the Gospel of St. Matthew, on the dogma of the Trinity, etc., demonstrate a truly fanatical preoccupation with the material. With typical Paracelsian self-wilfulness, they attack the official doctrine of the church, but in the depth of the sentiment that speaks from them, and the earnestness that inspires them, they are nevertheless documents of a marvellous religious ardour which will leave no reader indifferent. The spirit of the miracle of the Pentecost breathes in every line of them.

Having talked at length with his God and apparently recovered some peace of soul, he again turned to medical fields. The problems previously treated in his *Three Bertheonei Books* regained his attention, and the studies he now undertook resulted in the *Books of the Greater Surgery*, published in two successive editions in 1536 and 1537. Designed on a grandiose scale, the *Greater Surgery* covers this whole important field, and even today is a treasure trove for the surgeon. This was the only great publishing success of his life. His contemporaries, who otherwise showed so little understanding of his work, now listened with approval. Apart from this one, his only works to meet with no opposition were his numerous "prognostications." Such "forecasts" were in great vogue at that time, and presumably Paracelsus composed them to earn some money, but also in part no doubt because he found in them an appropriate vehicle for his admonitions and tirades, as we can see from his interpretation of the *Papstbilder* and the *Figuren des J. Lichtenberger*. In any event it would be erroneous to consider them as predictions of the future in the usual sense, even though Paracelsus, thanks to his

mantic and intuitive gifts, might have been able to forecast or surmise some aspects of the future. These prognostications, as well as his so-called *Practica*, which were circulated with calendars, bear little relation to the main body of his works, although they include many profound thoughts.

But Paracelsus no longer sought security on earth or the approval of men. And even medicine was now for him only a stage on the path to the supernatural. Soon he left its tangible domains and returned to the realm of the incomprehensible. Words at best can give only a veiled notion of the adventure upon which he now embarked. He attempted to order and record what his inner eye had seen and experienced in the many years of his struggle against the world and the super-world. The accumulated material was elaborated in 1537 and 1539; today it forms a volume of more than five hundred closely printed pages. He called this work *Astronomia magna, or the Whole Sagacious Philosophy of the Great and Small World*. Any attempt to sum up the content of this unique book in a short sketch would expose it to incomprehension and misunderstanding. Only the deepest absorption in it can help one to understand it. It is a most mysterious work and presents the most mature and the ultimate of Paracelsus' cosmological and anthropological insights. Soaring on the wings of a magical and artistic spirit, it evokes and formulates the subtlest essential problems of being. The cosmosophic philosophy herein embodied is conceived as a guide to the supreme initiation into the mysteries of God and nature.

To give a glimpse of the immense range of this work, we shall briefly quote the titles and topics of some of its sections, in which, as he observes in his preface, he describes the "action of the internal heaven" with help "of the spirit that emanated from the Father." The "nine members" into which he divides his "sagacious philosophy" are: *Magica* (on will power); *Astrologia* (on the spiritual influences and their reactions); *Signatum* (on the knowledge of the inner essence as obtained through outward signs); *Nigro-*

mantia (on apparitions); *Necromantia* (on second sight); *Artes incertae* (on the arts of the imagination and inspiration); *Medicina adepta* (on the occult science of supernatural cures); *Philosophia adepta* (on the wisdom of alchemistic skill and contemplation based on the science of the supernatural); *Mathematica adepta* (on the science of occult relations, geometry, cosmography, measures, weights, numbers).^{*} This is the first of the four books; the others encompass even more out-of-the-way domains under similar headings, and offer the ultimate, most occult knowledge of diabolical and divine things. He who possesses this knowledge has discarded the fetters of materiality while he is still here on earth.

With *Philosophia sagax*, Paracelsus reached the pinnacle of his work. His *Occulta philosophia* and *Archidoxis magica* attack the same themes and elaborate them in a still more sibylline manner; they are hermetic writings to which we have lost the key. After this final survey from the heights, which he made at the age of forty-five, and after which he began his descent into the valley of the beyond, he produced several minor but only two major works—the *Defensiones*, his passionate apologia, and the *Labyrinthus medicorum*, a last admonition and warning. Then he lost himself in the pathless realm of mysteries which can no longer be expounded in writing.

It is impossible to draw an exact picture of the doctrines that inspired Paracelsus; without doubt he was to some extent influenced by the Neoplatonists and the early Gnostics. Numerous alchemists, philosophers, and physicians, among them Agrippa von Nettesheim and the famous Abbot of Sponheim, as well as the surgeons Hieronymus Brunschwig and Hans von Gersdorff, are often named as his teachers. Paracelsus himself deeply influenced the intellectual development of the following centuries. German mystics and romantics, from Gerhardus Dorn and Jacob Böhme to Novalis, were moved by his profoundly mystical

* Titles as quoted by Sticker.

writings. Separate works of Paracelsus were published shortly after his death by Adam von Bodenstein and Johannes Huser, but the first complete collection appeared only fifty years after his death. Since then they have on countless occasions been violently attacked and passionately defended, and subjected to arbitrary interpretations. But in the spiritual life of mankind, it has always been a small group that has held up the torch of the spirit. It is this group that carries it through centuries, from generation to generation. To this small group Paracelsus belongs.

A restless wanderer for whom the earth was but a place of sorrow—such is the figure of Paracelsus as he is known to us. Compressed within a short span, station follows station, place follows place, and the breath-taking journey never ends. Beset by inner and outer tribulations, this man stands before us in all the precariousness of his earthly existence, and his struggle becomes the symbol of the struggle between darkness and light. Paracelsus has repeatedly, and rightly, been described as a true example of the Faustian man. A genuine European in his unquenchable urge for knowledge, torn asunder and yet magnificently whole, he might have said with Faust:

*Und was der ganzen Menschheit zugeteilt ist,
Will ich in meinem innern Selbst geniessen,
Mit meinem Geist das Höchste und Tiefste greifen,
Ihr Wohl und Weh auf meinen Busen häufen,
Und so mein eigen Selbst zu ihrem Selbst erweitern,
Und, wie sie selbst, am End' auch ich zerscheitern.**

History reveals many curious coincidences, and it is perhaps something more than accident that made Georg

* [. . . all that's dealt
The heart of man, all, all that men have felt,
Shall throb through my heart with an equal throe.
I'll grapple the great deeps, the heights above;
Upon my head be all men's joys and griefs;
So to their stature my sole self shall grow
And splinter with them on the roaring reefs.

—Trans. by G. M. Cookson.]

Sabelicus, on whose life the Faust legend was based, a contemporary of Paracelsus. In the place where myths are born, Paracelsus and this "original Faust" have long since been inseparably linked. According to an old Transylvanian legend, Paracelsus, when aged, made a pact with the devil in order that he might become a young man again. According to another legend (and this is one of the paradoxes attending the figure of Paracelsus) his tomb, like that of a saint, became in times of great stress—for instance, when the cholera was raging in Europe—a miraculous place of pilgrimage, whither thousands upon thousands of people went to pray. Even the manner of his death was not untouched by rumour. One story has it that his enemies hurled him from a cliff after he had eaten a luxurious meal; another that he threw himself down a flight of stairs in a state of heavy drunkenness; a third even speaks of violent death by a mysterious poison made of diamond powder. Other legends—for it is characteristic of fairytales to contradict one another—make him immortal, endowing him with supernatural knowledge and the secret of eternal life. For how could this Paracelsus, who allegedly transformed brass coins into gold, who called the philosophers' stone his own, who possessed all the rejuvenating essences, who had commerce with witches and nymphs, who could resurrect the dead and who was able to perform his endless journeys only because he rode a white horse given him by the devil in person—how could this wonder-worker be mortal like any common man?

And the truth is that he did not die. The unity of his conception of the world corresponded to the integrity of his being. Like every true genius, he himself was a free cosmos obedient only to his own law, and ultimately subject only to the commandments of God. And because every totality is infinity and transcends space and time, Paracelsus has always stood outside time. Of this his immortality is only a symbolic expression. The bold sentence from *Paragranum* which he hurls against his adversaries—"But

I shall put forth leaves, while you will be dry fig trees"—has come true. He stands like a tree with spreading branches, and with each year that passes the leaves he puts forth seem richer and greener. Always and everywhere living and active in his power to fructify our souls, he is still living among us today. And because fundamentally the living can be revealed only in itself, and only to those whose intuition is receptive to it, let his own words, as transcribed in the following pages, bear eloquent witness to his living greatness.

C R E D O

C R E D O

I am different, let this not upset you.

I/12, 403°

I am writing this to prevent you from being misled in any point; please read and reread it with diligence, not with envy, not with hatred, for you are students of medicine. Also study my books, and compare my opinions with the opinions of others; then you may be guided by your own judgment.

I/8, 158

I have thus far used simple language, and I cannot boast of any rhetoric or subtleties; I speak in the language of my birth and my country, for I am from Einsiedeln, of Swiss nationality, and let no one find fault with me for my rough speech. My writings must not be judged by my language, but by my art and experience, which I offer the whole world, and which I hope will be useful to the whole world.

I/10, 199

By nature I am not subtly spun, nor is it the custom of my native land to accomplish anything by spinning silk. Nor are we raised on figs, nor on mead, nor on wheaten bread, but on cheese, milk, and oatcakes, which cannot give one a subtle disposition. Moreover, a man clings all his days to what he received in his youth; and my youth was coarse as compared to that of the subtle, pampered, and over-refined. For those who are raised in soft clothes and in women's apartments and we who are brought up among the pine-cones have trouble in understanding one another well.

I/11, 151-52

To begin with, I thank God that I was born a German, and praise Him for having made me suffer poverty and hunger in my youth, and I rejoice when the day's labour is over and I can rest. I also thank God that He so kindly

* References so printed relate to the source, in the Sudhoff-Matthiessen edition, of the paragraph or paragraphs they follow; to wit, the source here is to be found in Part I, volume 12, page 403, of that edition. See pp. 307ff. for key.

commended me to the Virgin, under whose wings I am protected by the Holy Trinity.

I am resolved to pursue the noblest and highest philosophy and to let nothing divert me from it. . . . I shall not be concerned with the mortal part of man, and I shall meditate only upon that within him which does not die; for that is what we hold to be the highest philosophy.

Ever since my childhood I have pursued these things and learned them from good teachers, who were thoroughly grounded in *adepta philosophia* and well versed in the arts. First, from Wilhelmus von Hohenheim, my father, who has never forsaken me, and later from a great number of others whom I shall not name here, also from many writings of ancients and moderns of diverse lands, who laboured mightily.

For many years I studied at the universities of Germany, Italy, and France, seeking to discover the foundations of medicine. However, I did not content myself with their teachings and writings and books, but continued my travels to Granada and Lisbon, through Spain and England, through Brandenburg, Prussia, Lithuania, Poland, Hungary, Wallachia, Transylvania, Croatia, the Wendian Mark, and yet other countries which there is no need to mention here, and wherever I went I eagerly and diligently investigated and sought after the tested and reliable arts of medicine. I went not only to the doctors, but also to barbers, bathkeepers, learned physicians, women, and magicians who pursue the art of healing; I went to alchemists, to monasteries, to nobles and common folk, to the experts and the simple. . . . I have oftentimes reflected that medicine is an uncertain and haphazard art scarcely honourable to practise, curing one, and killing ten. . . . Many times I abandoned medicine and followed other pursuits, but then again I was driven back to it. Then I remembered Christ's saying: The healthy need not a physician, but only the sick. And so I made a new resolve, interpreting Christ's words to mean that the art of medicine is true, just, certain,

perfect, and whole, and there is nothing in it that should be attributed to the deception of spirits or chance, but that it is an art tested in need, useful to all the sick and beneficial in restoring their health.

I/10, 15-20

This is my vow: To perfect my medical art and never to swerve from it so long as God grants me my office, and to oppose all false medicine and teachings. Then, to love the sick, each and all of them, more than if my own body were at stake. Not to judge anything superficially, but by symptoms, nor to administer any medicine without understanding, nor to collect any money without earning it. Not to trust any apothecary, nor to do violence to any child. Not to guess, but to know. . . .

I/8, 181

To give to each nation its own type of medicine, the theoricam best suited to it, as it behooves. For I can well realize that my prescriptions may turn out to be ineffectual among the foreign nations, and that foreign recipes may turn out to be ineffectual in our nation. That is to say, I write for Europe, and I do not know whether Asia and Africa may profit by it.

I/11, 26

There is nothing in me except the will to discover the best that medicine can do, the best there is in nature, the best that the nature of the earth truly intends for the sick. Thus I say, nothing comes from me; everything comes from nature of which I too am part.

I have been criticized for being a wayfarer as though this made me the less worthy; let no one hold it against me if I defend myself against such allegations. The journeys I have made up until now have been very useful to me, because no man's master grows in his own home, nor has anyone found his teacher behind his stove.

I/7, 154-55

I am Theophrastus, and greater than those to whom you liken me; I am Theophrastus, and in addition I am *monarcha medicorum*, monarch of physicians, and I can prove to you what you cannot prove. I will let Luther defend his cause, and I will defend my cause, and I will defeat those of my colleagues who turn against me; this I shall do with the

I/11, 141

help of the arcana. . . . It was not the constellations that made me a physician: God made me. . . . I need not don a coat of mail or a buckler against you, for you are not learned or experienced enough to refute even one word of mine. I wish I could protect my bald head against the flies as effectively as I can defend my monarchy. . . . I will not defend my monarchy with empty talk but with arcana. And I do not take my medicines from the apothecaries; their shops are but foul sculleries, from which comes nothing but foul broths. As for you, you defend your kingdom with belly-crawling and flattery. How long do you think this will last? . . . Let me tell you this: every little hair on my neck knows more than you and all your scribes, and my shoebuckles are more learned than your Galen and Avicenna, and my beard has more experience than all your high colleges.

I cannot help being indignant at your simplicity, for you do not understand the origin of surgery. To believe you, I am a surgeon and not a physician; how can you think so when everyone knows that I administered medical treatment (I am not writing this to boast of it) to eighteen princes whom you had given up? And when I have also tended innumerable persons stricken with fever, and cured them of forty kinds of disease which I found in them, in the Netherlands, in the Romagna, in Naples, and in Venetian, Danish, and Dutch wars? Is there no physician to reveal the lies of the scribes, to denounce their errors and abuses, to bring them to an end? Will you turn to ridicule the experience that I have acquired with so much diligence?

If they hate me for writing otherwise than their own authors, that is the fault of their own ignorance, not of mine. . . . The art of medicine does not cry out against me, for it is imperishable and established upon foundations so imperishable that heaven and earth shall pass away before the art of medicine shall die. And since the art of medicine leaves me at peace, why should I be perturbed by the outcries of mortal physicians, who cry only because

I overthrow and wound them? . . . They are more eager to obscure their own errors than to fight in behalf of what the patients need, that is to say, the art, erudition, experience, piety, in which I seek the foundations and sources of my own writing.

I/8, 53

But since such useless rabble befoul the art of medicine with their bungling, and seek nothing but their own profit, what can it avail that I admonish them to love? I for my part am ashamed of medicine, considering what an utter fraud it has come to be.

I/11, 148

How can I fail to be horrified that a servant should be no servant but a master? They see to their own profit and take delight in letting me starve and perish. They lie about me to the patients, they receive patients behind my back, without my will and knowledge, treat them for half the money, say that they know my art, that they have watched me do it. . . . This has been done to me by doctors, barbers, bathkeepers, students, servants, and boys—should this make me as sweet as a lamb? It seems more likely that it should end by making me into a wolf! And with all this, I must walk on foot while they ride. The only thing that comforts me is that I remain where I am, while they run away and their falsity is exposed . . . for the cheat is discredited when the truth is told.

I/11, 153-54

I have also employed barbers, bathkeepers, and others of that kind, indeed I maintained them at great cost and trusted them fully. As soon as they learned how to make a plaster, etc., they left my service stealthily and secretly and, as is the habit of deserters, claimed the praise for themselves; they did not walk but ran away from me, and boasted of having mastered excellent arts. . . . I do not say this of all my apprentices; those to whom I am not referring here I regard as experienced, but I set small store by the others.

I/7, 133

This is why I expect thanks from no one. For my medical teachings will give rise to two parties. The first will befoul them; these are not of a breed to thank God or me, but rather will curse me wherever possible. The others will

thrive so well that for sheer joy they will forget to thank me. This is the fate of the scientist—the greater his services, the greater the ingratitude . . . and not only ingratitude, but the more he teaches, the more his disciples will one day abuse him.

This has been my cross and remains my cross. . . . There has been no one to give me support and protection. For all manner of men have persecuted and accused me and obstructed my path, and discredited me, so that I have enjoyed little esteem among men; but I have rather been despised and forsaken.

I am not an apostle or anything like an apostle, but a philosopher in the German manner.

Here I have no wish to philosophize or speak of the afterlife, except in so far as this can be done in the light of nature. I await the consummation of my hope; let me first achieve my own salvation through my faith in the Saviour, and then it will be time to impart it to others.

Although I have spoken here in a heathen way, as many might think, although I called man an animal, it is not concealed from me and I know full well that the difference between man and animal lies solely in the countenance and the spirit. To this I must bear witness before God.

Why should my Father's light be judged and looked upon as heathenish, and I as a heathen, when I am a Christian and walk in the light of Christ, both old and new? . . . And since I love them both, and see the light of each, as God ordained everyone to do, how can I be a heathen? . . . I have written in the Christian spirit and I am not a heathen . . . and I would defend myself as a Christian by saying that . . . I will not be called a sorcerer, or a heathen, or a gypsy, but profess myself as a Christian in my writings, and let the false Christians sweat with their own sour dough.

Desiring to write like a Christian, I have omitted the four *entia*, i.e., the active principles of the stars, the poisons, nature, and the spirit, and I have not described them. For

C R E D O

this is not Christian style but heathen style. But the last principle is Christian, and with it I shall conclude. And the heathen conception that we describe in the four *entia* ought not to harm our faith, but only to make our minds keener.

I/1, 175-78

So I have deemed it good to describe not only the natural man . . . but also, and with more delight, to go further and describe the eternal man, the heavenly man in the new birth, so that the old man may see and observe what man is, and learn to guide himself accordingly and learn what this reborn man can do, here on earth, and after this life, in the eternal life.

I/12, 332

The time for writing is ripe, for I must spare nothing of what I have spoiled. The field has not yet been plowed: . . . the time of geometry is ended, the time of artistry is ended, the time of philosophy is ended, the snow of my misery has gone; the time of growth is ended. The time of summer is here; whence it comes I know not, whither it goes, I know not: it is herel . . . And so also is come the time to write on the blessed life and the eternal.

I/1, 82

Paracelsus
1527

Fig. 5. Signature and impression of the signet ring of Paracelsus.

Read and read again, be not discouraged, but
let the existence of so many terrifying diseases
that no one can ignore induce you to follow the
truth and not the idle chatterers. Then you will
be a righteous judge! *I/9, 382*

I

MAN AND THE CREATED WORLD

Fig. 7. Creation.

God is marvellous in his works. . . .

WHEN the world was still nothing but water, and the Spirit of the Lord moved upon the face of the waters, the world emerged from the water; water was the matrix of the world and of all its creatures. And all this became the matrix of man; in it God created man in order to give His Spirit a dwelling place in flesh.

1/9, 191

The matrix is invisible and no one can see its primal substance; for who can see that which was before him? All of us come from the matrix, but no one has ever seen it because it existed before man. And even though man comes from it, and men are born from it again and again, no one has seen it. The world was born from the matrix, as was man and all other living creatures: all this has come out of the matrix. . . . Before heaven and earth were created, the Spirit of God brooded upon the water and was carried by it. This water was the matrix; for it is in the water that heaven and earth were created, and in no other matrix.

By it the Spirit of God was borne, that is to say, that Spirit which lives in man, and which is lacking in other creatures. For the sake of this Spirit man has been created; the Spirit of God lives in man so that God need not live alone. Therefore the Spirit of God comes to dwell in man, and is of God and returns to God.

The world is as God created it. In the beginning He made it into a body, which consists of four elements. He founded this primordial body on the trinity of mercury, sulphur, and salt, and these are the three substances of which the complete body consists. For they form everything that lies in the four elements, they bear in them all the forces and faculties of perishable things. In them there are day and night, warmth and coldness, stone and fruit, and everything else, still unformed. In a piece of wood . . . there lie concealed the forms of animals, the forms of plants of every description, the forms of all instruments; and he who can carve them out finds them. Accordingly, the first body, the Ilyaster, was nothing but a clod, which contained all the chaos, all the waters, all minerals, all herbs, all stones, all gems. Only the supreme Master could release them and form them with tender solicitude, so that other things could be created from the rest.

A potter is able to make a thousand different things from his clay, which, in a manner of speaking, comprehended diverse vessels and implements; or a woodcarver is able to carve out of wood whatever he pleases provided he can separate the wood from that which does not belong to it. Thus also God took out, drew out, and separated all His creatures from one mass and material, and He left no chips in the process, and He fashioned whatever He undertook to create in six days, into His ultimate matter. He selected that which belongs to the stars and made it into stars, from the darkness He took that which belongs to light and made it into light, and similarly with each thing according to its nature and in its own place. And thus there is nothing left for anyone to create because everything was adequately

CREATION OF THE WORLD

created, and the number is filled in all the creatures, races, and beings. . . . The earth is black, brown, and foul, there is nothing beautiful or pleasant in it; but all the hues—green, blue, white, and red—are concealed in it. There is none that is not in it. When spring comes and then the summer, all the hues sprout forth, and no one would suspect their presence in the earth if the earth itself did not produce them. Just as the noblest and most delicate colours arise from this black, foul earth, so various creatures sprang forth from the primordial substance that was only formless filth in the beginning. Behold the element of water in its undifferentiated state! And then see how all the metals, all the stones, all the glittering rubies, shining carbuncles, crystals, gold, and silver are derived from it; who could have recognized all these things in water . . . except for Him who created them in it? Thus God drew out of the basic substances that which He had put into them, and He assigned each created thing to its purpose and place.

I/9, 150-51

At the beginning of each birth stood the birth-giver and begetter—separation. It is the greatest wonder of the philosophies. . . . When the *mysterium magnum* in its essence and divinity was full of the highest eternity, *separatio* started at the beginning of all creation. And when this took place, every creature was created in its majesty, power, and free will. And so it will remain until the end, until the great harvest when all things will bear fruit and will be ready for gathering. For the harvest is the end of all growth. . . . And just as the *mysterium magnum* is the wonderful beginning, so the harvest is the wonderful end of all things.

I/13, 393

Matter was at the beginning of all things, and only after it had been created was it endowed with the spirit of life, so that this spirit might unfold in and through the bodies as God had willed. And thus the days of the creation and the order of all creatures were fulfilled. Only then was man

Fig. 8. The Creation of Adam.

created in the likeness of God, and endowed with His spirit.

Man was not born out of a nothingness, but was made from a substance. . . . The Scriptures state that God took the *limus terrae*, the primordial stuff of the earth, and formed man out of this mass. Furthermore they state that man is ashes and powder, dust and earth; and this proves sufficiently that he is made of this primordial substance. . . . But *limus terrae* is also the Great World, and thus man was created from heaven and earth. *Limus terrae* is an extract of the firmament, of the universe of stars, and at the same time of all the elements. . . .

The *limbus* is the primordial stuff of man. . . . What the *limbus* is the man is too. He who knows the nature of the

CREATION OF MAN

limbus knows also what man is. . . . Now, the *limbus* is heaven and earth, the upper and lower sphere of the cosmos, the four elements, and everything they comprise; therefore it is just to identify it with the microcosm, for it too is the whole world.

1/9, 193

Heaven encompasses both spheres—the upper and the lower—to the end that nothing mortal and nothing transient may reach beyond them into that realm which lies outside the heaven that we see. . . . For mortal and immortal things must not touch each other, and must not dwell

Fig. 9. The Stages of Nature.

together. Therefore, the Great World, the macrocosm, is closed in itself in such a way that nothing can leave it, but that everything that is of it and within it remains complete and undivided. Such is the Great World. Next to it subsists the Little World, that is to say, man. He is enclosed in a skin, to the end that his blood, his flesh, and everything he is as a man may not become mixed with that Great World. . . . For one would destroy the other. Therefore man has a skin; it delimits the shape of the human body, and through it he can distinguish the two worlds from each other—the Great World and the Little World, the macrocosm and man—and can keep separate that which must not mingle. Thus the Great World remains completely undisturbed in its husk . . . and similarly man

in his house, that is to say, his skin. Nothing can penetrate into him, and nothing that is in him can issue outside of him, but everything remains in its place.

Man emerged from the first matrix, the maternal womb, of the Great World. This world—formed by God's hand along with all other creatures—gave birth to man in his flesh and placed him in a transient life. For this reason man became "earthly" and "carnal"; he received his material body from earth and water. These two elements constitute the body in its transient, animal life, which man as a natural being received from divine creation. . . . In his earthly life man consists of the four elements. Water and earth, of which his body is formed, constitute the dwelling place and the physical envelope of life. And I am not referring here to that life of the soul, which springs from the breath of God . . . but to the transient life, of the earthly kind. For we must know that man has two kinds of life—animal life and sidereal life. . . . Hence man has also an animal body and a sidereal body; and both are one, and are not separated. The relations between the two are as follows. The animal body, the body of flesh and blood, is in itself always dead. Only through the action of the sidereal body does the motion of life come into the other body. The sidereal body is fire and air; but it is also bound to the animal life of man. Thus mortal man consists of water, earth, fire, and air.

Man is the child of two fathers—one father is the earth, the other is heaven. . . . From the earth he receives the material body, from heaven his character. Thus the earth moulds his shape, and then heaven endows this shape with the light of nature. Every man takes after his father; he is able to accomplish what is innate in him. And the son is empowered to dispose of his paternal inheritance.

The world edifice is made of two parts—one tangible and perceptible, and one invisible and imperceptible. The tangible part is the body, the invisible is the Stars. The

tangible part is in turn composed of three parts—sulphur, mercury, and salt; the invisible also consists of three parts—feeling, wisdom, and art. The two parts together constitute life.

1/12, 20

The mysteries of the Great and the Little World are distinguished only by the form in which they manifest themselves; for they are only *one* thing, *one* being. Heaven and earth have been created out of nothingness, but they are composed of three things—*mercurius*, *sulphur*, and *sal.* . . . Of these same three things the planets and all the stars consist; and not only the stars but all bodies that grow and are born from them. And just as the Great World is thus built upon the three primordial substances, so man—the Little World—was composed of the same substances. Thus man, too, is nothing but mercury, sulphur, and salt.

Fig. 10. The Hermaphrodite.

1/8, 280

The body has four kinds of taste—the sour, the sweet, the bitter, and the salty. . . . They are to be found in every creature, but only in man can they be studied. . . . Everything bitter is hot and dry, that is to say, choleric; everything sour is cold and dry, that is to say, melancholic. . . . The sweet gives rise to the phlegmatic, for everything sweet is cold and moist, even though it must not be compared to water. . . . The sanguine

Fig. 11. The Man of the Zodiac.

originates in the salty, which is hot and moist. . . . If the salty predominates in man as compared with the three others, he is sanguine; if the bitter is predominant in him, he is choleric. The sour makes him melancholic, and the sweet, if it predominates, phlegmatic. Thus the four tempers are rooted in the body of man as in garden mould.

The inner stars of man are, in their properties, kind, and nature, by their course and position, like his outer stars, and different only in form and in material. For as regards their nature, it is the same in the ether and in the microcosm, man. . . . Just as the sun shines through a glass—as though divested of body and substance—so the stars penetrate one another in the body. . . . For the sun and the moon and all planets, as well as all the stars and the whole chaos, are in man. . . . The body attracts heaven . . . and this takes place in accordance with the great divine order. Man consists of the four elements, not only—as some hold—because he has four tempers, but also because he partakes of the nature, essence, and properties of these elements. In him there lies the “young heaven,” that is to say, all the planets are part of man’s structure and they are the children of the “great heaven” which is their father. For man was created from heaven and earth, and is therefore like them!

1/8, 160-64

Consider how great and noble man was created, and what greatness must be attributed to his structure! No brain can fully encompass the structure of man’s body and the extent of his virtues; he can be understood only as an image of the macrocosm, of the Great Creature. Only then does it become manifest what is in him. For what is outside is also inside; and what is not outside man is not inside. The outer and the inner are *one* thing, *one* constellation, *one* influence, *one* concordance, *one* duration . . . *one* fruit. For this is the *limbus*, the primordial matter which contains all creatures in germ, just as man is contained in the *limbus* of his parents. The *limbus* of Adam was heaven and earth, water and air; and thus man remains like the *limbus*, he too contains heaven and earth, water and air; indeed, he is nothing but these.

1/8, 180

Heaven imprints nothing upon us; it is the hand of God that has created us in His likeness. Regardless how we are made—in all our members the hand of God has been directly

MAN AND THE CREATED WORLD

at work. God endowed us with our complexions, qualities, and habits when He endowed us with life.

Fig. 12. Creator and Creation.

Fig. 13. Adam and Eve (*Coniunctio*).

God wills man as man, and woman as woman, and He wills that both should be of the human kind.

1/1, 256

God created man directly from the matrix. He took him from the matrix and made a man of him. . . . And then He gave him a matrix of his own—woman. . . . To the end that henceforth there may be two of them, and yet only one; two kinds of flesh, and yet only one, not two. This means that neither of them is perfect alone, that only both together are the whole man. . . . Thus the son is created from the *limbus*—the father—but he is shaped, built, and endowed with his complexions in the matrix . . . just as the first man was created in the macrocosm, the Great World.

1/9, 193

There are three different kinds of matrix: the first is the water on which the spirit of God was borne, and this was the maternal womb in which heaven and earth were created. Then heaven and earth each in turn became a matrix, in which Adam, the first man, was formed by the hand of God. Then woman was created out of man; she became the

maternal womb of all men, and will remain so to the end of the world. Now, what did that first matrix contain within itself? Being the kingdom of God, it encompassed the spirit of God. The world encloses the eternal, by which it is at the

Fig. 14. The Creation of Eve.

same time surrounded. Woman is enclosed in her skin as in a house, and everything that is within it forms, as it were, a single womb. Even though the female body was taken from the male, it cannot be compared to it. It is true that in shape it is similar to the male body, for woman too is formed as a human being, and like man she carries God's image in her.

CREATION OF WOMAN

But in everything else, in its essence, properties, nature, and peculiarities, it is completely different from the male body. Man suffers as man, woman suffers as woman; but both suffer as creatures beloved by God.

1/9, 192

Just as heaven and earth close to form a shell, so the maternal body is a closed vessel. . . . An empty matrix in which no child is contained is like heaven and earth before they contained anything living. Since man is a child of the cosmos, and is himself the microcosm, he must be begotten, each time anew, by his mother. And just as he was created of the four elements of the world even in the beginning, so he will be created in the future again and again. For the Creator created the world once, and then He rested. Thus He also made heaven and earth and formed them into a matrix, in which man is conceived, born, and nourished as though in an outer mother, when he no longer rests in his own mother. Thus life in the world is like life in the matrix. The child in the maternal body lives in the inner firmament, and outside the mother's body it lives in the outer firmament. For the matrix is the Little World and has in it all the kinds of heaven and earth.

1/8, 327

Woman is like the earth and all the elements, and in this sense she must be considered a matrix; she is the tree which grows from the earth, and the child is like the fruit that is born of the tree. Just as a tree stands in the earth and belongs not only to the earth but also to the air and the water and the fire, so all the four elements are in woman—for the Great Field, the lower and the upper sphere of the world, consists of these—and in the middle of it stands the tree; woman is the image of the tree. Just as the earth, its fruits, and the elements are created for the sake of the tree and in order to sustain it, so the members of woman, all her qualities, and her whole nature exist for the sake of her matrix, her womb.

1/9, 209-10

God willed that the seed of man should not be sown in the body of the elements—not in the earth—but in woman; that his image should be conceived in her and born through her

and not from the field of the world. And yet woman in her own way is also a field of the earth and not at all different from it. She replaces it, so to speak, she is the field and the garden mould in which the child is sown and planted, then growing up to be a man.

He who contemplates woman should see in her the maternal womb of man; she is man's world, from which he is born. But no one can see from what force man actually is born. For just as God once created man in His likeness, so He still creates him today.

How can one be an enemy of woman—whatever she may be? The world is peopled with her fruits, and that is why God lets her live so long, however loathsome she may be.

Fig. 15. Venus.

has everything by which to give that for the sake of which it exists. But consider how much injury the tree can bear, and how much less the pear! By that much woman is also superior to man. Man is to her what the pear is to the tree. The pear falls, but the tree remains standing. The tree continues to care for the other fruit in order itself to survive; therefore it must also receive much, suffer much, bear up with much, for the sake of its fruits, in order that they may thrive well and happily.

Woman's season of blossoming occurs when she con-

ceives. At this hour she is in bloom, and the blossoming is followed by the fruit, that is to say, the child. . . . When a tree blossoms, it is always because of the fruit that desires to ripen in it, and the tree in which no fruit lies hidden does not blossom. . . . If a virgin is ever to blossom, she must bear fruit. . . . For this is the nature of woman, that she is transformed as soon as she conceives; and then all things in her are like a summer, there is no snow, no frost, and no winter, but only pleasure and delight.

I/9, 197-98

Just as a house is a work and is visible, and its master is also a work and is visible, so the master is a work of God, and the house a work of the master. In the same way it must be understood that we have the works visible before our eyes, and when we discover the master of the work, he is also visible to us. In things eternal, faith makes all the works visible; in things corporeal, but not visible, the light of nature makes all things visible. . . . Do not judge a thing that can become visible by its present invisibility. A child that is being conceived is already a man, although it is not yet visible. . . . It already resembles the visible man.

I/9, 257

When the seed is received in the womb, nature combines the seed of the man and the seed of the woman. Of the two seeds the better and stronger will form the other according to its nature. . . . The seed from the man's brain and that from the woman's brain make together only one brain; but the child's brain is formed according to the one which is the stronger of the two, and it becomes like this seed, but never completely like it. For the second seed breaks the force of the first, and this always results in a change of nature. And the more different the two seeds are in their innate complexions, the more the change will be manifest.

I/1, 263-64

When the seeds of all members come together in the matrix, this matrix combines the seed of the head with the seed of the brain, etc., in its own way . . . putting each in its proper place, and thus each single member is placed where it belongs, just as a carpenter builds a house from pieces of wood. Then every seed lies as it is supposed to lie in the

mother, which is also called a microcosm. Only life is not there, nor is the soul. . . . But the seed of a single man does not yet make a complete man. God wills to make man out of two, and not out of one; he wills man composed of two and not of one alone. For if man were born of the seed of one individual, he would not change in nature. His child would

Fig. 16. The Seed.

be just as he is, in the manner of a walnut tree, which is re-born of itself alone, and therefore is entirely like the one from which it is born. In all trees, the same always comes from the same; similarly all walnut trees bear the same nuts, without any difference. The same is true of man. If he had been born only of one individual, he would be like his father, and this father would be his father and his mother in one. Then there would be only people of one kind, and each would look like the other, and all would have the same na-

ture. But the mixing of the seeds of man and woman results in so much change that no individual can be like the other. . . . Each individual's seed breaks the unity of the other, and that is why no man is like another.

I/1, 262-63

At first the herb grows from the root, then a flower grows from the herb, and in the end the seed grows from the flower; the seed is the vital sap, the *quinta essentia* of the herb. For nothing grows without a seed, nothing is born without a seed, nothing multiplies without a seed, and in all fruits of the earth the seed is the most precious, the most noble part, which should be most valued and prized.

I/13, 371

A good tree brings good fruits. If the mother is healthy like healthy earth, and if her body is fertile, then the tree too is good and bears good fruit. But for the children there is another matter of importance: a good fruit can be born only of a good seed. . . . A tree of the earth bears fruit again and again, without always requiring a new seed; the tree of woman only when a new seed is planted in it, namely, by man. Therefore much depends upon the seed; if it is worthless, the tree cannot improve it. What is true of the tree is also true of the seed; both must be fit. And if both are good, together they produce something good: the fruit.

I/9, 213

A bad seed produces a bad tree, which brings bad fruit. Only the evil seed is not the man himself, nor is the good seed; for the good seed is God, and the evil seed is the devil, and man is only the field. If a good seed falls into a man, it grows from him, since this man is its field, his heart is its tree, and his works are its fruits. Cannot a field that bears weeds be weeded and cleansed of this bad fruit, so that another, good seed can be planted in it? . . . Or cannot a good field be sown with bad seeds? Indeed it can! Every field is ordered by its seed, and no seed by its field. For the seed is the master of the field. Every man is like a field, neither entirely good nor entirely bad, but of an uncertain kind. . . . If a good seed falls into the field, and the soil receives it, it grows to be good. If a bad seed falls into the field and is received, it grows to be bad. Therefore it is not

the soil of the field that decides the matter; it is neither good nor bad. It is like a body of water, coloured by the colours that fall on the water.

God set a term to the formation of a child, namely forty weeks; similarly a time was set for the formation of cows, pigeons, and all other animals. During this span of time the seed develops into a child. After this manner: When conception has occurred, nature begins its work and orders the seeds; the seed of the head moves to the place of the head, the seed of the arms to its place, and everything occupies the place which it must occupy according to its nature. When everything is in its right place, the matrix rests, and does nothing more. Thereupon follows the action of material nature and makes the child grow, so that everything that has been thus arranged may develop into a proper human body: what belongs to the flesh develops into flesh, what belongs to the bones, into the bones, what belongs to the blood vessels, into blood vessels, what belongs to the internal organs, into internal organs. And thus the seed ceases to be seed, and becomes flesh and blood. . . . Then it is no longer subject to material action, and it becomes subject to that action which is given to man by God's grace; it endows the child with life and with every attribute of a living being—sight, hearing, touch, taste, smell, and the active principle of these senses. When life has thus been infused into the child according to God's dispensation, the child grows for a long time in the mother's body, until all its members gain their full strength, and they are no longer wanting in force and completeness, and they become quite solid. Then, in the end, the child is endowed with spirit, soul, reason, understanding, and all the attributes of the soul. Understand, therefore, how the received seed is at first formed, and correctly ordered, then develops into flesh and blood, then is given size and strength, in order to be able to bear the burden of earthly life; and finally, how it is endowed with spirit and soul. For as long

as the child is still too weak to be able to bear the life of the earth, spirit is not given to it; only as its strength grows is it infused with spirit, and spirit is followed by the soul. For the soul does not move into any body in which the spirit does not dwell. . . . Thus the child grows in the union of spirit and body, until it no longer can do without the earth's air and the maternal food.—And then comes birth.

I/1, 270-72

Fig. 17. The Caesarean Section.

What has a man received from his father and his mother that he can boast of? For in his nature and in his qualities he is nothing but what they were, nothing but a hungry stomach and a wretched rudimentary intelligence, nothing but a naked image, at the mercy of death. What could man make of himself, or what could he do with himself, if he were nothing but a naked human body? He really possesses only what was given him outside this body, and beyond this, nothing. Only what God put into him, and what this gift contains, defines his action and his being.

I/1, 315

Four things play a part in conception and birth: body, imagination, form, and influence. The "body" as ordained in

the beginning must become a body and nothing else. For it is a law of nature that the oak tree must arise from an oak; and the same is true of the body of man. From the "imagination," and its objects, the child receives its reason. And just as heaven infuses the child with its motion, its good and evil qualities, sometimes strongly, sometimes weakly, so the imagi-

Fig. 18. The Holy Virgin with the Child, as Patron Saint of Sailors.

ination of man—like the stars—has a course, and makes the child's reason turn to higher or lower things. The third thing, the "form," compels the child to look like the one from whom it descends. And finally it is the "influence" that determines the health or sickness of the body. For in the same way as a strong architect erects good and solid buildings, and a weak one weak buildings, so it is in the conception of a child.

The imagination of a pregnant woman is so strong that it can influence the seed and change the fruit

in her womb in many directions. Her inner stars act powerfully and vigorously upon the fruit, so that its nature is thereby deeply and solidly shaped and forged. For the child in the mother's womb is exposed to the mother's influence, and is as though entrusted to the hand and will of its mother, as the clay is entrusted to the hand of the potter, who creates and forms out of it what he wants and what he pleases.

Thus the child requires no stars or planets: its mother is its star and its planet.

God does not want man or woman to be like a tree which always grows the same fruit. . . . Nor does He want every man to multiply his race, but created many without and

many with seeds; He made each one different from the other.

God left man free to propagate his kind; according to his will, he may beget a child, transmit his seed, or not. God planted the seed in all its reality and specificity deep in the imagination of man. . . . If a man has the will, the desire arises in his imagination, and the desire generates the seed.

I/1, 256-57

. . . But man himself cannot kindle the desire, it must be fanned by an object. That is to say, when a man sees a woman, she is the object, and it depends only upon him whether he wants to fasten to it or not. . . . God endowed man with reason, in order that he might know what the desire means. But he himself must decide whether to yield to it or not, whether to let it act on him or not, whether to follow his intelligence or not. God has entrusted the seed to man's reflective reason because the reflective reason encompasses both his intelligence and the object that inflames his fantasy. But all this takes place only if he himself wants it; otherwise there is no seed in him. . . . It is the same with woman. When she sees a man, he becomes her object, and her imagination begins to dwell on him. She does this by virtue of the ability that God has bestowed upon her. . . . It is in her power to feel desire or not. If she yields, she becomes rich in seeds; if not, she has neither seed nor urge. Thus God left the seed to the free decision of man, and the decision depends upon man's will. He can do as he wishes. And since this free decision exists, it lies with both, with man and with woman. As they determine by their will, so will it happen.—That is how matters stand regarding the birth of the seed.

I/1, 254-55

Just as man originates in the Great World, and is inseparably bound to it, so has woman been created from man, and cannot separate from him. For if Lady Eve had been formed otherwise than from the body of man, desire would never have been born from both of them. But because they are of one flesh and one blood, it follows that they cannot let go of each other.

I/12, 44

Just as there is love among cattle, which come together

Fig. 19. The Ten Commandments:
"Thou Shalt Not Commit Adultery."

couple by couple, female with male, so also among men such love is of the animal kind, and is inherited from the animal. This love has its usefulness, and its rewards, but it remains animal, and it is mortal, it does not endure, and it reflects only the reason and aspiration of instinctual man. It does not know higher goals. It is because of this animal love that people can be friendly or hostile, well or ill disposed toward one another, exactly as animals are fierce and angry, envious and hostile toward one another. Just as toads and snakes always behave according to their nature, so do men. And just as dogs and cats hate each other, so nations fall into conflicts. All this is rooted in the animal nature. When dogs bark and snap at one another, it is because of envy or greed, because each of them wants to have everything for himself, wants to devour everything himself and begrudges everything to the other; this is the way of beasts. In this respect, man is the child of dogs. He, too, is burdened with envy and disloyalty, with a violent disposition, and each man grudges the other everything. Just as dogs fight over a bitch, so the courtship of men is doglike in nature. For such behaviour is also found among the beasts, and it is the same among them as among men.

When a man and a woman who belong to each other and

have been created for each other come together, no adultery will take place because they form *one* being in their structure, which cannot be broken. But if these two do not come together, there is no steadfast love, their love sways like a reed in the wind. When a man courts many women, he has not found the proper wife to complement him; similarly, a woman who carries on amorous intrigues with other men has not found the proper husband. But God has created each man's instincts in such a way that he need not become an adulterer. Therefore,

for those who are not fit for each other, the commandment is to observe their marriage as if they belonged together. For there are two kinds of marriage—the one that God makes, and the one that man himself makes. In the first kind of marriage, husband and wife observe the commandment of their own accord; in the second, they do not, but are compelled to observe it.

Fig. 20. The Ten Commandments:
"Thou Shalt Not Covet Thy
Neighbour's Wife."

1/9, 304

Chastity endows a man with a pure heart and power to study divine things. God himself, who bids us do this, gave man chastity. But he who is unable to be his own master does better not to live alone.

1/9, 148

Let us suppose that there are one hundred men and one thousand women in the world, and that each woman wants a man, and does not want to do without one. But there are only one hundred men; thus only one hundred women are provided for, and for nine hundred there is no provision. Whereupon it may happen that the women pursue the men in such a way that adultery will result. . . . Would it not

be preferable to give each man ten women as wives instead of one, and thus to save the other nine from becoming whores? For God ordained that marriage be sacred, but He did not prescribe the number of wives, neither a high nor a low one: He commanded: thou shalt be faithful to thy marriage vow and thou shalt not break it. Now, it so happens that God has always created many more women than men. And He makes men die far more readily than women. And He always lets the women survive and not the men. Therefore it would be just not that three men should marry one woman, but that three women should marry one man, so that no path be opened to fornication. And if there is such a surplus of women, let it be taken care of by marriage, so that the meaning of God's commandment may be heeded. . . . If this cannot be achieved by giving each man one wife, he should have two, or whatever number may be required to take care of the surplus. And all this should be done in a just way, not in the spirit of partisanship; treat the other man just as you want to be treated yourself. . . . Why then issue laws about morality, virtues, chastity, and so forth? No one but God can give commandments that are permanent and immutable. For human laws must be adapted to the needs of the times, and accordingly can be abrogated and replaced by others.

Man is the Little World, but woman . . . is the Littlest World, and hence she is different from man. She has a different anatomy, a different theory, different effects and causes, different divisions and cares. . . . For the world is and was the first creature, man the second, and woman the third. Thus the cosmos is the greatest world, the world of man the next greatest, and that of woman the smallest and least. And each world—the cosmos, man, and woman—has its own philosophy and "art." The tooth of time gnaws at the world, as also at man and woman, and with respect to their transience all three of them—despite their diversity—are creatures of the same philosophy, astronomy, and theory. Also what they bring forth is transitory, and therein

MAN AND WOMAN

they do not differ. But the manner in which they bring it forth is different in the cosmos, in man, and in woman. And because the ways and means are different, the result is different in form. . . . But even though these three empires are separated from one another, they are borne by the same spirit . . . for this spirit encompasses them all.

I/9, 178-79

Fig. 21. Heaven and
Earth.

Fig. 22. Man and Heaven.

The centre of all things is man, he is the middle point of heaven and earth. . . .

The whole world surrounds man as a circle surrounds one point. From this it follows that all things are related to this one point, no differently from an apple seed which is surrounded and preserved by the fruit, and which draws its sustenance from it. . . . Similarly, man is a seed and the world is his apple; and just as the seed fares in the apple, so does man fare in the world, which surrounds him. . . . Each thing has its own origin; partly in the eternal, and partly in the temporal. And wisdom, whether it be heavenly or earthly, can be achieved only through the attractive force of the centre and the circle.

Let man consider who he is and what he should and must become. For the *compositio humana* is prodigious, and its oneness is formed of a very great diversity. . . . Man needs more than common intelligence to know who he is; only he who studies himself properly and knows whence he comes

and who he is will also give profound attention to the eternal.

1/12, 297

Everything that comes from the flesh is animal and follows an animal course; heaven has little influence on it. Only that which comes from the stars is specifically human in us; this is subject to their influence. But that which comes from the spirit, the divine part of man, has been formed in us in the likeness of God, and upon this neither earth nor heaven has any influence.

1/12, 18

You should look upon man as a part of nature whose end lies in heaven. In the heavens you can see man, each part for itself; for man is made of heaven. And the matter out of which man was created also indicates to you the pattern after which he was formed. . . . External nature moulds the shape of internal nature, and if external nature vanishes, the inner nature is also lost; for the outer is the mother of the inner. Thus man is like the image of the four elements in a mirror; if the four elements fall apart, man is destroyed. If that which faces the mirror is at rest, then the image in the mirror is at rest too. And so philosophy is nothing other than the knowledge and discovery of that which has its reflection in the mirror. And just as the image in the mirror gives no one any idea about his nature, and cannot be the object of cognition, but is only a dead image, so is man, considered in himself: nothing can be learned from him alone. For knowledge comes only from that outside being whose mirrored image he is.

1/8, 71-72

Heaven is man, and man is heaven, and all men together are the one heaven, and heaven is nothing but one man. You must know this to understand why one place is this way and the other that way, why this is new and that is old, and why there are everywhere so many diverse things. But all this cannot be discovered by studying the heavens. . . . All that can be discovered is the distribution of their active influences. . . . We, men, have a heaven, and it lies in each of us in its entire plenitude, undivided and corresponding to each man's specificity. Thus each human life takes its own

course, thus dying, death, and disease are unequally distributed, in each case according to the action of the heavens. For if the same heaven were in all of us, all men would have to be equally sick and equally healthy. But this is not so; the unity of the Great Heaven is split into our diversities by the various moments at which we are born. As soon as a child is conceived, it receives its own heaven. If all children had been born at the same moment, all of them would have had the same heaven in them, and their lives would have followed the same course. Therefore, the starry vault im-

Fig. 23. Man and Zodiac.

prints itself on the inner heaven of a man. A miracle without equal!

Just as the firmament with all its constellations forms a whole in itself, likewise man in himself is a free and mighty firmament. And just as the firmament rests in itself and is not ruled by any creature, the firmament of man is not ruled by other

creatures, but stands for itself and is free of all bonds. For there are two kinds of created things: heaven and the earth are of one kind, man is of the other. . . . Everything that astronomical theory has profoundly fathomed by studying the planetary aspects and the stars . . . can also be applied to the firmament of the body.

The light of nature in man comes from the stars, and his flesh and blood belong to the material elements. Thus two influences operate in man. One is that of the firmamental light, which includes wisdom, art, reason. All these are the children of this father. . . . The second influence emanates

from matter, and it includes concupiscence, eating, drinking, and everything that relates to the flesh and blood. Therefore one must not ascribe to the stars that which originates in the blood and flesh. For heaven does not endow one with concupiscence or greed. . . . From heaven come only wisdom, art, and reason.

I/12, 22

As great as the difference in form and shape between the two bodies, the visible and the invisible, the material and the eternal, is the difference between their natures. . . . They are like a married pair, one in the flesh, but twofold in their nature. . . . And because this is so, a contradiction dwells in man. . . . Namely, the stars in him have a different disposition, a different mind, a different orientation than the lower elements; and on the other hand, these elements in turn have a different wisdom and a different disposition than the stars in man. For instance: the elemental, material body wants to live in luxury and lewdness; the stars, the ethereal body, the inner counterpart of the upper sphere, want to study, learn, pursue arts, and so forth. As a result there arises an antinomy in man himself. The visible, ma-

terial body wants one thing, and the invisible, ethereal body wants another thing, they do not want the same thing. . . . Therefore there dwells in each of these bodies an urge to exceed that which is given to it, and neither wants to follow a middle course and act with measure. Both strive to exceed their bounds, and each wants to expel the other; thus en-

Fig. 24. Man and Zodiac.

mity arises between them. For everything that exceeds its measure brings destruction in its train.

Everything that man accomplishes or does, that he teaches or wants to learn, must have its right proportion; it must follow its own line and remain within its circle, to the end that a balance be preserved, that there be no crooked thing, that nothing exceed the circle.

Fig. 25. Man in Equilibrium.

Blessed and thrice blessed is he who observes the right measure and needs none of the help devised by men, but follows the path that God prescribed to him.

God could surely have created man out of nothingness by merely saying: "So be it!" This he did not do, but took him from nature, placed him in nature, left him to nature, and subjected him to nature as her child. But He also subjected nature to him, indeed as a father. . . . Thus nature is subject to man, she belongs to him as to one of her blood; he is her child, her fruit, which was made of her in the body of the elements . . . and in the ethereal body.

In nature we find a light that illumines us more than the sun and the moon. For it is so ordered that we see but half of man and all the other creatures, and therefore must explore them further. . . . Nor should we become drowned in our daily work, for whosoever seeks . . . shall find. . . . And if we follow the light of nature, we learn that there exists another half of man, and that man does not consist of blood and flesh alone . . . but also of a body that cannot be discerned by our crude eyesight.

I/9, 254-55

The moon emits light, yet by this light colours are not discernible; but as soon as the sun rises, all the colours can be distinguished. Similarly nature has a light that shines like the sun; and as the light of the sun exceeds the light of the moon, so the light of nature far exceeds the power of the eyes. In its light all things invisible become visible; remember always that the one light outshines the other.

I/9, 253

Know that our world and everything we see in its compass and everything we can touch constitute only one half of the cosmos. The world we do not see is equal to ours in weight and measure, in nature and properties. From this it follows that there exists another half of man in which this invisible world operates. If we know of the two worlds, we realize that both halves are needed to constitute the whole man; for they are like two men united in one body.

I/9, 258

The sun can shine through a glass, and fire can radiate warmth through the walls of the stove, although the sun does not pass through the glass and the fire does not go through the stove; in the same way, the human body can act at a distance while remaining at rest in one place, like the sun, which shines through the glass and yet does not pass through it. Hence nothing must be attributed to the body itself but only to the forces that flow from it—just as the smell of an animal is suffused while the animal's body may be at rest.

I/9, 325

Nature emits a light, and by its radiance she can be known. But in man there is still another light apart from that which is innate in nature. It is the light through which man experiences, learns, and fathoms the supernatural. Those who seek in the light of nature speak from knowledge of

nature; but those who seek in the light of man speak from knowledge of super-nature. For man is more than nature; he is nature, but he is also a spirit, he is also an angel, and he has the properties of all three. If he walks in nature, he serves nature; if he walks in the spirit, he serves the spirit; if he walks with the angel, he serves the angel. The first is given to the body, the others are given to the soul, and are its jewel.

The book in which the letters of the mysteries are written visibly, discernibly, tangibly, and legibly, so that everything one desires to know can best be found in this self-same book, inscribed by the finger of God; the book compared with which, if it is correctly read, all other books are nothing but dead letters—know that this book is the book of man, and should not be sought anywhere but in man alone. Man is the book in which all the mysteries are recorded; but this book is interpreted by God.

If you would gain understanding of the whole treasury that the letters enclose, possess, and encompass, you must gain it from far off, namely, from Him who taught man how to compose the letters. . . . For it is not on paper that you will find the power to understand, but in Him who put the words on paper.

Man is born of the earth, therefore he also has in him the nature of the earth. But later, in his new birth, he is of God and in this form receives divine nature. Just as man in nature is illumined by the sidereal light that he may know nature, so he is illumined by the Holy Ghost that he may know God in His essence. For no one can know God unless he is of divine nature, and no one can know nature unless he is of nature. Everyone is bound to that in which he originates and to which he must at some time return.

The light of nature is a steward of the Holy Light. What harm comes to the natural tongue because the fiery tongue

DIGNITY OF MAN

has spoken? Or how does the fiery tongue offend against the natural one? It is the same as with a man and a woman, who both give birth to a child; without both this could not be. Similarly, both lights were given man, to dwell within him. 1/12, 11

How marvellously man is made and formed if one penetrates into his true nature . . . and it is a great thing—consider for once, that there is nothing in heaven or in earth that is not also in man. . . . In him is God who is also in Heaven; and all the forces of Heaven operate likewise in man. Where else can Heaven be rediscovered if not in man? Since it acts from us, it must also be in us. Therefore it knows our prayer even before we have uttered it, for it is closer to our hearts than to our words. . . . God made His Heaven in man beautiful and great, noble and good; for God is in His Heaven, i.e., in man. For He Himself says that He is in us, and that we are His temple. 1/9, 219-20

Thoughts are free and are subject to no rule. On them rests the freedom of man, and they tower above the light of nature. For thoughts give birth to a creative force that is neither elemental nor sidereal. . . . Thoughts create a new heaven, a new firmament, a new source of energy, from which new arts flow. . . . When a man undertakes to create something, he establishes a new heaven, as it were, and from it the work that he desires to create flows into him. . . . For such is the immensity of man that he is greater than heaven and earth. 1/12, 183

Fig. 26. Astrolabe.

II

MAN AND HIS BODY

Fig. 27. Barber Shop: (*left*) a blood-letting; (*right*) the assistant dispenses a remedy against a skin disease and explains how to apply it.

Medicine should be based upon truth
and not upon verbal sleight-of-hand.

I/6, 316

THE physician comes from nature, from nature he is born; only he who receives his experience from nature is a physician, and not he who writes, speaks, and acts with his head and with ratiocinations aimed against nature and her ways.

I/6, 52

The physician is only the servant of nature, not her master. Therefore it behooves medicine to follow the will of nature.

I/7, 150

He who would be a good physician must find his faith in the rational light of nature, he must work with it, and not undertake anything without it. . . . For Christ would have you draw your faith from knowledge and not to live without knowledge. . . . If you desire to apply an art, let it be only in the light of nature, and not in superficial action.

God has given to each man the light that was his due; so that he need not go astray.

Who possesses a truth unless he has received it of a master? No one! We have the truth of the soul from God, otherwise we would not have it. Similarly we have the truths of philosophy from nature; she has taught us these without idle talk. . . . Just as Christ offered his person to our eyes, so we have personal teachers in nature. . . . They are born through seeing and touching, and not through nonseeing. For seeing and touching beget the truth.

No disease comes from the physician, nor any medicine. But he can aggravate the course of the disease, and he can also improve it. What teacher can be better in this respect than nature herself? Nature possesses the knowledge and makes the meaning of all things visible; it is nature that teaches the physician. Since nature alone possesses this knowledge, it must also be nature that compounds the recipe. . . . The art of healing comes from nature, not from the physician. Therefore the physician must start from nature, with an open mind.

It must not surprise the physician that nature is more than his art. For what can equal the forces of nature? He who has no expert knowledge of them has not mastered the art of medicine. In one herb there is more virtue and force than in all the folios that are read in the high colleges and that are not fated to live long.

Every physician must be rich in knowledge, and not only of that which is written in books; his patients should be his book, they will never mislead him . . . and by them he will never be deceived. But he who is content with mere letters is like a dead man; and he is like a dead physician. As a man and as a physician, he kills his patient. Not even a dog killer can learn his trade from books, but only from experience. And how much more is this true of the physician!

From his own head a man cannot learn the theory of medicine, but only from that which his eyes see and his fingers touch. . . . If a man were brought up in a monastery and

had never known anything but the customs of the monastery, and never experienced anything but what takes place in the monastery, and the monastic customs and ways, he would know nothing except these very monastic customs. If he should then encounter other customs, he would not know what to do, for he knows only his own tune. . . . He would not have anything to say except what he had learned in his

Fig. 28. Autopsy.

monastery; moreover, this monastic doctrine originated only in speculation . . . and was contrived only by men. . . . Consequently, our monastic scholar remains inexperienced and can never get to the fundament of things, whence everything comes; for this can never be discovered by pure theory.

1/11, 24-25

Theory and practice should together form one, and should remain undivided. For every theory is also a kind of speculative practice and is no more and no less true than active practice. But what would you do if your speculation did not jibe with findings based on practice? Both must be true or

both must be untrue. Look at the carpenter: first he builds his house in his head. But whence does he take this structure? From his active practice. And if he did not have this, he could not erect his structure in his mind: thus, both theory and practice rest upon experience.

Practice should not be based on speculative theory; theory should be derived from practice.

Experience is the judge; if a thing stands the test of experience, it should be accepted; if it does not stand this test, it should be rejected.

Every experiment is like a weapon which should be used according to its specific function—as a spear is used to thrust, or a club to batter. It is the same with experiments. And just as a club is not suitable for thrusting, and a spear for battering, so the nature and manner of the experiments must not change. Hence it is very important to discover the true active forces in experiments, in order to know in what form they can best be applied. The proper use of experiments requires an experienced man, who is skilled in thrust and blow, so that he can apply and master them, each according to its nature.

These are the qualifications of a good surgeon:

Regarding his innate temper:

A clear conscience,

Desire to learn and to gather experience,

A gentle heart and a cheerful spirit,

Moral manner of life and sobriety in all things,

Greater regard for his honour than for money,

Greater interest in being useful to his patient than to himself,

He must not be married to a bigot.

.

He should not be a runaway monk,

He should not practise self-abuse,

He must not have a red beard,
 He must not act without judgment,
 He must not accept belief without understanding,
 He must not scorn the workings of chance,
 He must not boast of knowing anything without ex-
 perience,

Fig. 29. Medical Implements.

He must never boast or praise himself,
 He must despise no one.
 Regarding knowledge of the body:
 He should know all the properties of the flesh,
 He should know the bones of the body,
 He should know the blood vessels,
 He should know the veins and arteries of the whole
 body,

Fig. 30. Barber-Surgeon at Work.

ART OF MEDICINE

He should know the length and breadth of all the organs,

He should know the relations between the different parts of the body,

He should know the articulations of nature and all her properties,

He should know what injury can befall each organ,

He should know how injury affects each organ,

He should know the needs of each organ in the body,

And he should know where death is and where life is.

Regarding the practice of his art:

He should know all the vulnerary herbs,

He should know all the tissue-forming remedies,

He should know all the essences,

He should know the course of all surgical diseases,

He should know how diseases are cured by time and by accidents.

He should know what to forbid the patient and what to permit him . . .

He should know the effect of each remedy,

He should know plaster for wounds,

He should know lotions for wounds,

He should know etc.

1/5, 476

The right path does not consist in speculation, but leads deep into experience. From experience the physican receives his help, and upon it rests all his skill. He must have rich knowledge based on experience, for he is born blind, and book knowledge has never made a single physician. For this purpose he needs not human, but divine things, and therefore he should not treat truth lightheadedly. He does not act for himself, but for God, and God bestows His grace upon him so that he may come to the assistance of his fellow men in their needs. Medicine does not serve man's

self-conceit but his pressing needs. And you must not abuse medicine to inflict damage on your fellow man, just as it is not meet to misuse the fruits of the earth. For it is not you who acts through medicine, but God, just as it is He who makes the corn grow, and not the peasant.

Your eyes, which take delight in experience, are your masters; for your own fantasies and speculations cannot advance

Fig. 31. The Forerunner of the Dentist: he extracted teeth with his fingers.

you so far that you can boast of being a physician. Nor can you acquire the art of medicine by sophisms, or after the manner of the sophists, those pseudo-scientists, who imagine that their own wisdom reaches as far as the end of the earth and the sea and all the elements. And not only do they maintain this; they also believe that their speculation reveals how God comports Himself in Heaven and what is in His heart. But no physician should build on such a precarious foundation, and must never rely on such things.

The art of medicine cannot be inherited, nor can it be copied from books; it must be digested many times and many times spat out; one must always rechew it and knead it thoroughly, and one must be alert while learning it, one must not doze like peasants turning over pears in the sun.

Prolix writing has no place in medicine; concise writing and great intelligence, brief treatises but great force—that is the standard by which the physician is measured. The longer the book, the less the intelligence; the longer the prescriptions, the poorer their virtue. Therefore each physician should achieve great things by means of small things. For nature is so excellent in its gifts that . . . it better befits a man to know one herb in the meadow, but to know it thoroughly, than to see the whole meadow without knowing what grows on it.

I/6, 289

It is better to know and to understand one remedy than to rummage through the great libraries of the monasteries, where of a thousand pages barely one is understood . . . nature does not call for long recipes.

I/6, 144

Regardless how much knowledge or skill a physician may have, he can be surprised by an anomaly—like a white raven—which confounds all the books; and all his experience, everything he has learned at the sickbed, is suddenly gone. Therefore study each day without respite, investigate and observe diligently; despise nothing, and do not lightly put too much trust in yourself. Do not be arrogant when in fact you are helpless, and do not regard yourself as a master at the outset; for no one can achieve mastery without labour. Also, learn from those who are more experienced than you, for who can pretend to know everything? Who can be everywhere and know where all things lie? Therefore travel and explore everything, and whatever comes your way, take it without scorn, and do not be ashamed to do so on the ground that you are a doctor, a master.

I/5, 425

(The physician does not learn everything he must know and master at high colleges alone; from time to time he must consult old women, gypsies, magicians, wayfarers, and all manner of peasant folk and random people, and learn from them; for these have more knowledge about such things than all the high colleges.)

I/14, 541

The arts are not all confined within one man's country; they are distributed over the whole world. They are not

found in one man alone or in one place, but must be gathered together, sought out, and taken where they happen to be. . . . Or is it not so? Art pursues no one, it must rather be pursued. Therefore, it is only just that we should seek art, and not that art should seek us. . . . If we would go to God, we must go to Him, for He says, Come to me, all. Now, since this is so, we must pursue what we wish to find. If a man

Fig. 32. The Doctor.

would see a specific person, or a country, or a city, if he would study the customs of a place or the nature of the heavens and the elements, he must pursue them, for they will not come to him. And this is true of anyone who wishes to see and experience anything whatsoever.

The physician should prescribe physic composed in accordance with the patient's blood and flesh, with his country's ways and his in-

nate nature—harsh, crude, hard, gentle, mild, virtuous, friendly, tender, etc. But this is not the essence of his art; the long and short of it is what he truly accomplishes.

The physician must give heed to the region in which the patient lives, that is to say, to its type and peculiarities. For one country is different from another; its earth is different, as are its stones, wines, bread, meat, and everything that grows and thrives in a specific region. This means that each country, in addition to the general properties common to the whole world, also has its own specific properties. The physician should take this into account and know it, and ac-

cordingly he should also be a cosmographer and geographer, well versed in these disciplines.

1/4, 501-2

How can a man become a good geographer of cosmographer if he always sits by the fireside? Does not the sight of a thing give the eyes a true foundation? Then let the foundation be made solid. What can the roaster of pears experience in his chimney corner? And what can the carpenter learn

Fig. 33. Cardinal Points and Seasons.

without the knowledge acquired by his eyesight? Or what can be proved without the help of the eyesight? Did not God reveal Himself to our eyes, and does He not call us to witness that our eyes have seen Him? How then should an art or anything else deprive itself of the testimony of the eyes? . . . The diseases migrate hither and thither throughout the broad world, and do not stay in one place. If a man desires to recognize many various diseases, he must travel from place to place; if he travels far, he will experience a great deal and he will learn to recognize many things.

1/11, 142

He who would explore nature must tread her books with his feet. Holy Scripture is explored through its letters, but nature is explored from country to country; it has as many pages as there are countries. This is the code of nature, and thus must her leaves be turned.

1/11, 145-46

Medicine rests upon four pillars—philosophy, astronomy, alchemy, and ethics. The first pillar is the philosophical

knowledge of earth and water; the second, astronomy, supplies its full understanding of that which is of fiery and airy nature; the third is an adequate explanation of the properties of all the four elements—that is to say, of the whole cosmos—and an introduction into the art of their transformations; and finally, the fourth shows the physician those virtues which must stay with him up until his death, and it should support and complete the three other pillars.

Fig. 34. An Itinerant Quack.

The physician should be versed in all branches of philosophy, physics, and alchemy as well, as thoroughly, as profoundly as possible, and he should not lack any knowledge in all these fields. What he is should stand on solid ground, founded in truthfulness and highest experience (For of all men, the physician is supreme in the study and knowledge of nature and her light, and that is what enables him to be a helper of the sick)

What is a pearl to the sow, since all she can do is eat? I praise the art of alchemy because it reveals the mysteries of medicine and because it is helpful in all desperate illnesses. But what shall I praise in those who have no idea of

the mysteries of nature that are placed in their hands? I also praise the art of medicine; but how can I praise those who are physicians and not alchemists at the same time? If the art of medicine were found among those who are only alchemists, they would not understand it, and if it were found among those who are only physicians, they would not be able to make use of it, for they do not hold in their hands the key to the mysteries. Thus I can only praise him who knows how to induce nature to be helpful, that is to say, is able to recognize what lies hidden in nature. For never must knowledge and preparation, that is to say, medicine and alchemy, be separated from each other.

1/10, 66-67

Know that philosophers are of two kinds, the philosopher of heaven and the philosopher of the earth. Each sphere constitutes only one aspect of the physician, and in itself neither makes the whole physician. He who has knowledge of the lower spheres is a philosopher, he who has knowledge of the upper spheres is an astronomer. But both have one intellect and one art, and both have a share in the mystery of the four elements. . . . Just as in heaven there is a Saturn of fiery nature, so on earth there is one of earthly nature; and just as there is a sun in the water, so is there one in heaven. (In man each thing is fourfold. What lies in the remotest corner of the earth, casts its shadow on man, and man is suffused with what lies in the depths of the sea. . . . What is the difference between the sun, moon, Mercury, Saturn, and Jupiter in heaven, and the same planets in man? The difference is only one of form. That is why there are not four arcana but only one arcanum; however, it has four aspects, just as a tower has four sides, according to the four winds. And just as a tower cannot be lacking in one side, so a physician must not lack any of these aspects. For one aspect does not yet make a whole physician, nor two, nor three; all four are needed. Just as the arcana consist of four parts, so the whole physician must comprise all the four aspects.

1/8, 77

Medicine should be taught so cleanly and clearly in the language of the homeland that the German should under-

Fig. 35. Sickness and Celestial Constellation.

stand the Arab, and the Greek the German; its art and wisdom should be of such a nature that all those versed in it should enjoy marvellous respect, and that all should pay tribute to this high art. For whom does heaven distinguish if not the physician who studies it? And whom the earth, if not its philosopher? The mysteries of the firmament are revealed by the physician; to him the mysteries of nature are manifest, and he communicates them to other learned men. Thus philosophy comprises knowledge of all the organs and limbs, health and sickness. The condition of urine must be read from the outer world, the pulse must be understood in relation to the firmament, physiognomy to the stars, chiromancy to the minerals, the breath to the east and west winds, fever to earthquakes, etc. If the physician understands things exactly and sees and recognizes all illnesses in the macrocosm outside man, and if he has a clear idea of man and his whole nature, then and only then is he a physician. Then he may approach the inside of man; then he may examine his urine, take his pulse, and understand where each thing belongs. This would not be possible without profound knowledge of the outer man, who is nothing other than heaven and earth. It would be bold and presumptuous to approach the study of man without such knowledge and to defend the sandy ground of speculation, which is more unstable than a reed in the wind.

1/8, 76

He who studies the sun and the moon and knows with his eyes closed how the sun and the moon look, bears them within himself in the same form as they shine in heaven. Philosophy teaches that they are intangibly imprinted upon man, just as in the firmament, one like a mirrored image of the other. Just as a man can see himself reflected exactly in a mirror, so the physician must have exact knowledge of man and recognize him in the mirror of the four elements, in which the whole microcosm reveals itself.

1/8, 71

The physician should speak of that which is invisible. What is visible should belong to his knowledge, and he should recognize the illnesses, just as everybody else, who

is not a physician, can recognize them by their symptoms. But this is far from making him a physician; he becomes a physician only when he knows that which is unnamed, invisible, and immaterial, yet efficacious.

A good physician must be a born physician. Therefore no one should be surprised that the medical faculty is full of students who contribute nothing to its good reputation, but only harm it and make it an object of contempt. A tree that has once borne fruit cannot be changed. And no more than an apple can be changed into a pear, will such people ever become good physicians. A life-long calling must be innate.

There are three kinds of physician. The first kind is born of nature, through the meeting of celestial constellations—

Fig. 36. Blood-Letter.

as also musicians, orators, and artists are born. The second kind is taught by men introduced to medicine and trained in it, to the extent that man in general and they in particular are capable of learning. The third kind is that given by God, and is directly taught by God. As Christ says, each scribe will receive his knowledge from God; that is to say, what we can

Fig. 37. The Sacred Mission of the Doctor.

do, we have from God. Now, although medicine has masters of three kinds, they need not agree in their theory and arguments; for in their work they will all meet, and will be directed to the same end. . . . Thus man teaches according to his abilities, but God teaches according to his will. And it is established that, in all things, the man who desires to transmit his knowledge to others must take this knowledge from God and from nature. . . . Whosoever teaches from another source is steeped in error.

The physician was created by God, not by man. Therefore let him act in good faith and without lying. He can help only him who has grace.

Whereas God created the physician . . . and appointed him to be useful to other men, it is good for him to know, in order to accomplish such special works, that he has no other duty but to drive out disease. If this is his office, he must act like God, his Lord, who appointed him. God took away the disease of the Great World, and that is why every year the flowers grow, every year the snow falls, and so on. All these things would have died if God Himself had not been their physician and had not taken away the disease of the winter. To take away the diseases of the Little World, those of man, he ordained the physician. If the physician is thus a god of the Little World, appointed as God's deputy, on what foundation should he build, and from whom shall he learn if not from the oldest physician, from God? Him he should imitate, follow His example and His actions, and he should not overestimate himself as a physician, but consider himself only the disciple of this Highest Physician.

To you Christians let God be the highest and first physician, the most powerful, and not the least important; nothing takes place without Him. The heathen and the infidels call to man for help. But as for you, call upon God, and He will send you him who will make you healthy again—whether he be a saint, a physician, or He Himself.

Sad would be the condition of a jurist who did not know the emperor's power, will, and laws; and how sad the condi-

tion of a Christian desirous of being Christian, who did not know the Christian articles of faith. Such Christians would be worthless good-for-nothings. Take, for example, a bird; how could it fly if it did not have its wings and feathers? How could anyone be a physician . . . if he were not properly equipped for it? The Holy Scriptures say that faith without works is dead—is then not mere reputation without works dead? Is then not the physician without medicine dead? There must always be two sides to each thing, dependent on and bound to each other; for so did God ordain; both faith and works . . . physician and medicine, master and mastery. Neither can stand alone. The two must always be together. Therefore it is said: Woe to *him who is alone!* For if he falls, no one is there to raise him!

I/11, 120

Only he who has no fear of God's works is wise. In him who fears medicine there lives knowledge neither of God nor of medicine. For where the wisdom given by God is lacking, in that place He who gives it is absent too. Therefore, if you want to become a physician, seek out medicine at its fountainhead. . . . Study all the books that exist on that subject! That which is in agreement with the light of nature has force and durability. But that which is in disagreement with it is like a labyrinth that has neither sure entrance nor exit.

I/11, 269-70

It is the physician who reveals to us the diverse miraculous works of God. And having revealed them he must use them in the right way, not in the wrong way; in the true, not in the false way. What is in the sea that he should not bring to the light of day? Nothing. He should make it manifest; and not only what is in the sea, but also what is in the earth, in the air, in the firmament . . . so that many people may be able to see the works of God and recognize how they can be used to cure disease. But if they are not brought to light, it is a sign that the intelligence capable of discovering them is still lacking. For what reason is the physician's calling practised with so much stupidity and so little art, although he fancies himself so important and so

superior? And how is it that blindness and shortsightedness prevail in many other trades? For physicians do not know the constellation of the Whale—the monster of the sea—and similarly in the other disciplines it is not known what the apocalyptic beast is, and what is Babylon: everywhere the same blindness prevails. . . . This blindness is the death of the soul, just as the physician's blindness can be the death of his patient. Christ says curious things in marvellous language.

Fig. 38. Cranial Operation.

Medical science too is full of mysteries, and must be studied like the words of Christ. These two callings—the promulgation of the word of God and the healing of the sick—must not be separated from each other. Since the body is the dwelling place of the soul, the two are connected and the one must open access to the other.

There are two kinds of physician—those who work for love, and those who work for their own profit. They are both known by their works; the true and just physician is known by his love and by his unfailing love for his neighbour. The unjust physicians are known by their transgressions against the commandment; for they reap, although they have not sown, and they are like ravening wolves; they reap because they want to reap, in order to increase their profit, and they are heedless of the commandment of love.

So great is the ill-will among physicians that each denies honour and praise to the other; they would rather harm a patient and even kill him than grant a colleague his meed of praise. From this, everyone can judge why a man has become a physician: not out of love for the patient, which should be the physician's first virtue, but for the sake of money. Where money is the goal, envy and hatred, pride and conceit, are sure to appear—and may God protect and preserve us all from such temptations!

God gave to the herbs power and virtue to free man from his infirmity, to the end that he might not too soon be conquered by death, but sojourn a little longer in this world, from which death has power to snatch him. For just as the herb and the remedy hidden in it were created before man, so God's mercy preceded his sternness. In the very beginning He sent death to man, but He

also gave him His mercy and medicine, whereby to protect his life span against the wrath of death up until the last minute. . . . Therefore the Scriptures say that God created the physician and endowed him with his mercy that he might help his fellow men. And He created the remedies of the earth, that is to say, He breathed His mercy into the herbs by means of which the physician can help the patient. . . . The wise man who recognizes God's mercy will not scorn it,

1/10, 279

Fig. 39. The Physician.

but willingly accept it. For all hope is directed toward God's mercy.

Man's frivolity is the cause of much disappointment, and we have no right to accuse anyone but ourselves. No one wants to learn his trade to perfection; everyone wants to fly before he has grown wings. The disappointment occurs when man does not know his trade. The frivolity inherent in man is to undertake a piece of work, in the knowledge that he is unequal to it. . . . Medicine is an art that should be applied only with great assiduity, great experience, and great fear of God. For he who does not fear God steals and murders for ever and ever.

The difference between a physician and the rest of men is this, that the others need think only of themselves, while the physician must care not only for himself but also for others. His office consists of nothing but compassion for others. But his compassion does not originate in him any more than the efficacy of the remedy emanates from him. And because there is nothing that comes from him—although he accomplishes it as though it were his work—his office is not to murder and injure, to strangle and cripple, but to cure the patient by the charity and love with which God has endowed man. A physician is uncharitable if he does not understand the nature of his office here below and does not live up to the responsibilities of his office. What is the meaning of an office to which one is appointed by God, if not to carry out and fulfil the will of God?

To teach and do nothing is little. To teach and do, that is great and whole. . . . A stonecutter who teaches his apprentices with his hands rather than with his tongue teaches and acts at the same time, and it is impossible for him to teach what he himself cannot also do. If he tried to teach what his hands cannot accomplish, nothing good would come out of it, nothing but uncertainties and failures. And if it is important to know how the stonecutter sets stone upon stone, how much truer this is of the physician's calling!

When Christ spoke and taught, his words were always ac-

accompanied by deeds. It should be the same in medicine. Those who spend their time in idle chatter and disputes and do no work speak vain words, for which they will be held to account. . . . Words and deeds should be wedded to each other. A theoretician of theology may talk about God and put the works aside, but a physician has no right to act thus; like a saint, he must prove himself by words and deeds. He whose words are efficacious is a saint. Simi-

Fig. 40. Operating on a Cataract.

larly, only he whose remedies are efficacious is a physician. . . . There should be nothing in medicine except what results from both word and deed, because medicine is a true art, and truth lies only in the deed and not in idle talk. . . . Therefore study and learn that words and deeds are but one thing; if you fail to understand this, you are not a physician.

If an unbeliever becomes a physician, he will not strive for the kingdom of God any more than before he became a physician; it will thus be manifest that without God no proper work can be done. The spirit bloweth where it listeth, it is subject to no one, it is endowed with free will. Therefore the physician must rest his foundations on the spirit, for without it he is nothing but a pseudo-physician, deluded and lost in error. If he wants to attain the truth of his art, he must follow the path of God. If he does not, he may study forever, yet he will not attain to the truth.

Fig. 41. The Physician at the Sick-Bed.

The art of medicine is rooted in the heart. If your heart is false, you will also be a false physician; if your heart is just, you will also be a true physician.

No one requires greater love of the heart than the physician. For him the 'ultimate instance is man's distress. Privilege and lineage pale to nothingness, only distress has meaning.

The physician should be pure and chaste, that is to say, a whole man in the sense that his mind is free from lewdness, conceit, and any evil thought. For all physicians who stand on evil ground produce lying works and fraudulent achieve-

ments; everything about them is false. They fatten on lies. But this is no proper soil for the medical art, which may rest only upon truth. Only what flows from the truth is pure and chaste, and only such fruits are of permanent value as are pure and chaste, and bear no stain of conceit, envy, lechery, lewdness, overweening pride, pomp, splendour, vanity, self-praise.

1/8, 210

Every disease has its own remedy. . . . God has ordained that we should love our neighbour as ourselves and Him above all else. Now, if you would love God, you must also love His works; if you would love your neighbour, you must not say, You cannot be helped. You must admit that you cannot do it and that you do not understand his illness. Only such truthfulness can free you from the curse that is decreed against those who are false. Therefore take good care . . . to continue your studies until you discover the art which is the foundation of good works.

1/11, 129-

In medicine we should never lose heart, and never despair. For each ill there is a remedy that combats it. Thus there is no disease that is inevitably mortal. All diseases can be cured, without exception. Only because we do not know how to deal with them properly, because we are unable to understand life and death in their essence, can we not defend ourselves against them.

1/2, 430

Therapeutics is the noblest pearl and the supreme treasure, and it holds first place in medicine; and there is nothing on earth that can be valued more highly than the curing of the sick. . . . It is a commandment of God that you shall love Him, this is the supreme good, and there is nothing that man may prize above it. The next commandment says thou shalt love thy neighbour as thyself, and it follows immediately upon the first. Now by what manner on earth can greater love be shown a neighbour, than when a man motivated by true love discovers the curative virtues of remedies, in order to avert the great sufferings, the diseases, and the death that threatens his neighbour?

1/10, 350

A man without a woman is not whole, only with a woman

MAN AND HIS BODY

is he whole. Because woman was created from earth and he too is of earth, both are of earth and form together one whole. . . . Similarly, man and remedy derive from the same substance, and both together form a whole, that is to say, a whole man. . . . In this sense, the disease desires its wife, that is, the medicine. The medicine must be adjusted to the disease, both must be united to form a harmonious whole, just as in the case of man and woman. If the physician finds such a remedy, he is complete.

The physician must take good care of his hand . . . for in it he possesses the noblest and most precious object, most prized by the Creator. But if he does not know the world, nor the elements or the firmament, how should he discover the nature of man, who is everything that is in heaven and on earth, indeed, who is himself heaven and earth, air and water? God who created all things also created both worlds and to both He gave their remedies and their physicians.

Fig. 42. Blood-Letting.

Fig. 43. Hospital Room.

That which injures the body destroys
the house of the Everlasting.

I/9, 257

There are two realms into which diseases can penetrate and spread. The first is that of matter, that is to say, the body; it is here that all diseases lurk and dwell . . . the other realm is not material, it is the spirit of the body, which lives in it intangible and invisible, and which can suffer from exactly the same diseases as the body. But because the body has no share in this life, it is the *ens spirituale*, the spiritual active principle, from which the disease springs. . . . Therefore there are two kinds of disease: the spiritual and the material.

I/1, 216-17

The *entia*, the active principles or influences, which govern our bodies and do violence to them are the following. The stars have a force and efficacy that has power over our body, so that it must always be ready to serve them. . . .

This virtue of the stars is called *ens astrorum*, and it is the first *ens* to which we are subjected. The second power that governs us and that inflicts diseases upon us is *ens veneni*, the influence of poison. Even if the stars are sound and have done no injury to the subtle body in us, this *ens* can destroy us; therein we are subject to it and cannot defend ourselves against it. The third *ens* is a power that injures and weakens our body even when the two other influences are beneficent; it is called *ens naturale*, the natural constitution. If it goes astray or disintegrates, our body becomes sick. From this many other diseases, indeed all diseases, can arise, even if the other *entia* are sound. The fourth *ens*, the *ens spirituale*—the spiritual entity—can destroy our bodies and bring various diseases upon us. And even if all four *entia* are propitious to us and are sound, yet the fifth *ens*, the *ens Dei*, can make our bodies sick. Therefore none of the *entia* deserves as much attention as this last one; for by it one can recognize the nature of all other diseases. . . . Note moreover that the various diseases do not come from one cause, but from five.

Even while still in the womb, unborn, man is burdened with the potentialities of every disease, and is subject to them. And because all diseases are inherent in his nature, he could not be born alive and healthy if an inner physician were not hidden in him. But wherever diseases are, there are also physicians and medicine! Each natural disease bears its own remedy within itself. Man has received from nature both the destroyer of health and the preserver of health. And just as the destroyer strives continuously to destroy and to kill man, so the preserver works with equal vigour and zeal to preserve him; what the first strives to shatter and destroy, the innate physician repairs. The destroyer finds in the body the instruments that help him in his destructive work. . . . Just as in the outside world a mason can wreck and has tools for this purpose, just as another mason has tools for building, so both—the destroyer and the preserver—have tools for

wrecking and tools for building. . . . The body possesses the high art of wrecking and also of restoring.

1/11, 196-97

Who can protect himself from harm and disaster if he does not know his enemy? No one. Hence it is indispensable to know him. For there are enemies of many kinds, and it is necessary to know the evil as well as the good. Who can know what joy is, if he has never been sad or in pain? And who can properly discover what God is if he knows nothing of the devil? Just as God reveals to us the enemy of our soul, namely, the devil, so He also reveals to us the enemy of our

Fig. 44. Organs and Parts of the Body.

life, namely, death. And furthermore, He reveals to us the enemy of our body, the enemy of our health, the enemy of medicine, and the enemy of all natural things. But at the same time He reveals to us by what means this enemy can be disarmed. For there is no sickness against which some remedy has not been created and established, to drive it out and cure it. There is always some remedy, a herb against one disease, a root against another, a water against one, a stone against another, a mineral against one, a poison against another, a metal against one, something else against another.

1/11, 323

The nature and force of a disease must be discovered by their cause and not by their symptoms . . . for we must not merely extinguish the smoke of the fire but the fire itself. If we want the earth to produce better grass, we must plow it, and not merely tear out the bad grass. Similarly the physician . . . should direct his thought to the origin of the disease, and not only to that which his eyes see. For in this he would see but the symptoms and not the origin; similarly

smoke is only the symptom of the fire, not the fire itself.

God alone preserves the body in life; He wants us to have a long life, and therefore provides us with many kinds of help and support. He even forces and compels our enemies to strengthen our life. God help us to gain salvation and good fortune from our enemies and those who hate us . . . whencesoever comes our help, it is always from God. . . . Behold the thistle amidst its thorns! It hates us so much that the thorns forbid us to touch the flower. And if we touch it, they prick us strongly and refuse us admission, to prevent us from obtaining the medicine that lies hidden in it. . . . But who for that reason would reproach the thistle which is otherwise so beneficent to us? Even though it hates our bodies, it must help them recover health. . . . And even if the devil himself told us that silver and gold bring us salvation and medicine, or have power to free us from prisons and dungeons, even this would be in fulfilment of God's command.

There where diseases arise, there also can one find the roots of health. For health must grow from the same root as disease, and whither health goes, thither also disease must go.

Just as the sun and the moon are separated from each other, although they formerly were one thing, so health and disease were one thing, and later they were separated from each other, as the sun was from the moon. And just as these wane and wax in the sphere of heaven, and now one or the other appears, so also are all the stars woven into the body—this you should know—and similarly distributed, and the same is true of the forms in which health and disease are manifested. For all of them must be present in the body in order that the "inner firmament" may be whole and that the number of the parts may be full.

It is well known and evident that in the course of time heaven brings many diseases . . . and that no healthy person can protect itself from them. A healthy man must submit to heaven and every day he must await what it sends

Fig. 45. Blood-Letter.

him. For the course of the heavens is wonderful, and just as wonderfully are men placed in nature.

1/10, 48

Just as time can bring rain, roses, flowers, and shape all things from their beginnings to their end, and no one can stop it, so can it also make diseases break out at will. The physician must never forget that time can do this, or he will be unable to discover what is possible and what is impossible, and to understand what he can nevertheless undertake to inspire people with respect for the medical art that God has created, and to prevent the disease from getting worse, for this cannot be the intention of God. Time is a brisk wind, for each hour it brings something new. Just as the people's thoughts change every hour, and are different twelve times a day, and no one knows them except God alone, so is it

Fig. 46. Disease as a Scourge of God.

with time. Again and again it brings something new, but who can understand and measure its sharp breath, its mystery and its design? Therefore the physician must not think himself too important; for over him there is a master—time—which plays with him as the cat with the mouse.

I/4, 495-98

Health and sickness are granted by God; nothing comes from man. . . . You should divide the diseases of men . . . into those which arise in a natural way, and those which come upon us as God's scourges. For take good note of it: God has sent us some diseases as a punishment, as a warning, as a sign by which we know that all our affairs are naught, that our knowledge rests upon no firm foundation, and that the truth is not known to us, but that we are inadequate and fragmentary in all ways, and that no ability or knowledge is ours.

I/1, 226

Because it is God who has given us disease, He could, when the time were proper and the limit of our purgatory had come, take it away from us, even without the physician. If He fails to do so, it is only because He does not want this to be accomplished without the help of man. If He works a miracle, He does it only in the human way and through man; if He makes us healthy by a miracle, He does it through a man.

I/1, 228

Every disease is a kind of purgatory. The physician should know this and bear it in mind, lest he presume to determine in advance the time of recovery or the efficacy of his remedies; for this lies solely in God's hands. If Providence has decided otherwise than you physicians intend, you will not be able to cure the patient by any remedy. But if the hour of Providence has struck, you will succeed in curing him. Note that if a patient comes to you and recovers through your remedy, God has sent him to you; but if he does not recover, he was not sent by God. Only when the hour of recovery strikes for the patient, does God send him to the physician, not before. All those who go to Him before go in vain. . . . God has created remedies against the diseases, and He has also created the physician; but He holds them back until

the hour predestined for the patient. Only when the time has been fulfilled, and not before, does the course of nature and art set in.

Often the remedy is deemed the highest good because it helps so many. But is not He who created it for the sake of the sick body more than the remedy? And is not He who cures the soul, which is more than the body, greater? Here then lies the supreme good; it is more than that which takes the disease away from the body and preserves the body.

Man and all creatures here on earth are subject to God: it is He who decrees fortune and misfortune for them. And to the end that you may well understand this, take good note that there are two kinds of chastisement administered by God: the first He sends you in your lifetime, the other after death.

God is the master who measures the disease and the stars. He has ordered everything according to His wisdom; who can fathom it?

The patient who pins his hope on the medicament is not a Christian; but he who puts his hope in God is a Christian.

Fig. 47. Liver, Heart, and Diaphragm.

Fig. 48. The Apothecary.

No disease is so great that God has
not created a remedy against it. . . . I/8, 269

The difference between the two medical arts—the heavenly and the worldly—consists in this: the adepts and non-adepts of worldly medicine are subject to the order and forces of nature, while those of heavenly medicine can dispense with herbs and the stars. . . . All active virtues come from the word of God, and His words have such power that all nature with its forces cannot accomplish as much as a single one of His words. This divine power is the heavenly medicine; it accomplishes what no natural force can accomplish. . . . There is no field on earth in which heavenly medicine grows or lies hidden, other than the resurrected flesh or the “new body” of man; only in the “new body” have all its words force and efficacy here on earth. This heavenly

medicine works according to the will of the man of the "new birth"; in him lie all the active virtues. For it does not operate in the mortal body, but only in the eternal body.

What sense would it make or what would it benefit a physician if he discovered the origin of the diseases but could not cure or alleviate them? And since the fit manner of preparation is not to be found in pharmaceuticals, we must explore further; that is to say, we must learn from alchemy. In it we find the true cause and everything that is needed. Although alchemy has now fallen into contempt and is even considered a thing of the past, the physician should not be influenced by such judgments. For many arts, such as astronomy, philosophy, and others, are also in disrepute. I am directing you, physicians, to alchemy for the preparation of the *magnalia*, for the production of the *mysteria*, for the preparation of the *arcana*, for the separation of the pure from the impure, to the end that you may obtain a flawless, pure remedy, God-given, perfect, and of certain efficacy, achieving the highest degree of virtue and power. For it is not God's design that the remedies should exist for us ready-made, boiled, and salted, but that we should boil them ourselves, and it pleases Him that we boil them and learn in the process, that we train ourselves in this art and are not idle on earth, but labour in daily toil. For it is we who must pray for our daily bread, and if He grants it to us, it is only through our labour, our skill and preparation.

The first and highest book of medicine is called *Sapientia*. Without this book no one will achieve anything fruitful. . . . For this book is God himself. In Him who has created all things lies also wisdom, and only He knows the primal cause of all things. . . . Without Him everything is mere foolishness. . . . For what is wisdom but the ability to recognize and know our talents and our calling? But we cannot do this by ourselves, no more than we have power over day and night, summer and winter. . . . Although the remedy is given by nature . . . it must be revealed to us by the all-highest book, so that we may learn what is in it, how it is made,

how it is obtained from the earth, and how and to what patients it should administered. . . . The remedy must flow from the spirit that dwells in man . . . therefore the first teaching is—and every inquiry must begin with it—that we should above all seek the kingdom of God. There lies the treasure, the school that leads to the primal causes of wisdom within each man's sphere of action. . . . For what is there more noble than that we should pray and implore God's grace? . . . No one, then, should be surprised if I say that God is the first book; and who can recognize a work better than he who has accomplished it? He alone can state and show its virtues. And who else has created the remedy but God? It flows from Him as warmth flows from the sun, which also makes the flowers grow. No differently should our wisdom flow from God. What has ever been discovered in the wide world that has not come to us from God? He holds everything in His hand, and we should accept it from Him.

The second book of medicine—of this too you must take note!—is the firmament. But this book must be studied after the first. . . . For it is possible to write down all medicine in the letters of one book, to the end that everyone may learn it by reading the book, and the firmament is such a book containing all the virtues and propositions . . . and he who has not penetrated into this book cannot be a physician or be called a physician. Just as a man reads a book on paper, so the physician is compelled to spell out the stars of the firmament in order to know his conclusions. For just as every word has special virtues but does not embody the whole sentence, and acquires its complete meaning only when it is supplemented by other words and the sentence is rounded into a whole, so the stars in heaven must be taken together in order that we may read the sentence in the firmament. . . . It is like a letter which has been sent to us from a hundred miles off, and in which the writer's mind speaks to us; as though in such a letter, the firmament speaks to us. . . . This is the way to study medicine, this is the book of the highest school of medicine.

The book of medicine is nature itself. And just as you see yourself in a mirror, so you must rediscover all your sciences in nature, with exactly the same certainty and with as little illusion as when you see yourself in a mirror.

Marvellous virtues are inherent in the remedies. One would hardly believe that nature contained such virtues. . . . For only a great artist is able to discover them, not one who is only versed in books, but only one who has acquired his ability and skill through the experience of his hands.

Fig. 49. Male Herb and Female Herb.

. . . It is an important art, and therefore it cannot be clearly described, but can only be learned by experience. . . . These remedies must not be known merely as physics, they must be termed arcana, occult healing substances. They have such noble

and lofty advantages and operate in so marvellous a manner that only with difficulty can our minds conceive and know from what properties and virtues their efficacy is derived.

Why is the world made in such a way that one herb is female and another male? The reason for this is that the diseases too are different. If they were all identical, why should nature have divided the remedies into these two species? But because there exist two worlds, the world of woman and the world of man, there are also two kinds of remedies. And just as man and woman are different in their infirmities, so their remedies differ.

Just as flowers grow from the earth, so the remedy grows in the hands of the physician. If he is a good physician, the remedy is like a root which grows a stem, which in turn un-

folds into a flower, and which in the end becomes a fruit. For the physician's art is like the earth, which also conceals such potentialities in itself. . . . In the winter, no herb nor any flower grows in your garden; everything remains hidden in the earth, and you do not see and do not know what lies in it. Nevertheless you are sure that herbs, flowers, and all kinds of plants lie in it, although you cannot see them. It is no different with the remedy you hold in your hands. At first you do not see what it contains, but you know with certainty that something is in it, like a seed that is different from the fruit that grows out of it. The earth makes the seed ripen into a fruit. And if the seed did not bear fruit, it would be worthless. Similarly, the remedy is nothing but a seed which you must develop into that which it is destined to be.

1/7, 265

If the physician is to understand the correct meaning of health, he must know that there are more than a hundred, indeed more than a thousand, kinds of stomach; consequently, if you gather a thousand persons, each of them will have a different kind of digestion, each unlike the others. One digests more, the other less, and yet each stomach is suitable to the man it belongs to. . . . Therefore the various dietary prescriptions should be observed not only for the sake of recovery from illness but also for the sake of preserving one's health. There are a hundred forms of health in the liver; each man has a different one. It follows that no one drinks the same amount as another, that no one has the same thirst as another; this is explained by the diverse kinds of health, which must not be described as illnesses. . . . A man who lifts fifty pounds may be just as able-bodied as a man who can lift three hundred pounds.

1/8, 154

A man should be awake from about four in the morning until about eight in the evening, and then he should sleep. This time between eight and four—it may be somewhat

shorter or longer according to the particular disposition—is needed for sleep. If a man does not observe this rule, if he is not awake at about four o'clock but for instance only at about ten, and stays awake all night instead, the order of nature is violated. For the sun wants everything to be awake and wants man, too, to be awake while it gives its warmth. But when it sets, man should lie down and rise again with the sun, and lie down again to rest with it, and so on. All

Fig. 50. The Divisions of the Day.

prescriptions concerning sleeping and waking hours should be based on this order. If they are not observed unknown illnesses break upon us.

If we would obey nature in its essence, all things must stand in their order, according to number, weight, measure, and revolution; the measure must nowhere be exceeded. . . . Two unequal weights on the scales of nature break its balance; either one is too heavy or the other too light, or the scales are worthless. To fill your belly all week long, but to abstain from all food except bread and water on Fridays and Saturdays, or to take your fill of meat throughout the year, and not touch anything during Lent, is to put unequal weights on the scales of nature. And this is true not only of eating, but also of work and leisure and everything else.

Fig. 51. Human Conditions.

. . . Therefore the physician should know that he must distribute, prescribe, and weigh all things in such a way that nature should not be burdened too much on one side and too little on the other.

I/4, 534-36

When ordering a diet, the physician should consider not only the age or youth of the patient, but also the customs, peculiarities, and nature of his country; the patient's diet should be established accordingly. For the nature and customs of the country should be followed and not transgressed, and the physician should keep in mind what food and what drink this nature requires in each case, and how much and how often it wants food; and the seasons of the year should

Bath Bad. Camer. Auffigwasser. Warmwasser. Bathwasser. Bathwasser in bad
minuten. Bathwasser in bad

Fig. 52. Bathers.

also be taken into account. For the summer diet is not fitting in the winter, nor the winter diet in summer. Each diet has its own time, and corresponds to the customs and habits of that season.

I/4, 521

Remedies should not be administered according to their weight, but according to other measurements. Who can weigh the brilliance of the sun, who can weigh air or the *spiritum arcanum*? No one. . . . The remedy should operate in the body like a fire . . . and its effect on the disease should be as violent as that of fire on a pile of wood. This mystery of fire should also apply to what you call dosage. How would it be possible to weigh the amount of fire needed to consume a pile of wood or a house? No, fire cannot be weighed! However, you know that one little spark is heavy enough to set a forest on fire, a little spark that has no weight at all. . . . Just as the spark acts on the wood, and becomes great or small according to the amount of it, so

you must act when dealing with remedies. You must administer them to the patient in accordance with the extent of the illness. But who would indicate a definite weight for this? No one!

Just as gold is of little use if it has not gone through fire, so there is little virtue or use in a remedy that has not been

Fig. 53. Prescriptions for Bathing.

purified in fire. For all things must go through fire in order to attain to a new birth, in which they are useful to man.

The art of prescribing medicine lies in nature, which compounds them herself. If she has put into gold what belongs to gold, she has done likewise with violets. . . . Therefore understand me correctly: the virtue that is inherent in each thing is homogeneous and simple, it is not split into two, three, four, or five, but is an undivided whole. . . . The art of prescribing medicines consists in extracting and not in compounding, it consists in the discovery of that which is concealed in things, and not in compounding various things and piecing them together. What trousers are the best? Whole ones. Those which are mended and patched are the worst. . . . Nature conferred potency upon the arcana and composed them in the proper way. Therefore learn in such a way as to understand and know them, and not in such a

Fig. 54. Various Grains.

way as to understand yourself in the end but not nature. Nature is the physician, not you. From her you must learn, not from yourself; she compounds the remedies, not you. See to it that you find out where nature has her pharmacies, where her virtues have been written down, and in what boxes they are stored.

I/8, 84-85

Everything external in nature points to something internal; for nature is both inside man and outside man. An example. . . . Herbs are gathered together in an apothecary's shop and can be bought there, and in one shop more numerous and varied herbs can be found than in another; similarly there is in the world a natural order of apothecary's shops, for all the fields and meadows, all the mountains and hills are such shops. Nature has given us all of them, from which to fill our own shops. All nature is like one single apothecary's shop, covered only with the roof of heaven; and only One Being works the pestle as far as the world extends. But man has such a shop only in part, not wholly; he possesses something, not everything. For nature's apothecary's shop is greater than man's.

I/11, 195

A good remedy was worth as much a thousand years ago as it is now, and a bad remedy was then as worthless as it is now. For although it is as old as the good one, and has come down to us in the same way, it is no better for that reason. . . . The tares among the corn are as old as the corn, nevertheless, they cannot be used instead of the corn. In my opinion, the world should awaken to this fact, and because the good surpasses the bad in worth, we should abandon the bad, and should not be reluctant or complacent when we are confronted with the task of rejecting the bad.

I/10, 59

Although our forefathers, if they were reborn, would have been surprised and taken aback by our remedies, this should

be our least concern. However, we do not reject their remedies, but are careful to preserve what is good in them.

We have experience, but it is not complete; we know that the curative herbs of nature have a cooling effect, but we do not know when they can also be warming. We know that one day they are efficacious and another day not, that they help one man and not another, that they are sometimes use-

ful and sometimes not. Sometimes we despair, and then they help; and many a time when we place hopes in them, they leave us in the lurch; often when we think that something is sure, it is futile, but often it actually is sure; for we do not have them in our power. And what we do not have in our power can at any time deceive us.

Fig. 55. Physician and Apothecary.

All the remedies are on earth, but we lack the men to gather them. They are ready to be harvested, but the reapers have not come. But one day the reapers of the right remedies shall come, and undeterred by empty sophistry we will cleanse the lepers and make the blind seeing. For this virtue is concealed in the earth, and it grows everywhere. But the presumption of the sophists prevents the mysteries of nature and their great miracles from coming to light.

Nature is so careful and exact in her creations that they cannot be used without great skill; for she does not produce anything that is perfect in itself. Man must bring everything

to perfection. This work of bringing things to their perfection is called "alchemy." And he is an alchemist who carries what nature grows for the use of man to its destined end. But within this art distinctions must again be made: if someone takes a sheepskin and uses it untanned as a coat, how crude and clumsy it is in comparison with the work of a furrier or clothmaker! If a man fails to perfect a thing that nature has given him, he is guilty of even greater crudeness and clumsiness, especially when man's health, body, and life are at stake. For this reason more diligence should be spent on alchemy, in order to obtain still greater results. Artisans have explored nature and its properties in order to learn to imitate her in all things, and to bring out the highest that is in her. Only in medicine has this been neglected, and therefore it has remained the crudest and clumsiest of all the arts.

1/8, 180

God created iron but not that which is to be made of it. . . . He enjoined fire, and Vulcan, who is the lord of fire, to do the rest. . . . From this it follows that iron must be cleansed of its dross before it can be forged. This process is alchemy; its founder is the smith Vulcan. What is accomplished by fire is alchemy—whether in the furnace or in the kitchen stove. And he who governs fire is Vulcan, even if he be a cook or a man who tends the stove. The same is true of medicine. It too was created by God, but not in its finished state, but still concealed in dross. To release the remedy from the dross is the task of Vulcan. And what is true of iron is true of the remedy. What the eyes perceive in herbs or stones or trees is not yet a remedy; the eyes see only the dross. But inside, under the dross, there the remedy lies hidden. First it must be cleansed from the dross, then it is there. This is alchemy, and this is the office of Vulcan; he is the apothecary and chemist of the medicine.

1/11, 186-88

God enjoined the physician to fight against the transience

of things. This transience also characterizes the Great World in which God himself practises medicine. The physician, by following the instructions of the Great Physician, must act against accidents that befall things. For the Great Physician created the ore but did not carry it to its perfect state; He has charged the miners with the task of refining it. In the same way He enjoined the physician to purify man's body . . . from which purification man emerges as inde-

Fig. 56. Physician with Urine Flask.

structible as gold.

. . . This is an action which—like that performed by fire on gold—frees man from the impurities that he himself does not know. And it is like such fire that the medicine should act.

Quicksilver manifests itself in three forms. In the first it is still unborn; in the second it is as it is in itself; in the third it appears such as it has been prepared

by the alchemist's art. As for the first, you should know that you must take it with the ore . . . and refine it, according to the rules. As for the second, its body must be separated from the ore and purified by fire. It achieves its third form when it has gone through fire and is like a molten metal. Upon these three forms of manifestation of *mercurius*, or quicksilver, is based the cure of the French disease.

The practice of medicine is a work of art. And because it is a work of art it must prove its master. But how each part

17C67JCS 62NEQJ8

Fig. 57. Broadside on Syphilis.

is to be judged can be seen only from the work as a whole. It is the art that imparts its wisdom to the work. For through this wisdom the art creates the work.

I/11, 128

Is not a mystery of nature concealed even in poison? . . . What has God created that He did not bless with some great gift for the benefit of man? Why then should poison be rejected and despised, if we consider not the poison but its curative virtue? . . . And who has composed the prescriptions of nature? Was it not God? . . . In His hand there abides all wisdom, and He alone knows what He put into each *mysterium*. Why then should I be surprised and why should I let myself be frightened? Should I, because one part of a remedy contains poison, also include the other part in my contempt? Each thing should be used for its proper purpose, and we

should use it without fear, for God Himself is the true physician and the true medicine. . . . He who despises poison does not know what is hidden in it; for the arcanum that is contained in the poison is so blessed that the poison can neither detract from it nor harm it.

I/11, 136-37

In all things there is a poison, and there is nothing without a poison. It depends only upon the dose whether a poison is poison or not. . . . I separate that which does not belong

to the arcanum from that which is effective as the arcanum, and I prescribe it in the right dose . . . then the recipe is correctly made. . . . That which redounds to the benefit of man is not poison; only that which is not of service to him, but which injures him, is poison.

When a medicine is found in accordance with the star, when hot is applied against hot, and cold against cold, all this accords with the arcanum. For in administering medicine we must always set entity against entity, so that each becomes in a sense the wife or husband of the other.

Every cure should proceed from the power of the heart; for only thereby can all diseases be expelled. Therefore, and take good note of this, it is particularly absurd to act in opposition to the heart. The heart wants to dispel the diseases, then why do you drive them toward the heart? . . . After all, the curative power must come from the heart, and the disease must be driven into the remotest corner. . . . Every medicine should act outward from the heart, and not in the direction of the heart. It starts from the heart and is made to work by the heart's own power.

Blessed and thrice blessed is the physician who recognizes the medicines in their living action, who knows how to obtain them, and who knows that they are not dead. For there are many medicines in the world which have already died, and others die continually. Therefore the physician is right to complain and speak of it. For heaven renews itself, new times come, and the time of certain plants is gone. Each new time brings death in its train, the death of the past. But heaven will renew that which is to serve the future. Thus, new virtues will one day flow into the occult remedies of medicine.

A physician should know how to judge the age of people, as well as the age of illnesses and medicines, and the age of the world. For today it is easier to cure than it was a thousand years ago. And two thousand years ago it was more difficult, and still more difficult three thousand years ago. The farther back we go in time, the more difficult was the task.

ETERNAL MEDICINE

Therefore one should never neglect to take age into account, whether it be the age of time, of the world, of the man, or of the disease.

1/4, 502

Medicine is an art that will survive until the Last Judgment. And even if all physicians died out, medicine would abide eternally, and new physicians would arise continually. Consider that there is Someone who instructs them always anew. He who has created the art of medicine also deserves praise for having created the physician.

Fig. 58.

III

MAN AND WORKS

Fig. 59. Alchemistic Oven.

Believe in the works, not in the words;
words are an empty shell, but the
works show you the master.

1/8, 89

WHAT man can give an account of or explain how he learned to till the soil, to raise vines, or to make cheese? No one unless he can point to his teacher, and the teacher will in turn point to his teacher, and so on and on, until we come to the first teacher. And to whom can he point? To no one except to Him who created man; for He also gave him his knowledge. What would men do if they had not been ordained to work? The commandment was: "In the sweat of thy face shalt thou eat bread." . . . God said: "Let it be!" And there was everything, but not "art," nor the light of nature. But when Adam was driven out of Paradise, God created the light of nature for him by ordering him to gain sustenance through the toil of his

Fig. 60. Expulsion from Paradise.

hands, and He also created the light of Eve when He said: "In sorrow thou shalt bring forth children." Thus the creatures that had hitherto been like unto angels became earthly and mortal. And Eve was taught to raise her children, and thus cradles and nursing came into being. The word was sufficient to create man; it was also sufficient to create the light that man needed . . . when he was driven out of Paradise. For only then did "the inner man," "the man of the second creation," come into being.

We received all the members of our body at the first crea-

tion, after all other things had been created. But the knowledge that man needs was not yet in Adam but was given him only when he was expelled from Paradise. Then he received "knowledge" through the angel; but not all knowledge. For he and his children must learn one thing after another in the light of nature, in order to bring to light that which lies hidden in all things. For although man was created whole as regards his body, he was not so created as regards his "art." All the arts have been given him, but not in an immediately recognizable form; he must discover them by learning. . . . Just as the herbs in the garden must be sown and planted, and do not grow unless this has been done, whatever we sow is but earth, as it were, that we give to the earth and again extract from it. The same is true of the "art" that is engraved and planted in us. He who taught it to me received it from the light of nature, and I have received it just as he has; it must be engraved in all of us. Yet it happens that many herbs grow without having been sown, and these are often the best. There are also many important species that are better than those that are sown. Such is the power of the earth, and such is the light of nature; they do not rest. Therefore, give heed to your inner garden . . . and also to yourself that you may learn that which no one can teach you, and which will amaze everyone.

I/8, 290-92

Man should study in three schools. . . . He should send the elemental or material body to the elemental school, the sidereal or ethereal body to the sidereal school, and the eternal or luminous body to the school of eternity. For three lights burn in man, and accordingly three doctrines are prescribed to him. Only all three together make man perfect. Although the first two lights shine but dimly in comparison with the brilliant third light, they too are lights of the world, and man must walk his earthly path in their radiance.

I/12, 197-98

Fig. 61. Lecture.

Everything that man does and has to do, he should do by the light of nature. For the light of nature is nothing other than reason itself.

Only he is the enemy of nature who fancies himself wiser than nature, although she is the greatest school for all of us.

You should not only know your way about grass and hay, you should not only rummage in cases and boxes—this is the way of the earth and of transience; you should also approach

TOIL, A DIVINE COMMANDMENT

things from the standpoint of eternity, yet with the resources of mortal man. If we are given the ability to learn from God—as has been amply demonstrated—we also have the ability to learn from nature.

I/12, 188

To learn and to do nothing is little. To learn and to do is great and whole.

I/7, 76

One man is heavy in the limbs, another on the contrary is tender and delicate; which of the two should be praised and which censured? Neither; for both have stomachs and hearts, red blood and red flesh, bones, marrow, and hair; their brains are developed, but they are still lacking in intelligence. . . . Therefore you should not judge people according to their stature, but honour them all equally. What is in you is in all. Each has what you also have within you; and the poor grows the same plants in his garden as the rich. In man, the ability to practise all crafts and arts is innate, but not all these arts have been brought to the light of day. . . . Those which are to become manifest in him must first be awakened. What can be learned for men is not properly learning, because everything is prefigured even in the child; it must only be awakened and summoned forth in him. . . . The child is still an uncertain being, and he receives his form according to the potentialities that you awaken in him. If you awaken his ability to make shoes, he will be a shoemaker; if you awaken the stonecutter in him, he will be a stonecutter; and if you summon forth the scholar in him, he will be a scholar. And this can be so because all potentialities are inherent in him; what you awaken in him comes forth from him; the rest remains unawakened, absorbed in sleep.

I/13, 298-99

We are born to be awake, not to be asleep!

I/9, 256

Therefore, man, learn and learn, question and question, and do not be ashamed of it; for only thus can you earn a name that will resound in all countries and never be forgotten.

I/13, 377

We desire to explore the same things as our forefathers desired to explore. However, we should not blindly accept everything they taught, but only that knowledge which is

Fig. 62. The Astrologer.

needed in our own time. For what is gone is gone, and the new time confronts us with new tasks! Although the ancients left behind many things that we can and should love, these things have not come down to us in such a way that from now there is no need to learn anything more than what we have received from them; on the contrary, we should improve on all these things, we should go further in our explorations

TOIL, A DIVINE COMMANDMENT

and study new things. This lesson and this commandment to learn are valid until the end of days.

I/12, 169

Much must be lopped from a tree, from its limbs and branches, before it stands right and beautiful and without a flaw. . . . How many books were written before at last a few immortal ones came into being; these are the fruitful boughs that grace the tree. A student must learn, and write a great deal in vain, before he can master the alphabet; should we for this reason ascribe value to the badly written letters and keep looking at them? No, only the last and best, which he has written correctly and well understood!

II/1, 77

Just as flowers cannot bloom before May and the corn cannot be ripe before the harvest time and wine cannot be pressed before autumn, so the time for learning cannot be curtailed. Learning is our very life, from youth to old age, indeed, up to the brink of death; no one lives for ten hours without learning.

I/8, 214

He who is guided by the ways of nature becomes well versed in the two branches of philosophy, that of heaven and that of the earth. He is blessed with such great knowledge that neither life nor death, neither health nor illness is hidden from him.

I/8, 373

Fig. 63. Scholars.

Fig. 64. The Physician in His Study: portrait of the Spanish physician Luis Lobera de Avila.

Not will alone, only will and deed
make for perfect achievement.

All things on earth have been given into the hands of man. And they are given into his hands in order that he may bring them to the highest development, just as the earth does with all that it brings forth. But this highest should be for man the lowest—a beginning; it is a seed which he is beholden to shape into something greater.

Nothing created is beyond man's fathoming. And every-

thing has been created to the end that man may not remain idle, but walk in the path of God, that is to say, in His works and not in vice, not in fornication, not in gambling and not in drinking, not in robbing, not in the acquisition of goods, nor in the accumulation of treasures for the worms. To the end that he may experience God's spirit, His light, and His angelic ways in all things which are of divine nature. It is more blessed to write about nymphs than about the ecclesiastical hierarchy, more blessed to write about the origin of the giants than about court etiquette, more blessed to praise Melusina than cavalry and artillery, and more blessed to speak of miners under the earth than of tournaments and chivalry. For in the former the spirit deals in divine works, while in the latter it is busied in worldly things, to please the world in vanity and impurity.

1/14, 116-17

Behold the herbs! Their virtues are invisible and yet they can be detected. Behold the beasts which can neither speak nor explain anything, and yet nothing is so hidden in them that man cannot learn of it. Thus there is no thing on earth or in the sea, in chaos or in the firmament, that does not become manifest at the appointed time. It is God's will that nothing remain unknown to man as he walks in the light of nature; for all things belonging to nature exist for the sake of man. And since they have been created for his sake, and since it is he who needs them, he must explore everything that lies in nature.

1/12, 148-49

It is not God's will that His secrets should be visible; it is His will that they become manifest and knowable through the works of man who has been created in order to make them visible. Thus Christ, whom no one recognized as the second person of the Trinity, was considered by everyone a man, because what He actually was remained invisible. . . . For God is the revealer of that which is hidden in all things. . . . And it is no different with man. No one sees what is hidden in him, but only what his works reveal. Therefore man should work continually to discover what God has given him. . . . We too should make manifest that which

He has put in us, to the end that the unbelievers may see what God can achieve through man.

God has planted many marvellous secrets in man, so that they lie in him like seeds in the earth. And just as the seeds burgeon from the earth in spring, so the flowers and fruits that God has put in men will come to light at the appointed time. God is pleased with all the fruits of the earth that ripen at their appointed time, He is pleased also with the fruits of

Fig. 65. The Garden of Health.

man when they grow ripe for harvest; for He is glad when His creatures retain nothing in themselves, when everything grows and unfolds from them, and when they praise God, their Creator, through their works. The earth brings forth all things and holds back nothing, not even the least thing; all the more should man help the gifts that God has sown in him to prosper and thus become a saint, a hymn in his praise. For it is the saints who embody and make manifest what God has put into them. Man should always keep this in mind, he should not fall asleep, but in daily effort should strive for his summer lest it be always winter round him.

Christ charged us with a task which must guide us all, which we must forever strive to perform. His command-

ments and teachings apply not only to the eternal light but also to the light of nature. He enjoined us: "Seek, and ye shall find." It is our task to seek art, for without seeking it we shall never learn the secrets of the world. Who can boast that a roast squab flies into his mouth? Or that a grapevine runs after him? You must go to it yourself. We can seek in various ways: . . . but the seeking that is needed here concerns the occult things. When the goal of the seeking is hidden, the manner of seeking is also occult; and because knowledge is inherent in the art, he who seeks the art also finds knowledge in it.

I/12, 150-51

All things are given into the hands of man though he make no effort to obtain them; they grow without his help. The ore takes its shape without human aid, and the flowers likewise. But if he wants to use or enjoy them, he must expend labour upon them. For although iron is iron, it is not of itself a plowshare or a carpenter's ax. Although corn means bread, it is not ready to be consumed as bread. So is it with all products; God has given them to us that through them we may preserve ourselves, and He has also given us the arts that we need to this end. Therefore we must be versed not only in all the plants of nature, but also in the art with which God has endowed us for the purpose of preparing them. In this practice we must withstand the test, and being natural bodies, we must during our stay on earth be guided by the light of nature. Let us not be idlers or dreamers, but always at work, both physically and spiritually, so that no part of us remains inactive. Such work in the sweat of our brow may even drive away the devil and his pack, for where man is at work none of them can abide.

I/12, 241

God makes a house; man too can build one. God has hands and feet in His word, man has them in his limbs. One man can cure another by means of a remedy, which he must set to work by means of his body; God does this by one word. . . . A man walks on his feet, the spirit walks without feet. . . . God wills the earth to grow trees, pears, and other fruits, and creatures of all kinds. . . . Similarly He wills that

Fig. 66. Alchemistic Oven.

all the arts—music, the crafts, the sciences, and doctrines of theology—which He created, and which rest in the “firmament,” should become real. . . . And this must be done by man, just as the pears are brought to maturity by the tree. For the “firmament” needs an agent through which to work, and this agent is man and man alone. Man has been so created that through him the miracles of nature are made visible and given form.

The herbs were created like the trees and the stars; they were not with God at the beginning of time, that is to say,

before the creation of heaven and earth. None of them was with the spirit of God; He created them one after another. Thus He made the stars, the planets, the earth, water, fire, air, the mountains, the metals, the herbs, and so on. And as He created them, they were born; then they became tangible and visible,

and out of nothing they became substance, for our own use. But God never lets anything stand empty, but fills everything; would not a stone, for example, be empty if no virtues were inherent in it? And what would man be if no soul dwelt within him? It is the soul that fills him. What would a cow be if it did not give milk? The milk is the "virtue" that fills it. . . . Man has a soul, and by it he and all men should live: in fulness and not in barrenness!

. . . What good would the earth be if it did not bear fruit? The fruit is its fulness. And what good would the fruit be if it were hollow? None at all! Therefore, God created nothing empty, but filled all things. Anyone who wanted to build a house that had no purpose would be a fool; and the same is true in this case.

God's hand cast the stars in the orbit of the firmament,

Fig. 67. Preparation of the Elixir of Life
("forma furni ad distillandum
aquam vitae").

and thus determined their course; the pace and circle of each star . . . now high, now low, for all stars without distinction. If one is high the other is low, if one is in exaltation the other is in declination, to the end that one yield to the other, that each serve the purpose for which God created it, and that everything be fulfilled. . . . No star can be idle; no star stands still, all exercise daily, to awaken nature and

Fig. 68. Astronomers at Work.

drive her to her daily work. And just as the stars have no rest, so also do the things of nature work without respite.

I/13, 147-48

Winter means the rest of all things in nature, for after the production of their fruits they should rest. Yet this is no real rest, for they continue to labour and labour and prepare for a new summer, for a new birth, and for a new bestowal of their fruit. Thus nothing is idle in nature, all things are at work from hour to hour, from day to day, from night to night. Only man rests at night and does not work on the Sabbath because of the commandment. But the day of rest was not ordained for the spirit, which must not stand still and idle; it is established only for the rest of the body, as of the beasts of the field, and for whatever pertains to it. The spirit must always be at work; neither sleep nor Sabbath can make it still and quiet. The same goes for all creatures; even though the body rests, their spirit never stands still and continues to work each day.

I/13, 148

Happiness does not consist in laziness, or sensual pleasure, or riches, or chattering, or gluttony. In labour and in sweat must each man use the gifts that God conferred upon him on earth, either as a peasant in the fields, as a workman in the smithy, in the mines, on the seas, in medicine, or as one who proclaims the word of God.

II/1, 253-54

The proper way resides in work and action, in doing and producing; the perverse man does nothing, but talks a great deal. We must not judge a man by his words, but by his heart. The heart speaks through words only when they are confirmed by deeds.

Fig. 69. Books.

I/9, 223

All things that we use on earth, let us use them for good and not for evil. And never for more or for anything other than the purpose for which they exist. We should add nothing and take away nothing, spoil nothing, better nothing.

II/1, 90

If you are called to write a book, you will not fail to do so,

Fig. 70. Vintage.

even if it is delayed for sixty or seventy years, or even longer. If you carry it within you and turn it over in your mind, you need not rush at it at once. It will not always remain within, it will have to come out, like a child from the womb of its mother. For only what is born in this way is fertile and good, and then it never comes too late. . . . Have patience and do not see a fig in every thistle. Wait: the hour will strike, then everything will come forth from you. . . . What must be born of you, and what is in you, that comes out, and you know not how or whence it comes, or whither it strives to go. And in the end you find it in that which you have never learned or seen.

By their heavenly fruits, that is to say, by their works, men are known. In them it becomes manifest whether man

walks in the path of God or not, whether he is a son of nature or of God, a son of the "old" or of the "new" birth—of the birth for blessedness or for unblessedness—whether he belongs to the righteous or the unrighteous, the elect or the non-elect. Such knowledge is needed, and very much needed. For if we go wrong in the beginning, we shall err still more in the middle, and most of all in the end.

I/12, 388

When the things we need are ripe for harvest, the season we need sends their harvester and their wagoner, that each thing may be brought to light at its appointed hour.

I/9, 285

Anyone who imagines that all fruits ripen at the same time as the strawberries knows nothing about grapes.

I/10, 14

Hope is one of the loftiest emotions we can experience; we must trust in our art and hope that it will not fail. For wherever we lack hope, our fruits will also be lacking. Only he who can do something hopes; he who can do nothing has no hope, but only doubts. And he who knows something and hopes does not go astray, nor does he doubt. He awaits the hour that will teach him what is the will of God.

I/7, 369

It is not of ourselves that we have wisdom and the arts, but through a mediator. He is the invisible spirit which gives us art in the same way as the fields give us fruit. . . . Thus God's spirit bestows His gifts in accordance with His orders: to one, the invention of the alphabet, to another, of the forge, to a third, of the lyre, and so to each the invention of something that is needed on earth. But once the things have been invented, we can also learn them of ourselves. . . . Everything we invent has its origin in the spirit. Therefore, let us not concern ourselves with how things have come to us, but trust that everything is done at God's command. . . . Everyone must understand that no bird could fly unless God had so ordained.

I/9, 340-42

We must not brood over things of divine nature, but rec-

ognize them only in their works; for these are the signs of the Master who lives in heaven. As the house is the sign of its master and confirms him to be a carpenter, as the pot is the sign of its potter, so the works are signs of their Master and bear witness that He is God Himself.

Every believer should be a philosopher . . . in order to

Fig. 71. Chemical Dissolution of Bodies.

know what is of benefit to him, to his life and his health. . . . He should know what he eats and drinks, what he wears and what he does; and to what use he can put these things for the prolongation of his life. . . . If he eats what is useful to his health and avoids what may shorten his life, that is the proper way to fast. For all our actions should be directed toward a long life. Therefore he should also study all causalities that he may know what God created out of nothingness; the firmament that he may understand its ef-

fects; the earth that he may see what grows in it; the sea and the air that he may recognize his Creator in all things. Only a cripple in knowledge can believe that God created His creation without unfolding it. Rich is he who knows God by His works, who draws from them his faith in Him, and who does not pass them by like a man who is colour-blind. For God wills that man know Him completely and not only half and without clarity.

I/13, 247-48

Pray, seek, knock at the gates in the name of God, then everything you need will be given you in excess; for in His name and through Him all things happen. And work diligently to be perfect in your craft, for God has made it perfect to the end that your works may praise, honour, and celebrate Him.

I/10, 23

Fig. 72. *Illuminatio*: alchemistic-symbolic illustration of the psychic rebirth.

Fig. 73. Cosmic Harmony.

Everything that is within can be known by what is without.

It is not God's will that all He has created for the benefit of man and has given him as his own should remain hidden. . . . And even if He did conceal some things, He left nothing unmarked, but provided all things with outward, visible marks, with special traits—just as a man who has buried a treasure marks the spot in order that he may find it again.

We men discover everything that lies hidden in the mountains by external signs and correspondences, and thus also do we find all the properties of herbs and everything that is in the stones. There is nothing in the depths of the seas, nothing on the heights of the firmament, that man is unable to discover. No mountain, no cliff, is so vast as to hide or con-

ceal what is in it from the eyes of man; it is revealed to him by corresponding signs. . . . For each fruit is a sign, and through it we discover what is contained in that from which it stems. Similarly there is nothing in man that is not marked in his exterior, so that by the exterior one may discover what is in the individual who bears the sign. . . . There are four ways by which the nature of man and of all living things can be discovered. . . . First, chiromancy; it concerns the extreme parts of man's limbs, namely the hands and feet. . . . Second, physiognomics; it concerns the face and the whole head. . . . Third, the *substantina*, which refers to the whole shape of the body. . . . And fourth, the customs and usages, that is to say, manners and gestures in which man appears and shows himself. . . . These four belong together; they provide us with a complete knowledge of the hidden, inward man, and of all things that grow in nature. . . . Nature is the sculptor: she endows everything with the form which is also the essence, and thus the form reveals the essence.

There is nothing that nature has not signed in such a way that man may discover its essence. . . . The stars have their orbits by which they are known. The same is true of man. As you can see, each herb is given the form that befits

Fig. 74. Man and the Annual Cycle.

I/12, 174-77

its nature; similarly, man is endowed with a form corresponding to his inner nature. And just as the form shows what a given herb is, so the human shape is a sign which indicates what a given man is. This does not refer to the name, sex, or similar characteristics, but to the qualities inherent in the man. The art of signs teaches us to give each man his true name in accordance with his innate nature. A wolf must not be called a sheep, a dove must not be called a fox; each being should be given the name that belongs to its essence. . . . Since nothing is so secret or hidden that it cannot be revealed, everything depends on the discovery of those things which manifest the hidden. . . . The nature of each man's soul accords with the design of his lineaments and arteries. The same is true of the face, which is shaped and formed according to the content of his mind and soul, and the same is again true of the proportions of the human body. For the sculptor of Nature is so artful that he does not mould the soul to fit the form, but the form to fit the soul; in other words, the shape of a man is formed in accordance with the manner of his heart. . . . Artists who make sculptures proceed no differently. . . . And the more accomplished an artist would be, the more necessary it is that he master the

Fig. 75. Herbs.

art of signs. . . . No artist can paint or carve, no one can produce an accomplished work, without such knowledge. . . . Only he who has some knowledge of this can be a finished artist.

Behold the *Satyrion* root, is it not formed like the male privy parts? No one can deny this. Accordingly magic discovered it and revealed that it can restore a man's virility

and passion. And then we have the thistle; do not its leaves prick like needles? Thanks to this sign, the art of magic discovered that there is no better herb against internal pricking. The *Siegwurz* root is wrapped in an envelope like armour; and this is a magic sign showing that like armour it gives protection against weapons. And the *Syderica* bears the image and form of a snake on each of its leaves, and thus, according to magic, it gives protection against any kind of poisoning. The chicory stands under a special influence of the sun; this is seen in its leaves, which always bend toward the sun as though they wanted to show it gratitude. Hence it is most effective while the sun is shining, while the sun is in the sky. As soon as the sun sets, the power of chicory dwindles. Why, do you think, does its root assume the shape of a bird after seven years? What has the art of magic to say about this? If you know the answer, keep silent and say nothing the scoffers; if you do not know it, try to find out; investigate, and do not be ashamed to ask questions.

I/13, 377

When a carpenter builds a house, it first lives in him as an idea; and the house is built according to this idea. Therefore, from the form of the house, one can make inferences about the carpenter's ideas and images. What nature has in mind . . . no one can know until it has acquired form and shape. . . . Now note well that virtue forms the shape of a man, just as the carpenter's ideas become visible in his house; and a man's body takes shape in accordance with the nature of his soul. . . . Nature acts no differently. She gives man an outward appearance that is in keeping with his inner constitution. . . . And each man's soul can be recognized, just as the carpenter can be known by his house.

I/12, 177-78

Through the art of chiromancy and the art of physiognomics . . . it is possible to tell by the shape, form, and colour, and nothing more, the qualities and virtues of each

herb and root; these are their signs. And for this we need no other test or long study. For God has carefully differentiated all His creation from the beginning, and has never given to different things the same shape and form.

Physiognomics is the art of discovering what is within and hidden in man. . . . It tells us in what relation his heart stands to God and his neighbour, what eyes are those

Fig. 76. Physiognomics.

of a rogue and what eyes are not, which tongue is cunning and which is not, which ears are open to evil and which to good. By it we know a man's temperament and his attitude toward God and his fellow men. . . . For his conduct toward God, his ways of acting, hearing, and seeing, all these are signs by which his heart can be known. That which fills the heart overflows in the mouth; and what a man's heart desires, that is what his ears hear, and his eyes

seek after. The physiognomics of the heavens provides us with exactly similar insights. . . . For it is written: by their fruits ye shall know them!

If we want to make a statement about a man's nature on the basis of his physiognomy, we must take everything into account; it is in his distress that a man is tested, for then his nature is revealed. For *in extremis*, things reveal their nature and become visible; then we can say: he is an upright man, a steadfast man, a faithful man, he manifests his inner being. . . . One man reveals more traits of loyalty and less of disloyalty; one man is to a large extent this, another man

that. Therefore we should keep an eye on the outward characteristics which nature gives a man by shaping him in a certain way. For nature shapes the anatomy of a pear in such a way that the pear develops into a pear tree; and she creates a medlar's anatomy, in such a way that it develops into a medlar bush; and the same is true of silver and of gold. Nature also forges man, now a gold man, now a silver man, now a fig man, now a bean man.

1/14, 183-84

There are many kinds of chiromancy; not only the chiromancy of man's hands, from which it is possible to infer and discover his inclinations and his fate, to ascertain what good or evil will befall him; there are yet other kinds of chiromancy, for example, that of herbs, of tree leaves, of wood, of rocks, of mines, or the chiromancy of landscapes, of their roads and rivers, and so on.

. . . All this must be studied and well understood, and the physician should also study the lines of the herbs and the leaves, and by the application

Fig. 77. Chiromancy.

of chiromancy, he should discover their efficacy and virtues. Those who work wood, such as carpenters, cabinet-makers, and the rest, must estimate the quality of wood by means of chiromancy, and discover its uses, what it is good for. Similarly, a miner should study mines with the help of chiromancy, in order to know what ores and metals a mine contains and whether they are deposited close to the surface or

deep below it. And in the same way the cosmographer should study the chiromancy of landscapes, countries, and streams.

Customs are innate in us, and we are brought up in certain customs. Our manners and customs depend on the way in which we are brought up. By finding out whether or not these customs serve God and our fellow man, whether we observe them steadily or whether we waver like reeds in the wind, we obtain a clear picture of our nature. Therefore you can discern man's immortal part in his visible, innate, characteristic signs, and you can know him even by his appearance; for the outer reveals the inner.

Fig. 78. Man and Planet.

Fig. 79. The Rose.

God gives us no art that does not bear in itself the necessity of its fulfilment.

I/9, 287

Human nature is different from all other animal nature. It is endowed with divine wisdom, endowed with divine arts. Therefore we are justly called gods and the children of the Supreme Being. For the light of nature is in us, and this light is God. Our mortal bodies are vehicles of the divine wisdom. Within our power there are arts that we owe to no one but God; they are given us in the hour of our conception. For this reason there is no justification for the skeptical question: "Is man able to see the future and is he able to know it?" Such doubts imply that not man, but only God, is capable of this knowledge. But since God has created the art, He is not alone to have the knowledge, it is also inherent in his art . . . and this art He has entrusted to man. Who conferred the word upon the prophets? God alone. Who taught

the arts? Again God alone. And if everything comes from God, why should art be incapable of something that God is capable of? Therefore, study without respite, that the art may become perfect in us.

Who gives man all the arts, all the skills that he achieves? Man does not give them to himself. No more than an ass becomes a lute-player does man by himself become something

Fig. 80. Mars and Venus.

he is not. Since man is more gifted than an ass, it follows that he can learn lute-playing and even more difficult things. But not from the firmament. For who is there that can play the lute? No one. But how could someone teach it if he did not know it himself? What we can do must come to us from another who can do it; for nothing can be learned from someone who knows nothing. And although we

speak of heavenly songs and symphonies, they are produced neither by harps nor lutes, but are a noise in the clouds, an echo from the earth. Thus all things come from God, and God plants all things in us according to His will.

In the stars all skills are arts, all crafts are hidden, and also all wisdom, all reason, as well as foolishness and what belongs to it; for there is nothing in man that does not flow into him from the light of nature. But what is in the light of nature is subject to the influence of the stars. The stars are our school in which everything must be learned.

If there had been no Venus, music would never have been invented, and if there had been no Mars, neither would the crafts ever have been invented. Thus the stars teach us all the arts that exist on earth; and if the stars were not active in us, and if we had been compelled to discover everything in ourselves, no art would ever have come into being.

I/12, 23

Just as the aspect of the heavens has been constantly renewed from the days of Adam down to our own time, so new arts arise from year to year. And not the arts alone, but every new thing, all wars, all governments, and everything that our brain produces, receive their guidance from the stars now and at all times. And if all musicians died, and all craftsmen died, this master would remain . . . and would always instruct new ones.

I/12, 23

Not all the stars have yet completed their action and asserted their influences. Therefore, the invention of arts has not yet come to an end, and for this reason no one who has discovered something new or who undertakes to explore some unknown field should be held back. . . . Give heed to those who each day seek for something new and each day find something new, whatever it may be—whether in the arts or in the revelations of natural wisdom. For it is the heavens that are responsible for it. Thus new teachings, new arts, new orders, new diseases, new remedies succeed one another, for . . . at all times the heavens are at work. And it remains for man to decide what portion of these things he should take to himself and what he should not. . . .

I/12, 24-25

There are seven ways in which we become versed in the arts:

First, a spirit—let us say, an angel—may teach man certain arts. . . . Such instruction is comparable to that of a schoolmaster who merely awakens in a child that which is already in him. It is an evocation, a revelation. . . .

Secondly, a man often gives advice which proves helpful but which he himself does not understand. The light of nature is responsible for the happy outcome. For the advice that was given might have resulted not in good but in evil, because the devils never fail to instil some of their falsity into all things.

Thirdly, many arts have come to the light of day through experience. For instance: a sick man tries out an unknown remedy which he hopes will help him, and lo and behold: it

Fig. 81. The Seven Liberal Arts.

is effectual. The light of nature has led him to it, and pointed out to him something which he had not noticed before.

Fourthly, many sorcerers have achieved skill in "nigromancy, necromancy, chiromancy, hygromancy"—i.e., in those false arts that concern themselves with soothsaying. . . . But these are not genuine arts as they fancy; no, it is the light of nature that confers a skill upon them under such a cloak, in order to gratify their covetousness. For thus does the light of nature play with men.

Fifthly, many arts have come to the light of day through genuine chiromancy; and the chiromancies of the hands, of herbs, or of wood have introduced the chiromancers to the art. Not without good reason was chiromancy so highly honoured by the ancients. We use it only for soothsaying, but the ancients used it as a means for learning the arts.

Sixthly, physiognomics has also led to many arts. It is the art that reveals characteristics hidden within. By means of it, we can discover the inward through the outward not only in man but also in all created things. . . .

ARTS, A GIFT OF GOD

Seventh, arts have developed on the basis of the outward form of things, that is to say, when one form is similar to another, and the similar is cured by the similar—cancer has been applied against cancer, dragon root against snake bite and so on.

But it is possible to enumerate other arts which have been given to us through the discoveries of astronomy and philosophy or through a deeper understanding of the properties of herbs and various other natural things.

I/8, 292-93

Fig. 82. The Dancers.

All of us should know that art, science, and skill exist only to be conducive to joy, peace, unity, purity, respectability, to gratify our needs and help us to serve our fellow men. This is also true of music. It is the remedy of all who suffer from melancholy and fantasy, disorders that ultimately make them desperate and solitary. But music has power to hold them in human company and preserve their minds; it drives out the spirit of witches, demons, and sorcerers.

II/1, 105-6

An art is the most durable good, the best wealth, which no thief can steal, no fire, no water, destroy; and if someone took my body away, he still would not have my art, for it is hidden in me, a possession that defies seizure.

I/14, 506-7

Our life is founded not only in bread, but also in arts and words of wisdom that come from the mouth of God. We should fill ourselves with these, and look upon a full belly as mortal, but upon those other things as eternal. For all

Fig. 83. The Harpist and the Nine Muses.

those who live on those things will shine like the sun in the kingdom of God.

Although there are many names, the arts are not separated, and one kind of knowledge is not severed from another; for one is in all.

Know that man makes great discoveries concerning future and hidden things, which are despised and scoffed at by the ignorant who do not realize what nature can accomplish by

ARTS, A GIFT OF GOD

virtue of her spirit. . . . Thus, the uncertain arts are in such a state that a new generation must come, full of prophetic or sibylline spirit, which will awaken and direct the skills and arts. The arts of this kind . . . are quite old, and enjoyed great reputation among the ancient. They were kept secret and taught secretly. For the students of these arts devoted their time to inner contemplation and faith, and by such means they discovered and proved many great things. But the men of today have no longer such capacity for imagination and faith; today their minds are exclusively concerned with things that are pleasant to the flesh and the blood; only what the flesh and the blood want and desire is being studied, that alone is still being practised. . . . These arts are uncertain today because man is uncertain in himself. For he who is not certain of himself cannot be certain in his actions; a sceptic can never create anything enduring, nor can anyone who serves only the body accomplish true spiritual works.

II/12, 485

If we would know the inner nature of man by his outer nature; if we would understand his inner heaven by his outward aspect; if we would know the inner nature of trees, herbs, roots, stones by their outward aspect, we must pursue our exploration of nature on the foundation of the cabala. For the cabala opens up access to the occult, to the mysteries; it enables us to read sealed epistles and books and likewise the inner nature of men.

II/1, 102

Fig. 84. Magic Sigil.

All of you, whose faith leads you to divine man's future, past, and present, you who see land beyond the horizon, who read sealed, hidden missives and books, who seek for buried treasures in the earth and in walls, you who teach so much wisdom, such high arts—remember that you must take unto yourselves the teachings of the cabala if you want to accomplish all this. For the cabala builds on a true foundation. Pray and it will be given you, knock and you will be heard, the gate will be opened to you. . . . Everything you desire will flow and be granted you. You will see into the greatest depth of the earth . . . and into the third heaven. You will gain greater knowledge than Solomon. . . . But only if you seek the kingdom of God above all else will this be granted you. The art of the cabala is beholden to God, it is in alliance with Him, and it is founded on the words of Christ. But if you do not follow the true doctrine of the cabala, but slip into geomancy, you will be led by that spirit which tells you nothing but lies.

Fig. 85. The Poet and the Thinker.

The interpretation of dreams is a great art. Dreams are not without meaning wherever they may come from—from fantasy, from the elements, or from another inspiration. Often one can find something supernatural in them. For the spirit is never idle. If the earth gives us an inspiration—one

INTERPRETATION OF DREAMS

of her gifts—and if she confers it upon us through her spirit, then the vision has a meaning.

1/12, 259

Anyone who wants to take his dream seriously, interpret it, and be guided by it, must be endowed with "sidereal knowledge" and the light of nature, and must not engage in absurd fantasies, nor look upon his dreams from the heights of his arrogance; for in this way nothing can be done with them. Dreams must be heeded and accepted. For a great many of them come true.

For the most part presentiments appear to man in so unimpressive a form that they are ignored. And yet Joseph discovered in his sleep who Mary was and by whom she was with child. And because dreams are not sufficiently heeded, no faith is put in their revelations, although they are nothing other than prophecies. . . .

The wise man must not neglect them, but recall that Christ too appeared in invisible form and was ridiculed. If he understands that inconspicuous things must not be ridiculed but judged with wisdom, he will also know Christ. The scoffers have no understanding, but the wise possess the knowledge that God has conferred upon them.

The dreams which reveal the supernatural are promises and messages that God sends us directly; they are nothing but His angels, His ministering spirits, who usually appear to

1/12, 491

Fig. 86. Mary with the Child and the Three Kings.

1/12, 104-6

us when we are in a great predicament. . . . Of such apparitions we must know how they take place and how they come to us; when we are in great need, we can obtain them from God's kindness if our prayer pours in true faith from a truthful mouth and heart. Then God sends us such a messenger who appears to us in spirit, warns us, consoles us, teaches us, and brings us His good tidings.

From time immemorial artistic insights have been revealed to artists in their sleep and in dreams, so that at all times they ardently desired them. Then their imagination could work wonders upon wonders and invoke the shades of the philosophers, who would instruct them in their art. To-day this still happens again and again, but most of what transpires is forgotten. How often does a man say as he wakes in the morning, "I had a wonderful dream last night," and relate how Mercury or this or that philosopher appeared to him in person and taught him this or that art. But then the dream escapes him and he cannot remember it. However, anyone to whom this happens should not leave his room upon awakening, should speak to no one, but remain alone and sober until everything comes back to him, and he recalls his dream.

Fig. 87. The Dreamer.

Fig. 88. The Great Sage: portrait of
Hermes Trismegistus.

Magic is the most secret of the arts
and the highest wisdom concerning
the supernatural on earth. . . .

I/14,538

Magic has power to experience and fathom things which are inaccessible to human reason. For magic is a great secret wisdom, just as reason is a great public folly. Therefore it would be desirable and good for the doctors of theology to know something about it and to understand what it actually is, and cease unjustly and unfoundedly to call it witchcraft.

I/14,538

After all, God has permitted magic, and this is a sign that we may use it; it is also a sign of what we are; but we must

not interpret this sign as a summons to practise magic. For if a man practises false magic, he tempts God. . . . And if he tempts God, woe to his soul!

All skills and arts come from God, and nothing comes from any other source . . . and therefore no one may vilify astronomy, alchemy, or medicine, or philosophy, or theology, acting, poetry, music, geomancy . . . or any other high art. Why not? What then does man invent of himself? Not even the slightest rag with which to patch his breeches. What new thing can the devil invent? Nothing on earth, nothing pure and simple; not even so much as is needed to catch and kill a louse on your head. But as soon as something is kindled in us by the light of nature, the devil pretends to be our guide and makes bold to falsify all things that God has given us, to slander them, and to make them deceptive, and thus does he spoil everything. . . . The devil makes bold to brand God's works as lies, in order to abuse Him; he seduces those who are weak in their faith and leads them astray in order to make them desert God and cultivate false arts and grievously affront Him. They spend their time in lies, and although they too brood, and inquire and explore, they nevertheless must die without finding the truth.

A test and a proof are always required to distinguish the sacred from the profane, and to discover from what virtues the various miracles derive. A careful examination is required before one can establish whether it is the spirit of nature or the spirit of God which appears to us in such a miracle. Learn to recognize this distinction well! It is most indispensable to know what comes from *divinatio* and what from *divinitas*. These terms are alike, they derive from the same root, but not so the miracles—these spring from different sources.

The Holy Scriptures call sorcerers—without distinction—all those who were versed in supernatural things and were not at the same time holy. But this matter must be given some consideration. God wills us to live simply, like the apostles, and not to brood over things and explore hidden

Fig. 89. The Magus.

things which occur in a supernatural manner, because it is not His will that we misuse such knowledge to the injury of our fellow men, and thus damn our bodies and souls. For this reason we must not regard as sorcerers all those who are so called in the Holy Scriptures. If we did we should have to look upon the three Wise Men of the East as arch-sorcerers, for they were more versed in the arts and things supernatural than anyone before them or anyone living in their time. But Holy Writ speaks of them not as sorcerers but as magi; and how should we interpret this? Only to mean that they did not misuse their art and their great occult wisdom. For magic is an art which reveals its highest power and strength through faith. It is true, however, that if it is misused, it can give rise to sorcery.

I/14, 521

As God awakens the dead to new life, so the "natural saints," who are called magi, are given power over the energies and faculties of nature. For there are holy men in God who serve the beatific life; they are called saints. But there are also holy men in God who serve the forces of nature, and they are called magi. God shows His miracles through His holy men, both through those of the beatific life and through

MAN AND WORKS

those of nature; what others are incapable of doing they can do, because it has been conferred upon them as a special gift.

Fig. 90. Magic Sigil Effective against Gout.

Fig. 91. *Turba Philosophorum*
(Disputing Alchemists).

Who can be an enemy of alchemy,
since it bears no guilt? Guilty is he
who does not know it properly and
who does not apply it properly.

1/11, 186

Let it be for you a great and high mystery in the light of nature that a thing can completely lose and forfeit its form and shape, only to arise subsequently out of nothing and become something whose potency and virtue is far nobler than what it was in the beginning.

1/11, 348-49

Nothing has been created as *ultima materia*—in its final state. Everything is at first created in its *prima materia*, its original stuff; whereupon Vulcan comes, and by the art of alchemy develops it into its final substance. . . . For alchemy means: to carry to its end something that has not yet been completed. To obtain the lead from the ore and to transform it into what it is made for. . . . Accordingly, you

Alchimia die Kunst redet.

Fig. 92. Alchimia.

ALCHEMY, ART OF TRANSFORMATION

should understand that alchemy is nothing but the art which makes the impure into the pure through fire. . . . It can separate the useful from the useless, and transmute it into its final substance and its ultimate essence.

1/11, 188-89

The transmutation of metals is a great mystery of nature. However laborious and difficult this task may be, whatever impediments and obstacles may lie in the way of its accomplishment, this transmutation does not go counter to nature, nor is it incompatible with the order of God, as is falsely asserted by many persons. But the base, impure five metals—that is, copper, tin, lead, iron, and quicksilver—cannot be transmuted into the nobler, pure, and perfect metals—namely, into gold and silver—without a *tinctura*, or without the philosophers' stone.

1/11, 356-57

Since ancient times philosophy has striven to separate the good from the evil, and the pure from the impure; this is the same as saying that all things die and that only the soul lives eternal. The soul endures while the body decays, and you may recall that correspondingly a seed must rot away if it is to bear fruit. But what does it mean, to rot? It means only this—that the body decays while its essence, the good, the soul, subsists. This should be known about decaying. And once we have understood this, we possess the pearl which contains all the virtues.

Decay is the beginning of all birth. . . . It transforms shape and essence, the forces and virtues of nature. Just as the decay of all foods in the stomach transforms them and makes them into a pulp, so it hap-

1/2, 47

Fig. 93. Lion Swallowing the Sun: "the true green and golden lion," symbolic picture of the transmutation of the *prima materia*.

pens outside the stomach. . . . Decay is the midwife of very great things! It causes many things to rot, that a noble fruit may be born; for it is the reversal, the death and destruction of the original essence of all natural things. It brings about the birth and rebirth of forms a thousand times improved. . . . And this is the highest and greatest *mysterium* of God, the deepest mystery and miracle that He has revealed to mortal man.

The great virtues that lie hidden in nature would never have been revealed if alchemy had not uncovered them and made them visible. Take a tree, for example; a man sees it in the winter, but he does not know what it is, he does not know what it conceals within itself, until summer comes and discloses the buds, the flowers, the fruit. . . . Similarly the virtues in things remain concealed to man, unless the alchemists disclose them, as the summer reveals the nature of the tree.—And if the alchemist brings to light that which lies hidden in nature, one must know that those hidden powers are different in each thing—they are different in locusts, different in leaves, different in flowers, and different in ripe and unripe fruits. For all this is so marvellous that in form and qualities the last fruit of a tree is completely unlike the first one. . . . And each thing has not only one virtue but many, just as a flower has more than one colour, and each colour has in itself the most diverse hues; and yet they constitute a unity, one thing.

Alchemy is a necessary, indispensable art. . . . It is an art, and Vulcan is its artist. He who is a Vulcan has mastered this art; he who is not a Vulcan can make no headway in it. But to understand this art, one must above all know that God has created all things; and that He has created something out of nothing. This something is a seed, in which the purpose of its use and function is inherent from the begin-

Fig. 94. *Mercurius Noster*: alchemistic-symbolic representation of quicksilver, or mercury, as one of the planets which is the source and cause of all transmutation.

ning. And since all things have been created in an unfinished state, nothing is finished, but Vulcan must bring all things to their completion. Things are created and given into our hands, but not in the ultimate form that is proper to them. For example, wood grows of itself, but does not transform itself into boards or charcoal. Similarly, clay does not of itself become a pot. This is true of everything that grows in nature.

I/11, 186-87

The *quinta essentia* is that which is extracted from a substance—from all plants and from everything which has life

Hom quicksilver.

Fig. 95. Quicksilver.

ALCHEMY, ART OF TRANSFORMATION

—then freed of all impurities and all perishable parts, refined into highest purity and separated from all elements. . . . The inherency of a thing, its nature, power, virtue, and curative efficacy, without any . . . foreign admixture . . . that is the *quinta essentia*. It is a spirit like the life spirit, but with this difference that the *spiritus vitae*, the life spirit, is imperishable, while the spirit of man is perishable. . . . The *quinta essentia* being the life spirit of things, it can be extracted only from the perceptible, that is to say material, parts, but not from the imperceptible, animated parts of things. . . . It is endowed with extraordinary powers and perfections, and in it is found a great purity, through which it effects an alteration or cleansing in the body, which is an incomparable marvel. . . . Thus the *quinta essentia* can cleanse a man's life. . . . Therefore each disease requires

Fig. 96. The Philosophers' Stone: alchemistic-symbolic representation.

its own *quinta essentia*, although some forms of the *quinta essentia* are said to be useful in all diseases.

Only what is incorporeal and immortal, what is endowed with eternal life, what stands above all natural things and remains unfathomable to man, can rightly be called an arcanum. . . . Like the divine curative powers, it has power to change us, to renew us, and to restore us. . . . And although the arcana are not external and although they do not constitute a symphony to the divine essence, they must be considered heavenly as compared with us mortals, for they can preserve our bodies, and by their influences achieve marvels in us that reason cannot fathom. . . . The arcanum is the entire virtue of a thing, multiplied a thousandfold. . . . Up until the present epoch, which is still young, only four arcana have come to our knowledge. . . . The first arcanum is the *prima materia*, the second the *lapis philosophorum*, the third the *mercurius vitae*, and the last the *tinctura*. . . . The *prima materia* can consume a man's old age and confer a new youth upon him—thus a young herb from a new seed grows in a new summer and a new year. . . . The second arcanum, the *lapis philosophorum*, purifies the whole body and cleanses it of all its filth by developing fresh young energies. . . . *Mercurius vitae*, the third arcanum, has a purifying action; like a halcyon, which puts on new feathers after moulting, it can remove the impurities from man—down to the nails and the skin—and make him grow anew. Thus it renovates the old body. . . . *Tinctura*, the last arcanum, is like the *rebis*—the bisexual creature—which transmutes silver and other metals into gold; it “tinges,” i.e., it transforms the body, removing its harmful parts, its crudity, its incompleteness, and transforms everything into a pure, noble, and indestructible being.

Here on earth the celestial fire is a cold, rigid, and frozen fire. And this fire is the body of gold. Therefore all we can do with it by means of our own fire is to dissolve it and make it fluid, just as the sun thaws snow and ice and makes them liquid. In other words, fire has not the power to burn fire,

ALCHEMY, ART OF TRANSFORMATION

for gold itself is nothing but fire. In heaven it is dissolved, but on earth it is solidified. . . . God and nature do nothing in vain, or without a purpose. The place of all things indestructible is not subject to time, it has no beginning or end, it is everywhere. Those things are efficacious when all hope has been given up, and they may accomplish miraculously what is considered impossible, what looks hopeless, absurd, or even desperate.

I/14, 413-14

But to write more about this mystery is forbidden and further revelation is the prerogative of the divine power. For this art is truly a gift of God. Wherefore not everyone can understand it. For this reason God bestows it upon whom He pleases, and it cannot be wrested from Him by force; for it is His will that He alone shall be honoured in it and that through it His name be praised for ever and ever.

I/14, 431

Fig. 97. Uroboros, "Serpent that Eats His Own Tail": representation of the hermetic alchemistic transmutation process and symbol of eternity, time, etc.

Fig. 98. The Astronomer.

Know that the philosopher has power over the stars and not the stars over him.

Astronomy is an indispensable art; it should rightly be held in high esteem, and studied earnestly and thoroughly. . . . For it teaches each man the condition and disposition of his soul, his heart, his thoughts; it teaches him whether they are false, or righteous and good, whether they are malignant or not. And it teaches how the hour of conception affects the child's fate, although it is less important than the conjuncture of the stars at the time of his birth.

The astronomer should be able to find his bearings in the firmament with the help of his natural reason, in a natural way, as a philosopher or a physician finds his way among the

Fig. 99. Astronomy Lesson.

things of nature, which derive from the elements. But he should not have a higher opinion of this art, and place more reliance in it than behooves a prisoner. The prisoner, too, has all the qualities that belong to a man, but he is prevented from unfolding them; he cannot do what he wants. The same is true of the firmament: it lies imprisoned in the hands of the Supreme Mover. What this hand intends to do with it is hidden to the astronomer. . . . For his art may be impeded, furthered, or changed by the hand of the Supreme Helmsman.

I/12, 91

Know that there are two kinds of stars—the heavenly and the earthly, the stars of folly and the stars of wisdom. And

just as there are two worlds, a Little World and a Great World, and just as the little one rules over the great one, so the stars of the microcosm rule over and govern the Stars of heaven. For never forget that God has created the planets and all other stars not to rule over and govern man, but to obey Him as do all other created things.

Fig. 100. Jupiter.

In the stars there dwell reason, wisdom, ruse, strife, weapons, just as they do in us men. For we originate in them; they are our parents, and from them we have received our reason, wisdom, strife, etc. We have received all these from the stars, and accordingly these same things are in the stars; with the sole difference that in us men they become material, corporeal, visible, while in the stars they are invisible, subtle, spiritual. But let no one fancy that the wisdom and reason, which we have received from heaven,

come directly from God! They do not come directly from Him, but exist in us men as a reflection of the corresponding qualities of the macrocosm, the Great Creature. But the wisdom which comes to us from God Himself stands above the other and is stronger than the heavens and the stars.

The art of astronomy helps us to discover the secrets of the innate disposition of the heart and makes manifest the good and evil qualities with which nature has endowed man. For man is a child of the Great World, and his nature is rooted in it. And because the earth and the stars are characterized by different natures, and the Kingdom of God by yet an-

other, we must discover each of these by its signs. . . . For the art of astronomy distinguishes fancy and opinion from science and knowledge. And it teaches us with what great reason all things proceed in their course. What in its essence belongs to the ways of God must be learned from God, but concerning what belongs to the mortal sphere we are instructed by the firmament, the Great Creature.

1/9, 578

It is not true that the firmament exerts a compelling action upon man; on the contrary man himself acts upon the world more than he is influenced by it. Therefore it would only be just if one refrained from writing about the action of the firmament as is usually done. . . . For this action has in-

Fig. 101. Blood-Letter.

fluence only upon the emotions and upon the heathen, sensual reason. But we are Christians, and we should live like Christians. If we live like heathen, other influences are visited upon us, influences that cannot be understood on the basis of the stars. . . . Christ said that pestilence, drought, famine, and earthquakes would follow fast upon one another, and so they will—let no one forget it!—and they will not be announced in advance by the earthly planets. We must pay greater heed to the words of Christ than to those of astrology. He alone decrees the signs of the seasons and tides and fulfils the seasons of the nations.

The stars are subject to the philosopher, they must follow him, and not he them. Only the man who is still animal is governed, mastered, compelled, and driven by the stars, so that he has no choice but to follow them—just as the thief cannot escape the gallows, the murderer the wheel, the fish the fisherman, the bird the snare, or the game the hunter. But the reason for all this is that such a man does not know himself and does not know how to use the energies hidden in him, nor does he know that he carries the stars within himself, that he is the microcosm, and thus carries in him the whole firmament with all its influences. Therefore he can rightly be abused as stupid and unwise, and must live in dire servitude to all that is earthly and mortal.

Christ and His apostles prophesy the seasons of the nations, but the astronomer states the seasons of natural events. This is a mighty difference; take note of it and understand it aright, ye scientists and theologians! For what God prophesies takes place and nothing can prevent it from coming true. But what the astronomer predicts may or may not happen. Thus prophecy springs from one source, astronomy from another. The true knowledge of man's essence can be attained only on the basis of his eternity; it cannot be understood by any other sign.

When Christ came all other wisdom died out and vanished, and since then it has been of no value. . . . Christ brought eternal wisdom into the world, and since then it has been

just and proper to renounce the inferior kinds of wisdom and adhere to the higher kinds; and though I myself often write in the manner of the heathen, I am a Christian and must recognize that the inferior wisdom must yield to the greater. The wisdom of Christ is more profound than that of nature, consequently a prophet or an apostle must be held in higher esteem than an astronomer or a physician; and it is better to prophesy from God than through astronomy, it is better to cure through God than by means of herbs. The message of the prophets is without an error. The apostles have power to cure the sick and raise the dead, and likewise their works are without a flaw. Who then can doubt that astronomy and its light have paled beneath the light of Christ?—Nevertheless it is our duty to say that the sick need a physician, while few need an apostle; similarly many forecasts must be made by the astronomer and not by the prophets. Thus each has his part—the prophet, the astronomer, the apostle, and the physician. For this reason astronomy has not been abolished, nor forbidden to us Christians; we have only been commanded to use it in a Christian manner. For the Father has set us in the light of nature, and the Son in the eternal light. Therefore it is indispensable that we should know them both. 1/12, 496-97

Man's wisdom is in no way subjugated, and is no one's slave; it has not renounced or surrendered its freedom. Therefore the stars must obey man and be subject to him, and not he to the stars. Even if he is a child of Saturn and if Saturn has overshadowed his birth, he can still escape Saturn's influence, he can master Saturn and become a child of the sun. 1/11, 378

The wise man is the man who lives by divine wisdom and is an image of Him in whose likeness he was created. The wise man rules over both bodies—the sidereal, or aerial, and the elemental, or material, body. Man must serve both, he

must go the ways of each, in order to fulfil the law of the Lord and live in harmony with nature, and with the will of God and with the divine spirit. He must not prefer the mortal body and its reason to the eternal "image," nor must he reject this "image" for the sake of the animal body and find eternal salvation in the wisdom of the animal body. . . . The wise man lives after the image of God and is not guided by the ways of the world. And he who imitates the image of God will conquer the stars.

Fig. 102. The Aged Sage.

IV

MAN AND ETHICS

Fig. 103. The Stages of Reality.

For what is a man profited if he shall gain the whole world, and lose his own soul?

1/14, 207

Even if we are born deaf and dumb, why should we remain deaf and dumb forever? It was God who has endowed us with speech, and how could children learn to speak, if He did not grant them His divine help? The word and the ear have been given us as implements with which to study God's creation in so far as He permits us to do so. What avails it a man to see if he does not know what he has seen? To what end has man been created except that he may learn to distinguish between good and evil and choose the good? If we have no knowledge of this, we know nothing of God. But who can say that a man who knows nothing is happy? A man who has knowledge will never succumb to a temptation,

nor has such a man ever been found to be superstitious. Where, then, does superstition prevail? Among those who know nothing. Where is vanity? Only among those who have no knowledge. And where is folly? Among those who are content with their own want of judgment and do not strive toward God's wisdom.

It behooves a pious man to be wise and skilful, so that he may understand what he believes. If a fool and know-nothing has faith, his faith is dead. Works alone lead one to faith, that is to say the works of nature, her signs and marvels. And since faith is based on works, signs, and marvels, it is fitting that we philosophize as believers and not as heathen, and that we profess the Christian creed. But there are believers of different kinds; and we are convinced that he who wants to believe must also know; for only from knowledge, and because of knowledge, does faith arise. Through this knowledge, which comes from philosophy and precedes faith, a man can be either blessed or damned; damned, though he know and believe in all God's signs and marvels, if for example the fruit of his knowledge fails to mature, and dies away. For he who knows much should bear much fruit. And if he does not, he may be regarded as a liar and not a philosopher. For first comes knowledge, then faith, and then the fruit; this is the ground on which the philosopher must stand.

The lover goes a long way to meet a beautiful woman; how much farther should one go to discover a beautiful art? The Queen of Sheba came from beyond the seas only to hear Solomon's wisdom. Now why did so exalted a queen pursue Solomon's wisdom? For the reason that wisdom is a gift of God and must be sought in him to whom God has given it. And similarly all art must be sought in those whom God has endowed with it.

Man possesses two kinds of reason: angelic and animal. The angelic reason is eternal, and comes from God, and belongs to God; God has also given us the animal reason . . . but it is not eternal, for the body dies, and it dies with the

KNOWLEDGE AND FAITH

body. No animal thing endures after death. Death is only the death of the animal part, not of the eternal part of man. . . . A beast is not a man, it is a beast; and man is not a beast, but the image of God. Man is the instrument through which God reveals His miracles; yet he is like a beast in that he is mortal.

Not the humanity in him, but the beast is mortal; man will be resurrected on the Day of Judgment and stand before God, but not so the animal, not so the beast in him. Man will be called to give an account of himself, but not so the beast. . . . Therefore, a man who is not a man of wisdom and of arts is only an abortion; he is not a man but only a beast.

There are two kinds of wisdom in this world — one eternal and one perishable. The eternal wisdom originates directly in the light of the Holy Ghost, the other wisdom directly in the light of nature. The one that comes from the light of the Holy Ghost is of only one kind—it is the just and flawless wisdom. But the one that originates in the light of nature is of two kinds: good and evil. The good wisdom is inseparable from the Eternal, the evil from Doom. . . . Is it not a high privilege of man to distinguish eternal wisdom from temporal wisdom, and to understand that the mortal is worthless when compared with the eternal?

Fig. 104. True and False Wisdom: The fool says, "Thee, O fortune, we make into a goddess, we exalt thee to heaven." The sage says, "Trust in virtue, fortune is more transitory than the waves."

I/13, 310-11

This treasure has been given man because he is the image of God, and therefore he should always strive to be worthy of this image, and distinguish a good and an evil kind of temporal wisdom, and thus discover that the good consists primarily of eternal wisdom; and only subsequently of temporal wisdom. And of this other wisdom let him retain only the good kind, and reject the evil kind. For wisdom does not command you, but you alone command yourself.

Hands and feet in themselves do not constitute a man; the wisdom of nature and the faculties she bestows are needed to complete him. Therefore man should not turn to the carnal part of his body; for all this is animal. He should concern himself only with that part of his body which is invisible and intangible—the light of nature, the natural wisdom that God has inculcated in the stars and that passes from them to man.

Natural reason and eternal wisdom belong together. Natural reason may exist without eternal wisdom, when it follows the heathen way, and is not concerned with the Eternal. But eternal reason cannot exist without natural wisdom because man must find the eternal in the natural. Therefore a man who dwells in God is endowed with both to be his guides in all things.

To all of us falls one heritage—wisdom. All of us inherit of it equally. But one man makes the best of his heritage, and another does not; one buries it, lets it die, and passes over it, another draws profit from it—one more, another less. According to how we invest, use, and administer our heritage, we obtain much or little from it; and yet it belongs to all of us, and it is in all of us.

God recognizes all talents that originate in His wisdom, each according to its own character. Much work leads to great knowledge. And all such talents partake of God's love; he to whom God reveals them has them.

The light of nature says: wisdom has no other enemy than the man who is not wise. Therefore wisdom has no other

KNOWLEDGE AND FAITH

enemy but lies, and thus he who teaches and writes in God has no other enemy but him who is not in God.

I/12, 284

Wisdom consists in knowing and not in imagining; a man who has wisdom understands all things and uses them with reason, his reason and wisdom are free from stupidity, free from folly, free from confusion and doubt. Let the right path, the right reason, the right mind, and the right weight and measure be the scale of all things—for it is by knowledge that all things are governed, led, and brought to their perfection.

I/11, 171

He who knows nothing loves nothing. He who can do nothing understands nothing. He who understands nothing is worthless. But he who understands also loves, notices, sees. . . . The more knowledge is inherent in a thing, the greater the love. . . . Everything lies in knowledge. From it comes every fruit. Knowledge bestows faith; for he who knows God believes in Him. He who does not know Him does not believe in Him. Everyone believes in what he knows.

I/11, 207

He who inherits God's wisdom walks on water without wetting his feet; for in the true art inherited from God, man is like an angel. But what will wet an angel? Nothing. Similarly, nothing will wet the wise man. God is powerful and He wills it that His power be revealed to men and to angels in the wisdoms and the arts. He wills it that the world and the earth be like Heaven. Not with regard to chastity, for this is a matter decided by the body, not with regard to fasting, for this too is imposed upon the body, and not in works, for these belong to the body, but in wisdom and the arts. . . . Can any man be a fool who follows the will of God? No, he cannot. Can anyone be unlearned who follows the will of God? No, he cannot. Can anyone be an ignoramus who follows His will? Certainly not. All this goes counter to the will of God; for He does not want us to be fools, uninformed, ignorant, and without understanding; He wants us to be awakened to knowledge in all the great things of His creation, which He has given us in

order that the devil may know we belong to God and are like unto angels.

Know that nothing could pass from us to God were there not an angel in us, who takes our inner message to Heaven. Nor would anything of God come to us without such an agent, who is swifter than all our thoughts. . . . Before a thought occurs to us, it has been with God and then returned to us. What God wills, He brings about through the spirit in us, which is charged with performing His work in us . . . It is incumbent upon the soul to serve as man's angel, and

Fig. 105. The Angel.

upon man to make use of his angel; for the angel is nothing other than the immortal part of man.

What have the angels power to do? All things. For in them is all the wisdom of God and all His art. . . . The angels are pure and clean, without sleep, in

an eternal waking state. The body of man is imprisoned in sleep, therefore he must be awakened if he would attain to the wisdom of angels, that is to say, to the wisdom and the art of God. . . . For God has given His power to the herbs, put it in stones, concealed it in seeds; we should take it from them, we should seek it in them. The angels possess wisdom in themselves, but man does not. For him wisdom lies in nature, in nature he must seek it. His harvest is stored up in nature. Through nature God's power is revealed to man, through nature he enters into his Father's heritage, in wisdom and in the arts.

The nature of a man's virtue is like that of his feelings. His treasure lies where his heart is. If it is with God, God is his treasure, and He attracts him. If his feelings are at-

tached to nature, it is she who attracts him. But if his attitude is dual, so is his work. For as the man is, so are his virtues and powers.

I/12, 161

Fidelity cannot be divided or mixed, any more than God's truth. All this cannot be divided, just as love cannot be divided; for fidelity and love are one thing. . . . When a man studies only for the sake of appearances, for the sake of outward splendour, and contents himself with mere talk, with superficial titles, there the highest fidelity is lacking. All such doings are unfaithful and have nothing in common with love.

I/8, 213

The Scripture says: *compelle intrare*, which means: compel them to enter; namely, from the lie into the truth. It is said to the end that he who boasts a sword may see to it that the truth is taught and not the lie. For only the truth can forestall all lies and encourage man to learn and grow in piety and not in malice. Of his own accord man inclines to evil, but if he is compelled to be good, the good will be revealed to him.

I/10, 213

We should write and assert the truth; but if we are in doubt and do not know the causes, we should abstain from writing. This rule should be observed not only in medicine, but also in chronicles, in the writing of history, in all books, and also in the interpretation of Holy Writ. . . . For otherwise lies are spread among the people, who prefer darkness to light. . . . The Scripture says: the letter killeth, but the spirit giveth life. . . . That is to say, the spirit which bears nothing but the truth in itself. If a man adheres solely to the truth in his writings, it is not mere letters that he writes; it is the spirit that he sets down in its truth, the spirit that is invisible in itself and that must come to us through the written or spoken word. . . . But if a man does not write the truth, he writes lies; and the letter that is a lie kills. Therefore let any desirous of writing be careful to keep

always to the truth, that he may kill no one. For to kill is forbidden under the penalty of forfeiting eternal life.

The promises that we give one another, let us keep them even though the ground burst open beneath our feet. It is better that we should sink into the earth than that we should lie to our fellow men. For the lie destroys our own heart. The lie makes false storekeepers, false traders, false brothers; all deceit springs from the lie. Therefore make sure that when you say yes, it should remain a yes, and not become a no.

God must nourish us, no one else can do it. He acts toward us as a master toward his servants; each servant is treated according to his bent, and so does God with us. If a man would nourish himself on truth, God gives him enough of it, and that is his nourishment. God owes us our nourishment and gives it to us in the form in which we ourselves desire it. If we desire it in the form of lies, even truths become lies in us, and we live like liars. For God gives the liars their nourishment just as He gives it to the truthful. He must nourish all of us, whether we be good or evil, just as he must make provision for the sun, the earth, and all creation.

It is God's will that we keep our vows and promises and that we do not waver in this but remain steadfast as a rock. For each yes is a promise, a vow. And it must be kept unbroken, whether it be good or bad. What you promise, keep! If it is good, it will be revealed as good to all men; if it is evil, men will discover where the righteous and the unrighteous stand, where the devil has his children.

. Our beginning is faith. It may be enclosed in our hearts like a treasure in an unused shrine, and lie there, well protected . . . and if a poor man should come to us, we

TRUTH AND FALSEHOOD

should open our hearts and give him the gift that is in our heart—this gift is love. If we have drawn out the love that lies in this treasure, and if we walk in the path of love on earth, we may also look forward to the third virtue—the hope of eternity. But he who does not know how to draw love from his treasure, his hope is like empty straw.

II/1, 85-86

Speech is not of the tongue but of the heart. The tongue is merely the instrument with which one speaks. He who is dumb is dumb in his heart, not in his tongue. Therefore the words of the tongue should come from the heart, for it is the heart that holds truth, loyalty, and love. He who speaks should draw them thence, and speak from the heart, then his yes will be a yes, and his no a no. If you say yes, abide by it, even if it is evil; and if you say no, abide by it, even if it is evil. For what is in our heart is thereby revealed, and thereby you may be known. As you speak, so is your heart.

I/14, 276-77

Fig. 106. The Heart.

Of ceremonies you should know that they are superfluous; for if we are to receive something from God, He looks into our hearts and not at the ceremonies. If we have received something of Him, He does not wish us to use it for ceremonies but for works. He grants us favours that we may love Him in our hearts, with all our strength and all our soul, and that we may thus help our fellow man. And if whatever He gives us serves only this purpose, all ceremonies become superfluous.

I/9, 344

He who loves much is given much. Salvation is the lot of all, but the gifts that spring from love are unequal. . . . No one may say: God, our Father, has given me more life than you; for He has given an equal share of life to all. And in the exact same measure are the goods of the earth

meted out, since the earth belongs to us and to no one else. And since it is ours, we are entitled to possess it all in the same measure, and not in unequal measures. But if a greater share falls to one man than to another, and a lesser to this man than to that man, and thus there is inequality of distribution, the rich man should nevertheless refrain from asserting that he possesses more than the poor man. For if he has more, that much more should he give away, and not eat everything himself, but like the others content himself with an equal share. God metes out many things, this to one man, that to another, to each his own. But the highest good is meted out to all of us equally—and that is the enjoyment of life on this earth. Hence we should act accordingly and help one another. Those who have much should give much to those who have nothing, that they may be found generous in their gifts.

The true faith of the jurist should rest upon mercy; and all his striving should be to the end that others be forgiven. . . . For who can say what is right, and who among us mortal men can presume to pass a judgment that will be valid before God, unless it has been inspired in him by the Holy Ghost Himself? But then he would not be taking it from a book or from his imagination or from his own head! . . . How can anyone praise himself and condemn another, since no one knows who he himself really is? Here lies the greatest error and contradiction in which the jurists are imprisoned. As long as they have been promulgating the law and sitting in judgment, no one has ever been given his right; the poor is always worsted, and the rich or quick-witted man always wins and not the slow-witted, the favoured and not the unfavoured. And all this happens by virtue of the letter. It is the letter that sends the thief to the gallows—and the judge to eternal damnation. The true religion of the jurist should be: to guide men to forgive, and

TRUTH AND FALSEHOOD

pardon one another, to turn the other cheek. For not for nothing has God so ordained.

II/1, 103-4

What we have received from the Holy Ghost, whether it be wisdom, or medicine, that serves our fellow man, and this is true of everything else. But what is not directed toward the love of God and the fellow man does not spring from the Holy Ghost.

II/1, 150

Fig. 107. The Scholar.

The heart of man is so great if it is righteous that God begrudges him nothing. But if it is not righteous and holds no goodness in it, even the Lord's Prayer is poison in such a man's mouth. Thus the Lord's Prayer, though it springs from God himself, is poison in the heart of an evil man, and his eternal death; but in the heart of a good man, it leads to life everlasting. Therefore you should know that even if the rogues did all that the saints have done, it would be

Fig. 108. Parental Love.

poison in the eyes of God. But he who is not a rogue, he who walks in the ways of God, will be pure in heart, even if he has done nothing but eat partridges.

It would be an error to try to build the Kingdom of Heaven upon envy. For nothing that is founded on envy can thrive; it must have another root. If

anyone were to attempt it, it would be with him as with the man who dug a moat: he dug it for another and fell into it himself. For God is the judge: He allows the moat to be dug, but He knows the hearts of men; when the moat is ready, He sets dogs on the men, and thus they fall into it. God often protects one evil man from another evil man because a greater evil might come about if one evil man killed another evil man. It is the same as with the wounded man whose wounds were swarming with flies. Someone wanted to chase them away, but he said: "No, let them remain where they are! For if you drive them away, others will come, which are hungry and which will torment me again. But these have already eaten their fill."

If a war breaks out, the cause of it is that God sends a punishment upon a country in order by such a punishment to renew the world. And in proceeding against a country the enemy metes out the same measure as God in Heaven metes out against that country. As a man who acts against God far exceeds the measure of malice, so another man may

come, who in acting against him also exceeds the measure; and just as the first man forgot himself in acting against God, so the second man forgets himself in acting against the first.

I/12, 280

You should practise humility first toward man, and only then toward God. He who despises men has no respect for God. The Scripture says: You should live in accord with your companions as long as you walk with them on earth, so that no one may hold a grudge against you in the next world. For in the hereafter there is a pit and a hangman whom you shall not be able to escape; you will be forced into the pit and you will pay dearly for your sins!

All of you here on earth, turn away from vanity and pride, and practise humility, and confess your sins; for all of us are sinners. If a man confess his sins to his fellow man, and his fellow man to him, everyone confesses to be a sinner. Therefore we should also pardon and forgive one another, so that we may be blessed. And you, holders of power, if you do not confess your overweening pride toward your subjects, you will never be pardoned. If you do not, here on earth, obtain forgiveness from those to whom you are indebted, how can you expect ever to escape the pit after this life? . . . And similarly you who are masters in

II/1, 204-5

Fig. 109. The Planet Saturn as Ruler of the Year Brings Ruin and Disease.

Fig. 110. Humility.

all lands . . . and who have measured with false measures. . . . Confess your sins! For this God will give full credit to your hearts, and will grant you his pardon.

11/1, 214-15

He who knows no repentance and no suffering can offer no resistance to the devil. When great sins weigh upon us . . . we should cry out to God from the bottom of our hearts. If from the depths of our souls we call out earnestly to Him, He will direct His eyes toward us and remit all our sins. But if we are not steadfast in our hearts, He will not forgive us any sin.

Who can oppose Him? Therefore let our hearts be alert by night and day, without respite, from one mass to the other, and never abandon hope, but remain steadfast, and let us think of God's great mercy and of the salvation that lies in him.

11/1, 214

Fig. 111. Of Food and Drink.

There is no greater evil than to yield to temptation in things which concern the body and life of man. For Christ has ordered us to entreat Him in prayer that we may not be led into temptation. To be unknowing and unclear about oneself is to meet temptation half way and to injure body and soul. When we act, let us act from full insight; if we live in folly and stupidity we find no favour in God's eyes, and nothing will excuse us. Therefore pray that you be not led into temptation!

1/8, 305

Take the good until you find something better, and in search for something better do not let the good slip away from you or die out. If you disregard it despite its worth, and pursue something better, what you had escapes you; but if you remain attached to what is good, you will always have it if nothing better follows.

1/8, 307

One thing is as good as another; the carbuncle is no better than the tuff stone, the fir is valued no less than the cypress; this is revealed in the light of nature. He who sets gold above silver does so out of greed; for silver like gold has been endowed with excellence. Therefore such actions do not spring from the wisdom of nature, but from mortal reason.

He who commits adultery or leads a life of fornication has been condemned by God, whatever he may be, whether learned or not, whether of the clerical or secular estate. The Lord is no respecter of persons. In this we should follow God and set equal store by everyone—without regard for his position in life—and help, advise, and give to all in equal measure. If we observe this rule, we walk in the footsteps of the Lord. . . . For such is His will—despise no one, favour no one!

Remember that we should not call our brother a fool; for we ourselves do not know what we are. God alone can judge and know.

What is the meaning of the Kingdom of Heaven? It is this: that we should forgive one another—then God will forgive us too; that we should love one another—then God

Fig. 112. The Suppliants.

will love us too. . . . What is more blessed than this? And if it is in this that we find our happiness on earth, then the Kingdom of Heaven is with us.

II/1, 246

We sin in a twofold way—against God and against our fellow man. And therefore forgiveness is twofold: we forgive our fellow man, just as we wish to obtain forgiveness from God. In other words, if we forgive our enemies and

Fig. 113. The Collector of Precious Stones.

debtors, God forgives us, however we may have transgressed against Him and whatever sins we may have committed. Therefore we must first of all forgive one another. For the beginning is with us, the end with God.

II/1, 202-3

If you are a peasant and have many fields, many possessions, and you have full enjoyment of them—what is enjoyment? After all, you cannot eat everything by yourself! Give one part to your servants and another to those in need. Amass no treasures; the worms, flies, and moths will devour them in any event. Sufficient unto the day is the evil thereof—and the care and the misery. This in itself is not a cross; but the very next day may bring you a cross. Therefore let us be free of care and give of our own free will what exceeds our pressing need. . . . Blessed are those who die

in the Lord! These are the poor who have sought no pleasure on earth.

If the purpose of your labour is not wealth, but if you confine yourself to daily bread, you are blessed and you will be happy. Then you will not steal, for stealing is done for the sake of riches, and in order to eat one's bread in idleness; you will kill no one, for the purpose of killing is to gain another man's possession or for an insignificant wage to help another to gain them; nor will you bear false witness, for this is done in order to circumvent God. But how blessed you will be and how happy if you are not burdened with any guilt! If you have understood the blessed life that is achieved by confining yourself to the needs of the day, you have properly understood those three commandments of God.

The wealth that properly belongs to the happy rich man consists not in treasures, which the moths devour, but in his children who stand round his table like the branches of an olive tree, which stand out in a circle round its trunk. This is the divine wealth of the blessed man, it is his share along with his work. The wealth consisting in such work and such children finds favour in the eyes of God and He delights in it. But the children of the idler will stand round his table as the thorns round a thistle.

If you are a knight, of what use to you are your golden necklaces and your golden spurs and bridles? If you want to be a knight and a champion of blessedness, then be a knight through your generosity and not through the shedding of blood.

There are not many rich people endowed by nature with blessed generosity. How many begrudge the poor even food. Such people, choking with vulgarity, cruelty, and avarice, and utterly lacking in understanding, should be taught generosity. For those who have no generosity will be eternally damned, and nothing will help them. On the Day of Judgment they will be told: "You did not feed me when I was hungry, you did not give me to drink when I was thirsty, and you did not clothe me when I was naked."

Therefore may blessed generosity be praised, that they may gain understanding and learn how to give—these stupid, arrogant, proud men, who imagine that there is no God and they themselves are the masters of heaven and earth.

II/1, 155-56

Not in riches does our happiness consist, but in our natural needs. For in our needs there is also love; love does not pursue riches, riches defraud the fellow man. But this is against God, and the blessed life becomes worm-eaten. If the patient gives you, physician, what you need and nothing more, then you are both blessed. If you give him health, which is his need, and nothing more, then you are both blessed. If you are a potter, then your fellow men who need your work support you by paying you a wage. Let them give you as much as you need, but no riches; riches would bring you only damnation, but poverty will bring you blessedness. For our kingdom is not of this world, but of the life everlasting.

Without the rich, nothing can be accomplished in behalf of the poor; the rich are bound to the poor as by a chain. . . . You, rich men, learn to know this chain, for if you ever break one link of it, you will not only be breaking the chain, but you yourselves will be cast aside like the broken link. Why do you make yourselves free from the poor and deny them your help? Just as by taking a few links from a chain, you would be making it too short, so without the poor, your path will be too short to lead to Heaven, and you will never attain to the goal that lies at the end of the chain. Know, therefore, that all your diseases on earth lie in one single hospital, whether you be rich or poor; and that is the hospital of God. This you must understand well, and consider that death and disease spare you as little as they do the

Fig. 114. The Beggar.

II/1, 242

poor. Examine yourselves and know that all of you need the hospital equally, and that all of you, lords and princes, as you are assembled, must lie in this hospital, and die or else recover.

Blessed and thrice blessed is the man to whom God gives the grace of poverty. . . . Therefore the most blessed is he who loves poverty. It rids him of many fetters, frees him from the prison of hell. It does not lead him to practise usury, to steal, to murder, and so on. But he who loves riches sits on a shaky limb; a little breeze comes—and it enters his head to steal, to practise usury, to drive hard bargains, and other such evil practices, all of which serve him only to acquire the riches of the devil and not those of God. Therefore let the doctrine of the blessed life be taught not to those who love riches, for they will not find pleasure in it, but only to those who delight in poverty, in the community of the poor, in a just life, so that no one may surpass his fellow man in the satisfaction of his needs, but that each may suffer with the other, and help him, and rejoice and weep with him. For to be merry with the merry and to grieve with the aggrieved is fair and just.

Become poor, indeed, and become poor as a beggar, then the pope will desert you, and the emperor will desert you, and henceforth you will be considered only a fool. But then you will have peace, and your folly will be great wisdom in the eyes of God. But if you are not ready to assume voluntary poverty, you walk away in sadness, like the disciple whom Christ commanded to sell his house, his land, and all his belongings, and to follow Him.

Fig. 115. The Light of the Heart.

V

MAN AND SPIRIT

Fig. 116. The Creator Blesses the Globe.

The Holy Ghost kindles
the light of nature. . . .

IT is nature that teaches all things, and what she herself cannot teach, she receives of the Holy Ghost, who instructs her. For the Holy Ghost and nature are one, that is to say: each day nature shines as a light from the Holy Ghost and learns from him, and thus this light reaches man, as in a dream.

I/13, 32

Everything that comes from the light of nature must be learned from the light of nature, excepting only the image of

God, which is learned from the spirit that the Lord has given to man. The spirit instructs man in the knowledge of supernatural and eternal things, and after the separation of matter from spirit, it returns to the Lord. For it is given to man only as a teacher, to enlighten him in things eternal.

There are two schools for man. The school of the earth teaches earthly things and has its schoolmaster from nature, in nature; indeed, it is nature herself. It inculcates knowledge of itself, that is to say, of those things which are in it. Then there is the other school, that from above. There, the teacher is our Father in Heaven. He from whom we are. . . . He teaches us in the reborn body, and not in the old body, and in this reborn man, He teaches heavenly wisdom. . . . From this school are the apostles, prophets, and those who study God, and their works and fruits are their witnesses.

What is there in us, mortals, that has not come to us from God? He who teaches us the eternal also teaches us the perishable; for both spring from God.

There are many who deem man and his power to be the highest good. There are men who consider the emperor to be the highest good, or hold the highest good to be their fellow men who do them a good turn, give them gifts, or help them. But in this they are mistaken. For is there not Someone above the emperor, Someone who is more righteous than the emperor? Is there not Someone who gives to the man, who in turn gives you what you need? Is not this Someone more? We may rise as high as we can, in search of the highest good, but all this remains within the earthly sphere: that which is eternal is above all this.

If we are to follow our God, and not He us, we must do everything ourselves, for He does nothing. It is entirely up to us whether or not we do a thing. Of what benefit is ruling to a man who uses the power he has over others only for purposes of arrogance and pride, for the sake of his own pleasure and not to serve others? For the power which only castigates and afflicts others, and which in itself can do nothing but feast and revel, and blow trumpets, is not divine. But

if he who has the power is just in himself, the power must so subjugate him that he is sadder than those under him. For power comes from God, and He bears the human burdens that derive from it.

II/1, 190

There is a tree from which many and diverse things are sucked and drawn, and everything is one tree . . . a tree that bears only one fruit, to be sure, but a fruit of many tastes. This tree is the Holy Ghost himself, it is also His only fruit. This fruit is apportioned in many ways, that is to say, the tree bears very diverse fruit. For when the manna fell from heaven and the people ate of it, each ate what he wanted, and it had the taste he desired. It is the same with this fruit: he who eats of the tree of the Holy Ghost tastes just what he would like to suck and eat from it. It follows that to each is given the spirit he desires: to one the spirit of wisdom, to another the spirit of science, to a third the spirit of faith, to a fourth the spirit of healing, to a fifth the spirit of power, to a sixth the spirit of prophecy, to a seventh the spirit of tongues. Thus God gives diverse things through the Holy Ghost; and not just one craft, but many hundreds of crafts, that man may know how marvellous is that spirit from which all things come.

II/1, 143-44

Each craft is twofold: on the one hand there is the knowledge that we learn from men, on the other hand the knowledge that we learn from the Holy Ghost. The making of glass is not an art for him who has learned it from someone else. But he who was the first to invent it of himself deserves to be praised as an artist, for in him we feel the action of the Holy Ghost. . . . But in him who can do only what he has learned from others, the presence of the Holy Ghost cannot be felt. . . . Man can do none of all this by his own strength; all his wisdom, his reason, and everything that is in him cannot discover the new, let alone fully develop its properties. Those who learned from the first teachers learned directly from others, but they too lived by the Holy Ghost. For the Holy Ghost put it into those men, and it has thus come down

from the first to the most recent men. . . . And thus the spirit of God triumphs on earth among men.

Fig. 117. God the Father and the Pilgrim.

Since God . . . is not an inhabitant of this earth but has His throne and His Kingdom in Heaven, it is necessary that there be someone on earth to govern mankind and guide it and show it the way through the straits of life. There is no angel, no spirit on earth, to lead men; to man alone this task has fallen. Therefore, it is not surprising that many false paths are entered upon, and it is of great importance that man should recognize his shepherd, and know who he is, lest a wolf be taken

for a shepherd and mislead man by donning sheep's clothing, while concealing the devil within him. . . . For each of the two paths—the narrow one through life and the broad one in heaven—has its own shepherd, and each of these shepherds reveals and shows us his way. But it is so hard to distinguish between the two that it is almost impossible to tell the one

from the other. . . . God has given man shepherds to lead him and show him the way in study and work. But the shepherds cannot of themselves gain such leadership and guidance, but only when inspired by God. . . . For man must be guided in a divine, and not in a human manner. Therefore God himself ordained and appointed man's shepherds, and taught and instructed them as to what to teach and tell the people, in order that not their will but only the will of God be obeyed.

II/1, 264

One of the greatest gifts that God bestows upon us is to provide us always with holy men who lead us and teach us and guide us in things eternal, in the blessed life. He has enlightened them through the Holy Ghost that they may speak marvellously of His Kingdom with a great and fiery tongue, in a language that can be understood by the many. This is the true task of the pious teachers on earth, who take their instruction from the Holy Ghost and who speak and lead. . . . But not only are they deeply enlightened by the Holy Ghost and speak important words, a marvel to all men; they also possess a mighty power on earth, which God has bestowed on them. . . . Therein they are like their master: they purify the lepers when nature no longer has power to do so, and this they do with one miracle-working sentence: "You are pure." And it comes to pass. For the great truth is such that all the forces of nature are silent and yield in the face of its power; with one single word it can resurrect the dead.

II/1, 91-92

It is impossible for a man to know how a nation should be governed unless he has received the grace of the Holy Ghost, that is to say unless he has eaten of the tree of the Holy Ghost. Who except God can correctly gauge the hearts of men? He who wants to govern must look into the hearts of men and act accordingly. If he does not look into their hearts, his rule is beset with errors and difficulties, and harms his country. But he whose government is inspired by the Holy Ghost governs for the good of all, even if he is severe, hard, rude, and coarse. The Holy Ghost helps him to know the hearts of his subjects. And then he can also be

gentle, kind, gracious, and merciful toward them, and rejoice their hearts. If they are evil or sinful, they should be treated with kindness rather than severity; a disobedient and sinful man must be seized by the authorities with a view to correction by hard or lenient punishment. If the authority upon which power is conferred does not pluck from the tree whose fruit is the Holy Ghost—as the bees suck honey from flowers—then its rule will in time become harmful and burdensome, and will never end happily. But this is true not only of government authorities, but also of fathers and mothers, masters, lords, and all those whose function is to instruct and to lead people. Let all of them equally take their wisdom, reason, judgment from the tree; for only thus can they learn how to wean others from evil and excess. The tree teaches how people should be governed and led: it is not a common tree, created only for the pleasure of the belly and the eyes, but is the fountainhead and reservoir of the blessed life. He who applies the power and wisdom that he has received from this tree is just in his authority and just in his wisdom; his authority and wisdom endure forever and abide with him forever. For no part of them is perishable.

Any attempt to establish injunctions for all eternity is folly. For what can man build on earth that will be eternal? He is not even certain whether the work he has done in the morning will still be standing at nightfall! In all things do as time commands; time draws you and you must follow. God teaches you to go whither time leads. Customs change and pass away, and to cling to them is folly. And it is folly to suppose that all things are eternal. All things are the product of time, and no one can raise himself above time; everyone is subject to time. Next to God, it is the emperor who commands. What command can he decree that will apply eternally? None. Commandments that must be observed eternally are decreed by God, and the emperor must only see to it that they are fulfilled. And if he does this, his own commandments will also be observed, provided they spring from the divine commandments. And if even the emperor can is-

Fig. 118. King and Knight.

sue no orders to his successors, what can the common man expect to do? Time rules man, but does not rule God. Therefore His commandments are eternally true, but not those of man.

Man should lead his fellow men, but not on the basis of his own strength. For man cannot sit on God's throne and rule, but must govern, teach, and instruct through God. Only thus can he lead rightly!—Man is like a sheep, and sheep have a fold. It must stand on a rock. And if the sheep are people, and the fold is the church, the rock on which the church stands must be a man whom God has chosen for this

I/14, 260-61

Fig. 119. Hermit Pursued by the Devil.

purpose. But before a man can be entrusted with a herd, he must first be tested to determine whether he will not be like a wolf set over sheep. For if he is a wolf, he cannot be a rock for God to build on. It follows that no one is capable of truly knowing the rock of the sheepfold except him to whom it belongs, namely, its builder. And this builder is God, and He Himself set the rock. Know therefore that the rock upon which the sheepfold of man is built cannot have been established by a man, and that no man has ever undertaken to create a rock. But, whether they were bad or good, they always placed the burden on the rock which God had given them . . . and here they have always let the matter rest, entrusting themselves to the rock and believing in him whom God sent. And while God Himself from the beginning of time has given men their guides and has never relinquished his authority, but retained it in his own discretion, men have nevertheless, from pride, established successors and leaders of their own. But never has anything resulting from this had any strength—as is obvious to everyone. And if other opinions have been offered on this score, let it only be a sign that they emanated from guides appointed by Satan.

II/1, 266-67

God's enemy is the devil, Satan and Beelzebub. For the truth cannot be without adversaries. God is the supreme truth and the devil the supreme lie. Only the devil cannot appear before God, he cannot confront Him, and the sight of God is forbidden him. But man, who was created as God's vicar on earth, can be led astray and assailed by the devil. For while the devil cannot appear before God's face, he can appear to man. . . . Upon man the same power is bestowed, as was once bestowed upon the devil when he was still in heaven and had not yet been driven out. Then he was free to be presumptuous or not. But he was presumptuous,

and therefore God rejected him. Man too can be presumptuous or not, therein he is like the devil when the devil was still an angel. And what befell the devil will also befall the men who are like him. Therefore we should be like the an-

Fig. 120. Angel Captured by Devil.

gels and not like the devil; for to this end we were born and sent into the world.

To what end does man live on earth, if not to become versed in the works of God and to learn how all things have their source in Him. Now, the devil along with his infernal host is against God and the followers of God, and like a roaring lion he sets traps for each of us, each man in his own way, as has been sufficiently demonstrated. When he meets the merchant,

he assumes the form of a merchant; but to the merchant God too is a merchant, only one is from God and the other from the devil. Similarly, the devil is a king to the king, a prophet to the prophet, an apostle to the apostle, a physician to the physician, a warrior to the warrior, a knight to the knight, and so on. And likewise, God is a king to the king, a prophet to the prophet, and so on. . . . Therefore must each man get wisdom and know what is of God and what of the devil, what is divine government, and who are God's prophets, but also who are the devil's. For it seems

to me quite especially useful that a merchant should recognize the devil, and also that everyone else should know how the devil speaks to the merchant, the physician, the prophet, by what snares he entraps and catches each of them.

I/12, 410-11

Let us give to God that which is God's, and to the devil that which is the devil's. To this end we must know which things are of God and which are of Satan, and distinguish among deeds, and classify them aright.

I/12, 369

Although a man has been given a title by the people, and is called prophet, apostle, or doctor, his office is not thereby fulfilled. Many believe that it is God above who determines the acts and the choices of men on earth, but this is error. . . . Though many may claim to speak the word of God, it is not given to everyone: not to everyone is the reward granted, not to everyone is the door opened.

II/1, 219

When God created man, He gave him his heart; in paradise He gave him knowledge of good and evil, and taught him not to do unto others what he would not have done unto himself. For such is the law, and such is the heart we received from the hand of God when He created us. Now, the heart is a rock on which man stands and shall stand, in so far as God did not appoint him to any special office or did not designate him as one of the elect, that is to say, in so far as He does not build on this man as on a rock. As you know, God made a seed issue from Abraham and blessed this seed, and promised it greatness. . . . And He gave to mankind a few chosen men, marvellously endowed with virtues and wisdom, and with reason and judgment far exceeding all others. It also pleased God to choose one part of the people and to bless it, and to let the rest be heathen. Nevertheless these others—namely the heathen—were not damned, much less were they driven out of Heaven. . . . For it was not needful that . . . God give them someone to teach and lead them . . . provided only that they stand on the foundation which God had given them, that is to say, on their hearts. . . . God has taught them what is good and what is evil, so that they may know of themselves what they should

Hom Geist.

Fig. 121. Concerning the Spirit.

and what they should not do. This knowledge, then, is the rock upon which they shall stand.

II/1, 274-75

The spirit bloweth where it listeth; not in everything, not in many things, but where it pleases. Many persuade themselves that they themselves are the spirit, but it is with them above all that the spirit has never been.

II/1, 78

Just as a man cannot exist without divine strength, so he cannot live without the light of nature. For only these two together make a man complete. . . . Everything springs from these two; they are both in man, without them man is nothing. But they themselves can perfectly well subsist without man. And as regards man, he is nothing by himself, and what he fancies himself to be has no worth. His true essence must dwell in him like a guest without whom he is nothing and can accomplish nothing. . . . The purpose for which a man is chosen, whether it be this or that, remains concealed to the blood and flesh; for only in divine strength and the light of nature does free will exist. Their spirit operates where they will, and theirs is the free will!

I/12, 231-32

Christ enjoins us to explore the nature of things! . . . And if someone should ask, Who teaches you thus?, let me ask you, Who taught the grass and the leaves to grow? Christ exhorted men to take heed and learn from the example of his gentle and humble heart. From Christ flows the spring of truth, and that which does not come from Him is but seduction. The devil knows a thousand tricks, and he has at his command many false signs and miracles. He gives us no respite, he is like a roaring lion who is always at our heels, to brand us and Christ as liars.

I/11, 130

Although God has created great and marvellous things, of which we men can gain knowledge in many ways, and although He gave us great power to use them in diverse ways and manners, it is most important to remember here—and this holds for all of our actions—that we must never use them in any shape or form except when we need them. For consider this: woman is created that she may give birth to children, yet not in disgrace, but only in honour and respect.

Similarly many great things were created that they might be revealed to man through religion, one abetting the other. But never otherwise than in the path of the Lord . . . although all things can be employed for good as well as for evil purposes.

It pleases God that we should achieve knowledge of His works, and that we should not with sound eyes grope in the darkness as though totally blind. It is His will that we use our eyes for the purpose for which they were given us—for gaining knowledge of Christ and His Word. For if you have eyes, it is your cross; if you have hands and feet, it is your cross, and if you are sound and well, it is your cross. Bear your cross! But at the same time follow Christ and do not indulge in games and pleasures. Then you will be blessed.

It must be established once and for all that our body is not ours but God's, that it is made not for us but for God, not for our own but for God's benefit. And since this is the nature of man's body, it must come entirely from God, that is from Him to whom it belongs. Therefore, whatever man has springs from God—life, sickness, wisdom, eyesight, hearing, reason.

The body harbours the eternal as a host harbours a guest. But there is an additional grace of God, which maintains body and soul—life. . . . Life is a gift which may be compared to a house that a lord gives to a man without owing it to him, but only that he may dwell and stay therein.

Our mortal body has no strength, for all the strength that we need and that is our due we must draw from faith.

What raises us above our mortal nature is faith; through faith we become like the spirit.

Although on earth we walk in flesh, nevertheless our faith in the Creator of all things is so great that no one can ex-

POWER OF FAITH

press it, and that it can be taken away from no one, except from him who rejects it of his own accord.

I/9, 264

Just as simply and easily as we can take a mustard seed in our hands and cast it into the sea, because it has no weight at all, so simply and easily do we cast mighty mountains into the sea by our faith.

I/9, 260

To die for the faith is bliss; but to die for the articles of faith is a death that springs from false faith.

I/9, 282

Let man not be surprised that God is with him, and that he can perform miracles on earth by virtue of His power, for man is of divine nature. "All of you are gods and sons of the Most High," says Holy Writ. . . . And it is displeasing to God that the saints of His heavenly body be despised by the earthly body; that the earthly make mockery of the heavenly.

I/12, 328

Fig. 122. Head of Christ.

God created everything that is in heaven and earth, from which grows all that man needs: his food, his drink, his remedies, his clothing, heat and cold, enough to content us each and all. But all these are resources of the heathen kind, created for the heathen, who suck at them like bees; they do not help man to gain the blessed and only life, but solely the temporal life. For this life is perishable. But that which serves the eternal and blessed life cannot . . . enter into us without Christ: from God the Father it comes to us through Christ.

II/1, 139

From Holy Scripture comes the beginning and guidance

of all philosophy and natural science, and it must be taken into account before anything else; without this fundament all philosophy would be expounded and applied in vain. Consequently, if a philosopher is not born out of theology, he has no cornerstone upon which to build his philosophy. For truth springs from religion, and cannot be discovered without its help.

He who would be blessed on earth must found his teachings, his dominion, and his order upon Christ as his cornerstone. It is Christ from whom everything must be drawn. No doctrine avails unless it comes from Heaven, no commandment avails unless it comes from Heaven, no art avails unless it comes from Heaven. And the same is true of all the rest.

Fig. 123. Baptism.

Men are baptised in the name of the Father and the Son and the Holy Ghost, and therefore they should know that they must live in God, that is to say, in the ways taught by Him in Whose name they were baptised, and that they must not forsake these teachings, but live in the most perfect faith in

the Son of God and follow His words and teachings. Only then does the reason that was given us by virtue of baptism enter into us. But once reason is in us, the innocence of childhood no longer protects us, we are no longer counted among

POWER OF FAITH

the simple, but considered as beings endowed with reason, and we must make operative in us the force of baptism, that is to say, we must know of Christ and we must have faith in Him, love Him, and follow Him—a task from which simpletons and children are dispensed. . . . Consequently baptism enjoins on us, when it confers reason upon us, repentance and faith—to know both and to understand both, lest, through want of reason, we bring eternal death upon us.

II/1, 329–30

Baptism is the hallmark of the Christian, just as his master's livery is the hallmark of the servant, or an ensign is the mark of a general, captain, or party. . . . It is also a kind of passport; let no one insult or attack its owner. It is like the priest's frock: let no one strike him who wears it. . . . And just like one who wears his master's colours but serves him ill, or like a false priest, so is a Christian who does not fulfil the virtues of his baptism, as revealed by the sign. . . . For baptism is eternal and grants no surcease, it is continuous, and unlike a colour which is intended to represent its master only for a time, it is destined to remain forever and ever, and never to pass away. . . . It is a dedication, which the devil cannot take away, a dedication to blessedness. . . . Consequently it is the highest order and the highest priesthood, and all others are false and vain. In it let us put our strength, our virtue, and our being, that we may not be breakers of our vow before the Lord our God.

II/1, 319–20

It is the soul that bears man's burdens and joys. It has reason, foresight, and wisdom as adjuncts. These three are intended to rule over the body and to lead it, lest the soul's yoke prove too burdensome. But over them the spirit has been appointed, and the spirit governs reason as well as wisdom and foresight. Thence arises the order of life, and thus do all things spring from the light of the spirit.

I/1, 301–2

The seat and home of the soul is in the heart, in the centre

Von der Seel.

Fig. 124. Concerning the Soul: Anima.

POWER OF FAITH

of the man; it is the heart that nourishes the spirits which know of good and evil. It dwells within man in the place where life is, against which death fights. . . . But if the whole heart is to be filled with love of God, all opposition to God must withdraw from the soul, and that which is not divine must go, to the end that it may be all pure, untainted by any other thing, separated from all the rest, perfectly clean and pure itself.

I/12, 299

The soul is born in this way: when the child is conceived in the womb—that is to say, born into its seed—a word from God enters into this carnal conception, which gives the flesh its soul. Thus the soul—take good note of this—becomes the centre of man, in whom now both good and evil impulses dwell. The body is the house of the soul, but the soul is the house of the good and evil spirits which dwell in man. An example: A king sits in the middle of his council and has many councillors; some are good, some are evil. Thus he receives good and evil advice. But these advisers are in some sense in himself, they are of his own spirit. And so he is free to choose whether he wants to do what the ones or what the others advise. He is free to follow those whom he wants to follow. So is it with the spirit which stands above the soul like a king in man, amidst the council of the natural order.

I/12, 298

It is just and correct to call the soul a spirit, and to call the spirit God's angel in man. For both of them have come from the mouth of God and we have received them from His hand. Thus the spirit with all its powers is born of God, and thus the body of the world is provided with as many powers as man needs. And if these powers—the natural and the heavenly—are exercised in accordance with the will of God, each soul encloses them in itself, and they remain therein for all eternity. Both powers bring their wisdom, their reason, from the place whence they themselves come, and each has the nature of its creator; the divine power they bring with them from God, and the natural from nature. In the soul these are transformed into works, just as a king translates advice into deeds.

I/12, 300

The spirit is not the soul, but—if it were possible—the spirit would be the soul of the soul, just as the soul is the spirit of the body. For the spirit of man is not the body, and not the soul, but a third thing in man. When man's body rests in the earth, when he is relieved of labour and immersed in sleep until his awakening, when the soul has gone thither, where every debt is repaid—down to the last farthing—then the spirit dwells in the place to which God assigns it: with Him, with the soul, with the body, or in the dwelling of man. . . . For the spirit contains man's judgment of the soul, of the body, and of everything else.

In God let us see nothing other than truth and justice. They are the essence of God; and these we must see in Him, to the end that we may know ourselves, and understand that we are nothing in so far as we are not like God and are not perfect like our Father in Heaven. For we too are gods—because we are His children!

No one is excepted, no one lives outside the province of God; I may be subject to my master, my master may be subject to me, I may be under him outside my own province, and he may be under me outside his province. Consequently everyone is in some way dependent upon the other, and in such love each is subject to the other.

Fig. 125. The Lamp of
Eternal Light.

VI

MAN AND FATE

Fig. 126. Souls Weighed in the Balance.

God has given us the eternal body
to the end that we mortal men on
earth may become immortal.

II/1, 249

WHAT then is happiness but compliance with the order of nature through knowledge of nature? What is unhappiness but opposition to the order of nature? If nature takes its proper course, we are happy, if nature follows the wrong course, we are unhappy. . . . He who walks in light is not unhappy, nor is he who walks in darkness unhappy. Both are right. Both do well, each in his own way. He who does not fall complies with the order. But he who falls has transgressed against it.

Fig. 127. Wheel of Fortune: an angel turning the sphere of heaven.

Diligence and care frighten misfortune away; lack of care and diligence invite misfortune. . . . If this is so, who has the right to speak of the wheel of fortune? It goes up, and it goes down. He who rises has only himself to thank, and the same can be said of him who goes down. . . . How can a man who has reached the lowest point in the circle of fortune say: "Misfortune has cast me down?" Since he himself is responsible? . . . Thus, in the end, man himself bears responsibility and guilt for his fate whether it has brought him fortune or misfortune.

A man who goes about his task in the proper way, who has intrinsic worth, who is capable and knows what he is doing and displays diligence and care in performing his work, moves ahead. But a man who does not move ahead has no right to complain! For he is worth less than the other; and for this he can blame only himself and no one else.

What right has the lazy man to maintain that he has no luck, since he does nothing and never stirs from the corner of his chimney, and fancies that there is such a thing as luck which will come to him of itself and for which he need only wait? If luck were a messenger travelling across the land, it would be best to wait for it at the door. But there is no such messenger, and luck is nothing other than ability, knowledge, and skill. These are the things that help a man to get what he needs on earth. He who has not these things will never get anywhere.

Fig. 128. The Course of the World.

Luck is a wheel; heaven keeps it in constant motion with all its signs and stars, which

GOOD AND BAD FORTUNE

minge with one another in their course, or proceed or follow one another, thus forming good and bad signs. We for our part walk on earth, and our course therefore runs in a direction opposed to that of the heavenly wheel. And according to the manner in which these two circles meet will a man meet with fortune or misfortune.

I/10, 144

The sun shines upon all of us equally with its luck. The summer comes to all of us equally with its luck, and so does the stormy winter. But while the sun looks at all of us equally, we look at it unequally. God has redeemed all of us, the one as much as the other; but one does not look at Him in the same way as the other. He loves us all, without regard for person; but our love for Him is unequal. . . . When a father has ten children, all of them inherit equally, and the father remembers one as much as the others. He who fails to keep his inheritance cannot blame luck, but only himself.

Fig. 129. Wheel of Fortune.

I/14, 191

It is God who makes you fly, with or without wings. He induces your imaginings, opinions, judgments. . . . And when you have decided that you have flown as far as the third heaven, you have not even lifted yourself above the grass on the field, and you have not yet accomplished anything. You have suppressed and destroyed the fruit that was supposed to grow out of you, and now the fruit, along with you, has become worthless for it has not prospered.

II/1, 79

We sometimes say that it depends only upon our free will to do a thing or not to do it. But this is not true. We can do nothing unless God has so ordained. He who does evil must

have received the power to do it from God, otherwise he could not have done it; he who does good must have received the power to do it from God, otherwise he could not have done it. How can a man do what he wants if he cannot so much as make a single hair white or black? "I may stab someone or not stab him, I may steal or not steal, I may commit adultery or not"—who is justified in speaking thus? No one.

God gives us life, strength, and power; and once we have it, we can use it to serve God or the devil, our fellow men or ourselves.—But who is justified in supposing that for this reason his will is free, as long as the hangman stands behind him, and the judge is ready to pass sentence upon him?

God destroys what is displeasing to Him, and what man cannot change by his own efforts God changes, because He does not desert his children.

How can a man say, "I am certain," when he is so far from any certainty? The truth is rather that he knows nothing—he does not know the hour of his death, nor any hour of his life and his health. . . . For he has been created without foreknowledge. . . . Whatever God may undertake, He has in the devil an adversary who can ruin everything and frustrate His intentions. How then can anyone know with certainty what may happen tomorrow? Even if a man were an angel of God, he would not know! . . . How much more uncertain must we be, poor mortals on earth! . . . As long as the world stands, all things will be uncertain. For a mixture of certainty and uncertainty does not yet produce certainty. Only divine things are certain, but not earthly things. And if the two meet, each makes the other confused and uncertain. But if the perishable part is eliminated, there arises complete certainty, such as is not otherwise possible.

Man is capable of knowing nothing with regard to the soul, nor can he encompass its affliction and complaint, nor what will become of it on the Day of Judgment, nor what great torments it will then have to suffer. And because man knows nothing of all this, let him shun human doctrines, not turn to them. For man does not understand himself. . . . We ourselves know nothing at all, and can only judge perishable things.

II/1, 273

We hope . . . that everything will be for the best; but if we were certain of this, we should have nothing left to hope for. It has doubtless been sufficiently demonstrated that here on earth our fate is uncertain. We do not know what lies in store for us, and we do not even know what we ourselves are, whether we are good or evil, and we do not know what our fate will be in the hereafter. Our uncertainty about ourselves is at the base of the uncertainty of all things . . . only God knows us. We who would attain certainty must wait until the day of resurrection; then everyone will be endowed with certain knowledge.

I/12, 395

If at a certain moment everything seems good, beautiful, pure, and full of bliss . . . this does not mean that we have anything different from a treasure of gold and pearls, which lies in a box, and which a thief can despoil, so that nothing is left to the owner. For the thief spares no one, and takes no heed of debit or credit, piety or sinfulness; all that concerns him is to seize his loot and be off. And even if the whole world depended upon one thing, God holds it of no account, and does not take it into His reckoning. Thus our life is an uncertain treasure, which we must protect and preserve well in all our actions.

I/9, 89-90

Take an hourglass and let it run; once the sand has begun to flow, you know at what moment it will run out. It is the

same with all creation! Nature too knows the boundaries of its course. According to her own appointed term, she confers upon each of its creatures its proper life span, so that its energies are consumed during the time that elapses between the moment of its birth and its predestined end.

To every existing thing God has allotted a time to grow in, lest it ripen prematurely. Much happens before it yields fruit: first come the sprouting buds, then the shoots, then

Fig. 130. Hourglass: with skull as symbol of death.

the flowers, and then the fruits. But all are exposed to many accidents, many kinds of danger, before they don their husks and are harvested. It is the same with man: he has his goal in death, and death is the harvester of the human fruit; death is the vintner of man's vineyard, the fruit picker of his orchard, and so on. Birth is man's spring; then his buds grow on

his branches. And then come his shoots, and then his flowers, and finally his fruits. Should then the fruit of man—that is to say, what man produces—be cut off when it is still a burgeon or a shoot? Man thinks, to be sure, that he is something, and because he bears more fruit than a nut tree, he fancies that there are fruits in him at all times. But *this* is not so. Let man see to it that his fruits be not at all external, like those of the trees in the garden, and let him not waste and squander his time. If he disregards this truth and attempts to grind the wheat before it has been threshed, his whole life will be folly and lies. For before the appointed time God gives no fruit; everything must come in due

time. . . . And as in everything else, time must complete its cycle; whether a thing ripens sooner or later depends on God.

II/1, 78-79

The heavens manifest their influence at the appointed time, and reveal the powers that are inherent in things. For powers and virtues are subject to it.

I/8, 108

The stars have grown out of their heavens and there they stand as though they would fly like birds through the air, in their God-given order and orbit. . . . And as they came into being at the beginning of time, so will they remain for ever and ever. The trees and fruits of the earth pass away and grow anew, but the stars will pass away only once—at the end of the world—never to return. Everything that is encompassed by the other elements is destroyed by death, corroded by rust, devoured by the moths. Only the celestial element of the stars subsists, even though their fruits come and go.

Fig. 131. Death the Reaper.

I/13, 132

If we knew the predestination of Heaven, we should also know the fate of man. Only God knows his predestination, that is to say, his end.

I/1, 207

The life span of man is short as compared to all other creation; gold and silver will survive until the fire at the end of the world, and the same is true of stone and salt. But man does not endure so long, he has the shortest term. He does not know the hour appointed for his end; every day he may hear the voice saying: get thee hence! For the power that assails man ignores the rest of creation.

I/4, 493-94

To each thing a term of existence is given, whether it be for good or evil purposes. The saints too have their term after which they must cease to lead their lives on earth, and

Fig. 132. *Danse macabre.*

the sinners too have their term. For each thing God has set a term, which no saint can exceed, however pious, righteous or useful to his people he may be, and whether he likes it or not. When the hour has struck, all this is disregarded. . . . Death itself does not know the hour at which it will attack or kill. But it strives diligently and eagerly, so that it may not overlook the appointed minute, but prove obedient to its master in heaven.

No man has the power to reawaken that which has died a natural death and which nature has killed at the predestined time; only by God can it be done, or by another at God's order. Nor can man restore what nature has consumed. Only what he himself has broken can he repair, and then again break it. More man cannot do by his own strength. If he were to presume further, he would trespass the power of God, and still his efforts would be in vain. . . . What dies:

naturally has reached its appointed term, therein lies God's will and order; even if death occurs through accident or illness, no reawakening is possible. Therefore, there is no defence against fate and against the predestined end.

Fig. 133. Sundial.

I/11, 343-44

No man can know for whom the sun is shining, no man is privileged to take for himself what only God can give him. For everything lies in the hands of God and He gives to whom He desires to give. Any opposition on the part of man is futile. The hour in which you will die is foreordained—regardless of your strength, your power, and your helpers. For everything you have built for yourself will sink with you into the grave, and you will have deceived only yourself and others.

I/10, 592

Consider with what vigour nature strives against death. She resorts to heaven and earth and all their powers and virtues to help her. So also the soul must fight the devil with all her might; and she calls for God's help with all her heart, out of her very depths, with all her strength, only to resist the devil. Nature too is full of anxiety; she has recourse to everything that God has given her in order to repel death; she tries to drive out harsh, bitter death, who fights against her; dreadful death, whom our eyes cannot see, nor our hands clutch. But nature sees, touches, and

Fig. 134. The Hand of Fate.

knows him. Therefore she summons all the powers of heaven and earth to resist the terrible one.

What is death? . . . He is one who takes our life in many ways. . . . Therefore let us be awake and keep a vigilant eye; for he leads us to judgment, to give an account of our lives from the beginning to the end. He is the bailiff, the executioner, the summoner to the judgment of God. And what does this summons mean? . . . Nothing but this: the

Fig. 135. Entombment.

journey to God's judgment, at the appointed hour and on the appointed day, on the day of wrath, when heaven and earth will quake and rise, when the trumpets will awaken him who has been summoned. It is death who brings us the awakening and thus, we might say, returns to us what he has taken from us. . . . Earth is man's prison. We men on earth all die in sin and therefore we must go to prison and there remain until judgment, just as any other prisoner must wait. When we are summoned, body and soul separate, the spirit goes to the Lord and the body to earth. Indeed, the earth is not a prison for the spirit, but only for the body. Thus each stays in its place, and one day they both come together again.

What happens then is concealed from all men; it is known only to Him who has created body and soul.

I/9, 99-100

What transcends the animal is what constitutes man. For man has a father, who is eternal. For this father let him live and not for the beast in him. . . . God has so created man that he lives in animality, yet animality is not the true home of man.

I/13, 323-24

The spirit that is bound to the flesh is indeed called a spirit, but it is subject to death, in contradistinction to that

Fig. 136. The Journey Through Death:
symbolic representation of a phase
of the process of transmutation.

spirit which God has given us and which is immortal. The spirit that springs from nature guides the natural reason, but the spirit of God guides divine knowledge. The two spirits leave man at the moment of death, but the first dies, while the other remains alive.

I/12, 279

A man's death is nothing but the end of his daily work, an expiration of air, the consummation of his own balsamic curative power, the extinction of the rational light of nature, and a great separation of the three—body, soul, and spirit—a return to the womb. The earthly and natural man is of the earth, and the earth is his mother, to which he must return and lose therein his earthly and natural flesh, that he may be born a second time on the Day of Judgment in a new, heavenly, and transfigured body.

I/11, 333-34

The death of all things in nature is nothing other than a reversal and change of the powers and virtues, a transcendence of good and evil, an eradication and destruction of the first nature and a birth of the second and new nature. For know that many things which are good in life and bear great power and virtue in themselves, later have but little or no power and virtue when they have died or been killed, but are dull and powerless. Similarly, there are many things which are evil in life, but which in dying or after they have died manifest manifold power and virtue.

Only that is gold which has been cleansed of all dross, which through fire has been brought back to its native state,

Fig. 137. Resurrection from Death. (The caption reads: "After my many and several sufferings and great martyrdom—I am resurrected—clarified—and free of all flaw.") An alchemistic-symbolic representation of "purified gold," the end-stage of the process of transmutation.

to lead, which has gone through pure antimony, that is to say, has been brought to efflorescence in antimony and has been properly prepared and transformed. And just as this procedure amounts to a testing of gold, so it may serve as a parable for the testing of the resurrected body. For this body too will have to cast off all dross of earthly life, and then it will have to go through an even more difficult test by fire; it will have to go through a melting, a preparation and elaboration comparable to the stage of pure antimony, it will have to suffer a transformation in *aqua fortis*

MAN AND DEATH

that will make it quite clear and pure. This does not mean that the impure becomes pure, and that the putrefied and murky part becomes clean. For the impure always remains impure, dirt remains dirt; but the pearl concealed in it is taken out, and it is this pearl that is transfigured. For the

Fig. 138. Toward the Celestial Spheres: Beatrice leads Dante through the sphere of the moon to the firmament of fixed stars, which is surrounded by the eighth and last celestial sphere, the Empyrean, or Heaven of Pure Light. In the center of the circles is the earth with the planets revolving around it.

pearl itself has never been impure, it has only lain hidden in the darkness.

II/1, 310-11

The supreme good is so constituted that neither gold nor silver nor any other thing that derives from the elements stands above it. Nothing can be the supreme good except that which is immortal, eternal, and imperishable, and stands above all of us. Therefore it is an error to suppose that a perishable thing can be equal in value to the supreme good. Only he who masters mortality is the master, and it is the righteous who masters it in the end. . . . What fills our

bellies is a valuable possession; and what quenches our thirst or makes us merry or gives us joy is likewise a valuable possession. But a far more valuable possession is that which gives us life, and still more, that which confers eternity upon us. . . . What avail us the garden, the vineyard, the corn-field which exist for the sake of the belly? They leave us and we leave them. . . . For the highest good that life and earth have given us leaves us when we die, and deserts us in anguish and pain. Therefore our truly supreme good can only be that which leads us from death to resurrection, into eternal life.

We cannot by our eyes recognize the supreme good. Nor can we gauge it or know it by means of our tongues. There is nothing in the body that can reveal the supreme good; for only the spirit from heaven can do this. . . . It is the soul in us which strives for the supreme good, not the body. . . . And he who does not have the light of the soul in him regards gluttony, drinking, and so on as the supreme good. But these are only pleasures of the body; and if a man dies, that which he has deemed to be the supreme good dies with him.

The summer is the supreme good for the bees, it gives them a pleasant occupation, wax and honey. Pillage and rapine are the supreme good for the wolf, that is to say, sheep and goats are his supreme good, for that is how he is made. For the beasts of the air, on the land, in the water, the supreme good is their favoured element. . . . Thus water is the supreme good for the fishes, grass for the cows, and air for the birds. But with man it is different. His supreme good is not of this earth. He must continue his search after he leaves this earth, and can hope for more after this life than the animals, because he must rise to the Highest.

LAST JUDGMENT

Man has two bodies: one from the earth, the other from the stars, and thus they are easily distinguishable. The elemental, material body goes to the grave along with its essence; the sidereal, subtle body dissolves gradually and goes back to its source, but the spirit of God in us, which is like His image, returns to Him whose image it is. Thus each part dies in that medium from which it has been created, and finds rest accordingly.

Man has a body which does not spring from matter and consequently is not subject to any physician; for it was breathed into man by God, and like every breath, is intangible to our hands, and invisible to our eyes. . . . According to Holy Writ we shall be resurrected in the flesh on the Day of Judgment and called to account for our misdeeds. But

the body that has sinned is a body invisible to our eyes; hence we may assume that this same body must rise again with us. For we shall not give an account of the health and sicknesses of our visible bodies . . . but of the things that proceed from the heart, because only these actually concern man, and they belong to a body which does not consist of matter, but comes from the breath of God. But since one day, clothed in the flesh, we shall see our Lord and Saviour, it follows that the body which derives from the *limbus*, and is material, will also be present at that moment. Who can be

1/12, 18

Fig. 139. Dying Man.

ignorant of this transfiguration, which is accomplished through the mouth of God, and by virtue of which both bodies will be present? For we shall rise again in the flesh, and we only know one flesh, not two; two bodies, and one flesh, namely that which is on earth. . . . The flesh made out of earth is nature, and is subject to her measure and her justice. But the evil that arises from the flesh does not come from material nature, but springs from the intangible, ethereal body; it is this body which exceeds the measures of nature. . . . Consequently man has a second, immaterial body; it is the ethereal body, which Adam and Eve acquired in Paradise through eating the apple; it was only by acquiring this body that man became completely human, with knowledge of good and evil. Because he has this body, man can eat more than is required by nature, and drink more than he needs to quench his thirst. God in His benevolence has set before our eyes the things that we desire—good wines, fair women, good food, good money. And this is the test: whether we keep ourselves under strict control, or whether we break and exceed the measure of nature. For the two bodies are wedded, and both—that from God's breath and that from the earth—are united as in marriage. To exceed the measure is therefore an evil and adulterous deed, an act of infringing on all obligations, because the intangible body vowed that it would not overburden the natural body, and would not drive it beyond its measure. But if this vow is not kept—what is it but a violation of the marriage, which is subject to God by the highest oath?

The first separation, with which we must begin, starts with man: he is called a microcosm—that is to say, the Little World. For his sake, the macrocosm—the Great World—was created, and it is man who establishes separations within the macrocosm. But the final separation of the microcosm, man, takes place in death. For in death the two bodies of man separate from each other—the divine from the earthly, that is to say, the eternal from the elemental body—and the first

soars up to Heaven like an angel, but the other drops down to earth like lead.

Our earthly body is infertile and worthless. It is made fertile by God in order that another body may spring from it—the body which will be resurrected. . . . But this resurrection is not effected in the flesh in which we live in this world. For this flesh originates in the earth and does not belong to heaven. Nor can the earthly body be transfigured for it is consumed and destroyed in the ultimate fire. On the Day of Judgment, how-

ever, the other creature arises from us, the creature which is born of the other Adam and of God.

As for the flesh, understand that it is of two kinds: the flesh from Adam and the flesh that does not spring from Adam. The flesh from Adam is a crude flesh, for it is earthen and it is nothing but ordinary flesh that can be touched and bound like wood or stone. But the other flesh, which does not spring from Adam, is an ethereal body and can neither be tied or grasped, for it is not made of earth. Now, the flesh from Adam is the man from Adam, that is to say, mortal man; he is crude like the earth, which is solid, so that a man cannot go through walls or partitions, unless

Fig. 140. The Soul Goes to Heaven: the seven angels with the six keys, standing for the six works of charity, with which they open heaven and receive the soul into heaven.

I/2, 361

II/1, 304

he makes a hole for himself through which he may slip. For nothing yields to him. But to the flesh which does not spring from Adam, every wall yields; this means that such flesh can do without doors or holes, and pass through walls and partitions without breaking anything.

In the blessed life nourishment is not sought on the earth, after the manner of the beasts, but taken from eternity, as the angels are fed on eternity. For a beast devours like a beast, and man, too, in so far as he is a beast, finds his food in the earth. But he ought not to be like a beast; his essence stems from the eternal and he should therefore feed on things eternal. For he was created not beast but man, in the image and likeness of God. The beast, however, is

subject to man in water, on land, and in the air. And precisely because man is master of the beast, he ought not to make his eternal salvation depend upon power, but use the beast that is subject to him as nourishment for his worm-like body, as long as he dwells on earth and stays in the body which is master of the beast. This body is not the same body as that which feeds on the tree that grows from the root of God, our Father. For this body of man is an eternal body, in the image of God, like Him and therefore im-

Fig. 141. Poverty, Disease, Lust, Death.

LAST JUDGMENT

mortal. Man was created immortal and brought to Paradise where no death was. Only after he was driven out of Paradise was he subject to death. Then he lost part of his essence; that is to say, he remained like the image of God, but not like His essence. This was taken from him by death.

He who hears and learns much on earth, will also be learned when he is resurrected. He who knows nothing will be inferior. For in the house of God there are many mansions, and to each his mansion will be allotted according to his learning. To be sure, we are all learned, but not equally; we are all wise, but not equally; we are all skilful, but not equally. He who explores himself goes farthest; for the ex-

ploration of things and the gathering of knowledge lead to God and dispel the vices of the world. Such men shun worldliness, subservience to princes, courtly manners, polite gestures; they learn tongues, which also contain lies and curses. The miraculous works of God bear witness to the light of man, and are not concerned with vain talk. Subservience to men—what is it but a worthless shadow? Neither wage nor reward accrue to man from such subservience. He dies, and in death he is nothing but dirt. What can man make of himself by his own strength? He must learn more

II/1, 134-35

Fig. 142. The Rule of Christ.

than obedience, he must let obedience be, and love his neighbour. Then obedience will grow of itself, as flowers and fruits grow from a good tree.

It is a naïve philosophy that puts all blessedness and eternity in the elements of our earth, and it is a foolish opinion that looks on man as the noblest of creatures, since there are more worlds than ours alone. . . . But doubt will be impossible in the end, when all things are gathered together in their eternal aspects. For in the end much will be discovered and manifested in diverse ways; and I am speaking not only of those things which contain an eternal part within themselves, but also of those which have borne, nourished, and preserved something in which an eternal part is inherent. For eternity manifests itself both in those who rule and govern, and in those who are only the servants of those who rule. And it is contrary to true philosophy to affirm that the little flowers do not partake of eternity; although they wither away, they will nevertheless appear in the assembly of all the generations. And nothing has been created in the *mysterium magnum*, in God's great marvellous world, that will not also be represented in eternity.

When the end of the world draws near, all things will be revealed, from the lowest to the highest, from the first to the last—what each thing is, and why it existed and passed away, from what causes, and what its meaning was. And everything that is in the world will be disclosed and come to light. Then it will become manifest that many who are known as highly learned have no knowledge of these things. Then the true scholars and the vain chatterers will be recognized—those who wrote truthfully and those who traded in lies, those who stood on firm ground and those who stood on no ground at all; and to each will be meted

Fig. 143. St. John with the Seven-Headed Dragon on Patmos.

out according to his diligence, his earnest labours, and his truth. And in that place, not everyone will be or remain a master, or even a physician. For then the tares will be separated from the wheat, and the chaff from the grain. . . . Then blessed will be those men whose reason will reveal itself. For the hearts of all men will be opened to the light of day; and whatever offences they may have perpetrated will be written on their foreheads.

I/14, 150-51

As men who descend from Adam we are nothing but dust and ashes, there is nothing among us but strife and dissension, misery and wretchedness, and this life of ours is full of wrath, sorrow, and lamentation, hatred and conflict. Why then should we continue to seek in our bodies what cannot be found in them, and ascribe to our bodies faculties

they do not possess? Would it not be better to consider that all things can be mastered by patience? For only when the mortal body has died and passed away can we begin to seek the immortal body in which we would wish to live. There we shall accomplish everything that the philosopher bade us. And this means: let us direct our thoughts toward Paradise, where a new life begins, where another fruit, another office, another order, another master and father await us.

Man is God's most beloved creature, more beloved than the angels; this is proved by the Lord's death, which he dies for man and not for Lucifer. If God intercedes for man, it is because He has greater joy in the recovery of one lost sheep than in the recovery of ninety-nine others that did not stray from the fold. The difference between man and the angels is that we are the sheep of God, while Lucifer was not a sheep; that we were found, while Lucifer was not. God interceded for man because man bears eternity in himself; He died for the human race lest man in his short time on earth bring eternal doom upon himself, lest his flesh seduce him to lewdness. Lest man suffer such a fate, He died on the cross and gained joy everlasting for those whose spirit feels repentance and sorrow for the sins of the flesh.

Although Christ had to give up His life, He did not lose the battle, but won it. He was resurrected from death and ascended to Heaven; for He was not here on earth that He should die of disease . . . or on a pillow or cushion, but that He might suffer from the death of the cross. . . . Indeed to fight and to struggle means to live. He who is slain and remains on the battlefield has won the victory. He who remains alive cannot be victorious, because he has never been smitten. Only he who has been smitten carries off the victory. He alone has stood his ground. . . . Only the defeated can be victorious. The undefeated escapes; but what honour has he, of what victory can he boast?

What is as mighty and so powerful and so marvellous in its action as lightning? Since Christ foretold that his second

Fig. 144. Ascension of Christ.

coming would be as lightning fallen from Heaven, it is needful that we know the nature of lightning. For it strikes hard and heavy, and is so wondrous in nature that man can hardly conceive of it. . . . To him who considers this, let the lightning serve as a warning to commit no sin, or turn aside from the path of God.

Consider that here on earth there is no joy without sweat, anguish, and suffering. But when we leave this world, we enter into the eternal body, and in it we shall find rest and joy—joy upon joy, eternity upon eternity.

As each day brings its own cares and burdens, so is each man burdened with his cross. Under the cross we will enter in the Kingdom of Heaven; indeed, the cross itself is of Heaven.

Nothing will subsist of the world, neither the elements nor the firmament, nor anything that is in them, but one day the prophecy will come true: the world will be consumed by fire, and the fire will consume the water, as well as the stones and all metals. . . . And there is nothing that will be able to defend itself or to resist the fire. Thus everything will return to the state in which it was once, as is said in the Holy Scripture: "The spirit of God brooded over the waters" . . . Then nothing perishable will exist, for everything will be like unto the spirit of God.

Fig. 145. The Eye of
Consciousness.

VII

GOD, THE ETERNAL LIGHT

Fig. 146. God the Father Blesses the
Globe.

IF MAN had not been created, who would have known of God's wisdom? Of his power and glory? No one, not even the angels in Heaven would have known. But in the act of creation His wisdom came to the light of day, and likewise His power and glory—and the being and nature of God were made manifest.

1/13, 330

If you attempted to explore the mathematics of Heaven, you would find nothing that could be measured. For Heaven has no beginning and no end, and no one knows the middle.

GOD, THE ETERNAL LIGHT

The mortal body ought to hold this heavenly mathematics in high esteem, and thereby achieve a more profound insight. . . . It has been demonstrated that where there is no beginning and no end, there is no art. But where no number has value . . . and where nothing is first and nothing is last, who can be a mathematician? Where everything has no beginning and no end, no art can be applied, and no distinction can be made! How can man guided by the light of nature find his way in Heaven? Though he may stand in the light of eternity, he can only know that he does not know the beginning and the end of things. . . . Our striving to form ideas about all things has been instilled in us only that we may consider God and not the creatures. But if God could be encompassed, all the rest could also be encompassed; but this is impossible. . . .

There is one single number that should determine our life on earth, and this number is One. Let us not count further. It is true that the godhead is Three, but the Three is again comprised in the One. And because God transforms Himself into the One, we men on earth must also strive for the One, devote ourselves to the One and live in it. In this number is rest and peace, and in no other. What goes beyond it is unrest and conflict, struggle of one against another. For if a calculator sets down a number and counts further than one, who can say at what number he will stop? But this question is the difficulty that gnaws at us and worries us. How much more pleasant and better it would be if we always walked in the path of the One.

Fig. 147. Apocalypse.

GOD, THE ETERNAL LIGHT

Even if we had in
our hands all the arcana
and elixirs of the Great and
the Little World, but not Thee, O
Lord, all this would be nothing! Close
to Thee, in Thee, and with Thee alone is the
eternal life and the light. In our bodies,
after the great death, when it is as
though renewed by the divine fire,
the light will be translucent,
and only then will it truly
shine. God grant that
this may be soon!
Amen. Amen.
Amen.*

Fig. 148. The Eye of God. .

KEY TO SOURCES

The reference numbers in the text relate to the part, volume, and page numbers in the Sudhoff-Matthiessen edition where the preceding passage may be found. The following summary of the Sudhoff-Matthiessen edition, based on the tables of contents of the volumes, provides the Paracelsian title of each source.

Sudhoff, Karl, and Matthiessen, Wilhelm, eds. *Paracelsus. Sämtliche Werke.*

Part I: Medizinische, naturwissenschaftliche und philosophische Schriften. vols. 6-9, Munich: O. W. Barth, 1922-25; vols. 1-5, 10-14, Munich, Berlin: R. Oldenbourg, 1928-33.

Volume 1. Earliest Works, c. 1520

Elf Traktat von Ursprung, Ursachen, Zeichen und Kur einzelner Krankheiten (Wassersucht, Schwindsucht, Farbsuchten, Kolik, Schlag, Taubsucht, Würmern, Stullauf, Podagra, Fallender Sucht, Kalten Wehe). Entwürfe und Ausarbeitungen	1
Bruchstücke des Buches "Von den fünf Entien" genannt "Volumen medicinae Paramirum de medica industria." (Paramirum primum)	163
Das Buch von der Gebärung der empfindlichen Dinge in der Vernunft (Von Gebärung des Menschen. Von des Menschen Eigenschaften)	241
Ein Büchlein (Philosophia) de generatione Hominis	287
Zwei frühe Ausarbeitungen über das Podagra sampt Fragmenten	307
Liber de podagricis et suis specicibus et morbis annexis (drei Bücher)	309
Von den Podagrischen Krankheiten und was ihnen anhängig (zwei Bücher)	345
Weitere verstreute Bruchstücke über das Podagra	373

*Volume 2. Works Written in Southwestern Germany,
1525-26*

"Herbarius," von den Heilwirkungen der Nieswurz, der Persicaria, des Salzes, der Engel-Distel, der Korallen und des Magneten	1
Von den Natürlichen Dingen (Das Erste Buch). Von Terpentin, schwarzer und weisser Nieswurz, Wasserpfeffer, Salz, St. Johannis Kraut, dem Magneten, Schwefel, Vitriol, Arsenik (Weinstein)	59
Andere Ausarbeitung über Terpentin, samt einer Abhandlung über den Honig	177
Fragmentarisches zu den Virtutes Herbarum und Heilkräften anderer Naturdinge	205
Von den natürlichen Bädern (Thermen)	225
Bruchstücke von Thermalwässern	261
Von den natürlichen Wassern, Buch III-V	274
Ein Bruchstück "Vom Wein" und ein Büchlein "De Lithiasi," beide fragmentarisch (Ältestes zur Tartarus-Lehre)	347
Das VI., VII. und IX. Buch in der Arznei	357
Das sechste Buch in der Arznei von den tartarischen oder Steinkrankheiten samt deren Heilung	359
Das siebente Buch in der Arznei, von den Krankheiten die der Vernunft berauben, de morbis amentium	391
Das neunte Buch in der Arznei, von Ursachen und Kuren der Kontrakturen und Lähme	457

Volume 3. 1526 and First Months of 1527

Von den ersten dreien Principiis	1
De viribus membrorum, 6 Bücher, unvollständig	13
Das Buch De Mineralibus	29
De Transmutationibus Metallorum, nur das 9. und 10. Buch,	
De Cementis und De gradationibus	65
Neun Bücher Archidoxis	86
Die beiden Bücher De renovatione et restauratione und vom langen Leben	201
De Vita longa, libri quinquae	247
Deutsche Originalfragmente	293
Liber Praeparationum (De Praeparationibus). Fragment	309

PART I, VOLUMES 2-4

Process und Art Spiritus Vitrioli	363
Libellus de Xylohebeno (Guajak)	367
De Ruptura compendium	373
De Mumia libellus	375
Hohenheims Brief an Erasmus von Rotterdam	377
Scholia et observationes in Poëmata Macri	381
Tabellarisch gruppierte Übersichten allgemeiner Krankheitstypen (Theoricae figurae universalium morborum)	425
Fragmentarisches zu Anatomie und Physiologie	459

Volume 4. Lectures in Basel, Summer 1527

Intimatio, Basileae, 5. Juni 1527, das "Baseler Programm"	1
De Gradibus et Compositionibus Receptorum et Naturalium Libri VII	5
Begleitbrief an Clauser, 10. Nov. 1527	69
Studiosorum Tigurinorum coetui 11. Nov. 1527	75
Autographische Zettel und Entwürfe zu "De Gradibus"	77
Nachschriften und Notizen aus der Vorlesung De Gradibus	89
Zwei Eingaben an den Rat der Stadt Basel, Sommer 1527	139
Zwei Hörer-Nachschriften aus der Vorlesung über chirurgische Krankheiten; von Apostemen, Gaschwären, offenen Schäden, Sironen und anderen Gewächsen, Sommer 1527	149
Vom Aderlass	369
Vom Purgieren	422
Vom Schröpfen	428
De modo pharmacandi: Erstes Buch	435
Bruchstückweise Ausarbeitungen zum 1.-3. Buch des Modus Pharmacandi	469
De stercore	488
Deutsche Kommentare zu den Aphorismen des Hippokrates	491
Gründlich erklerung über die ersten sechs aphorismos Secundae sectionis	530
Alia explicatio primi aphorismi	539
Fragmentum super aphorismorum libri quarti particulam quartam	542
De Urinarum ac Pulsuum Judiciis Libellus	547
De pulsibus	575
De physionomia medica (Hundstags-Vorlesung 1527)	578

Aus Anderen Kollegienheften zur Baseler Harnschau-vorlesung, August 1527	581
Deutsches zur Harnlehre, fragmentarisch aber nach dem Autogramm	621

Volume 5. Lectures in Basel, Winter 1527-28

Nachschrift aus der Vorlesung über tartarische Krankheiten (2 Bücher)	1
Autographische Entwürfe zu den Büchern de Tartaro	123
Weitere Schülernachschriften in der Tartarus-Vorlesung	153
Nachschriften in der Vorlesung "De Icteritiis liber unus"	183
Nachschrift aus dem Kolleg "Der Paragraphen, 14 Bücher" spezieller Pathologie und Therapie	205
Ausarbeitungen eigener Hand Hohenheims zu den Libri Paragraphorum	267
Andere Kolleg-Niederschriften zu den Büchern der Paragraphen	281
Zwei Kollegienhefte aus den Vorlesungen über Wunden und Wundbehandlung	315
"Antimedicus." Fragmentarische Ausarbeitung und Entwürfe zu einem polemischen Wundarzneibuche	411
De ulceribus. Zwei Entwürfe zur Verschwärungslehre (zur Lepra und Zugehörigem) aus dem Autogramm	491

Volume 6. Writings Composed in Colmar (Alsace), 1528

Zwei Briefe Hohenheims aus Colmar an Bonifazius Amerbach in Basel	33
Drei Bücher der Wundarznei, Bertheonei 1528	39
Entwürfe, Notizen und Ausarbeitungen, zur Bertheonea von Hohenheims eigener Hand	167
Von allen offenen Schäden, so aus der Natur geboren werden, sieben Bücher . . . (De Ulceribus)	207
Vorarbeiten und Fragmente zu den Büchern "Von allen offenen Schäden"	291
Von Blattern, Lähme, Beulen, Löchern und Zitrachten der Franzosen und ihres gleichen, inhaltend zehn schöne Bücher (Von Chemie und Heilung der Franzosen neun Bücher)	301

*Volume 7. Works on Syphilis and Others
Written in Nuremberg, 1529*

Von Holz Guajaco gründlicher Heilung	51
Von der französischen Krankheit 3 Bücher	67
Vom Ursprung und Herkommen der Franzosen sampt der Rezepten Heilung 8 Bücher	183
Spital-Buch (Erster Teil)	367
Entwürfe und vorläufige Ausarbeitungen zur Syphilis	413
Politisch-astrologisches Schriftwerk aus dem Jahre 1529 und dem Beginn des Jahres 1530	455
a) Practica gemacht auf Europen, anzufahren in dem nächstkünftigen 30. Jar bis auf das vier und dreis- sigst nachfolgend	457
b) Pronosticatio auf das gegenwertig jar, betreffend ein Confederation, so von andern Astronomis und Prac- tlicanten dis jar ausgelassen und übersehen ist (An- fang 1530)	469
c) Auslegung über etliche Figuren Jo. Liechtenbergers aus dem ersten und dritten Teil	475

*Volume 8. Works Written in the Upper Palatinate,
Regensburg, Bavaria, and Swabia, 1530*

Brief an einen Nürnberger Arzt	27
Paragranum. Vorrede und erste zwei Bücher. Entwürfe und 1. Ausarbeitung in Berezhausen	31
Paragranum, Aufzeichnungen zum 1. und 3. Abschnitt	115
Sendschreiben an den Rat der Stadt Nürnberg vom 1. März 1530	127
Das Buch Paragranum, letzte Bearbeitung in vier Büchern	133
De Eclipsi Solis, Regensburg, 29 März 1530	225
Entwurf hiezü	232
Weiteres zur Praktika gemacht auf Europen auf vier Jahre	237
Zwei Bruchstücke eines Büchleins von Mercurio Amberg, Juli 1530	255
Von den hinfallenden Siechtagen (de Caducis, Epilepsie) vier Paragraphen. Erste Ausarbeitung	261
Einige Konzepte hiezü	309

Von hinfallenden Siechtagen der Mutter (Hysterie). Erste Ausarbeitung, neun Paragraphen	317
Zwei Bücher von der Pestilenz und ihren Zufällen, Nördlingen 1529 oder 1530	369

Volume 9. Swiss and Tyrol Period, 1531–35

Die drei (vier) Bücher des Opus Paramirum	37
Entwürfe zu den vier Büchern des Opus Paramirum	231
Die Bücher von den unsichtbaren Krankheiten	249
Vorläufige Ausarbeitung zum vorstehenden Entwurfe der fünf Bücher von den unsichtbaren Krankheiten	351
Schriften über Kometen, Erdbeben, Friedbogen, Himmelszeichen	369
Uslegung des Kometen Anno 1531	371
Uslegung der Erdbidem 1531	395
Uslegung des Fridbogens 1531	403
Uslegung des Kometen und Virgultae 1532	411
Entwürfe zu den Kometenschriften von 1531 und 1532	421
Von den wunderbarlichen, übernatürlichen Zeichen, so in vier Jahren einander nach im Himmel, Gewölke und Luft ersehen 1534	427
Practica teutsch auf das 1535 Jar	445
Von der Bergsucht und anderen Bergkrankheiten drei Bücher	461
Bruchstücke und Entwürfe zu den 3 Büchern von den Bergkrankheiten	542
Büchlein von der Pest an die Stadt Sterzingen	454
Weitere, meist bruchstückweise Ausarbeitungen zur Beulenpest	563
De peste libri tres cum additionibus	565
Ein Vorred	617
Liber de epidemiis	618
Zerstreute Zettel zur Pest	622
Eine grössere fragmentarische Ausarbeitung früherer Zeit	629
Von des Bades Pfäfers Tugenden, Kräften und Wirkung, Ursprung und Herkommen, Regiment und Ordnung	639
Das Consilium für den Abt Johann Jakob Russinger zu Pfäfers	661

*Volume 10. Writings Composed in Swabia and Bavaria,
1536*

Ärztlicher Ratschlag für Adam Reissner zu Mindelheim	1
Das erste Buch der Grossen Wundarznei	7
Der Text des letzten Bogens des Ulmer Druckes	201
Das zweite Buch der Grossen Wundarznei	215
Das angebliche dritte Buch der Grossen Wundarznei	423
Vorläufiges und Ausarbeitungen zur Grossen Wundarznei, samt chirurgischem Beiwerk	481
Entwurf für die Widmung zu einem Buche über die französische Krankheit	483
Zerstreute Zettel zur Wundarznei	490
Drei chirurgische Bücher	499
Von Öffnung der Haut, ein Fragment	539
Zur "Kleinen Wundarznei," Ausarbeitungen und Entwürfe	565
Drei weitere Konsilien, angeblich für die Familie von Zerotin	573
Die Prognostikation auf 24 zukünftige Jahre	579
Ein Mantischer Entwurf "geben zu München"	637

Volume 11. 1537-41

Widmung der drei Bücher an die Kärntner Stände	1
Chronica und Ursprung des Landes Kärnten	7
Das Buch von den tartarischen Krankheiten, dem Pfarrer Dr. jur. Johann von Brant in Eferdingen gewidmet	15
Sieben Defensiones. Verantwortung über etliche Verunglimpfungen seiner Missgönner	123
Labyrinthus medicorum errantium. Vom Irrgang der Ärzte	161
Praktiken und Verwandtes zur mantischen Praxix aus den Jahren 1537-1541	223
Deutsche Practik auf das Jahr 1537	225
Deutsche Practik auf das Jahr 1538	238
Praktika auf das Jahr 1539	251
Entwürfe und andere Bruchstücke zu Jahrespraktiken usw. unbestimmter Zeit; Ein Kometentext	267
Konsilien und Verwandtes aus den Jahren 1537-1541	279
Unterricht und Anzeigung Dr. Theophr. v. Hohenhaim, wie er gehandelt hat mit Johann von der Leipnik	281

GLOSSARY

A

ALCHEMY. The medieval precursor of chemistry. Its object was the artificial production of gold, of the philosophers' stone, of the elixir of life. The procedures of medieval alchemy were often religious in character. They represented a kind of religious ritual intended to symbolize the belief that man was eternally and immutably integrated in a hierarchically organized cosmic order; the transmutation of the chemical elements served as a tangible illustration of a profound inner experience. This was considered not merely as a chemical process, but also as a mystical process, of which the alchemist himself, in his role of mediator, was a part, and in which he strove to release his own divine "spark of light," imprisoned in his material body. In the view of the alchemists, this result could be achieved only *deo concedente*—that is to say, only with the help of God's grace. The pursuits of the alchemists can be classified as follows:

- (1) The art of the transmutation of metals—*chrysopoeia*.
- (2) The manufacture of arcana (secret remedies), particularly of *elixir vitae* (elixir of life) and *aurum potabile* (potable gold)—*pharmacopoeia*.
- (3) The magical production of the homunculus or "son of wisdom" or the *lapis philosophorum* (philosophers' stone)—*philosophical alchemy*.

ANATOMY. A structure in its organic totality or the original form which underlies each individual form. (Cf. **PLANET.**)

ANIMA. The soul. In Paracelsus this term is largely iden-

tified with the "sidereal body." But he also uses it to designate everything similar to the breath, all refined, volatile matter (the term has always been used in this sense in alchemy), as well as the specifically effective part of a medicine, its essence. (Cf. MERCURY.)

ANTIMONY. The element, used as an occult alchemistic remedy; the name also designates symbolically a specific stage in the process of transmutation (see p. 288). "Just as antimony purifies gold and leaves no slag in it, in the same form and shape it purifies the human body" (Paracelsus, quoted by Sticker). This "purification" refers specifically to diseases, and symbolically to the soul.

APOCALYPTIC BEAST. The seven-headed dragon mentioned in the Revelation of St. John (ch. 12-13) as the embodiment of evil. (Cf. BABYLON, and fig. 143.)

AQUA FORTIS. "Strong water": nitric acid which was used in alchemical manipulations.

ARCANUM (plural: arcana). Secret. Paracelsus calls arcana all so-called "secret medicines," whose efficacy is manifested in the secret virtues inherent in the various herbs, minerals, metals, etc. They are discovered by a special science, and obtained through special manipulations. (Cf. also QUINTA ESSENTIA.)

ART. Paracelsus uses this word to designate skill in any profession, but more particularly in therapeutics and alchemy; in other words, the term is not confined, as it is in modern usage, to music, literature, and the fine arts.

ARTS, UNCERTAIN. Paracelsus calls geomancy, pyromancy, hydromancy, chiromancy (q.v.), etc., *artes incertae* (uncertain arts), because in his view knowledge of these "arts" does not come to man directly from God's spirit but from his human imagination; therefore man can misuse them and be deceived and led astray by them.

ASCENDANT. The sign of the zodiac or the star which rises on the horizon at the moment of a man's birth. But Paracelsus also uses this term in a cosmic and mystical sense, to denote man's relation and connexion with the whole of

GLOSSARY

creation, to symbolize the "rising" of nascent man as one who will complete and carry on the marvellous work of creation.

ASPECT. The relative position of the stars, which according to ancient doctrines may result in a generally favourable or unfavourable situation for a given individual.

ASTRAL BODY. The sidereal body in man. (Cf. **ASTRUM**, **BODY**.)

ASTRONOMY. In Paracelsus' day, astronomy and what we call "astrology" were not yet distinguished from one another, and he uses this term for both. He consistently rejects astronomy as an art of prophecy or magical interpretation of the future, and considers it only as a method for arriving at an understanding of the all-embracing unity and harmony of creation, indispensable for any true knowledge of the natural processes. Paracelsus' conception of astronomy might be designated as a kind of cosmosophy. Man is placed at the centre of the cosmos and is related to it from every point of view; on the other hand, Paracelsus insists that man is the image of God and enjoys an inner freedom that is granted him by God. This suffices to show that for Paracelsus man was free from determination by astral influence. Thus Paracelsus' view of astronomy has little in common with astrology, fortune-telling, magic, etc. In the Paracelsian system, astronomy is the science which "deals with the comparison between the microcosm and the macrocosm, in order to elucidate the physiological nature of the first, and to grant an insight into the rational active principle of both" (quoted in Kayser). It is in this sense that astronomy constitutes the "second pillar" of the Paracelsian system (philosophy, alchemy, and ethics being the other three), and Paracelsus wanted every physician to master it as an indispensable foundation for medicine.

ASTRUM. The impression engraved in man at the hour of his birth by the external heaven, which inside man's body forms a separate "heaven" and which constitutes this man's specific character.

AURUM POTABILE. Fluid gold. Gold is the highest of all elixirs (cf. **ELIXIR**). On the one hand it can transmute all metals into gold, on the other hand it is a rejuvenating elixir of life. "This gold elixir transforms each thing, in which it is incorporated, into its own likeness, and . . . it also purifies and preserves the human body. . . . Its power as an arcanum surpasses that of any poison" (quoted in Sticker).

AZOTH. In a portrait of Paracelsus dating from 1567 (reproduced in fig. 2), the pommel of the sword upon which his hand rests bears the inscription "Azoth." From the poem printed under the picture we may gather that Azoth was the name of a secret medicine, a kind of *elixir vitae*, an infallible remedy, an *alexipharmakon* (counter poison). According to an old tradition, these miraculous virtues were inherent in a white powder that Paracelsus always carried with him in a case inside the pommel of his sword. It was allegedly for this reason that he never put aside his sword, even at night.—Azoth is also the secret name of Mercurius, which was extracted from certain metals, a universal medicine that comprised the virtues of all the others. Hence it is also a name for the philosophers' stone. It is a *spiritus animatus*, an animated spirit. It occurs in writings as early as those of the Coptic philosopher, Maria the Jewess, of Olympiodorus in the sixth century, and of Geber, or Al Djabir, an Arab alchemist of the eighth century. (It is also interpreted as standing for alpha and omega, i.e., Zeus or Theos.)

B

BABYLON. "Babylon the Great, the Mother of Harlots" of the Revelation of St. John (ch. 17), the ravening beast, the epitome of evil, which was identical with Tiamat, the Babylonian primal mother. (Cf. **APOCALYPTIC BEAST**.)

BALSAM. The life-preserving principle in all living beings; a remedy that can be extracted by alchemistic methods.

GLOSSARY

It originally referred to the fluid which preserved mummies from decay. It has a functional significance similar to that of Yliaster (q.v.).

BODY. Paracelsus distinguishes three kinds of body:

(1) The elemental body, which is physical and animal, and to which the lower instincts belong.

(2) The sidereal body, i.e., the astral body, which is volatile and animated, which cannot be perceived by our senses, and to which the higher instincts belong.

(3) The illumined body, the imperishable, essential kernel of man, the "spark of God," which is also called the resurrected flesh.

The first two bodies are mortal, only the third is immortal. According to Paracelsus, each body returns to its source after death. The elemental body becomes water and earth, the sidereal is dispersed in air and cosmic radiation; the illumined body rises to God. Paracelsus ascribed materiality to the first two bodies, although he says that the sidereal body is "as subtle as the light of the sun." Flesh and blood from the "elemental" body; feeling, thought, and mind the "sidereal" body of man. Characteristically, Paracelsus ascribes a bodily quality even to the spirit and the soul, even though it is an invisible and intangible quality. In each body are inherent the instincts corresponding to its nature: "luxury, lewdness, etc.," in the elemental body, "feeling, art, wisdom," in the sidereal body, and the striving for the knowledge of God in the eternal body.

C

CABALA. Tradition; the term designates the Jewish Neoplatonism of the Middle Ages, which originated in Gnosticism and the apocalyptic writings of the first century A.D. and comprises two basic works: *Sepher Yezirah* ("The Book of Creation") and *Zohar* ("The Splendour of Light"). The first dates from the ninth century; the second was composed by Moses de Leon in the thirteenth century.

GLOSSARY

CHIROMANCY. Not only the art of reading the lines of the hand, but more generally the art of inferring the inner constitution of any object from its outward characteristics.

COMPOSITIO HUMANA. For Paracelsus, man is composed of the four elements which also make up all the rest of creation. Each of these elements is based upon three substances, namely mercury, sulphur, and salt, which form the flesh and blood of the elemental body and, as faculties of the sidereal body, develop into "feeling, wisdom, and art." Here as elsewhere the fundament is expressed by the mysterious number 7 ($= 4 + 3$). (Cf. PLANET.) But the *compositio humana* is in addition conceived as a compound of *limus terrae* and *limus coelorum*; moreover, one part of it is perishable and another eternal, since it belongs simultaneously to the realm of nature and the realm of God.

CONCORDANCE. The basis for the various "correspondences" assumed by Paracelsus, particularly those between microcosm and macrocosm.

CONSTELLATION. The position of the stars at a specific moment; in a broader sense, a specific conjuncture of diverse factors, obtaining at a given moment. Paracelsus often denotes by this term a force (sympathy) that establishes relations between things, and thus causes certain situations in man's inwardness to affect the constellations and, conversely, causes the constellations to influence developments in the "lower sphere," which includes the sphere of man's life.

COSMOGRAPHER. A student of the theory of the cosmos.

CURE. Paracelsus admits three forms of cure—by the application of medical remedies, by uttering the "efficacious word," and by divine miracle. To effect either of the first two, the physician is required to know not only all the specific remedies, but also the great interconnexions between man, cosmos, and God; without this knowledge, he cannot know the arcana nor apply them correctly. For instance, a sick person cannot be cured at the time arbitrarily chosen by the physician, but only at a time appropriate to his

GLOSSARY

nature and destination. The cure also depends upon the physician's personal nature and attitude, which must be in concordance with the disease and the patient. Therapeutic practice, as conceived of by Paracelsus, must always emphasize the patient's total personality.

D

DISEASE. Any disturbance in the equilibrium of forces (which are organized in pairs of opposites) which results in the dissolution of the natural order of any entity, including the soul. A disease can arise in any separate sphere (in the elemental or the sidereal body) or as a result of a disturbance in the relation between them; it can be produced by natural causes (then it is predestined) or be decreed by God as a punishment or trial.

DIVINATIO. Prediction, prophecy.

DIVINATOR. Interpreter and diviner of the future. Paracelsus contrasts this concept with the revealed knowledge that comes from God.

DIVINING RODS. Forked rods for the discovery of water, hidden treasures, and minerals.

DIVINITAS. Divinity.

E

ELEMENTAL LIGHT. The vital manifestations of man, which spring from the sphere of instinct and which also characterize animals. Partly coincides with the "light of nature" (q.v.).

ELEMENTS. According to the ancient conception, the four elements are earth, water, air, and fire; the former two are considered moist and heavy, more akin to matter, the latter two warm and volatile, more akin to the realm of the soul. According to Paracelsus, water and earth form the "animal body," fire and air the "sidereal body" (q.v.). Paracelsus conceives of them not in the modern sense, as chemical

substances, but as the four fundamental forms of matter, which are potentially and sometimes invisibly contained in all perceptible things, even if they no longer manifest themselves outwardly in their typical original form. According to Paracelsus, there are four higher (spiritual) and four lower (physical) elements; the latter are the so-called *matrices*, "mothers," while the higher are the *patres*, "fathers," corresponding to the lower. Therefore all beings have four fathers and four mothers. (Cf. the Gnostic "Ogdoad," a group of eight divine beings or eight aeons.)

ELIXIR. The secret remedy for the prolongation of life, which has always been the ardently-yearned-for goal of the various magical and alchemical manipulations. Paracelsus also uses this term in the meaning of *essentia* (q.v.). As elixir of life it confers immortality upon man, and in a symbolic sense is identical with the panacea which releases man from his *prima materia* and leads him to the fulfilment of his personality.

ENS (plural: *entia*). An existent, an entity, a definite physical, psychic, or spiritual thing. The *entia* are influences, principles, and hence causes and "birth-givers" of bodily disturbances and illnesses. Paracelsus distinguishes five such *entia* (cf. pp. 149 ff.).

ESSENTIA. Essence, as opposed to "poison"—the active good principle in things, which is often designated also as *virtus*, "virtue, power."

ETHER. Paracelsus almost always uses this term to designate the air; thus it belongs to the lower sphere.

EXTRACTIVA. The means by which the essences of things are extracted.

F

FIRMAMENTAL EXTRACT. Extract of the astral components of man; similar to the elixir of life.

FLESH OF ADAM. Identical with the sinful animal body;

GLOSSARY

contrasted with the illumined body, the "subtle flesh that is not of Adam."

FRENCH DISEASE. See SYPHILIS.

G

GEMS. Precious stones, also fossils, the so-called *cerauniae* or toadstones, and other colored minerals.

GEOMANCY. A kind of divination based on the observation of crevices, mountain chains, and in general of the configuration of the earth's surface.

H

HEAVEN, HEAVENS. Paracelsus uses this term in the sense common today and also to denote "the stars," and the "upper sphere," which is opposed to the "lower sphere," that is, the earth. (Cf. THE STARS.)

HOMO MAXIMUS. The macrocosm (q.v.), conceived as the principle of man.

HYDROMANCY. Divination by means of water, based on the observation of whirlpools, springs, lakes, or smooth, brilliant surfaces of water.

I

IMAGE. Primarily the image of God, in the likeness of which man was formed; but Paracelsus also uses this term in the broader sense of "prototype."

IMAGINATION. Paracelsus identifies this faculty with "the stars" or the "firmament" in man; that is to say, fantasy results from the action of the astrological heaven, which forms in us the "astral man," i.e., the true, inner, or higher and "right" man, the "sidereal body," and the faculties inherent in it.

IMPRESSIO. Impression or imprint. By this term Paracelsus primarily means the character and constitution-forming

action of "the stars" (cf. THE STARS, SIDEREAL BODY). *Impressio deltica* denotes a magical influence obtained by means of the imagination.

INCARNATIVA. A medical remedy intended to further the healing of wounds; it was supposed to make the flesh grow.

INCUBUS. An evil spirit that descends upon sleeping persons; a kind of nightmare or demon that attacks women at night. According to Paracelsus, such demons are created by the power of the imagination. (Cf. SUCCUBUS, WOMAN.)

INFLUENCE. Primarily, planetary influence.

L

LAPIS PHILOSOPHORUM. The philosophers' stone. In chemistry and alchemy, this term denotes gold in a special sense, or its supreme and definitive form, or else the substance which transmutes metals into gold; it also denotes the panacea. In the symbolic sense, however, the philosophers' stone stands for the highest wisdom, the final goal of the process of man's initiation, enabling him to bring his personality to the highest possible fulfilment, and often it means the perfect man himself. Paracelsus uses the term in the sense employed by hermetic philosophy, hence chiefly as a symbol for man's highest degree of wisdom. In the hermetic philosophy, if a man discovered or produced the "stone," it accomplished his "second birth," the birth of the pure, dross-free body, the "second Adam," or, as symbolized in the alchemistic procedure, the release of the "pearl" from the darkness in which it lay hidden, the freeing of the divine spark from its "dungeon." (There are parallel doctrines in Gnosticism and Manichaeism.)

LEAD. Not merely the metal, but also an alchemistic symbol for dark, heavy, lustreless primal matter. This matter is at the beginning of both the process of spiritual maturation and the alchemical transmutation of gold. *Aurum philosophorum est plumbum*, "the philosophers' gold is lead," we read in *Pandora*, an alchemistic work published

G L O S S A R Y

in Basel in 1588. In the doctrine of correspondences, lead corresponds to the planet Saturn.

LIGHT OF NATURE. Intuitive knowledge gained by the experience of nature and implicit in all beings at their birth, in contrast to the knowledge given by revelation. It is one of Paracelsus' basic concepts. In a cosmological sense, it is a secret radiation of nature and makes possible the discovery of natural mysteries. In an anthropological sense, it is man's active intelligence (Paracelsus also calls it "reason"), a kind of knowledge guided by intuition and developed by experience. The light of nature belongs to the sphere of creation and operates only within it; it originates in the spirit of God. As Paracelsus says, "the light of nature was kindled by the Holy Ghost." But although the natural light is inseparably bound to the Holy Ghost, it constitutes an independent source of knowledge.

LIMBUS. Formless and quality-less matter, endowed with primal life, the sole mother of everything earthly, the "chaos" of the alchemists, which contained as in a reservoir all things, in a potential state (cf. Kayser). It also constitutes the primal matter in the *compositio humana*, and consists of the *limus coelorum* and the *limus terrae* (q.v.). (Cf. **PRIMA MATERIA.**)

LIMUS COELORUM. The basic heavenly substance, which in addition to *limus terrae* forms the other, eternal part of the *compositio humana*, or human compound.

LIMUS TERRAE. The primal stuff of the earth, the clay out of which God created all tangible things. Often identical with *limbus* (q.v.).

M

MACROCOSM. The totality of creation as opposed to the microcosm, or man. Also designated as "the Great Creature" or "the Great World," in its cosmogonic sense it denotes the primal man (the Gnostic Adam or the Hindu Purusha).

MAGIC. Paracelsus distinguishes two kinds of magic—good

magic, which is consistent with Christian religion and applies occult natural knowledge for purposes beneficent to the sick and favourable for the exploration of nature; and bad magic, which is heathen sorcery used for evil purposes. For therapeutic purposes Paracelsus used, among other things, seals, amulets, and incantations, which at that time formed part of the equipment of the occult sciences.—The word “magic” derives from Old Persian *magus*, “priest” or “priest-scientist.” The three Magi who travelled from the East, in the New Testament, were Chaldean astrologers. For Paracelsus, magic is above all a method for gaining insight into occult heavenly and earthly things; not, however, on the basis of or by means of sorcery but by way of intuitive knowledge, which is obtained by the grace of God and by concentrated contemplation and which reveals the great hidden interrelationships between God, the world, and man. This art was still alive for the “magical man” of that time, but must be rediscovered today if we are to understand it.

MAGNALIA. All medical remedies and works to which Paracelsus attributes a special efficacy owing to the divine power inherent in them he called *magnalia Dei*, and he extends this notion to include the whole of creation, all “marvellous works of God.”

MANIFEST. See REVEAL.

MATRIX. Primal womb, primal mother, the still formless receptacle of form.

MATTER. Paracelsus uses this term to designate all kinds of matter within the cosmos, from the coarse and tangible to the refined and intangible.

MEDICINA ADEPTA. Supernatural therapy, occult medicine, that medicine which rests upon the knowledge of the interrelations between heaven and man and deals with those diseases which are caused by a disturbance of this interrelationship, or by “heaven.” (A number of mental diseases belongs to this category.)

MEDICINE. Paracelsus uses the same German term—*Arznei*

GLOSSARY

—to designate the science of medicine, therapeutics, and medication.

MELUSINA. A legendary, magic being, whose name Paracelsus also uses to designate an arcanum. He conceives of it as a psychic force whose seat is a watery part of the blood, or as a kind of *anima vegetativa* (vegetative soul).

MERCURY. One of the three basic substances of man. Because of its vivacity and volatility, mercury, or quicksilver, serves often as the alchemistic symbol for the "psychic substance," or "ethereal body," and is usually mentioned in association with sulphur and sal (qq.v.). (See fig. 95 and fig. 124.) This metal is used as (1) *argentum vivum*, quicksilver (chemical sense), and (2) *anima mundi, spiritus vitae*, the soul of matter, the spirit of life (philosophical sense). It is symbolized by the Dragon, the Snake, etc.

MICROCOSM. Man, who as the image and son of the macrocosm contains all of its essential parts in miniature. According to the theories prevalent at Paracelsus' time, there was a correspondence between the parts of the human body and man's psychic properties on the one hand and the various parts of the cosmos on the other. (Cf. THE STARS, CONCORDANCE.) Paracelsus conceives of the microcosm and macrocosm as independent entities.

MYSTERIUM MAGNUM. The Great Mystery. Paracelsus also uses this term to designate the whole of creation.

N

NECROMANCY, NIGROMANCY. The art of conjuring the spirits of the dead and of wresting predictions from them; a kind of medieval spiritism.

P

PHILOSOPHY. Knowledge of all natural processes and their profound essence. It corresponds to the modern term "natural sciences." See also SAPIENTIA.

GLOSSARY

PHYSIOGNOMICS. The art of discovering the character of a person from his facial features and skull structure.

PLANET. In accordance with an old tradition, Paracelsus numbers among the planets not only Venus, Mars, Mercury, Jupiter, and Saturn but also the sun and the moon. The planets thus total seven, a number which has been regarded from time immemorial as one of the most significant symbols within the cosmos (see fig. 62 and fig. 94). In accordance with his cosmological theories, Paracelsus sees close reciprocal association between planets, metals, and medical remedies and draws far-reaching medical inferences from this association. The planets are also in man, they are his "anatomy." In keeping with his theory of the organic unity of the microcosm and macrocosm, Paracelsus believed that there was an inner, invisible connexion between the cosmic situation of each period (this includes the positions of the planets) and the course of human history—for instance, the outbreak of wars, the emergence of new arts, inventions, etc.

PLANTS. Primarily, all herbs and vegetation. But Paracelsus uses this expression in a broader sense to denote everything that has capacity for growth and development, that is to say, all living beings.

PRAESAGIUM. Forecast, divination, omen. In Paracelsus' own words: "*Praesagium* is a thing by which one shows something that is not this thing" (quoted in Sudhoff-Matthiessen). Such a statement, in contrast to statements based on the correspondences, can be made on the basis of any heterogeneous things.

PREDESTINATION. The course of destiny as predetermined by God or by nature. Paracelsus assumes that everything created has an inherent and hidden term, a kind of "inner clock."

PRIMA MATERIA. The still undifferentiated primal substance; in a cosmogonic sense, chaos; in an alchemistic and symbolic sense, everything that is in or has returned to its original state, as well as the unconscious initial state of

GLOSSARY

the soul before it has attained fulfilment, that is to say, "before the removal of its dross."

PROGNOSTICATION. Interpretation of the future, prognosis, advance knowledge. In Paracelsus' own words: "To prognosticate is to state a thing about the invisible on the basis of the visible" (quoted in Sudhoff-Matthiessen).

Q

QUINTA ESSENTIA. Each of the four elements contains a fifth—which is the quintessence, an ethereal substance of particular subtlety that constitutes the "virtue," or active principle, of each being. The quintessence is the vehicle of the special curative power of herbs, metals, stones, etc.; to extract it was the primary object of pharmaceutical alchemy. In a philosophical sense, it is a kind of life principle and hence related to the Yliaster (q.v.).

R

REBIS. The hermaphrodite, or bisexual being; in its unity, that is to say, by combining the two antitheses, the male and the female principle, it represents, in accordance with an old alchemistic idea, the highest and most desirable degree of the process of transmutation—totality.

REVEAL, MANIFEST. Paracelsus uses these verbs and their derivatives primarily to designate the potential ability of all created things to bring to light their prefigured immanent "final form." Everything created is fulfilled by being raised from its potential state to its actual state. (Cf. **LIGHT OF NATURE.**)

S

SAL. Salt, one of the three basic substances composing man. In a chemical sense, Paracelsus also uses this term to designate everything that is earthly, material, that can

never be entirely consumed, but is turned into ashes. Symbolically it also designates the material and physical part of man. Usually occurs in association with mercury (the soul) and sulphur (the spirit) (qq.v.).

SAPIENTIA. Wisdom. In most cases Paracelsus uses this term in the same meaning as *scientia* (science) and philosophy; all three designate both knowledge obtained by experience and the treasure of wisdom that lies hidden in all beings.

SATURN. The planet; the term is also used, however, as a symbol for "lead," or primal matter, the "original" matter from which the "final" matter is obtained. Saturn is the star of the melancholic, of the inhibited and socially hindered, but also of a dark primal wisdom (cf. p. 229 and fig. 109).

SATYRION. An orchis root, once regarded as an aphrodisiac because of its similarity to testicles.

SCIENTIA. See **SAPIENTIA.**

SEED. A kind of vital sap, a quintessence of all parts of man, in contradistinction to "sperm." In many cases the sperm serves to transmit it. "Seed" also means everything that exists only potentially, not actually.

SENSIBLE (INSENSIBLE). Perceptible (or not perceptible) by the senses.

SEPARATIO. Division, separation. *Separatio elementorum* is a process that separates the pure from the impure, the light from the heavy, alcohol from wine, the refined from the crude, etc. It is an alchemistic operation and denotes the process by which individual things are detached from the chaotic primal mass in which they were potentially contained, or by which they are put back in their primal state. As an alchemistic symbol, the term designates any clarifying differentiation or separation of things that have been improperly mixed, hence also of soul and body after death. Paracelsus calls *separatio* the primal division of the pre-existing chaos into primal force and primal matter, which upon emerging from their original unity became percep-

GLOSSARY

tible and tangible material creation; it is God's will that makes operative the *separatio* as a factor in the process of begetting. "Primal force, primal matter, and *separatio*—or the primal law—cannot be encompassed by our human understanding; all three together constitute the *mysterium magnum*" (quoted by Kayser).

SIBYLLINE. Oracular. The sibyls were oracular virgins, priestesses of Apollo, who uttered their prophecies in a state of wild ecstasy. The *Sibylline Books*, a collection of prophecies in verse, were allegedly the work of the Cumaean Sibyl.

SIDEREAL BODY. The same as "astral body." A part of the human body, consisting of fire and air, which receives the impressions of "the stars," and is responsible for the body's vital motions. Called also the "ethereal body," it is contrasted with the elemental body and, according to Paracelsus, forms a kind of psychic body which is, however, as mortal as the other. (Cf. BODY.)

SIDEREAL KNOWLEDGE. The knowledge obtained through the sidereal body, or the *astrum*; above all, knowledge concerning the occult cosmic and natural relationships.

SIEGWURZ. German name of a bulbous herb, to which virtues of all kinds were ascribed; Paracelsus must have been referring to a bulbotuber or corm, enclosed in netlike broken skins (see p. 197).

SIGNATURE. External characteristics corresponding to inner qualities, which serve as signs, by which everything internal and invisible can be discovered. The idea of the "signature" underlies the Paracelsian doctrine that the similar can be cured by the similar; the higher a creature in the order of creation, the more difficult it is to discover its inwardness, the less unambiguously, thinks Paracelsus, does its inner nature manifest itself in the outward form. Most hidden of all is the essential core in man, whereas in plants, for example, it is often obviously expressed in their form and colour.

SOPHISTS. All pseudo-scientists who lead their public

astray by many ingenious words, and especially physicians who deceive their patients.

SOPHISTRY. In line with the foregoing, all idle, fallacious, and scientifically misleading verbiage.

SPERM. Paracelsus distinguishes "sperm" from "seed": the sperm is the tangible material component of the germinating fluid; it does not include the spirit and the essence, the active forces of the seed (q.v.).

SPHERE (LOWER, UPPER). Paracelsus calls the earthly realm the "lower sphere" and the realm of the firmament the "upper sphere." All of man's "animal" qualities and instincts, all his elemental parts, belong to the lower sphere; all his psychic qualities and "higher instincts" are part of his "sidereal body" and belong to the upper sphere.

SPIRIT. The "consciousness," the essence, and the "life" of a thing (cf. also SPIRITUS); the divine spark in man.

SPIRITS. Paracelsus means by this word "psychic forces"; these can be recognizable externally and can manifest themselves as distinct and clearly defined forces or actions, or can be projected into others as human beings. In the language of modern depth psychology, such forces might best be designated by the terms "dissociated parts of the ego" or "psychic partial personalities," which can be encountered in descriptions of certain mental diseases and neuroses.

SPIRITUS. Spirit, aerial spirit. In Paracelsus, the fiery spirit, the spark that God breathed into man, and that constitutes the immortal essence of each creature. In the phrase *spiritus arcanus* or *spiritus arcanorum*, he uses this term to designate the permanent and immanent radiating energy of an occult remedy. (Cf. SPIRITUS VITAE.)

SPIRITUS VITAE. The spirit of life, mercury, Yliaster-like *spiritus arcanus* (cf. SPIRITUS), the radiating energy inherent in every living body, which is part of the general cosmic radiation (universal energy). It is only indirectly related to the divine spiritual part of man; everything

created also possesses the light of nature, which also comes from God or the Holy Ghost.

STARS, THE. The totality of the firmament as well as its influence on the bodily constitution and soul of man (on the "inner stars," which are in interaction with the cosmic constellation). The term is often used in the same sense as "heaven," "heavens," and "firmament." (Cf. SIDEREAL BODY, IMAGINATION, ASTRUM.)

STARS, INNER. See THE STARS, SIDEREAL BODY.

STARS, OUTER. See THE STARS.

SUBSTANCE. Paracelsus uses this term sometimes in a chemical sense, to designate the three main substances which are the "fundaments" of man, i.e., mercury, sulphur, and salt. (Cf. MERCURY, SULPHUR, SAL.)

SUCCUBUS. The nocturnal demon that haunts males (cf. INCUBUS).

SULPHUR. One of the human components. Chemically, anything that can be consumed by fire; symbolically, the spiritual part of man (cf. fig. 121). Sulphur usually occurs in association with mercury (the soul) and salt (the body).

SYDERICA. Probably vervain or vulnerary herb (*Sideris*, *Sideritis*) with its starlike flower (see p. 197).

SYPHILIS. *Morbus gallicus*, "French disease," the venereal disease today called syphilis, which in the Middle Ages was also called "plague of lewdness." It was allegedly brought from America by Spanish soldiers toward the end of the fifteenth century, whereupon it spread suddenly and with unprecedented rapidity throughout Europe. Each nation called it by the name of another suspected of having exported it. At one time it was called the Spanish disease, then the Neapolitan disease (because the army of Charles VIII, king of France, was suddenly afflicted with it in the course of the Neapolitan campaign), but most often the French disease. Paracelsus was the first to use mercury as a remedy against syphilis, and mercury was until recently considered the most effective cure. Paracelsus believed that this disease

GLOSSARY

was caused by succubi, "demons which are begotten through fornication in brothels." He took an extraordinary interest in syphilis and its treatment, as evidenced by a number of his writings.

T

THEORICA. In alchemy, philosophical preparation, meditation, and interpretation; in medicine, the analysis and explanation of the disease.

THYMIAN. An herb with a two-lipped calyx, also called common caraway.

TINCTURE. Dye; all fluids that can bring about a transmutation; also fluid occult remedies. (Cf. **TINGEING.**)

TINGEING. Dyeing; an alchemistic process which stands symbolically for external change, the ennobling of outward form. Alchemistically, used for "changing the colour of, transforming." The red tincture was used to dye the base metals the colour of gold, and also as a panacea.

TRANSMUTATION. Not only an external but also a substantial change in contradistinction to "tingeing." In the medieval view, the elements could gradually be changed into one another, and the various metals transmuted.

TUFF. A kind of volcanic, porous stone; tufaceous limestone.

U

ULTIMA MATERIA. Matter raised to its definitive state; cosmogonically, world matter raised to its final form; in an alchemistic and symbolic sense, the spiritually matured personality.

V

VULCAN. Roman god of fire and subterranean forges. The name is used by Paracelsus to symbolize the transforming power in man (often identical with Archeus); he expresses

GLOSSARY

the transforming power of fire, through which things are freed of dross and matured. This power extends from the primitive transformation of food in man's digestive tract to the subtlest symbolic forms of psychic metamorphosis.

W

WILD CHICORY. An herb with bright blue blossoms.

WOMAN. Paracelsus accepts the medieval dogma according to which woman is the "second creature," her place in the hierarchical order being below that of man, after whom she was created. She exists primarily "for his sake," as the matrix or womb of the human race. This defines and fulfils her important and honourable task on earth. But in this sense woman is also the vehicle of physical matter, of darkness, and according to Paracelsus, she is responsible for the development of all diseases. For before the creation of woman, when Adam was still innocent and walked in the pure spirit of God, there were no diseases; they came into the world only through the original sin, hence through woman. Paracelsus assigns a subordinate role to woman as an earthly creature. But at the same time he considers her completely equal to man as a human being, and her soul has a share in immortality. For in her, too, the "image of God" is engraved, in her too dwells the immortal illuminated body, which returns to the Creator after the death of the elemental and the sidereal body. Thus, whereas Paracelsus does not assign to woman a spiritually creative task, he does assign to her an ethical task. (See pp. 98 ff.)

Y

YLIASTER (var.: Yliastrum, Ilyaster, Iliastes, Iliadus). A word probably composed of *hyle* (matter) and *astrum* (the stars), that is to say, of two components of the basic substance of the cosmos, or *prima materia*; Paracelsus uses this term to mean "chaos" or the mystical concept of primal man, or *homo maximus*. Yliaster is also a spiritual vital force.

TABLE OF CONTENTS.

VOLUME II.

PART II.

HERMETIC MEDICINE.

	PAGE.
THE ARCHIDOXIES OF THEOPHRASTUS PARACELSUS.	
BOOK THE FIRST: concerning the Mystery of the Microcosm ...	3
BOOK THE SECOND: concerning the Separation of the Elements	10
BOOK THE THIRD: on the Separation of the Elements from Metals	15
Concerning the Separation of the Elements out of Marchasites. Concerning the Separation of the Elements from Stones. Concerning the Separation of the Elements from Oleaginous Substances. Concerning the Separation of the Elements in Corporeal Resins. Concerning the Separation of the Elements from Herbs. Concerning the Separation of the Elements from Fleshly Substances. The Separation of the Elements from Fishes. Concerning the Separation of the Elements from Watery Substances. Concerning the Separation of the Elements out of Water. Concerning the Separation of the Elements from Glasses and those Substances which are of the Nature of Glass. Concerning the Separation of the Elements in Fixed Substances. Concerning the Separation of Fire. Concerning the Separation of Air. Concerning the Separation of Water. Concerning the Separation of the Earth.	
BOOK THE FOURTH: concerning the Quintessence	22
Concerning the Extraction of the Quintessence from Metals. Concerning the Extraction of the Quintessence from Marchasites. Concerning the Extraction of the Quintessence from Salts. Concerning the Extraction of the Quintessence from Stones, from Gems, and from Pearls. Concerning the Extraction of the Quintessence from Burning Things. Concerning the Extraction of the Quintessence out of Growing Things. Concerning the Extraction of the Quintessence from Spices. Concerning the Extraction of the Quintessence from Eatables and Drinkables.	
BOOK THE FIFTH: concerning Arcana	37
Concerning the Arcanum of the Primal Matter. Concerning the Arcanum of the Philosophers' Stone. Concerning the Mercurius Vitæ. Concerning the Arcanum of the Tincture.	
BOOK THE SIXTH: concerning Magisteries	48
Concerning the Extraction of the Magistry from Metals. The Extraction of the Magistry out of Pearls, Corals, and Gems. Concerning the Extraction of the Magistry out of Marchasites. Concerning the Extraction of the Magistry from Fatty Substances. The Extraction of the Magistry from Growing Things. Concerning the Extraction of the Magistry out of Blood.	

vi. *The Hermetic and Alchemical Writings of Paracelsus.*

	PAGE.
BOOK THE SEVENTH : concerning Specifics	59
Concerning the Odoriferous Specific. Concerning the Anodyne Specific. Concerning the Diaphoretic Specific. Concerning the Purgative Specific. Concerning the Attractive Specific. Concerning the Styptic Specific. Concerning the Corrosive Specifics. Concerning the Specific of the Matrix.	
BOOK THE EIGHTH : concerning Elixirs	69
On Preservation and Conservation by Elixirs. Concerning the First Elixir, that is, of Balsam. Concerning the Elixir of Salt, by the force of which the body is conserved. Concerning the Third Elixir, namely, of Sweetness. Concerning the Fourth Elixir, which is that of Quintessences. The Fifth Elixir is that of Subtlety. The Sixth Elixir, which is that of Propriety.	
BOOK THE NINTH : concerning External Diseases	77
A Remedy for Wounds. A Remedy for Ulcer. A Remedy against Spots.	
BOOK THE TENTH : the Key of Theophrastus Paracelsus Bombast von Hohenheim, from a German Manuscript Codex of Great Antiquity. Comprised in a Preface and Ten Separate Chapters	81
The Preface. Chapter I. : concerning the Separation of the Elements. Chapter II. : concerning the Quintessence. Chapter III. : concerning Magisteries. The Preparation of Circulated Salt. Chapter IV. : concerning First Entities ; and primarily concerning the Extraction of the Quintessence or First Entity of Common Mercury. Chapter V. : concerning Arcana. Chapter VI. : concerning the Arcanum of the Stone, or of the Heaven of the Metals. Chapter VII. : concerning the Arcanum of the Mercurius Vitæ. Chapter VIII. : concerning the Great Composition, being the chief of our secrets in medicine. Chapter IX. : concerning the Corporal Balsam, or Mercury of the Sun. Chapter X. : concerning the Composition of the Spiritual Balsam, and of the Balsam of the Coagulated Body.	
THE MANUAL OR TREATISE CONCERNING THE MEDICINAL PHILOSOPHIC STONE	94
Preface to the Reader. The Preparation of the Matter of the Stone. The Remainder of the Preparation. The Use of the Stone.	
A BOOK CONCERNING LONG LIFE	108
THE BOOK CONCERNING RENOVATION AND RESTORATION	124
The First Entity of Minerals. The First Entity of Gems. The First Entity of Herbs. The First Entity of Liquids.	
A LITTLE BOOK CONCERNING THE QUINTESSENCE	137
Concerning the Quintessence out of Oil, also of the Salt of the same. Concerning the Oil or Quintessence of Silver and its Salt. Oil of Mars. Oil of Saturn. Oil and Salt of Jupiter. Of the Quintessence of Antimony. Concerning Oil and Salt out of Marchasite. Oil out of Common Salt. Oil and Salt of Coral, also of Crystal. Oil and Salt of Pearls. Of the Essence and Salt of Things growing on the Earth. The Method of separating Oil and Salt from Oil of Olives. Red Water out of Oil of Olives. Manufacture of Salt from the Red Water. Method of Extracting the Oil and Salt from Pepper. Oil out of Gums. Preparation of Colocynth.	
ALCHEMY THE THIRD COLUMN OF MEDICINE	148
THE LABYRINTHUS MEDICORUM concerning the Book of Alchemy, without which no one can become a Physician	165

vii.

CONCERNING THE DEGREES AND COMPOSITIONS OF RECIPES AND OF
NATURAL THINGS IN ALCHEMY.

BOOK THE THIRD	339
BOOK THE FOURTH	344
APPENDIX III. : a Short Lexicon of Alchemy, explaining the chief Terms used by Paracelsus and other Hermetic Philosophers ...	348
INDEX	387

PART II.

HERMETIC MEDICINE.

THE ARCHIDOXIES OF THEOPHRASTUS PARACELSUS.

BOOK I.

CONCERNING THE MYSTERY OF THE MICROCOSM.†

I F, my dearest sons, we consider the misery by which we are detained in a gross and gloomy dwelling, exposed to hunger and to many and various accidents, from all sources, by which we are overwhelmed and surrounded, we see that we could scarcely flourish, or even live, so long as we followed the medicine prescribed by the ancients. For we were continually hedged in by calamities and bitter conditions, and were bound with terrible chains. Every day things became worse with us, as with others who were weighed in the same balance, whom also the ancients have not so far been able to help or to heal by means of their books. We do not in this place advance the different causes of this misfortune. This only we say, that many teachers by following the ancient methods have acquired for themselves much wealth, credit, and renown, though they did not deserve it, but got together such great resources by simple lies. From which consideration we have wished to elaborate and write this memorial work of ours, that we might arrive at a more complete and happier method of practice, since there are presented to us those mysteries of Nature which are too wonderful to be ever thoroughly investigated.

* The ten books of the *Archidoxies* stand in the same relation to Hermetic Medicine as the nine books *Concerning the Nature of Things* stand to Hermetic Chemistry and the science of metallic transmutation. They appear to have been reckoned among the most important works of Paracelsus, and the editions are exceedingly numerous. That which has been selected for translation is derived from the Geneva folio.

† The Microcosmos itself is to be understood thus, namely, as consisting of the four elements, and it is these invisibly. It is formed after the image of Him who created all things, and yet it has remained a creature. Therefore, it is partially one with the earth, because like the earth it has need of the other elements, heaven, air, and fire.—*De Hydropisi*. This, therefore, is the condition of the Microcosmos, or smaller world. It contains in its body all the minerals of the world. Consequently the body acquires its own medicine from the world. Hence it is clear that all minerals are useful to man, if any one of these be joined to its corresponding mineral in the body of the Microcosm. He who lacks this knowledge is by no means a philosopher or physician, for if a physician affirms that a certain marcasite is useful for this or that, it is first of all needful that he should know what is the marcasite of the world and what is the marcasite of the human body.—*Paramirum*, Lib. IV. *De Matrice*. There is a vast variety of things contained in the body of the Microcosm which elude the observation of the senses, though God, the Creator, has willed them to exist in that structure. There are, for example, more than a thousand species of trees, stones, minerals, manna, and metals. Even as the incredible magnitude of the Sun appears small to us by reason of its distance, so other things may be made to look small which are placed nearer at hand, and thus we come to understand that He who filled the shell of the heaven with so many and such great bodies, was able to include as many and as great wonders in the body of the Microcosm. Accordingly, know that the mysteries of the Microcosm are to be mystically understood—that is, we are not to measure local things according to proportion or substance, but must all the more arduously enquire in what matter we are to expect the effect of any agent.—*De Causis et Origine Luis Gallicæ*, Lib. V., c. 10.

4 *The Hermetic and Alchemical Writings of Paracelsus.*

Wherefore we have come to consider how that art can be reconciled with the mysteries of Nature, in opposition to those who, so far, have not been able to arrive at the art at all.

The strength of this mystery of Nature is hindered by the bodily structure, just as if one were bound in a prison with chains and fetters. From this the mind is free. For in its operation this mystery is like fire in green wood, which seeks to burn, but cannot on account of the moisture.

Since, then, hindrance arises from this source, one had to see how to get free from it. For such freedom being secured, this art of separation can only be compared to the art of the apothecaries, as light is compared to darkness. And this we say not in mere arrogance, but on account of the great frauds practised by apothecaries and physicians. Wherefore, not undeservedly, we call them darkness, or caves of robbers and impostors, since in them many persons are treated for gain by ignorant men ; persons who, if they were not rich, would at once be pronounced healthy, since the practitioners know that there is no remedy or help for these people in their consultations.

This, then, is worthy to be called an art, which teaches the mysteries of Nature ; which, by means of the quintessence, can cure a contraction and bring about health in the space of four days, whereas otherwise death would be the result. A wound, too, can be healed in twenty-four hours, which would scarcely yield to bodily treatment in as many days. Let us, therefore, readily approach by experiment this separation of the mysteries of Nature from the hindrances of the body.

First, then, we have to consider what is of all things most useful to man and most excellent. It is to learn the mysteries of Nature, by which we can discover what God is and what man is, and what avails a knowledge of heavenly eternity and earthly weakness. Hence arises a knowledge of theology, of justice, of truth, since the mysteries of Nature are the only true life of man, and those things are to be imitated which can be known and obtained from God as the Eternal Good. For although many things are gained in medicine, and many more in the mysteries of Nature, nevertheless after this life the Eternal Mystery remains, and what it is we have no foundation for asserting, save that which has been revealed to us by Christ. And hence arises the ignorant stupidity of theologians, who try to interpret the mysteries of God, whereof they know not the least jot ; and what it is not possible for man to formulate, namely, the will of Him who gave the mystery. But that word of His they twist to their own pride and avarice ; from whence arise misleading statements, which every day increase more and more. Hence it comes that we lightly value, nay, think nothing at all of that reason which is not evidently founded on the mysteries. In like manner the jurists have sanctioned laws according to their own opinions, which shall secure themselves against loss, though the safety of the State be imperilled.

Seeing, then, that in these faculties so many practices have come into vogue which are contrary to equity, let us dismiss the same to their proper time.

Nor do we care much for the vain talk of those who say more about God than He has revealed to them, and pretend to understand Him so thoroughly as if they had been in his counsels ; in the meantime abusing us and depreciating the mysteries of Nature and of philosophy, about all of which they are utterly ignorant. The dishonest cry of these men is their principal knowledge, whereby they give themselves out to be those on whom our faith depends, and without whom heaven and earth would perish.

O consummate madness and imposture on the part of human creatures, in place whereof it would be more just that they should esteem themselves to be nought but unprofitable servants ! Yet we, by custom imitating them, easily learn, together with them, to bend the word of our Teacher and Creator to our own pride. But since this word is not exactly known to us, can only be apprehended by faith, and is founded on no human reason, however specious, let us rather cast off this yoke, and investigate the mysteries of Nature, the end whereof approves the foundation of truth ; and not only let us investigate these, but also the mysteries which teach us to fulfil the highest charity. And that is the treasure of the chief good which in this writing of our Archidoxies we understand in a material way.

From the aforesaid foundation we have drawn our medicine by experiment, wherein it is made clear to the eye that things are so. Then, coming to its practice, we divide this our book of Archidoxies into ten, as a sort of aid to the memory, so that we may not forget these matters, and at the same time may speak of them so far openly that we may be understood by our disciples, but not by the common people, for whom we do not wish these matters to be made too clear. We do not care to open our mind and thoughts and heart to those deaf ears, just as we do not wish to disclose them to impious men ; but we shall endeavour to shut off our secrets from them by a strong wall and a key. And if by chance this our labour shall not be sufficiently safeguarded from those idiots who are enemies of all true arts, we shall forbear writing the tenth book, concerning the uses of those which precede it, so that we may not give the children's meat to the dogs. Nevertheless, the other nine will be sufficiently understood by our own disciples.

And, to speak more plainly of these matters, it must be known that in this treatise on the microcosm are proved and demonstrated all those points which it contains, which also embrace medicine, as well as those matters which are interconnected therewith. The subject of the microcosm is bound up with medicine and ruled by it, following it none otherwise than a bridled horse follows him who leads it, or a mad dog bound with chains. In this way I understand that medicine attracts Nature and everything that has life. Herein three things meet us, which shew by what forces they are filled and produced. Firstly, in what way the five senses are assisted by the mysteries of Nature, though those senses do not proceed from Nature, nor spring naturally as a herb from its seed, since there is no material which

6 *The Hermetic and Alchemical Writings of Paracelsus.*

produces them. Secondly, the mobility of the body is to be considered : whence it proceeds, by what power it is moved and exercised, and in what manner it is ministered to. Thirdly, there must be a knowledge of all the forces in the body, and what forces apply to each member, and are transmuted according to the same nature as the particular limb, when originally they are identical in Nature.

First, then, we will speak of these senses : sight, hearing, touch, taste, and smell. The following example teaches us. The eyes have a material substance, of which they are composed, as it is handed down in the composition of the body. So of the other senses. But vision itself does not proceed from the same source as the eye ; nor the hearing from sound, or from the same source as the ears ; nor touch from flesh, nor taste from the tongue, nor smell from the nostrils, any more than reason proceeds from the brain ; but these are the bodily instruments, or rather the envelopes in which the senses are born. For it must not be understood that these senses depend solely on the favour of God, in the sense that they do not belong to the nature of man, but are infused solely by the grace of God above and beyond all Nature, to the end that, if one were born blind, the mighty works of God might be made known to us. We must not think so in this case. For the abovementioned senses have each their own body, imperceptible, impalpable, just as the root of the body, on the other hand, exists in a tangible form. For man is made up of two portions, that is to say, of a material and a spiritual body. Matter gives the body, the blood, the flesh ; but spirit gives hearing, sight, feeling, touch, and taste. When, therefore, a man is born deaf, this happens from a defect of the domicile in which hearing should be quartered. For the spiritual body does not complete its work in a situation which is badly disposed.

Herein, then, are recognised the mighty things of God, that there are two bodies, an eternal and a corporeal, enclosed in one, as is made clear in the Generation of Men.* Medicine acts upon the house by purging it, so that the spiritual body may be able to perfect its actions therein, like civet in a pure and uncontaminated casket.

Coming next to the power of motion in the body, let us inquire whence it is produced and has its origin, that is, how the body unites itself to the medicine so that the faculty of motion is increased. The matter is thus to be understood. Everything that lives has its own motion from Nature. This is

* The treatise *De Generatione Hominis*, to which reference is here made, appears to be fragmentary in character. It regards the generation of all growing things as twofold—one where the nature and the semen are contained in a single essence, the other where the essence of the nature exists without the semen. In man it recognises the existence of four complexions, and it distinguishes between the outward and the interior man. Men, as regards their mortal part, are nothing but mere cattle. There is, however, an internal man wherein there is no nature of the animal, and to consider him in this his true nature must be counted among the highest branches of philosophy. There is an immortal as well as a corruptible body of man, and it is in this, by the infusion of God's power, that reason, discernment, wisdom, doctrine, art, and generally whatsoever is above mortality, do alone inhere. Man, therefore, endowed with wisdom and subtlety, can emerge from his external body. All wisdom and intelligence which man enjoys is eternal with this body, and man the interior can live after another manner than can man the outer. This internal man is illustrated and clothed upon with truth for ever.

sufficiently proved of itself so far as natural motion is concerned. But the motion of which we think may be described as that which springs from the will, as, for example, in lifting the arm one may ask how this is done, when I do not see any instrument by which I influence it ; but that takes place which I desire to take place. So one must judge with leaping, walking, running, and other matters which occur in opposition to, or outside of, natural motion. They have their origin in this, that intention, a powerful mistress, exists above my notions in the following manner. The intention or imagination kindles the vegetative faculty as the fire kindles wood—as we describe more particularly in our treatise on the Imagination.* Nowhere is it more powerful to fulfil its operations than in its own body where it exists and lives. So, in every body, nothing is more easily kindled than the vegetative soul, because it runs and walks by itself and is disposed for this very purpose. For, even as a hidden or buried fire blazes forth so soon as it is exposed and catches the air, so my mind is intent upon seeing something. I cannot with my hands direct my eyes whither I will ; but my imagination turns them whithersoever it is my pleasure to look. So, too, as to my motion must it be judged. If I desire to advance and arbitrarily propose this to myself, at once my body is directed to one or the other place fixed on by myself. And the more this is impressed on me by my imagination and thought, the more quickly I run. In this way, Imagination is the motive-power of my running. None otherwise does medicine purify those bodies in which there is a spiritual element, whence it happens that their motion is more easily perfected.

Thirdly, it must be understood that in the body a distribution is made over all the members of everything which is presented to it, either without or within. In this distribution a change takes place by which things are modified, so that one part subserves the constitution of the heart, another accommodates itself to the nature of the brain ; and of the rest in like manner. For the body attracts to itself in two ways, from within and from without. Within, it attracts whatever is taken through the mouth. Externally, it attracts air,

* *De Virtute Imaginativa* is another treatise which has survived only in a mutilated state. It further insists on the division of man into two bodies, the one visible and the other invisible, but is devoted to the consideration of the second only. The imagination is the mouth of the body which is not visible. It is also the sun of man which acts within its own sphere after the manner of the celestial luminary. It irradiates the earth, which is man, just as the material sun shines upon the material world. As the one operates corporeally, so works the other, after a parallel manner, spiritually. And as the sun sends its force on a spot which it shines upon, so also the imagination, like a star, bursts upon the thing which it affects. Nor are all things posited in heat and cold only, but in every operation. As the sun works corporeally and effects this or that, so also the imagination, by giving fire and fuel, effects all things which the sun effects, not that it has need of instruments, but that it makes those things with which it burns. Consider the matter as follows : He who wishes to burn anything needs flint, fire, fuel, brimstone, a candle, etc., and so he obtains fire ; but if the sun seeks to burn, it requires none of these things, doing all things together and at once, no one beholding its steel. Such also is the imagination. It tinges and paints its own surface, but no one sees its pencil, ceruse, or pigments ; all things take place with it at once, just as fire from the sun bursts forth without any corporeal instrument. Let no one, therefore, be surprised that from the imagination corporeal works should proceed, since similar results are manifest with other things. The whole heaven, indeed, is nothing else but an imagination. Heaven works in man, stirs up pests, fevers, and other things, but it does not produce these by corporeal instruments, but after the same manner that the sun burns. The sun, indeed, is of one power only, the moon of one power only, and every separate star is of one power only. Man, however, is altogether a star. Even as he imagines himself to be, such he is, and he is that also which he imagines. If he imagines fire, there results fire ; if war, there ensues war ; and so on in like manner. This is the whole reason why the imagination is in itself a complete sun.

8 *The Hermetic and Alchemical Writings of Paracelsus.*

earth, water, and fire. Thus, then, the subject is to be arranged and defined. Those matters which are received from within need not be described. They are known by the foundation of our nature, what they are which are distributed, and we shall speak subsequently as to their division. But, externally, one must understand whatever is necessary to itself the body attracts from the four elements. Unless this were done the internal nutriment would not suffice to sustain the life of man. For instance, moisture, not existing constitutionally in the body, is extracted by the body itself from water, whence it happens that if one stands or sits in water, it is not necessary that he satisfies his thirst from without. It does not, indeed, take place in the same way that heat is extinguished by water, like fire ; but the internal heat attracts to itself the moisture from without, and imbibes it just as though it were from within. Hence it happens that in the Alps cattle are able to remain the whole summer without drinking ; the air is drink for them, or supplies its place : and the same should be judged with regard to man.

The nature of man, too, may be sustained in the absence of food, if the feet are planted in the earth. Thus we have seen a man who lived six months without food and was sustained only by this method : he wore a clod of earth on his stomach, and, when it got dry, took a new and fresh one. He declared that during the whole of that time he never felt hungry. The cause of this we shew in the treatise on the Appetite of Nature.*

So, in the matter of medicine, we have seen a man sustain himself for many years by the quintessence of gold, taking each day scarcely half a scruple of it. In the same way, there have been many others who for so long as twenty years ate nothing, as I remember to have seen in our times. This was by some attributed to the piety and goodness of the persons themselves, or even to God, which idea we would be the last to impugn or to criticise. But this, nevertheless, is an operation of Nature ; insomuch that sorrow and mental despondency take away hunger and thirst to such an extent that the body can sustain itself for many years by its own power of attraction. So, then, food and drink are not thus arranged that it is absolutely necessary we should eat bread or meats, or drink wine or water, but we are able to sustain our life on air and on clods of earth ; and whatever is appointed for food, we should believe is so appointed that we should taste and try it, as we shall shew more at length in the " Monarchy of God."† Let us, however, concede this point—that on account of our labours and such things, it cannot be that we do without temporal and bodily food, and that for many causes. Wherefore food was ordained for this purpose, just as medicine was against diseases.

We will make a distinction of things entering into the body after the following fashion, that they are distributed through every part of it none otherwise than as if ardent wine be poured into water. The water acquires

* There is no treatise extant on the *Appetite of Nature*.

† There is also no treatise extant under the title of *The Monarchy of God*. *The Aurora of the Philosophers* is the *Monarchia of Paracelsus*, but, as will be seen, it is wholly chemical.

the odour of the wine because the wine is distributed through its whole volume ; and, in the same way, when ink is poured into wine the whole of the wine is thereby blackened.

So, too, in the human body, the vital moisture immediately diffuses whatever is received, and more quickly than in the examples we have cited.

But under what form the substance received becomes transmuted depends entirely on the nature of the members that receive it, just as if bread be conveyed into a man it becomes the flesh of a man, if into a fish the flesh of a fish, and so on. In the same way, it must be understood that the substances received are transmuted by the natural power of the members, and are appropriated according to the nature of the parts which take them up. A like judgment must be passed upon medicines, namely, that they are transmuted into members according to the properties of those members. For the limbs gain their own force and virtue from the substance of medicines peculiar to themselves, according to the good or bad dispersion of them, and according as the medicine itself was subtle or gross. This is the case with the quintessence ; its transmutation will be stronger and more effectual. But if it be thick it remains the same, just as a picture acquires its tint, its beauty, or its deformity from its colours, and if these be more vivid it will be the same. Wherefore, in order that we may have experience of like matters to fall back upon in those things which happen to us, and that we may lay them up in our memory, so as to have them ready in case of need, we will write these nine books, keeping the tenth shut up in our own brain on account of the thankless idiots. Nevertheless, to our own disciples, these things shall be made sufficiently clear.

And let no one wonder at the school of our learning. Though it be contrary to the courses and methods of the ancients, still it is firmly based on experience, which is mistress of all things, and by which all arts should be proved.

THE END OF THE PROLOGUE AND OF THE FIRST BOOK OF THE ARCHIDOXIES
ON THE MICROCOSM, OUT OF THE THEOPHRASTIA.

THE SECOND BOOK OF THE ARCHIDOXIES,

FROM THE THEOPHRASTIA OF PARACELSUS THEOPHRASTUS.

CONCERNING THE SEPARATIONS OF THE ELEMENTS.*

BEFORE we approach a description of the separations of the elements, we shall explain this separation, for the greater and clearer understanding thereof, seeing that certain matters written about the generation of things are not altogether consonant with the separations of the elements. For every matter is more readily brought to its appropriate end, where mature and intellectual consideration is given beforehand as to what its end may be. Thence the practice becomes clearer. We say, then, that the four elements exist together in all things, and out of them arises to every one of these things its predestined condition. In this way you may understand how it comes about that these four elements, differing so widely from one another, are able to agree and coexist without mutual destruction. Whereas the mixture of the elements is united and strengthened by predestination, it results that no weight is taken account of in them, but the power of one is greater than of another; by which, indeed, it is understood that in the digest and ferment of the predestination, that which is strongest will preponderate and conquer and subdue the other elements. In this way, the remaining three elements cannot attain their perfection, but stand related to that perfect element as

* The light of Nature teaches that God has separated and divided everything, so that it can exist by itself. Thus are separated light and darkness without any mutual damage, as day and night prove. Moreover, He has also separated the metals, each into its property. Thus, gold has its vein, iron has its minera, silver has its brilliancy. Lastly, every metal has its proper domicile. Moreover, He has separated from one another the marcasites and the genera of salts; in the same manner also summer and winter, elements, herbs, fruits, and every growing thing, so that we hence see how God has created various species from a single Illaster, while the species of his workshop surpass all the number of the sands. He has so adorned heaven and earth that what they contain can never be sufficiently recognised and considered.—*De Balneis Piferinis*, c. 1. The philosophy of separation in preparing specifics is thus developed in treating of the cure of ulcers. You must also understand concerning separation that there is nothing so noxious but that it has its peculiar use, like the spider, which in addition to its venom possesses a marvellous power for curing all chronic fevers. Good and bad are equally necessary in the constitution of our arcanum, for both the venom and the antidote, the sweet and the bitter, are in the body. Further, it has been proved that all colours and all savours exist in the body. Inasmuch as there exist three colours in Saturn—yellow, white, and red; in Mars also three—purple, red, and black; notwithstanding neither Saturn nor Mars are a colour. Thus we must judge it to be the case with the colours of Salts by means of separation; and just as the redness of Saturn tinges with a red, and the yellow with a yellow colour, by virtue of separation, similarly, alumen works as alumen and salt as salt in ulcers. Concerning the wonders of separation it should be remembered what happens concerning vinegar. Who would judge by his senses that vinegar was present in uncorrupted wine? Nevertheless, no one can doubt that it is there. Similarly, in Venus there is vitriol. Indeed, Venus herself is vitriol, and by separation can be reduced into vitriol. Yet no one would rightly say that Venus was vitriol. Wherefore we must judge concerning separation that it is of the form but not of the species, as in the conversion of Venus into a salt.—*Chirurgia Magna*, Part III., Lib. IV.

the light matter in wood. Wherefore they are not to be called elements, since they are not all perfect, but only one. When, therefore, we speak of the four elements, which finally exist in all things, we are not to understand definitely so that there are four perfect elements therein, but that there is only one such finished element, the rest remaining imperfect through the potency of that excelling element. Hence it happens that they are able to meet and coexist, because in three of them there is no perfection. On which account, too, no corruption can prevail by reason of their contrarities. Moreover, that an element is predominant in one kind arises from the fact that it is hereto predestinated. Hence no corruption or confusion can accrue, as we lay it down in our treatise on Generations.*

Since, then, there is only one element specially present in everything, it avails not to seek the four elements in things, seeing that three of these elements are not in a state of perfection. In a word, we must understand that the four elements are in all things, but not actually four complications. The matter stands thus: A substance contains water, and then it is nenufar. Besides this element there exists in it no earth, air, or fire. There is no appearance of heat or dryness in it. It has no peculiar operation; but the predestination thereof is water; and the element of water is the only one under which is no dryness nor heat, according to its congenital nature. Though matters be thus, however, yet notwithstanding the three elements are involved in it, still the things have not their origin in those three elements which are not produced in a perfect state, nor have they beginning or aid from them, but from that predestinated element which is united to and impressed upon that particular kind.

Now, although this is at variance with the vulgar philosophy, namely, that one predestinated element has of its own nature the other three elements cohering with it, still it is credible that the element and the substance differ the one from the other. It may be understood thus: the substance is not from that element which gives thereto its special tinge and elementary form; nor, again, are these elements from the substance, but they agree at the same time uniformly, as the body and soul agree. But now every body, as for example of some growing thing, has its own conformation; so has the element. Although the element itself is not visible in the body of the growing thing, or tangible, or demonstrable, because the element is stronger, by reason of its subtlety, and subdues the other elements of the growing thing. They are all, however, in the body, but imperceptibly, just as when water is mixed with vinegar the water becomes like the vinegar; and although the vinegar shall have changed the whole essence of the water, still the complexion of the water remains unchanged, nor does it on that account become

* Both from the text and the notes of this translation the reader will see that there are several treatises by Paracelsus on Generations of various kinds, not excepting some fragments upon the generation of fools, who appear, in the days of Paracelsus, to have abounded in the high places of science and religion. The reference above may be either to the *Generation of the Elements* or to the first book *Concerning the Nature of Things*.

12 *The Hermetic and Alchemical Writings of Paracelsus.*

vinegar, but remains water as it was before. And although it does not display the properties of water, yet it does not follow that it does not still possess those properties.

In these propositions we wish to make it clear in what way the separations of the elements are to be brought about, concerning which two methods of practice need to be understood. One is that with which agrees the separation of the predestined element, and this we shall elucidate in our treatise on the Quintessence. The other is that to which belong the four substantial elements in growing things. By this it is understood that the Quintessence exists as a predestined element, and that it cannot be separated from itself, but only from the three elements, as follows in the treatise on the Quintessence. But when we speak of the separations of the four elements, we understand those four which are essentially in the body. Hence have arisen various errors, because the four elements have been sought in the predestined element, and also in addition the Quintessence, which cannot in any way come to pass.

Moreover, it must be known when the elements of bodies are to be separated, that one exists as fire, another as water, a third is like air, and a fourth like earth, according to their complications, because elements sometimes appear with their own forms, and at other times with complications, for example, water as water, air as air, earth as earth, and fire as fire. These matters must be subtly understood, and this can be done by means of a similitude, if they are taken for the union of the elements not visibly or in act, or according to the element of fire, but as the environment is warm and dry like fire. In this way its own nature, essence, and condition is assigned to each element, without any breach of propriety. For it is not supposed, because any particular herb is especially warm, as the nettle, that on this account it contains within itself more fire, but rather it is supposed that its own Quintessence is warmer than the Quintessence of the chamomile, which, indeed, has less heat. But the elements of a body receive less or more from their own substance, as, for instance, wood contains within itself more fire than herbs do; and, in like manner, stones have in them more dryness and earth than resins have. Note, also, in like manner, that the bulk and quantity of degree in a Quintessence arises from the predestined element. And the intensity of degree in bodily elements springs out of the appearance of the substance which is unlike.

But we must come to the practice of separating bodily elements from all other things, and this is twofold. One, indeed, teaches us to draw out the three elements from the pure elements as from burning fire, from invisible air, from true earth, and in like manner from natural water, which have not an origin similar to the preceding ones. Another method of practice is with those things out of which these four elements exist, as we have said above, with such difference, however, that this exhibits more of the element of fire, of water, of earth, or of air, with a likeness to the form of the essential elements. When they have been separated in this way they can never be

further dissolved, for instance, it is impossible that they should be corrupted beyond their complexions.

It must also be considered that the elements are found by separation to be formally like the essential elements. For air appears like air; and the same cannot in any way be enclosed, as some falsely think, for this reason, because at once, in the moment of separation, it levitates itself, and sometimes bursts forth as wind, and ascends sometimes with the water, sometimes with the earth, and at other times with the fire. And, indeed, this levitation or elevation in the air is very wonderful. Just as if the air were to be separated from the essential element of water, it would be done by boiling. When this begins to take place the air is soon separated from the water, carries off with itself the very light substance of the water, and in proportion as the water is diminished, so the air itself decreases according to its proportion and quantity.

And it must be remarked here that no one of the elements can be conceived or had without air, though of the rest one can be had without another. We do not, therefore, undertake the task of separating the air, since it is in the other three elements, just as life is in the body. For when it is separated from the body all things perish, as we clearly shew in the following practical treatise on separations. Four methods must be considered at this point; one, indeed, in watery bodies, that is, in herbs, which have more water than any of the other elements. A second is in fiery bodies, such as woods, resins, oils, roots, and the like, which contain within themselves more of the fiery substance than of others. A third is to be understood of earthy bodies, which are stones, clays, and earths. The fourth is airy, and this is in all the other three, as we have mentioned. In like manner, also, concerning the pure elements, there are just so many ways to be considered, in the same manner as has been said above concerning the four preceding.

Hence it is easy to learn what the elements are, and how they are to be separated. And among these the separations of the metals first meet us, wherein there are peculiar predestined virtues which are wanting in the other elements. For, although all the elements are alike in form, in heat, in cold, in moisture, and in dryness, still, the dryness or damp, or heat or cold, is not the same in one as in another. In some it is appropriative, but in others specific; and this in various ways, as in each kind they are produced peculiarly and essentially, since no kind of the elements is precisely like another in its properties.

So, also, it must be laid down with regard to the separation of marshaltes, which differ from other substances both in the practice and in their elementary nature. For every kind is disposed in a particular separation, and must be dealt with in a special way. Stones and gems must demonstrate their elements afterwards, since they appear in no way similar to the others.

Then, too, salts exist in a peculiar and most excellent nature, with more abundant properties than appear in other substances. There is also a different

essence in herbs, which in no way agree with minerals, nor can they be alike so far as relates to their nature. Moreover, the property of woods, of fruits, of barks, and the like, is peculiar; so, too, of flesh, of drinks, and all comestibles, and of things not good or pure, but bad and impure, which have to be separated into their elements.

Of that separation concerning which we think, two methods are found. One consists of the separation of any element confined by itself in a peculiar vessel, without the corruption of its own forces, the air excepted.

There is another method of the separation of the pure from the impure from among the four elements, namely, in the following way. After the elements have been separated, that is to say, one from the other, they have still a dense substance; and, on this account, there follows another similar separation of the already separated elements. Now, we purpose to make clear the practical method in all these cases. For in the first place it must be known that the quintessence of things is to be separated and extracted in this way, because, indeed, the elements of bodies in the nature of a quintessence are not subdued but are left with them. So it is able to tinge these elements more strongly or more lightly. Hence it comes to be understood that the forces in the elements do not perish when the predestined element, that is, the quintessence, is extracted; for this itself is elemental and separable so far as relates to its elementary form, but not as to diverse natures, as is clear from the treatise on the quintessence.

By separations of this kind all elemental infirmities can be cured by one simple method, namely, if the one set of predestinations oppose the other, as we have laid it down in the treatise on predestinations. In these words we have sufficiently unfolded the initial stage of separations. Wherefore we can now speed on to the practice of them; and here there is a tenfold variety: one of metals; a second of marchasites; a third of stones; a fourth of oleaginous matters; a fifth of resins; a sixth of herbs; a seventh of flesh; an eighth of juices; a ninth of vitreous substances; and a tenth of fixed things. For these separations of the elements three methods are adopted: one by distillations; a second by calcinations; and the third by sublimations. In these are comprised all the exercises, as the application of the hands to the fire, the labour, and other necessary things which will be specified in the following pages.

THE END OF THE SECOND BOOK OF THE ARCHIDOXIES AND OF THE
FIRST PART CONCERNING THE SEPARATION OF THE ELEMENTS.

THE THIRD BOOK OF THE ARCHIDOXIES,

FROM THE THEOPHRASTIA OF PARACELSD THE GREAT.

ON THE SEPARATIONS OF THE ELEMENTS FROM METALS.

FOR the separation of the elements from metals there is need of the best instruments, of labour, of diligence, together with experience of the art and adaptation of the hands to this work.

Take salt nitre, vitriol, and alum, in equal parts, which you will distil into aqua fortis. Pour this water again on its fæces, and distil it again in glass. In this aqua fortis clarify silver, and afterwards dissolve in it sal ammoniac. Having done this, take a metal reduced into thin plates in the same way, that is, in the same water. Afterwards separate it by the balneum Mariæ, pour it on again, and repeat this until there be found at the bottom an oil, namely, from the Sun, or gold, of a light red colour ; of the Moon, a light blue ; of Mars, red and very dark ; of Mercury, white ; of Saturn, livid and leaden ; of Venus, bright green ; and of Jupiter, yellow.

All metals are not thus reduced to an oil, except those which have been previously prepared. For instance, Mercury must be sublimated ; Saturn calcined ; Venus florified ; Iron must be reduced to a crocus ; Jupiter must be reverberated ; but the Sun and Moon easily yield themselves.

After that the metals have been in this way reduced to a liquid substance, and have disposed themselves to a disunion of their elements—which cannot be done in a metallic nature, seeing that everything must be previously prepared for the use to which it is adapted—afterwards add to one part of this oil two parts of fresh aqua fortis, and when it is enclosed in glass of the best quality, set it in horse-dung for a month. After that, distil it entirely with a slow fire, that the matter may be condensed at the bottom. And if the aqua fortis which ascends be distilled by a bath in this manner, you will find two elements together. But the same elements will not be left by all metals alike. For from gold there remain in the bath earth and water ; but air is in all the other three, and the element of fire remains at the bottom, because the substance and the tangibility of gold have been coagulated by the fire ; therefore, the substance will agree in its substantiality. From the Moon there will remain at the bottom the element of water, and in the bath the elements of

earth and fire. For from the cold and the moisture is produced the substance and corporality of the Moon, which is, indeed, of a fixed nature, and cannot be elevated. From Mercury there remains fire at the bottom, and earth and water are elevated upwards. From Venus there also remains fire, and both, that is to say, earth and water, remain in the bath. From Saturn there remains the element of earth at the bottom, while fire and water are held in the bath. From Jupiter air remains at the bottom, while fire, water, and earth are elevated therefrom.

So it must be noticed that in the case of Jupiter the air supplies a body, and in the case of no other metal. And of this, although some part ascends together with it and remains mixed inseparably with the other three elements, still it is not corporeal air, but adheres to, and concurs with, the others, and is inseparable from them.

And now, it must be remarked that the residuum, that is, the corporeal element which remained at the bottom, must be reduced into an oil by means of the bath with fresh aqua fortis. So, this element will be perfected, and you will keep it for one part. The rest you will separate by means of a bath in this way. Place them in sand, and press them gently. Then, first of all, the water will be elevated, and will escape ; afterwards the fire, for it is known by the colour when these two remain. But, if the elements of earth and water should have remained, the water will ascend first, and afterwards the earth. But if it should be earth and fire, the earth is elevated first and the fire afterwards. If water, fire, and earth be together, the water will first ascend, then afterwards the fire, and last of all the earth. These elements can be so kept in their respective glasses, each according to its own nature ; as, for example, from the Sun, the warm and the dry, without any other property ; in like manner the cold and the moist, and the cold and the dry. So, also, must it be understood of the others. It must not be forgotten that the corrosive nature of the aquafortis must be extracted as we have handed down in our book on the Quintessence.

CONCERNING THE SEPARATIONS OF THE ELEMENTS OUT OF MARCHASITES.

Having previously set down the separations of the elements out of metals, it remains that we come to those which can be produced out of marchasites, and that we shew what they are.

Take of marchasite, in whatever form you please, whether bismuth or talc, or cobalt, granite, or any other, one pound ; of salt nitre the same. Beat them very small, and, burning them together, distil by means of an alembic without a cucurbite, and keep whatever liquid ascends. But that which remains at the bottom, let this, when ground down, be resolved into a water with aqua fortis. Hereupon pour the water previously collected, and distil it into an oil, as before directed in the case of metals. By the same process, too, you shall separate the elements. So, the golden marchasite is to be understood as gold, the silver as the Moon, bismuth as lead, zinc as copper,

talc as Jupiter, cobalt as iron. Let these directions suffice for the separation of marchasites in every kind.

CONCERNING THE SEPARATION OF THE ELEMENTS FROM STONES.

The separation of the elements of stones or gems comes to be understood in the following way. Take a stone well ground, to which add twice the quantity of live sulphur, and, when all is well mixed, put it in a luted pot into an Athanor for four hours, so that the sulphur shall be entirely consumed. Afterwards, let what remains be washed from the dregs and the sulphur, and dried. Let the stony calx be also put into aqua fortis and proceeded with as we have already laid down concerning the metals. Stones, too, are compared with metals; as, for instance, clear gems which are not white or tawny are compared with gold. White, cœrulean, or grey, with silver or the Moon; and afterwards the commoner stones with the other metals, as alabaster with Saturn, marble with iron, flint with Jupiter; but dulech with Mercury.

CONCERNING THE SEPARATION OF THE ELEMENTS FROM OLEAGINOUS SUBSTANCES.

All oils, woods, roots, seeds, fruits, and similar things, which have a combustible nature, and one fit for burning, are considered oleaginous; and the separation of them is twofold, namely, that of the oleaginous substances and that of the pure oils.

THE SEPARATION OF THE OLEAGINOUS SUBSTANCES IS AS FOLLOWS:

Take such a body, pounded, ground, or reduced to fragments in whatever way you can, wrap it up in linen, fasten it, and place it in horse-dung until it shall be entirely putrefied, which happens sooner in one case than in another. When it is putrefied let it be placed in a cucurbite, and on it let there be poured so much common hot water as may exceed four fingers broad; then let there be distilled in sand all that can ascend. For all the elements ascend except the earth itself, which you will know by the colours; nevertheless, let the hot water first ascend, afterwards the air, next the water, lastly the fire, and the earth will remain at the bottom. Of the pure oils, however, it must be understood that these do not require putrefactions, but they must be distilled alone and without additions. Afterwards their elements, as it has been said above of others, must be separated, and these are discerned by their own colours. None otherwise with resins of liquid substance must it be done, such as pitch, resin, turpentine, gum, and the like. But the corporeal resins which exist, such as sulphur, must be prepared in the following manner.

CONCERNING THE SEPARATION OF THE ELEMENTS IN CORPOREAL RESINS.

Take sulphur very minutely ground; let this be cooked to hepatic sulphur in a double quantity of linseed oil; let it be shut up in a vessel and place it to

putrefy in horse-dung for a space of four weeks. Afterwards let it be distilled in an alembic slowly over a naked fire. The air and the water first ascend, with different and pale colours. Then, the heat being increased, the fire ascends and the earth remains at the bottom. The colours appear pure ; the air yellow ; the water like thick milk, so much so that it can scarcely be distinguished from milk ; the fire like a burning ruby, with transparency and with all the fiery signs ; but the earth is altogether black and burnt. The four elements having been thus separated, every one is perfect in its own elemental complexion, and without any admixture, as has been said above.

CONCERNING THE SEPARATION OF THE ELEMENTS FROM HERBS.

So, too, in herbs, the element of water is principally contained when they are cold ; but if they are airy, then that element predominates. In like manner must it be understood of fire. The separation of those elements is as follows :

Take sage, and bruise its leaves. After this place it for putrefaction, as aforesaid. Then you will distil it by means of a *venter equinus*, and the element of fire will ascend first so long as the colours are unchanged and the thickness of the water. Afterwards the earth will succeed, and some part of it will remain at the bottom, which part, indeed, is fixed. Distil this water in the sun six days, and afterwards place it in a bath. Then the element of the water will ascend first. It is very minute, and is distinguished by the taste. After the colour changes the element of fire ascends, until the taste, too, is altered. Then at last a part of the earth is elevated, yet it is a very small portion, which, being mixed with air, is found at the bottom. In the same way it must be understood of airy and watery herbs, of which the air ascends first, afterwards the water, and lastly follows the fire, according to the process laid down concerning sage.

CONCERNING THE SEPARATION OF THE ELEMENTS FROM FLESHLY SUBSTANCES.

The separation of the elements from fleshly bodies, and from those which live with blood, comes to be understood thus, because the predominating element in them is more copious and is generally found last of all ; as, for instance, water in fishes, fire in worms, and air in edible flesh are the principal elements, as we describe in our treatise on the generation of animals.*

THE SEPARATION OF THE ELEMENTS FROM FISHES IS AS FOLLOWS :—

Putrefy the fishes perfectly. Then distil by means of the *venter equinus*, and a good deal of water ascends. You will renew this putrefaction and distillation, and increase it until no more water rises. Afterwards distil what remains in sand ; then at length the fire ascends in the form of oil, but the

* This treatise must also be included in the long catalogue of the missing works of Paracelsus. But many references to the generations of animals will be found in the present translation.

earth remains at the bottom. Thus the whole substance of the fishes is separated into its elements. One need take no account of the fats and the marrows, but must suppose that everything is separated by the putrefaction, and divided into its elements. In the same way is it to be understood of worms, except that there comes forth from them not only water but more fire, unless they are aquatic worms, as serpents ; in the distillation of which more wonderful things occur than it is possible to say. Of edible animals, too, it must be understood in the same way, of such, that is, as respectively disclose their elements by separation.

CONCERNING THE SEPARATION OF THE ELEMENTS FROM WATERY
SUBSTANCES.

For the separation into their elements of juicy and watery bodies, and of those which have the form of wateriness, as urine, dung, water, and the like, note the following process :—

Take urine and thoroughly distil it. Water, air, and earth will ascend together, but the fire remains at the bottom. Afterwards mix all together and distil again four times after this manner ; and at the fourth distillation the water will ascend first, then the air and the fire, but the earth remains at the bottom. Then take the air and the fire in a separate vessel, which put in a cold place, and there will be congealed certain icicles, which are the element of fire. Although this congelation will take place in the course of distillation, still it will do so more readily in the cold.

CONCERNING THE SEPARATION OF THE ELEMENTS OUT OF WATER.

Make the water boil by means of a dung-heap, and the earth itself sinks to the bottom. Putrefy at the proper time that which ascends, and let it afterwards be distilled by a bath. Then the water will ascend first, and afterwards the fire. Dung, vitriol, tartar, and similar juices, as alum, salts, and other substances of that kind, are to be distilled in ashes, with such an amount of heat and for so long a time, until they cease to rise, and the water and air have ascended, while the earth has remained at the bottom. Afterwards, by means of the heat, the fire will ascend. And in this place it is to be remarked that although the four elements have been separated, there remain still in the earth four occult elements, as though fixed. From vitriol remains a *caput mortuum*, which sublimate with sal ammoniac, and there will issue forth an oil, in which are water and fire, and the earth itself remains in substance. Separate those things which have ascended, and again there will ascend water, while the fire will remain at the bottom. So also must it be understood of tartar and of salts. And although there are in existence additional separations of liquids, yet we shall discuss them more amply when speaking of Transmutations. It must, however, be remembered that there are more elements in a corrosive earth than in ashes. Therefore, the separation must be made by sublimation, as we shall shew.

CONCERNING THE SEPARATION OF THE ELEMENTS FROM GLASSES AND THOSE
SUBSTANCES WHICH ARE OF THE NATURE OF GLASS.

As we lay down above concerning the resolutions of marchasites, so is it to be in like manner understood in this place concerning the glasses : namely, the principal consideration is that they are calcined with sulphur as stones are, then washed away with saltpetre and aqua fortis, and furthermore, as we have before made clear. Their elements also are recognised by the colours in the distillations, not as they shew themselves to the eye ; and this is the sum and substance of what we have to say concerning them.

CONCERNING THE SEPARATION OF THE ELEMENTS IN FIXED SUBSTANCES.

The separation of the elements in fixed substances is brought about by sublimation, as we teach concerning salts and liquids ; with this difference, however, that these are to be calcined with salt nitre, and afterwards to be sublimated. And although there are many other things which are not set down in this place, nevertheless it is to be understood that the separations of all substances should be made in the ten ways already described. Furthermore, concerning the separation of the four elements, it is to be remarked that each of them can be again separated ; for example, fire as fire, air as air, water as water, earth as earth, as follows hereafter concerning the respective separations of them.

CONCERNING THE SEPARATION OF FIRE.

It should be known that from the element of fire, the four elements may be separated in this way. When the fire is burning most violently, or ascends, take it in a receptacle or vessel perfectly closed, and place it in horse-dung for a month. Then you will find in that one element four elements, which, when you have opened the vessel, put into a receiver. Thus the vapour or air will mount into the vessel that receives it. Afterwards, distil that which remains by means of a bath, and the water will thus ascend. Next, by means of ashes, the fire will ascend and the earth will remain at the bottom. What is the force of these elements, and why are they described in this place, we will make more clear in other books.

CONCERNING THE SEPARATION OF AIR.

Having received the element of air in a perfect glass vessel, and hermetically sealed it, you must expose and direct it to the sun for the whole of the summer. By circulating, the air is turned into moisture, which increases daily more and more. This quantity you will separate after the following manner. Let it putrefy in horse-dung for four weeks, and afterwards distil it by the bath, like fire. Concerning its potency more is said in another place.

CONCERNING THE SEPARATION OF WATER.

Having filled a glass brimful, leaving no space empty, seal the vessel hermetically, and place it in a warm sun for a month, so that it may receive a daily and equal heat, and would boil, but it cannot on account of the vessel being full. When the time has elapsed, putrefy it for four weeks. Then open it, and distil it by means of an alembic with four necks. In this way the three elements are separated, and in the bottom will remain the earth of that water. The nature of this is said to possess much virtue in many cases.

CONCERNING THE SEPARATION OF THE EARTH.

The same process is to be observed with the earth as with the water, save only in the distillation. For this is like that which takes place with fire and is accomplished in the same way. This separation of the elements we have inserted at this point for several causes, because it is very useful, not only in philosophy, but also in medicine. Concerning the separations of the elements, we have thus far written with sufficient fulness. Though much more might be added, it does not appear to be by any means necessary.

Now, we will make clear the separation of the pure from the impure, according to the purpose of our design. This, indeed, is done in the same way as we teach with regard to Arcana and Aurum Potabile; so it need not be put forward here, though that process from its origin is not altogether identical with that which is laid down concerning Arcana and Magisteries. Nevertheless, I do finally assume the same way by the separation of the elements; since in this place those elements are separated after each one of them has been purged from the impurities existing therein, so that no deformity or impediment may arise from them, as might otherwise easily happen.

THE END OF THE THIRD BOOK OF THE ARCHIDOXIES CONCERNING
THE SEPARATIONS OF THE ELEMENTS.

THE FOURTH BOOK OF THE ARCHIDOXIES,

FROM THE THEOPHRASTIA OF PARACELSUS THE GREAT.

CONCERNING THE QUINTESSENCE.*

WE have before made mention of the quintessence which is in all things. Already, at the beginning of this treatise, it must be understood what this is. The quintessence, then, is a certain matter extracted from all things which Nature has produced, and from everything which has life corporeally in itself, a matter most subtly purged of all impurities and mortality, and separated from all the elements. From this it is evident that the quintessence is, so to say, a nature, a force, a virtue, and a medicine, once, indeed, shut up within things, but now free from any domicile and from all outward incorporation. The same is also the colour, the life, the properties of things. It is a spirit like the spirit of life, but with this difference, that the life-spirit of a thing is permanent, but that of man is mortal. Whence it may be inferred that the quintessence cannot be extracted from the flesh or the blood of man: for this reason, that the spirit of life, which is also the spirit of virtues, dies, and life exists in the soul, not in the material substance.

* *The Correction of the Quintessence.* The books which have been written by so many previous authors concerning the Quintessence, such as those of Arnoldus de Villa Nova and of Johannes de Rupescissa, whence afterwards, under a pretentious title, was composed the *Calum Philosophorum* [not to be identified with the work of Paracelsus which occupies the first place in this translation], contain nothing of any value. The mere fact that these writings embody a singular and new praxis abundantly demonstrates that their authors have misunderstood the essential nature of diseases, seeing that they have, as it were, devised one form of all diseases, regarding which they have, moreover, invented many marvellous things, adorning their conceptions with monstrous titles, all mere boasting, wherein there is no mention of philosophy, medicine, or astronomy. They are all a mere deluge of absurdities and lies. There can be no doubt that originally most admirable discoveries have been transferred from the chemical art to that of medicine, but the same have been since adulterated by sophistry. For certain people, when they have investigated a chemical preparation, wish to vary it immediately in hundreds of different ways, and thus the truth is foolishly confounded with lies. Now, it should be observed that the severest rebuke which can be given to such impostures is that of paying no attention to promises and to proud titles, and of believing only to that extent which is warranted by good sense and experience. Remedies which require more knowledge of a practical kind than has ever been possessed by monastic pseudo-chemists may, in careless hands, give rise to the most malignant diseases. It may be observed, for example, that the preparations of Mercury which are used against Luis Gallica, and, indeed, all remedies adopted in the cure of this disease, cannot be properly prepared without great skill in chemistry. Pretenders in pharmacy will vainly vaunt such decoctions unless they can compose vitriolated salts, alums, and things similar, by purely chemical artifice, seeing that there are recondite secrets in the remedies which conduce to the cure of Luis Gallica. Yet there is no need to write a new correction; it is enough to adhere to the legitimate mode of preparation, giving no faith to the hollow pretences of alchemists. These men certainly promise more than they are ever able to perform; but this is common to alchemy and not a few other callings, namely, that their professors boast of the harvest before they have finished the sowing.—*Chirurgia Magna, De Imposturis in Morbo Gallico*, Lib. II., c. 13.

For the same reason, animals, too, because they lose their life-spirit, and on that account are altogether mortal, also exhibit no quintessence. For the quintessence is the spirit of a thing, which, indeed, cannot be extracted from things endowed with sensation as it can from those not so endowed. Balm has in itself the spirit of life, which exists as its virtue, as a force, and as a medicine ; and although it be separated from its root, nevertheless, the life and virtues are still in it, and for this cause, that its predestination was fixed. Wherefore the quintessence can be extracted from this, and can be preserved, with its life, without corruption, as being something eternal according to its predestination. If we could in this manner extract the life of our heart without corruption, we should be able to live without doubt, and without the perception of death and diseases. But this cannot be the case ; so from this circumstance death must be looked for by us.

When, therefore, the quintessence of things exists as a virtue, the first thing we have to say is in what form this virtue and medicine are in things, after the following manner. Wine contains in itself a great quintessence, by which it has wonderful effects, as is clear. Gall infused into water renders the whole bitter, though the gall is exceeded a hundredfold in quantity by the water. So the very smallest quantity of saffron tinges a vast body of water, and yet the whole of it is not saffron. Thus, in like manner, must it be laid down with regard to the quintessence, that its quantity is small in wood, in herbs, in stones, and other similar things, lurking there like a guest. The rest is pure natural body, of which we have written in our book on the Separations of the Elements. Nor must it be supposed that the quintessence exists as a fifth element beyond the other four, itself being an element. It is possible that someone may think this essence would be temperate, not cold, not warm, not moist or dry, but this is not the nature of its existence. For there is nothing which exists in this temperature by which it is alienated altogether from the other elements ; but all quintessences have a nature corresponding with the elements. The quintessence of gold corresponds with fire ; that of the Moon with water ; that of Saturn with earth ; and that of Mercury with air.

Now the fact that the quintessence cures all diseases does not arise from temperature, but from an innate property, namely, its great cleanliness and purity, by which, after a wonderful manner, it alters the body into its own purity, and entirely changes it. For as a spot or film, by which it was formerly blinded, is removed from the eye, so also the quintessence purifies the life for man. All natures are not necessarily of one and the same essence one with the other. Nor do those which are fiery on that account manifest the same operations by reason of their complexion ; as, for instance, if anyone should think that the quintessence of Anacardus should have a like and identical operation with the quintessence of gold, because both are fiery, he would be greatly misled, since the predestination and the disposition make a difference of properties. For as every animal contains within itself the life-spirit, yet

the same virtue does not exist in each, simply because they all consist of flesh and blood, but one differs from another, as in taste or in virtue, so is it with the quintessence, which does not acquire its virtue from the elements by a simple intellectual process, but from a property existing in the elements, as we lay down in our book on the Generation of Things. Thence it happens that some quintessences are styptic, others narcotic, others attractive, others again somniferous, bitter, sweet, sharp, stupefactive, and some able to renew the body to youth, others to preserve it in health, some purgative, others causing constipation, and so on. Their virtues are innumerable, and although they are not exhausted here, yet they ought to be thoroughly known by physicians.

When, therefore, the quintessence is separated from that which is not the quintessence, as the soul from its body, and itself is taken into the body, what infirmity is able to withstand this so noble, pure, and powerful nature, or to take away our life, save death, which being predestined separates our soul and body, as we teach in our treatise on Life and Death? In this place it should be equally remarked that each disease requires its own special quintessence, though we tell of some which are adapted to all diseases. How this comes about shall be explained in its proper place.

Furthermore, we bear witness that the quintessence of gold exists in very small quantity, and what remains is a leprous body wherein is no sweetness or sourness, and no virtue or power remains save a mixture of the four elements. And this secret ought by no means to escape us, namely, that the elements of themselves, without the quintessence, cannot resist any disease, but are able to effect only this and nothing more, that is, to produce heat or cold without any force: so that if a disease be hot, it is expelled by cold, but not by that kind of cold which is destitute of force, or things made frigid with snow; since, though, these are sufficiently cold, yet there is no quintessence contained in them by the power whereof the disease might be expelled. Wherefore the body of gold is powerless of itself; but its quintessence alone, existing in that body, and also in its elements, supplies the forces hidden therein. So, likewise, in all other things, it is their quintessence alone that cures, heals, and tinges the whole body, just as salt is the best seasoner of any food. The quintessence, therefore, is that which gives colour, whatever it be, and virtue; and gold when it has lost its colour, at the same time lacks its quintessence. None otherwise must it be understood of metals from which when the colour is taken, they are deprived of their special nature.

In like manner is it with stones and gems; as, for instance, the quintessence of corals is a certain fatness with a red tint, while the body of them is white. The quintessence of the emerald, too, is a green juice, and the body thereof is also white. None otherwise must we judge of all other stones, namely, that they lose their nature, essence, and qualities when they lose their colours, as we particularly shew in our book on the extractions of them.

The same, also, should be understood of herbs, plants, and other growing products. So, too, of flesh and blood, from which no quintessence can be extracted, for reasons already laid down. But, nevertheless, a certain resemblance to a quintessence can be extracted from them by us in the following manner. A morsel of flesh still retains life in itself, because the flesh is yet supplied with all its nature and force. Wherefore there is life in it, which, however, is not true life, but still the life is preserved until putrefaction sets in. So this difference must be noted, whereby dried herbs and the like are to be looked upon in the same way as flesh. That green spirit which is their life has gone from them. Dead things, therefore, can be taken for a dead quintessence, as flesh is able to put forth all its powers from itself, though specially separated as to one part from the body. So, too, with blood and with dried herbs. These, indeed, though they are not living quintessences, none the less demonstrate how a dead quintessence displays some virtues. But metals and stones have in them a perpetual life and essence, and they do not die, but so long as they are metals or stones, so long does their life last. Therefore, they also exhibit perfect quintessences which, in like manner, can be extracted from them.

And now we must see by what method the quintessence is to be extracted. There are many ways indeed: some by additions, as the spirit of wine; others by balsamites; some by separations of the elements, and many other processes which we do not here particularise.

But by whatsoever method it takes place, the quintessence should not be extracted by the mixture or the addition of incongruous matters; but the element of the quintessence must be extracted from a separated body, and, in like manner, by that separated body which is extracted. Different methods are found by which the quintessence may be extracted, for instance, by sublimation, by calcination, by strong waters, by corrosives, by sweet things, by sour, and so on, in whatever way it may be possible. And here this is to be taken care of, that everything which shall have been mixed with the quintessence by the necessity of extraction, must again be drawn off from it, so that the quintessence may remain alone, unpolluted, and unmixed with any other things. For it cannot be that the quintessence shall be extracted from metals, more particularly from gold, which cannot be overcome by itself, without exhibiting some appropriate corrosive, which can afterwards again be separated from it. In this way, salt, which was water, is again extracted from water, so that this water is free from salt. And here this consideration comes in, that it is not every corrosive which is adapted for this purpose, because they cannot all of them be separated; for if vitriol or alum be mixed with the water, neither of these can be separated from it afterwards without loss or corruption, so that they leave behind them a sharp residuum, for this reason, because each of them is watery, and thus two similar things meet, which ought not to occur in this process. Care must therefore be taken that a watery body be not taken for a watery, or an oily body for an oily, or a

resinous body for a resinous one ; but a contrary ought in every case to separate the quintessence and to extract it, as waters extract the quintessence of oily bodies (which is explained in the case of the metals), and oily substances the quintessence of watery bodies, as we may learn concerning the quintessences of herbs. The corrosives, therefore, after the separation and extraction of the quintessence, must be again separated, and this will be easily done. For oil and water are readily separated, but not so oil from oil ; nor, in like manner, can water be separated from water without admixture ; and if this is left it may cause great damage to the quintessence. For the quintessence ought to be clear and spotless, and collected without the admixture of anything, that it may possess a uniform substance by means of which it can penetrate the whole body. In truth its subtlety and force cannot be probed to the foundation, no more than its origin whence it first proceeded can be fully known. It has many grades : one against fevers, as in the case of opiates ; another against dropsy, as the essence of tartar ; one against apoplexy, as that of gold ; one against epilepsy, as that of vitriol. The number of these is infinite, and incapable of being proved by experiment. Wherefore the greatest care and diligence should be shewn that to every disease its true enemy may be assigned. In this way Nature will afford help beyond belief, as will be made more clear in what follows. We cannot speak of the grades in the same way as grades are applied to simples in medicine, for this reason that there is no possible comparison between the grades of a quintessence and the grades of simples, nor ought the comparison to be attempted ; but when such gradation is made it is found that the excellence and virtue of one is greater than of another, but not the complexion. For it must not be set down that the quintessence of Anthos is hotter than the quintessence of lavender, or the quintessence of Venus is drier than that of the Moon ; but the grade of anything should be determined by its great and more excellent virtues, namely, after this manner. The quintessence of antimony cures leprosy, and the quintessence of corals cures spasms and contortions. In order to learn, then, which of these occupies the better and higher grade, there can be no other judgment than this, namely, that the quintessence of antimony is higher and more potent, inasmuch as leprosy is a more severe disease than colic and its belongings. According to the property, therefore, which it has against different diseases its grades are considered. This is, moreover, the case in one and the same disease ; for one essence is more powerful than another for curing leprosy. The quintessence of juniper expels it, and the quintessence of amber, the quintessence of antimony, and the quintessence of gold. Now, although there are these four essences in all which cure leprosy, they do it with a difference, since with regard to the cure thereof they do not occupy the same grade. For the essence of juniper drives away this disease by the extreme purgation and purification which it introduces into the blood, and so consumes the poison that it is not so perceptible. Hence it is reckoned in the first grade of that cure. The quintessence of amber also takes away the poison and

more. It purifies the lungs, the heart, and the members subject to leprosy ; wherefore, the second grade is assigned to it. The quintessence of antimony, beyond both the virtues already spoken of, also clears the skin, and sharpens and renovates the whole body in a wonderful manner ; so, then, it holds the third rank. But the quintessence of the Sun by itself fulfils each of these tasks, and then takes away from the roots all the symptoms of leprosy, and renovates the body as honey and wax are purged and purified by their honeycomb. For this cause it occupies the fourth rank.

In this way the grades of the quintessence can be learnt, and the one distinguished from the other, that is to say, which of them is higher or more excellent than another. Even simples should be known by their properties. For whatever be the property in a simple form, such is the property of their quintessence, not more sluggish, but much stronger and more excellent.

But now, moreover, let us learn the differences of quintessences, for some are of great service to the liver by resisting all its diseases, some to the head, others to the reins, some to the lungs, and some to the spleen, and so on. So, too, some operate only on the blood, others on the phlegm, others in melancholy only, others only in cholera, while some others have effect only on the humours, some on the life-spirit, some on the nutritive spirit ; some operate on the bones, some others on the flesh, some on the marrow, others on the cartilages, some on the arteries ; and there are others which have effect only against certain diseases and against no others, as against paralysis, the falling sickness, contractions, fluxes, dropsy, and so on. Some, also, are found to be narcotics, others anodynes, some soporific, some attractive, purgative, cleansing, flesh-making, strengthening, regenerative, and some stupefying, and the rest.

Some, too, are found which renovate and restore, that is, they transmute the body, the blood, and the flesh. Some are for preserving the continuance of life, some for retaining and preserving youth ; some by means of transmutation, others by quickening. Moreover, this must be understood, that some have a specific form, others an appropriated, others an influential, and others a natural form. In a word, more of their virtues exist than we are able to describe, and their effects in medicine are most wonderful and inscrutable. In different ways it happens that some quintessences render a man who is a hundred years old like one in his twentieth year, and this by their own strength and potency. But what man is able to trace the origin of so great a mystery, or to ascertain from whence the first materials naturally take their rise ? It belongs to our Supreme Creator to make these things so, or to forbear. For who shall teach us, that we may know by what powers the quintessence of antimony throws off the old hair and makes new hair grow ; why the quintessence of balm destroys the teeth, eradicates the nails of the hands and the feet, and restores new ones ; the quintessence of rebis strips off and renews the skin ; and the quintessence of celandine changes the body and renovates it for the better, as colours renovate a picture ?

There are far more matters than these, which here we omit, and reserve for making clear in their proper chapters.

How, then, at length could it be that we should relinquish that noble philosophy and medicine, when Nature affords us such wonderful experiments in and from them? Of these all the other faculties are destitute, and so take their position nakedly in mere cavil. Why should not this fact delight us that the quintessence of the carline thistle takes force away from one and affords it to another who uses it; also that the quintessence of gold turns inside out the whole leper, washes him as an intestine is washed in the shambles, and likewise polishes the skin and the scabs and makes a new skin, loosens the organs of the voice, takes away the whole leprous complexion, and makes him as if he had recently been born of his mother.

Wherefore we will turn our mind to the making of such quintessences, pointing out the way for the extraction or composition of them—one for the metals, another for marchasites, another for salts, another for stones and gems, another for burning things, another for growing things, another for spices, another for eatable and drinkable things, all of which, with their belongings, we will endeavour to make clear in a proper series. But it must be noted, in the practice with quintessences, a good knowledge of theory and of natural science is required; theoretically, that is, of the properties of things with regard to natural diseases. One must not be ignorant that there is a difference between a quintessence, aurum potabile, arcana, magisteries, and other things of that kind; such as this, for example, that a quintessence cannot be again reduced to its own body, but aurum potabile is easily transmuted again to its metallic body; so that far more noble virtues exist in a quintessence than in the other things.*

* The distinction which subsists between the quintessence of gold and potable gold is illustrated by the following citation which, though it occurs in an independent treatise, offers only some small variations from a passage in the *Chirurgia Magna* which has been already given in the note on page 76 of the first volume :—We have already said that it is scarcely possible for contractions to be cured in any other way than by medicines existing in the supreme grades, such as is potable gold and the like, concerning which we have treated in the larger grades, whence great care must be taken concerning them, as is stated in the Book about the Quintessence. It is called potable gold so often as it is reduced, together with other spirits and liquors, into a substance which can be drunk. The oil of gold is a golden oil made out of the substance only, saving addition. It is called quintessence of gold when a reddish tincture is extracted therefrom and separated from its body. A virtue, or at least an active force, exists in the tincture. The dose of potable gold is $\mathfrak{D}$ i., when needed. The dose of golden oil should not exceed ten grains of barley in weight. That of the quintessence should not exceed three similar grains in good water of life, or some other water of equal subtlety. It should be taken morning, noon, and evening, according to the requirements of the medicine, and without the addition of corrosives or corruptives, which can neither alter its nature nor be mixed therewith.—*Description of Potable Gold.* Take of potable gold, pulverized and dissolved in salt, $\mathfrak{Z}$ i., with a sufficient quantity of distilled vinegar. Perform successive separations upon the whole by means of distillation till nothing of the acquired savour shall remain. Then take water of life $\mathfrak{Z}$ v., pour them into a pelican, and digest together for a month, when you will have perfect potable gold, the practice of which you must learn from our book on the quintessence. Though it has not been described in glowing colours there is no equal medicine found in this age.—*Description of the Water of Life.* Take rolbs. of *vinum ardens*; of roses, balm, rosemary, anthos, cheirus, both species of hellebore, marjoram, ana m. j.; of cinnamon, mace, nutmegs, garyophylli, grains of paradise, all peppers, cubebæ, ana $\mathfrak{Z}$ ii.; of the sap of chelidonia, tapsus, balm, ana lib. ss.; of bean ashes $\mathfrak{Z}$ v. Let all these be mixed and digested together in a pelican for twelve days; then separate, and use for above process.—*Description of the Oil of the Sun.* After the sap has been separated from the gold in the way previously stated, let it boil for fifteen days in the digestive compound which follows. Let it afterwards be separated by the bath, when a thick oil will remain at the bottom, and this is unalloyed gold, which use as above.—*Formula of the Quintessence.* Take as much as you please of gold which has been repurged by royal cement or antimony. Remove its metallic quality, or malleation, by means of the water of salt. Wash away the residue with sweet water. Extract its tincture with spirit of wine. Lastly, elevate the spirit from it

While we thus speak of the quintessence, the difference of one from another should be learnt, and then also what it is in itself. And although we have already sufficiently explained it, nevertheless, practice calls us another way by which also the condition and nature of the quintessence can be found out. For although these do not appear in the form of the quintessence, nor are they produced in the same way, nor do they consist of one element only as the quintessence should, still, none the less, we should judge of the quintessence of these things, which is of more importance than that they should be called a quintessence. It should rather be spoken of as a certain secret and mystery, concerning which more should be written than we have written concerning the quintessence. But since we have made that clear in the books of the Paramirum, we pass it by in this place.* The number of the arcana and of the arts of the mysteries is infinite and inscrutable, and many methods in them are met with worthy the attention of the clearest human intellects. Among these arcana, nevertheless, we here put forward four. Of these arcana the first is the mercury of life, the second is the primal matter, the third is the Philosophers' Stone, and the fourth the tincture. But although these arcana are rather angelical than human to speak of, nevertheless, we shall not shrink from them, but rather we will endeavour to trace out the ways of Nature, and we will arrange that everything which proceeds from Nature

and the quintessence will remain at the bottom.—*Construction of the Water of Salt.* Take by itself the purest and whitest pounded salt, which is produced by nature without decoction, boiling, or any of those processes by which salt is usually made. Liquefy it several times, pound it very fine, mix it with the juice of raphanum roots, dissolve and distil it, and when a reddish green appears again distil it five times, combining it in equal weights. Dissolve laminated Sol in this liquor till it becomes powder. Let this powder be washed in most limpid water, and distil a sufficient number of times till the salt shall depart from it, which will take place soon, as it does not penetrate the interior nature. When the corrosive has been removed the gold will be found by itself.—*Extraction of the Spirit of Wine.* Take one measure of the best natural wine, red in preference to white, place in a capacious circulatory vessel for its better rotation, seal it, plunge it into the sea-bath, and let it boil for forty days. Afterwards pour it into a cucurbite, distil by the cold way till the spirit shall have gone and all signs of it shall cease. So finish. (The process varies from that of the *Chirurgia Magna*.) After the sign has been given cease. What follows is the water of life, not spirit; either is efficacious. Then the sign is double, one of the spirit and one of the water of life. Pour out this spirit of wine to the dregs, and in such a way that it floats over the surface to the height of six broad fingers. Close all openings completely with glass. Digest for thirty days, during which time the tincture enters the spirit. At the bottom there remains a white powder. Separate by art, and let the powder melt. Hence there is produced an aqueous metal or metallic water. Let the spirit evaporate, as we are taught by alchemy, and a sap resembling liquor remains at the bottom. Graduate this four times in a retort adapted to the quantity of the matter. This is performed by elevation, for it renders such like substances subtle, though it permits not the same to be developed beyond the fifth essence.—*De Contracturis*, Tract II., c. 2. Among other uses of potable gold, it is a tonic for the heart which is so efficacious that it is affirmed by Paracelsus to prevent all injury befalling that organ. Of like virtue is the liquor of gold and the substance of pearls reduced into the form of an oil and halsam. After these are enumerated the essence from the crocus of Mars and corals. The description of the potable gold in this connection is given as follows: Let the gold be calcined into yellowness by the royal cement of *Hell and Match*. Then let it be separated from its impurity, and afterwards mixed with circulated water. Digest for twenty-four hours in a moderate fire, when the oil will flow forth and will float upon the surface of the water. Collect and drink it mixed with water of life. Proceed in the same way with pearls, only adding calx of chelidonia, and confine by means of distilled vinegar until they pass off into liquor. Proceed also in like manner with corals, dissolving them in vinum ardens mixed with *Hell*. Remove the vinum ardens from the putrefaction and you will have the liquor of coral. There are also other essences, as of crocus, chelidonia, mace, cesium, balm, etc., which are suitable for other complaints and affections of the heart, and some of which will fill the old, infirm, melancholy, and depressed with the greatest joy.—*De Viribus Membrorum*, Lib. II., c. 2.

* The reference here made is too obscure for verification. In the large literature of the Paramirum and its connected treatises, there are many observations upon arcana and mysteries, though few passages deal actually with the quintessence. Whatsoever is of importance has been embodied in this translation as notes to the text. That section of the present volume which is devoted to Alchemy as the fourth column of medicine may also be consulted in this connection, as it is a treatise derived from the Paramirum.

shall be capable of being naturally understood. Concerning the Mercury of Life, therefore, we profess that it is not a quintessence, but an arcanum, because there exist in it many virtues and forces which preserve, restore, and regenerate, as we write in our book on the Arcana.

In like manner, also, the Primal Matter, not only in living things, but also in dead bodies, operates more in the same manner than is thought to be naturally possible. So also the Philosophers' Stone acts, which, tinging the body, frees it from all diseases, so that even metals are purged from their impurities. In like manner the Tincture acts, which, as though it should change the Moon into the Sun, so also changes disease into health. The same things equally the other magisteries and elixirs do, and the aurum potable, all of which are treated of severally in their own respective books.

CONCERNING THE EXTRACTION OF THE QUINTESSENCE FROM METALS.

We will, then, briefly go through the extraction of the quintessences from metals. For, in our times, many persons have made numerous experiments with these, and copious results followed which obliged them to enter on other different ways. With regard to metals, then, it must be understood that they are divided into two parts, namely, into their quintessence and into their body. Both are liquid and potable, and do not mix, but the impure body ejects the quintessence to its surface, like the cream from the milk. In this way two fatnesses or viscous liquids are formed out of the metals, and these liquids have to be separated. The fatness of the body is always white in all metals; but their quintessence is coloured, as we have before explained concerning the seven metals. All, moreover, have the same process, which is as follows:—

Let the metal be dissolved in water, and afterwards this solution distilled by a bath and drawn off. Let it be putrefied until it is reduced to an oil. Let this oil be distilled from small phials or cucurbites by means of an alembic, and one part of the metal will remain at the bottom. Let this be reduced to an oil as before, and be distilled, until all the metal shall have ascended. Afterwards let it be again putrefied for a month, and at length again distilled with a slow fire. Then the vapours will at first ascend and afterwards fall into the receiver. These vapours remove; and there will ascend two obscure colours, one white, but the other according to the nature and condition of the metal. When they have ascended altogether they become separated in the receiver, so that the quintessence remains at the bottom and the white colour of the body floats at the top. Separate these two by means of a tritorium, and in another phial receive the quintessence, into which pour purified ardent wine and let it remain until the wine is completely acidulated. Afterwards let it be strained or separated from the quintessence, and let more fresh wine be poured on. Do this until you no longer perceive any sharpness. At last, pour on doubly distilled water, so that it may be washed and brought to its proper sweetness, and so keep it. In this way the quintessence of

metals is prepared. But if you reduce the white portion, you will have therefrom a malleable, white, and metallic body of which it cannot be known under what species it is embraced. There are many other ways found out for extracting the quintessence. About these we keep silence, for the reason that they are not considered by us to be true extractions of quintessences, but only transmutations in which no extraction is produced or comes to be used.

CONCERNING THE EXTRACTION OF THE QUINTESSENCE FROM MARCHASITES.

In marchasites also are found various methods for the extraction of their quintessence, and yet we scarcely judge these to be true quintessences. And although they are of greater virtue than their quintessence, as we teach of Arcana, Magisteries, and Elixirs, nevertheless, this our mode and manner of extracting the quintessence from all the metallic marchasites is like the true extractions of the metals. But the following is the reason why we before said that the quintessence is the supreme virtue of things, and now, on the contrary, do here say of Arcana that they are greater than the quintessences themselves: because all the Arcana contain in themselves the quintessences and, moreover, are reduced to such subtlety and acuity that they hence receive a far greater virtue than the quintessence does. The same is laid down, too, concerning their appropriate and specific quality. But the process for extracting the quintessence from marchasites is as follows:—

Take a pound of a marchasite very finely ground, of the eating water two pounds, mix them together in a pelican, let them remain in process of digestion for two or three months, and be reduced to a liquid. Distil this entirely with the fire and it will pass over into an oil which you will putrefy in the dunghap for a month. Afterwards distil it like metals, and in the same way two colours will ascend therefrom, one white, and the other the true colour of the quintessence. Leave the white, unless it be from bismuth or from a white marchasite, in which case you shall know one from the other by the density. Take the lower one, and reduce it to its sweetness as was said above concerning the metals. In this way you have extracted the quintessence from marchasites without any corruption of their powers or virtues.

CONCERNING THE EXTRACTION OF THE QUINTESSENCE FROM SALTS.

The method of extracting the quintessence from salts is brought about in a somewhat peculiar way, so that their force may not be diminished, and is as follows:—

Take salts, which you will calcine perfectly; and if they be volatile you will burn them. Afterwards let them be resolved into tenuity and distilled into water. Put this water in putrefaction for a month, and distil it by means of a bath, when the sweet water will ascend, which throw away. That which has not ascended put again in digestion for another month, and distil as before, repeating the process until no sweetness is any longer perceptible. By this means you now have the quintessence of the salt at the bottom, scarcely two

ounces in weight out of a pound of the calcined or burnt salt. Of this salt, thus extracted, though it shall be only common salt, an ounce and a half seasons food more than a pound and a half of the other. For only its quintessence is present, and the body is taken away from it by means of the liquid solution.

In this way is separated the quintessence of all salts ; but it is extracted in another way from alum and from vitriol, as follows :—

These will not allow of their being calcined into flux like salts. Therefore, after their calcination it is necessary to burn them, and resolve them according to the usual method. After they have been resolved, pour on them again the waters which have proceeded from them, and go on according to the method prescribed in the case of salts. For much of the essence ascends with the moisture, which again subsides at the bottom in process of composition and putrefaction, and so they meet together in one.

CONCERNING THE EXTRACTION OF THE QUINTESSENCE FROM STONES, FROM GEMS, AND FROM PEARLS.

The method of extracting the quintessence out of stones, gems, and pearls, with all of which the process is the same, is of all others the most excellent, and in its operation is very subtle and ingenious. A very small quantity of this quintessence is to be obtained from gems, and the more subtle and pure the gem is, the more minute is the essence. It is scarcely worth the trouble to extract the essence from dense, great, and cheap stones, since little virtue exists in them, whence it happens that very little comes forth from them. The process is of the following kind :—

Take gems, margarites, or pearls, pound them into somewhat large fragments, not into powder, put them into a glass, and pour on them so much radicated vinegar as will exceed the breadth of four or five fingers. Let them be digested for an entire month in a dung-heap, and when this is over the whole substance will appear as a liquid. This you will lighten with other radicated vinegar, and by shaking mix them together. The vinegar then acquires the colour of the stone. Pour the coloured liquid into another glass, again pour on vinegar as before, until the whole has no longer any colour. In that colour is contained the quintessence ; the residuum is the body. Then take the colours, suffer them to be cooked to dryness, and afterwards wash often with distilled water until all becomes sweet as above. At length let this dust be dissolved on marble. In this manner you will have the quintessence of the gems and pearls. It must be remarked, however, in the colour of pearls, that they themselves are resolved into the colour of thick milk, and their body is sandy and viscous. In like manner is it to be laid down about the crystal. Its quintessence comes to the top, a certain viscous body remaining, by which the success of this kind of extractions may be known.

CONCERNING THE EXTRACTION OF THE QUINTESSENCE FROM BURNING THINGS.

Those things are called burning which are used neither for food nor for drink, and which of their own nature burn and keep alive the fire in the

bodily substance. The method of extracting the quintessence from these is as follows :—Take such a body, very finely pounded, place it in a glazed pot, until it be full, seal it with the seal of wisdom so that it shall not breathe forth, and burn it in a circulatory fire for twenty-four hours, so that it shall remain at an even temperature, while the pot glows like the coals. Then take it out of the fire, let it putrefy in dung for four weeks, and afterwards distil it. Whatever ascends, let this be placed in a *venter equinus*, in order to distil all the moisture from it, and again set it to putrefy until no moisture any longer issues from it ; and then at length the quintessence of the body which thou hadst taken remains at the bottom. In this manner the quintessence is extracted from all things which contain oil in them, or resin, or pitch, or anything of that kind, as out of turpentine, fir, juniper, cypress, and the rest ; and in like manner out of all seeds, fruits, and similar things.

But it must be remarked that many more methods of extracting the quintessence from these are handed down elsewhere, ways and modes by which it comes forth quite odoriferous, subtle, and clear ; but these methods are not extractions of the quintessence ; they are rather certain magisteries of these things, by which certain portions of the quintessence mount up at the same time in the process of mixing. They are not, however, perfect quintessences. For the essence of woods is a certain fatness or resin and a thick substance, whence it is not extracted in the form of magisteries. And the cause is this. The quintessence of the turpentine tree heals wounds, but when, in the above-mentioned way, it has been extracted from other magisteries, it does not heal wounds, because it has not in itself the fundamental power of the quintessence. The magisteries, indeed, are separated from the quintessences on this principle, that they only concern the complexions and the four elements, which, however, is not the nature of quintessences. Moreover, these magisteries receive it spiritually and not materially in its proper essence, as is clear from the chapters.

CONCERNING THE EXTRACTION OF THE QUINTESSENCE OUT OF
GROWING THINGS.

Those things are called growing in this place which fall and grow again, as herbs, leaves, and the like. For extracting the quintessences of these, several methods also have been found out by the addition of other things. But they should be extracted without the admixture of anything, so that they may retain their taste, colour, and odour ; and that these properties may be increased in them, not diminished. Thus, if the quintessence be extracted from musk, amber, and civet, their body afterwards stinks, so that they are no longer of any account in taste, in odour, or in nature. So of other things in this class it must be understood, so far as relates to the extraction of their quintessences. But we do not discuss musk, amber, and civet in this chapter, because we write specially of them elsewhere, and at present we are only treating of growing things, as the lily, spike, leaves ; for the extraction of the quintessence from which the following is the process.

Take growing things, bruised as completely as possible. Put them in some fitting vessel, and set this in a *venter equinus* for four weeks. Afterwards distil them by means of a bath; again let them be placed in horse-dung for eight days, and once more distilled by the bath of Mary.

Thus the quintessence will ascend by the alembic, but the body will remain at the bottom. If any of the quintessence shall have remained at the bottom, putrefy it still further, and proceed as before. Then take at length this distilled water, add it again to this growing thing, and so, by means of a pelican, let them be digested together six days. Thereupon the colour will be dense. Abstract this by means of the *balneum maris*, when the body will disappear, the quintessence remaining at the bottom. Separate this by a retortive process, that is, by pressure, from the dregs, and let this quintessence digest for four days. In this way you will have it perfect in odour, in juiciness, in taste, and in virtue, as well as consisting of a thick substance.

CONCERNING THE EXTRACTION OF THE QUINTESSENCE FROM SPICES.

We will now teach the method of extracting the quintessence from spices, as musk, civet, camphor, and the like. First the quintessence ought to be reduced to another form, and at length to be separated therefrom. In that same process of separation the quintessence is found, as follows:—

Take oil of almonds, with which let an aromatic body be mixed, and let them be digested together in a glass vessel in the sun, for the proper time, until they are reduced to a paste. Afterwards let them be pressed out from their dregs. In this way the body is separated from the quintessence, which is thus mixed with oil, from which it is separated in the following way:—

Take rectified ardent wine, into which let the aforesaid oil be poured, and let them be left in process of digestion for six days. Afterwards let them be distilled by ashes. The ardent wine will ascend, and the quintessence with it. The oil will remain at the bottom without any of the quintessence remaining. Afterwards let this wine be distilled by the *balneum maris*, and the quintessence will remain at the bottom in the form of an oil distinct from all similar ones.

CONCERNING THE EXTRACTION OF THE QUINTESSENCE FROM EATABLES AND DRINKABLES.

The quintessence of food ought to be none otherwise than in a form similar to that wherewith we should be fed, namely, flesh. And although, as we said before, no quintessence can be extracted from flesh, nevertheless we are easily able to extract from it, so far as it is its own, that which is equivalent to the quintessence, as follows:

Take some eatable thing, cut up, put it into a vessel or jug, carefully luted, and suffer it to boil for three days. Then strain off what is in the pot, and distil it by means of a bath. Thus there will ascend first of all a kind of wateriness, and when this has entirely passed over, the quintessence

will be left at the bottom. This is the chief nutriment beyond all others which we could put down or describe. And in respect of its nutritive power it is equal to a quintessence. The quintessence may also be extracted out of drinks in various ways ; but this is the true process which we consider chiefly useful and convenient for the work in hand :

Take anything drinkable, enclose it in a pelican, just as it is, with its whole substance. Let it digest for a month in horse-dung. It will be still better to let it stay a year or more, and you will find in the pelican a certain something digested. Separate this by means of the bath, afterwards by ashes, and lastly by fire. In this way you will have three quintessences, which, in like manner, are in all drinks, for many reasons, which we enumerate in our treatise on Generations.

These three quintessences having been extracted, and each put into its proper vessel, the two latter should be further digested and then placed in the *balneum Mariæ*, when there will ascend more of the previous quintessence. Keep on doing this until no more of the former ascends, and in this way they are separated as completely as possible.

What we have so briefly taught about the quintessence of all things, and the short method of its extraction, ought not to rouse wonder in any at the rapid course of our hand and pen. For they are all well and completely handed down, and not so succinctly is the quintessence written of by us but that the work and labour necessary for it are clearly demonstrated. What need is there of much writing, which shall only nauseate ourselves and our readers, if we do not take into consideration that exercise and experience teach everything ?

But how wonderful are its virtues and powers if it be extracted in the aforesaid manner we have even now partly taught, and shall make more clear in the last books that which belongs to this part of the Archidoxies ; and thus we shall have fully described the quintessence of all things. And although many before us have, in various documents, written great things about quintessences, still we do not think of their writings as a quintessence, the cause whereof we have already sufficiently adduced.

We have even learnt from them that verdigris was accounted the quintessence of Venus, when it is not so, but the crocus of Venus is the quintessence of Venus, which is thus to be understood. The flower of brass is a transmutation with the substance, at once dense and subtle, and extracted from every complexion of Venus. Wherefore it can be no quintessence, but the crocus of Venus, as we have taught, is the true quintessence : for it is a potable thing divided from the body without corrosion or admixture, very subtle, even more so than one cares to write in this place, for the sake of avoiding prolixity. So also, the crocus of Mars and its rust have hitherto been considered a quintessence, but it is not so. But the crocus of Mars is the oil of Mars. Concerning these things we set down more about transmutations in our philosophy.

A quintessence, therefore, is thus to be understood, namely, that it is nothing else than a certain separation of virtues from the body, wherein exists the whole virtue and essence of medicine. But what are the flower of brass, and the flower of Mars, and many similar matters, is handed down in the treatise on Magisteries.

None otherwise must it be judged of vegetables and herbs and such things than concerning the metals. And although we have put forth lofty and numerous virtues of the quintessence, nevertheless, only the smallest part of their forces and qualities has been told. But we have principally made it clear how these things are to be understood ; yet least of all have we been able to tell what and how great are their powers and virtues. From this may be hinted how great is the power which we have in our hands, only let us know how to use it well. Hence, also, is made clear the cause why man was created, and all things on earth were made subject to him ; and also why it is that nothing good or ill happens without a cause, which we set forth more clearly in our book on the Nature of Things.* For that foundation brings with it a faith fixed on the Creator, and a hope of His love towards us, as of an excellent father for his children. So, then, we must not snatch at any shadowy and vain faith ; but it is right that we regard only God and Nature, and the Art of Nature. Wherefore, with good reason, we call only on Him in this life and for evermore, and believe that only which we see to be so, receiving or approving nothing that does not agree with Nature, or which is beyond Nature.

THE END OF THE FOURTH BOOK OF THE ARCHIDOXIES ON THE QUINTESSENCE.

* In the first book of the treatise entitled *Philosophia Sagax*, man is considered as the quintessence of the macrocosm. This point is frequently a subject of consideration in the transcendental physics of Paracelsus, and some reference has been made to it already in the annotations of the first volume. Man is a certain extract of the whole machine of the world derived no otherwise than the physician extracts the strength and essence from a herb, the result of which process is called a quintessence. That which the despoiled body is to the extracted virtue, so is the world to man. By so much as the body is weaker the quintessence is more efficacious ; the more is extracted the less remains in the original matter. In the case of the macrocosm, however, there has not been so exhaustive an extract as is performed by medicine. That only has been taken which was needed for man, and what remains is sufficient for his nourishment. Now, concerning Adam it must be known that he was made man in the image of God ; his wife, Eve, was made, and not born, out of Adam. It was not the will of God to make a double extract from the world, but one only, which is the quintessence of the Microcosm. He extracted, therefore, the man, not the woman. . . . Man is generated from putrefaction. Putrefaction takes place through the operation of the macrocosm, through the elements, and through the stars, in the father and mother, as by instruments which Nature has bestowed. Not that the exterior world works here, but the microcosm through the quintessence. . . . From the father and mother no intellect, or sapience, is born, but only out of the firmament, by the operation of the quintessence and the microcosmic virtue. . . . The quintessence which is made in man is retained, being ordained for seed, whence children are born. That sperm which is the quintessence retains the nature, essence, and property of the mass and clay of the earth.

THE FIFTH BOOK OF THE ARCHIDOXIES.

FROM THE THEOPHRASTIA OF PARACELSUS THE GREAT.

CONCERNING ARCANA.

HAVING treated of quintessences, we will now turn our attention in due course to write about Arcana, since we understand more about them than about the forces of quintessences; wherein experience teaches us that there is the greatest difference on account of the very powerful operations whereby are demonstrated to us by most evident signs what things are better, more useful, or inferior in their powers. In this way we are able to avail ourselves of one or the other, according to their usefulness in medicine. Indeed, the ancients often thought that the arcana were quintessences, since they saw that they were much more subtle than dense substances, and knew that they operated in a wonderful manner through their subtle nature. But this error of theirs arose, not from reason, but rather had its origin in a lack of practice; since there was among them no knowledge as to the determinate difference of the high degrees, but they esteemed every higher and highest degree as quintessences. This difference, however, ought to be known and defined, not by practice alone, but also, and rather, by the operations of medicine.

Before, then, we treat of arcana, we must see and know why they are so called, and what an arcanum is, since it has so excellent a name, and well deserves to have it, too. That is called an arcanum, then, which is incorporeal, immortal, of perpetual life, intelligible above all Nature and of knowledge more than human.* Compared, indeed, with our corporeal bodies, arcana are to be considered incorporeal and of an essence far more excellent than ours, the difference being as great as between black and white. They have the power of transmuting, altering, and restoring us, as the arcana of God, according to their own induction. And although there is not eternity in our arcana, or that harmony which is celestial, nevertheless, compared with us, they ought to be judged celestial, since they preserve our bodies more than can be done or found out by Nature, and operate upon them in a wonderful way by their virtues. None otherwise, therefore, should these

* The arcanum is, as it were, a potent heaven of medicine set within the hand and the will of the physician.—*De Aridura*.

natural arcana be compared to our bodies, so far as medicine is concerned,* than as the secrets of God are. Nor shall we fear to write that these arcana are higher and greater than ourselves, and that they have the greatest power of inaugurating life in us, as witness those four which we shall set down. Neither shall we take any heed of the empty stories told by those slavish dwarf-divines, since we consider that they have no more understanding than a blind man has sight. One arcanum, then, is of a single essence; another is the arcanum of Nature herself: for the arcanum is the whole virtue of a thing, excelling a thousandfold the thing itself. We are able, therefore, fearlessly to assert that the arcanum of a man is every gift and virtue of his which he retains to eternity, as we teach in another book of these Archidoxies. An arcanum, then, comes to be understood in two ways: one is perpetual, the other is quasi-perpetual. This quasi-perpetual arcanum we judge to be like that which is perpetual according to the esteem and predestination of it. Four arcana only have been known to us from our boyish years; with these we will complete this book, and work out for ourselves a sufficiently praiseworthy memorial, so that we may never forget them, praying the Supreme God that of His mercy He will allow our human flesh to attain to many years, so that we may lay up a long and gentle repose for our age, to hope faithfully in Him, and in no way to doubt that He, since He deigned to take our human nature, will allow us to enjoy it, so that we may in no way be disappointed of our hope, as we confidently expect will be the case.

Relying thus upon this hope, we will begin by making clear what is the difference between these four arcana, as to the labour, the art, and lastly, the virtues. For this purpose, a final and conclusive knowledge of the virtues of each is required. Generically, first of all, they keep the body in health, ward off diseases from it and drive them away; they enliven the depressed spirits, freeing them from all sorrow; they protect from all sickness, and happily conduct the body even to its predestined death, which has no end save by a lessening of consumption, as we lay it down in our treatise on Life and Death.

And although we have already made clear their virtues in a general way, and their nature, nevertheless they differ very much in particulars one from the other, so that no one of them operates altogether in the same way as another, or fulfils its virtues, but they are different both in manner and form, each with its own proper and peculiar ways. So, then, the *Prima Materia* is the first Arcanum; the second is the Philosophers' Stone, the third is the *Mercurius Vitæ*, and the fourth is the Tincture, for even thus we will set down the

* Now, the difference between arcana and medicines is this, that arcana operate in their own nature, or essence, but medicine in contrary elements. Yet arcana do not prefer themselves to medicine. Medicines are those things wherein it is understood that cold is to be removed by heat and superfluity by purgation. Thus, there are reckoned substances of the arcana which by their natures are directed against the property of their enemy, even as one pugilist is opposed to another. Accordingly, the conflict of Nature is such that craft is circumvented by craft, and all things that we possess naturally in the earth, the same Nature also requires to be preserved in medicine. This is, therefore, the part of the physician, namely, to act not otherwise than as if two enemies opposed one another, who were equally cold or equally glowing with heat, and are both armed with similar weapons. Since the victory lies between these, so must you also understand concerning man, that there are two combatants, soliciting natural aid from one mother, namely, the virtue alone. The arcana also operate with like virtue.—*Paragrinum*, Tract II., *De Astronomia*.

practice of them in order, after we have explained their modes of operation as follows :—

In the beginning, it must be remarked, concerning the Primal Matter, that it puts forth its predestination, to which it is foreordained, entire, and from its first origin to its final end well-defined and exemplified. For as the seed gives of itself the entire herb, with renewal of all its forces and consumption of the old essence, so that the former substance, nature, and essence have no further operation, so do we say of the primal matter, that we are born from one seed like something growing in the field according to its growing nature. According to the aforesaid example, the primal matter introduces new youth into a man, just as a new herb springs forth from a new seed in a new summer and a new year.

The Philosophers' Stone, which is the second arcanum, perfects its operations in another form, namely, this: As the extrinsic fire burning the spotted skin of the salamander, renders it pure as if it were newly born, so, also, the Philosophers' Stone purges the whole body of man, and cleanses it from all its impurities by the introduction of new and more youthful forces which it joins to the nature of man.

The Mercury of Life, which is the third arcanum, gives proofs of its operations like those which the kingfisher displays, which is renewed every year at its annual period and endued with new plumage. Even so this arcanum casts off the nails from the hands and feet of a man, the hair, skin, and everything that belongs to him, makes them grow afresh, and renews the whole body, as was said above concerning the kingfisher.

But the Tincture, which is set down by us as the fourth Arcanum, displays its operations like the Rebis, which makes gold, or the Sun, out of the Moon and other metals. None otherwise does the tincture affect the body of man, and take away from him his corruption and impediments, changing all into the greatest purity, nobility, and permanence.

How, then, can it be that we should withdraw from this noble art of medicine, or from philosophy itself, when we see so clearly their force and power, which alone confirm us, and deservedly so, that we should place the greatest confidence in them? For we have not applied our minds to believe, learn, or imitate things which cannot be proved and attested by most true and certain evidence conjoined with reason. When Christ hung upon the Cross, if the sun and moon had not been affected with a kind of sympathy, so that they were deprived of their light and darkened, and had not the earth been shaken with a fearful tremor, and had not other signs been manifested at His nativity, no one would now believe in Him. They naturally teach us to see and know this, that Jesus Christ is God, and took human nature upon Himself. We may say the same of the Arcana, that they cause and even compel us to believe in them, so that we should not withdraw from them even up to the time of death, but rather strictly and constantly, among many hindrances, every day go on to give thanks to God. So neither the eclipse

nor the moon will detach anything from us. We will therefore put forth the practice and elaboration of these four Arcana, by which we are able to drive away the accidents and corruptions of our youth, and to rejoice in them as our eternal Arcanum rejoices in its eternal life.

CONCERNING THE ARCANUM OF THE PRIMAL MATTER.*

Since we have sufficiently pointed out concerning the Primal Matter, whence it proceeds and what it is, we must understand that it is based not only on men, but on all bodily creatures, that is, on everything that is born from any seed. Whence it may be inferred that if it has its operation in any created body and perfects it, as we have before declared, it is able also to preserve trees from corruption, herbs from being dried up, and also metals from rust, concerning which the same thing must be understood of men and of brute beasts. So, then, a tree which is now almost consumed with age, and daily more and more verging on its own corruption, not from defect of root or of nutriment, but of its own proper virtue, can be renewed by its own primal matter just as we said about the skin of the salamander, and so may arrive at another age according to its predestination, nay, even at a third, a fourth, or more. On this principle virtues are to contribute to it, namely, in order that its corruption and destruction may be now and again renewed in a long process of time. No less is this to be understood of herbs, which last only for a single year, because their predestination is no longer. For they, even when they begin to be dried up, are renewed by their primal matter, so that they remain green and fresh for another annual period, or for a third, a fourth, or more. The same thing understand of brute beasts, as, for instance, old sheep and other animals. They can be renewed for a fresh period of life, having received their virtues, such as milk and wool, like young sheep. Equally, too, can man be led on from one age to another, as we have said before. From this it ought be known what the primal matter is according to its essence. In created things, such as have no sensation, it is their seed; but in created beings endowed with sensation, it is their sperm. For it must be known that the primal matter is not to be taken from the thing out of which this created body is produced, but out of the produced and generated material. For the primal matter has in it such virtues that it will not allow the body which is born of it to go into consumption, but abundantly affords whatever is necessary for the supply of every requirement. Indeed, death only arises from the destruction or infection of the living spirit. Now, that spirit grows out

* According to one of his treatises on turpentine Paracelsus held that the ultimate matter is contained in that seed wherein God has digested each thing, but those more especially which are subject to natural growth, created by Himself. The primal matter is gross seed. It is the ultimate and not the primal matter, which, on the authority of this treatise, is useful to man. According to the tenth chapter of the *Labyrinthus Medicorum*, every growing thing whatsoever is in its first matter without form, or unformed. For example, the fir, the beech, the oak, are all in the beginning seed, wherein there is nothing which ought to be, that is, nothing which we should expect to find, having regard to what they become subsequently. But if such a seed be put into the ground, it is needful that it should first putrefy. Otherwise nothing is produced from it. When it putrefies, it dissolves altogether, and from being a seed it becomes nothing, but, at the same time, the putrefaction is the first matter from which the tree develops.

of the sperm, or out of the seed, and is altogether a spermatic substance ; therefore it can be helped by its like. For wherever the like is given as a help, there is introduced a new period of life, for many causes which we do not detail in this place, but make clear in our "Philosophy."* Furthermore, although we did not propose to write in this book anything about the nourishment and renovation of trees, since we undertook to treat only of the medicine of the human body, still, let those facts about the trees and other transmutations of this kind be set down, in order that, parabolically, and by those examples, we may make our meaning easier to be understood. The quintessence of the seed of the nettle (otherwise the lavender) if it be poured on to any root of its own herb, so that this herb may receive its tincture and be affected by it, it remains another year as in the former year, not putrefying until that second year shall have been completed.

In like manner, if the quintessence of the seed of quinces be poured on the root of a quince tree, the tree remains green to the end of another year, and also produces flowers and fruits. In the same way, the quintessence of cherries causes trees to put forth their fruits twice in a year, as if in two summers ; one is the middle summer of the seasonable cherry trees, and the other summer is made like the former.

Not only, therefore, is it fit that we should speak of the quintessence of the sperm, but also concerning the arcanum of the sperm, from which proceed far more wonderful things than we have already pointed out.

So then, let us first make clear the process of this practice. In the first place, it is alike among men and animals. Secondly, it is made out of primal matter only in the following way :

Take primal matter, let it digest in a flaccum in a resolute digestion for a month. To this let there be joined the addition of a monarchy of equal weight. Let them be suffered to digest again from one to two months. Then distil this matter [? by the cloth] and what ascends will be the arcanum of the primal matter, concerning which we are here writing. And let no one wonder at the brevity of this method or process, for complexity is apt to involve much error.

CONCERNING THE ARCANUM OF THE PHILOSOPHERS' STONE.

I am neither the author nor the executor of that Philosophers' Stone, which is differently described by others ; still less am I a searcher into it, so that I should speak of it by hearsay, or from having read about it. Therefore, since I have no certainty thereof, I will leave that process and pursue my own, as being that which has been found out by me through use and practical experiment. And I call it the Philosophers' Stone, because it affects the

* Paracelsus has bequeathed to his followers a Philosophy of the Four Elements, a Philosophy addressed to the Athenians, an Occult Philosophy, Five Philosophical Tracts, and a vast system under the title of *Philosophia Sagax*. The connection of the living spirit with the sperm is discussed very largely in most or all of these, as, indeed, elsewhere in his writings. Under these circumstances there is scarcely any need, as, in fact, there would be great difficulty to distinguish the special section to which reference is here made.

bodies of men just as their's does, that is, just as they write of their own. Mine, however, is not prepared according to their process ; for that is not what we mean in this place, nor do we even understand it. We do not set down in this our practical treatise the process of the operation, since we have before mentioned it in the beginning of this book when we were writing of its force and its effects, which it has by means of separation.

Concerning the entrance of this penetration, you shall also further note, by which entrance it penetrates the body and all that therein is. For by that penetration it restores and renews it, not that it removes the body altogether, and introduces a new body in its place, or that, like the primal matter, it infuses its spermatic arcanum thereinto, but that it so purges the old whole body as the skin of the salamander is purged, without any injury or defect, and the old skin none the less remains in its essence and form. In like manner, this Philosophers' Stone purifies the heart and all the principal members, as well as the intestines, the marrow, and whatever else is contained in the body. It does not allow any disease to germinate in the body ; but the gout, the dropsy, the jaundice, the colic, fly from it, and it expels all the illnesses which proceed from the four humours ; at the same time,

purges bodies and renders them just as though they were newly born. It banishes everything that has a tendency to destroy nature, none otherwise than as fire does with worms. Even so, all weaknesses fly before this renovation.

This Philosophers' Stone has forces of this kind, whereby it expels so many and such wonderful diseases, not by its complexion, or its specific form, or its property, or by any accidental quality, but by the powers of a subtle practice, wherewith it is endued by the preparations, the reverberations, the sublimations, the digestions, the distillations, and afterwards by various reductions and resolutions, all which operations of this kind bring the stone to such subtlety and such a point of power as is wonderful. Not that it had those powers originally, but that they are subsequently assigned to it. Something like this is to be understood in the case of honey, which, by its elevations becomes far sharper than any aquafortis or any corrosive, and more penetrating than any sublimate. Such a property of sharpness it has not by nature, but this proceeds solely from the elevation, which changes all the honey into a corrosive. In these effectual Arcana, too, it must be considered that those who use them, as well as the children sprung from them, live afterwards endued with such health that no sickness or ailment, or anything like a flaw, afterwards happens to their bodies, but they are adorned altogether with such a subtle and pure complexion of Nature, that it is impossible a more noble state of the complexion can be induced. For that most choice and excellent medicine effectually renews and purifies, and introduces an incorruptible life, which cannot be contaminated by any kind of life. It suffers nothing to become enfeebled, but secures that men shall live in the highest nobility of Nature, while it advances their offspring to the tenth generation.

This Philosophers' Stone not only transmutes one weight, but this transmutes another, and this again another, and so on, in so far that these mutations might be extended almost endlessly, just as one light kindles a second, and this second a third. So it should be understood of the Philosophers' Stone in relation to health, as out of a good tree good seed and good shoots are born, out of which again good trees are produced. The power and potency of the Philosophic Stone is exalted to so wonderful an extent that it is impossible to trace how it can be naturally brought about; and unless most evident signs lay open to our eyes, it would be incredible that men could perfect and accomplish such wonderful things; since the virtue of that operation passes from generation to generation without any break. On the other hand, by the mercy of God, it exists in one body, and at length, according to their deserts, it is either denied to others or conceded as a special act of grace.

Now let us set down the process of our Philosophic Stone in the following manner.

In the name of the Lord, take Mercury, otherwise the element of mercury, and separate the pure from the impure. Afterwards let it be reverberated even to whiteness, and then sublimate this by sal ammoniac until it is resolved. Let it be calcined and again dissolved, and digested in a pelican for a month. Then let it be coagulated into a body. This body no longer burns nor is consumed in any way, but remains in the same state. Those bodies which it penetrates are permanent in the cineritia, and cannot be reduced to nothing or altered; but the stone takes away every superfluous quality from sensible and insensible things, as we have before related. And although we have set down a very short way, nevertheless it requires a prolix labour, difficult in its adjuncts, and requires an operator who is affected by no weariness, but is in the highest degree active and expert.

CONCERNING THE MERCURIUS VITÆ.

Next in order we wish to write concerning the *Mercurius Vitæ*, the virtue of which far excels the virtues of the two preceding Arcana; for that virtue consists, not in the art or in the operation, but in the *Mercurius Vitæ* itself, like which we have never known any simple anywhere existent; forasmuch as that nature and property is innate therein, not from the virtues of the quintessence or of the elements, but from the specific quality of its predestination. Neither has it only the virtues of transmuting persons and other essential things, but also of renewing every growing thing, and their likes, out of the old quality into a new, after the following manner. The *Mercurius Vitæ* reduces Mars into its primal matter, and again transmutes it into its perfect matter, so that out of it iron is again made. It also renovates gold in the same way, because it reduces it into proper mercury and tincture, and again digests it into gold, so that it becomes a metal as before.

Nor, in truth, does it operate in metals only, but similarly in other bodies, as in herbs. When their roots are suffused with it they will bring forth a second crop of flowers and fruits. If the first seed has fallen off, and they are at that time suffused with the same, they will produce second flowers and fruits, irrespectively of the season.

And none otherwise must it be understood of animals than of men and other things. When this Mercury is applied it renovates all their old and consumed members, and restores the defective and lost powers into a youthful body or abode, so that in old women the menses and the blood flow naturally as in young ones. It also brings back aged women to the same perfection of nature as the younger ones.

Concerning the arcanum of life it is further to be remarked that its forces exist so potentially in its specific form that it separates the old from the new, or age from youth; that it augments the latter, and so renovates the period of life. Whence it may be inferred that youth and its powers do not fail on account of old age, but that these exist equally in the old as in the young. The corruption, however, which grows up with youth is so strengthened that it takes away the powers, whence old age is recognised.

As soon, therefore, as this corruption is separated from youth, that youth again manifests itself without let or hindrance. Now this must be understood thus: When any body or corpse putrefies, the quintessence thereof is not putrefied, but remains fresh and unconsumed, and is separated from the corpse into air, or sometimes it is scattered into the earth or into the water, according to the place whither it goes. For there can no destruction of the quintessence occur, a fact which must be clearly noted and regarded with admiration, as we teach in our treatise on Corruption and Generation.* So, also, a rose putrefied in dung retains its quintessence in itself, even whilst in the dung. Though everything becomes fœtid and putrid, still, in the separation of the pure from the impure, the quintessence lives without spot or blemish, though the bodies are noisome corpses. Thus, therefore, we say of the *Mercurius Vitæ* that it separates corruption, even as in wood it separates that which is decayed. So powerful, also, is it in man, that, after the corruption shall have been separated from him, the quintessence is again excited, and lives as in youth. And this is to be understood thus: Not that the *Mercurius Vitæ* stirs up a new essence, as some persons may malignantly interpret our opinion and experience, but that the essence and the youthful spirit whence proceed the forces of youth remain unconsumed, none the less, though, being oppressed, they are beheld as dead. The *Mercurius Vitæ* removes the impurity, whence it happens that the aged life recovers most effectually its powers as they were before. As we said above when speaking of the kingfisher, it is renewed after death for this reason, that the quintessence does not

* The reference does not correspond to the treatise on the Nature of Things, and there is no other extant under this exact title.

withdraw from its abode. But if that dwelling-place be dissolved by putrefaction, then the quintessence is received into that upon which it lies. Whence it happens that there are often found wonderful conditions of Nature in growing things, not naturally existing in them, but by some accident of this kind, as we set it down in our book on Generations. In this way, then, the matter is to be understood. In dung there meet and are accumulated many corruptions, as from herbs, roots, fruits, waters, and other like things. Whence it happens that fields are rendered fat and fertile, not on account of the corruption, but on account of the quintessence existing in the dung, which, betaking itself to the roots, exhibits power in the growing things though the body, that is, the dung vanishes and is reduced into nothingness, its substance being consumed. Wherefore human dung has great virtue in it, because it contains in itself noble essences, as of the food and the drink, concerning which wonderful things might be written. For the body receives from it nothing save nutriment, but not the essence, as we write in our treatise on Nutriments.*

We will come, then, more strictly to the practical view of *Mercurius Vitæ*, which, as we said before, perfects its operations in a wonderful manner, as, for instance, by shedding the nails of the hands and the feet, and plucking out grey hairs by the roots, it strengthens youth, so that corruption cannot demonstrate old age by those signs unless a second old age be again attained.

Now, approaching the practice, let us treat with alchemists in a few words; for there is no need to write much or to preach with prolixity to them. Pretenders and fools we will altogether exclude. Let this, then, be the method of practice :

Take essentialised mercury; separate it from all superfluity, that is, the pure from the impure. Then sublime it with antimony, so that both may ascend and become one. Then let them be resolved upon marble and coagulated four times. This being done, you will have the *Mercurius Vitæ*, about which we have before spoken, and with which, as with an arcanum, we will console our own old age.

CONCERNING THE ARCANUM OF THE TINCTURE.

None otherwise is the arcanum of the tincture to be understood, namely, that it takes away all the inconvenience from old age, all diseases, and whatever corrupts the health or has an influence contrary to it. This arcanum is a certain tincture of such properties and conditions that it operates and induces health, not in the same way as the preceding three arcana, but according to its own name. The tincture *tinges* the good and the evil, the dense and the subtle. None, otherwise, does this perfect its operations on the body so as to transmute corrupt and ill-disposed complexions into sound ones, just like that

* This is another treatise which apparently is wanting.

tincture which makes Luna out of Mercury ; it does not separate from it what is evil, but it tinges both the good and the evil, so that in the end they both turn out to be excellent. So, too, this tincture tinges the dropsical and jaundiced body and makes it sound, not because the dropsy is taken away, the origin driven out or separated from the good, but it is transmuted into good, as it should be, and is settled in its highest and best grade, in like manner as the corrupted dung may, by the subtle corruption of art, be converted into an elixir, which drives away all corruption ; that corruption not being separated, but the entire substance being transmuted into another quality and nature.

The same is to be thought concerning this tincture, that it tinges the body apart from all separation of the evil from the good, or expulsion of man's original essence, but by his renovation.

Yet it should be known that the tinged body no longer lives in its old form, but, like a metal, is transmuted into another, as into copper or some other. Saturn has not in itself its old quality, but the quality of the tincture itself. None otherwise must it be thought of tinged bodies which have received the tinging of the tincture, that they exist no more in the former life from which they were transmuted by the tincture, but far nobler, better, and more healthful is the condition of the body and the form than its native origin was ; and it is like natural gold made out of iron by the tincture, as we have also written concerning Transmutations. If, therefore, this tincture is a transmuter of bodies into better ones, as in the case of metals which so few know or have tried, there will be as many and various corporal as there are metallic tinctures. And as of these one is always better than another, so with the corporal tinctures. It must be considered that some tinge and are tinctures naturally, as the crocus, flower, sulphur ; some are made by art, as a stone, realgar, and others. It is highly necessary that these things should be understood, because the beginning and the entrance to these tinctures which they exhibit is not unimportant. Moreover, it is to be remarked that these tinctures ought to be made for the seven principal members, and that to every one of them its own property ought to be assigned and given, as to the heart those that serve the heart, to the brain those which belong to it ; and such tinctures should be prepared from metals, herbs, and like things which are proper. So it will happen that by them the whole body will be tinged. Nor will it suffice that it be tinged by one tincture only, but as one tincture tinges only one metal, so must it be judged of these. The practical preparation of the Tincture should be as follows :—

Take the essence of the members, from which you will separate the elements. Afterwards put the fire of them in digestion, and leave it so long until there remains nothing more at the bottom and nothing of the matter appears substantially. Then take the matter, and the glass luted in this way with the lute of Hermes ; put it in a moist, cold place, where again it will be resolved into visible matter. That visible matter is the one concerning which we have written. With these few words we conclude : for if we were

to write more concerning it, that would be a handle for the derision of the stoics.* From this we would fain be exempt, and speak only to alchemists.

* In another place Paracelsus affirms that arcana are not old things but new, not ancient but recent productions. The ancient productions are substances and forms as they exist in the world. And as the form of these things is no good to us, but must be resolved and renovated in order that it may be of use, so there is needed in addition the removal of all properties, whether of heat or cold. That is, unless the solatrum lose its cold it does not become a medicine. Similarly, unless anacardi lose their heat they will in no wise prove a remedy. In short, unless all the old natures pass away and are removed, and are brought over into a new birth, they will never be made into medicines. This removal is the beginning of the separation of the bad from the good. Thus, therefore, the latest medicine, that is, born recently, is left, without any complexion and the like, a pure and absolute arcanum.—*Paramirum*, Lib. II., *De Origine Morborum ex Tribus Primis Substantiis*, c. 2.

FROM THE THEOPHRASTIA OF PARACELSUS THE GREAT.

CONCERNING MAGISTERIES.

THE preceding books on most excellent medicines having been finished, we propose to add this one treating of the Magisteries : and first to declare what a magistry is. It is, then, that which, apart from separation or any preparation of the elements, can be extracted out of things ; and yet by the addition of something the powers and virtues of those things are attracted to that material and kept there.

Those virtues do not in any way proceed from Nature, so far as their operation is concerned, nor from a specific virtue, but from a mixture whereby virtues of the same kind are attracted. If vinegar be poured into wine it renders the whole vinegar. Now, this is a magistry. When wine is poured upon honey the wine is so transmuted ; so there is no magistry in that case. Those things, therefore, must be considered which relate to a magistry, even as wines do to vinegar. For such as are perfect, or, as should be the case, ill adapted for this purpose, cannot produce a magistry. So, then, the natures of things come to be considered. In the same way, the difference of the extractions of magisteries must be noted, as, for instance, out of metals, marcasites, stones, herbs, and the like matters, by those things which are not metallic, but which become like metals, just as wine is made like vinegar in its powers, its virtues, and its taste. The cause that wine does not appear different from vinegar is, that a nature like vinegar exists in it, whence it happens that the appearance of their natures is the same. If, in like manner, the nature of metals be but pure, it equally appears in their magisteries, but yet it is not of the same property.

Moreover, mention must be made of additions. Those things which are taken for this purpose, though they are not of one and the same complexion, power, or action, nevertheless agree in preparation, since that which results from power of this kind is appropriated and not complexioned. By means of these substances the metals afford their magisteries, which, indeed, are no less to be accounted of than quintessences on account of their virtues. Gold in its magistry lays down all its quality and complexion in one essence. It must not for that reason be supposed that because the body is of no account the rest

will therefore be infected with that failing ; for in this case its leprosy is in no way injurious, but the thing is entirely good. Sugar, again, is wholly sweet whilst as yet it remains in the body and is not separated, and it can be so prepared, while retaining its sweetness, that it shall turn out by far sweeter and more efficacious than it was before. But the quintessence when extracted is not sweeter than when in or with its own body. Wherefore, this body by no means brings loss to it. But still its virtue separated from the body is less than when prepared in or with it. The magistery amends it more than Nature can be supposed to do.

The same must be understood of stones, which enter into the number of magisteries, and also of their bodies, namely, that what is assumed for their use is not deficient in its virtue, but is a sufficiently powerful magistery. This you may understand thus, as when sulphur is lighted and burnt up ; that which burns is the very smallest part ; and so likewise stones ; for example, the crystal, when it is reduced to a magistery, brings all stones to their first matter, and grinds them in a wonderful manner, in the same way as its essence does, for this reason, that the nature is tinged by the quintessence, and may be held for a quintessence, as in the case of the vinegar and the wine, of which the one makes the other like itself without any defect. In like manner, it is not only in stones that tincture of this kind is made, but also in metals, as the quintessence of gold tinges all its body into a pure quintessence, which light we think great, and even too great, for it is the light of all the secrets in our Archidoxies : wherefore we kindle coals with a light mind, so that we may investigate the final end of these secrets of Nature. We derive our instruction from examples proved experimentally by ourselves, as in magisteries, and chiefly in that of gold, which, containing the body and the quintessence, is drawn therefrom just as the quintessence is. Wherefore our magisteries are known to be dowered with special virtues, and we write them down to our own praise even until death.

We speak also in like manner concerning the magisteries of herbs, which indeed are so efficacious that half an ounce of them operates more than a hundred ounces of their body, because scarcely the hundredth part is quintessence. So, then, the quantity thereof being so very small, a greater mass of it has to be used and administered, which is not required in the case of magisteries ; for in these the whole quantity of the herbs is reduced into a magistery, which is not then, on account of its artificial character, to be judged inferior to the true extracted quintessence itself. One part of this being exhibited is of more avail than a hundred parts of a similar body, for this reason, because the magisteries are prepared and rendered acute to the highest degree, and are brought to a quality equal to a quintessence, in which magisteries all the virtues and powers of the body are present, and from these its own helping power arises to it. For in them the penetrability and the power of the whole body exist, from the mixture that is made with it. For the body receives none of those things with any desire except such as

are spiritual to it. Whence it happens that it attracts that magistery and mingles itself therewith none otherwise than as gold attracts to itself the *Mercurius Vitæ*, and is mingled therewith. Now, iron does not do this, because they are not, in their composition, so much in agreement with each other. So, then, both the body of it and this magistery are amalgamated, and become one ; and hereof many examples may be found which need not be brought forward in this place.

Some of the marchasites, too, perform the office of a medicine in a like way, although with a difference : that is to say, they leave their body, and the best part of them, as the juice, is extracted, and none the less exists as a magistery, though the body be separated from it. This, however, must be understood, that it is not the body of the marchasite, but rather of the earth or the mineral in which the marchasite exists. Its virtue, therefore, is not efficacious of itself, that the earth or the mineral should be separated from it, but it abides therein as in a marchasite, which, indeed, it is thought to be. In order, therefore, to make it clear concerning a marchasite, what it is, whence produced, and with what virtues endowed, we wish to relate its practice in the following treatises, and also to describe the art of its preparation. The process, however, cannot be comprised in one general explanation, but the matter must be treated of particularly, concerning each special case, as of metals by themselves, marchasites, too, in particular, and also stones and herbs.

There is, likewise, reckoned a special magistery of the blood, which is taught in a peculiar form and manner. In it is considered what virtues and forces of man exist, and what its nature contains in itself, in what there is any defect produced, and so on ; but still, without diminution of the natural creation, but that it may be considered as a complete and perfect work in all its parts, as a bird with all its feathers.

CONCERNING THE EXTRACTION OF THE MAGISTERY FROM METALS.

First of all, we will set down the magistery from metals, and make that clear which openly shews itself to be of wonderful virtues, which are to be known according to the tenour of its essence. The process of them must be carried on without any corrosives and all things which are complexioned contrary to the metals. For, from the conjunction or mixture of contrary things, the essences are corrupted, so that, on account of this error, they put forth no virtues, since the one contrary or the other predominates and prevails.

Seeing, therefore, that great account is to be taken of agreement, only the temperate will agree therewith. Consequently you must know what is a temperate thing. A temperate body is one of a certain complexion ; this receives another into itself, and is incorporated with that which shall be joined to it, so that it no longer displays its old and special complexion, but only the virtues of that which has been added to it. So, forsooth, *vinum ardens* has in

itself a full and perfect complexion ; but yet, whatever is put therein, it, so to say, complexionates more abundantly, fulfilling its operation thus, according to the power of that which was put into it.

Since, then, it attracts the virtues of other things and subdues its own, it is on this account said to be temperate, and is deservedly so called. Here some differences call for notice ; we understand the elements only, so that we are able to say of oil that it draws to itself foreign natures and hides its own element. From anything like these a magistery ought to be made, so that the virtues of the metals may pass into the same temperate thing, may be cleansed and purified therewith, and may be distilled to their own end. A magistery like this, after it has been purified, shall be called potable, because it can be taken in drink : whence it comes that the magistery of gold is called *aurum potabile*, that of the moon *argentum potabile*, so also iron, lead, quicksilver, etc., will be capable of being made potable, and so called and described according to their complexions, in relation to which processes they have far greater operation than it becomes us to describe. After the following manner, with one temperate thing, and by one process, as also by one practical method, all the magisteries of the seven metals can be made. The practical method is as follows :—

Take circulatum thoroughly purified, even to its highest essence, in which place very thin metallic plates or filings of any metal you please, perfectly and subtly wrought and purified. When these two have been put together in a sufficient weight, let them be circulated for four weeks, and by means of this temperate medium, the leaves will be reduced into an oil, and into the form of a fattiness swimming at the top, coloured according to the condition of the particular metal which you shall separate by means of a silver attractorium from the circulatum. This same is the potable gold or silver. The like is extracted with the other metals, and may be taken as drink, or with food, without any harm.

THE EXTRACTION OF THE MAGISTERY OUT OF PEARLS, CORALS, AND GEMS.

The Magistery from precious stones is to be understood in the same way as from metals, according to the virtues which each stone has in harmony with its nature. It must be remarked, however, that for stones there is no need of a temperate medium, or of any addition whatsoever, because the solution of them is not the same as the resolution of metals, but the magistery of them is extracted in another way ; in the practice of which three processes are understood, one for gems, another for marchasites, and a third for corals, according to which stony growing things may be brought each into its own magistery. In the process of stones, the colours need not be considered, nor their brightness be taken into account, since all their magisteries have a white colour. So also pearls, with the exception of corals, which retain their colours in a remarkable way above others in the magistery. In them, there-

fore, the colour is chiefly to be noted ; for the magistery of them, together with the body and the element and the whole essence, is extracted by means of additions, without any corruption. None the less, however, they may again be restored to their perfection. Wherefore, in respect of their generation and nature, they cannot be compared to stones, and yet they have a stony condition. This, too, may be done : the whole colour may be extracted out of the body of corals into another medium, and afterwards from their body a form may be made as if from clay. After this formation the colour can be again infused, so that it becomes a coral as before. This cannot be done with pearls or gems, which are unable to return to their perfection by a similar process, but they remain in their magistery, their essence not having been corrupted. We have even seen this penetrate glass and instruments, and form them according to its nature. The magistery of the magnet has drawn things towards itself, in the form and after the manner of the material magnet, and afterwards it has fixed itself in the glass and tinged that, so that this also has attracted needles and straws. None otherwise must it be understood of the rest. Therefore they must be kept in gold only. More of these things have occurred to us than is credible, whereof we put together this record, so that from this inducement other persons also may investigate the arts and the magisteries. Since, therefore, they exhibit a demonstration apart from other extractions, we will now teach the practice of them in the following manner. First we will speak of gems.

Take gems, having first bruised them and calcined them according to the reverberatory condition, together with common salt-nitre, of an equal weight, that is to say, one pound. Let these be burnt together into the form of lime, and afterwards washed in *vinum ardens* until no surplus matter can be found. After the washing, calcine this substance again, and cause the whole of it together to pass through the *vinum ardens*. Let this evaporate by boiling ; and thus you will have an alkali, which dissolve in water and keep. There is no reason why you should fear to make use of this administration, since, however sharp and calcined it may be, with all its sharpness it only affects that which resists it ; and it is so subtle, that one single drop alone tinges the whole body so as to produce a remarkable virtue.

Pearls, too, are to be reduced to a water in the following way, namely : Take corrected vinegar, in which place bruised pearls, and let them digest therein for a month ; so that they will be reduced to a water. Then distil it, and separate the *acetum* from it by a bath, having done which, you shall find the pearls in the bottom resolved into water. This is the magistery of pearls or unions. And although the process of this practice is a short and easy way, nevertheless, give credence to one who has tried it ; for the operation of these same things is indeed wonderful. This action of their virtues, however, is not produced by art, but is placed in the nature of them, which is hidden in a dense substance, on account of which it cannot operate, just as is the case with a dead body ; but by making a resolution its body will be

vitalised.* Enough of this. Corals, however, must be ground and calcined from the commencement with salt nitre; then, afterwards, they must be prepared as gems are, and also resolved. So you have the magistry of corals, the virtues whereof I very much and specially wonder at, which God has bestowed on this growing thing, which also do operate powerfully and wonderfully, even as they grow.

CONCERNING THE EXTRACTION OF THE MAGISTRY OUT OF
MARCHASITES.

Concerning the magistry of marchasites thus much must be known; that they are only minerals. So, then, the mineral is not brought to its magistry, but only the true marchasite, as is also ascertained with regard to metals, since these do not pass into their magistry unless they shall have been first separated from their mineral. And although marchasites cannot well be separated from these, still this may none the less be done in the magisteries. There are, indeed, different kinds of marchasites, such as the golden, the silver, the golden talc, the white, the purple, the tin or bismuth, antimony, granite, and others of a like nature, for all of which there is only one appropriate extraction. In like manner, the virtues and powers of them manifest themselves in medicine according to the conditions of metallic operations. And although they do not exist as metals, none the less they have the properties of them. Wherefore, we set down only a few details about them, because we treat them more at length in our book on Extrinsicals.† There is a difference to be noted, according as they come together and agree one with another, as gold and the marchasite, antimony and lead, which, indeed, in their fabrication and constellation are compared one with the other, but are none the less separated in their virtue. For in some marchasites there are more virtues than in the assimilated metals. This we see to be the case with lead and antimony, of which the one cures morphia, alopecia, and the like, and all scabs and scars, the leonine, the elephantine, the Tyrian, etc., which the magistry of lead or Saturn does not affect. So, then, the properties of this kind are to be noted, which are sometimes latent not only in great things but also, and that more abundantly, in smaller ones. Let us, therefore, go

* Among other virtues which Paracelsus attributes to the pearl is the increase of milk in women when the supply is deficient. Let the pearls be resolved into a liquor, otherwise an elixir, but in the body a ferment. Whatsoever other things are required for this ferment, these the body supplies. The quantity administered must be regulated by the experience of the physician.—*De Aridura*. Another method for the extraction of a medicament from pearls is as follows:—The matter in the form of a potable sap is extracted from pearls, and this is so powerful that it can scarcely find its equal among sperms. *Formula for compounding the Sap of Pearls*.—Take one pound of purest distilled vinegar, half a pound of circulated water of life, and four ounces of cleansed pearls. Reduce to a fine powder, prepare, digest with others for a month in a circulatorium. The matter of the pearls will then have sunk to the bottom like a thick liquor. Then separate the waters by effusion from the sap. Of this sap administer doses of six grains. There are many other processes for the extraction of this kind of sap, but the above is the most useful of all.—*De Contracturis*, c. 3.

† The book concerning Extrinsicals, and that also concerning the Generation of Wines, mentioned a little further on, are unknown. A similar remark will apply to the treatise on the Properties of Things, which is cited in the seventh book. There is probably little doubt that many of these apparently missing works are merely the mis-stated titles of others which have come down to us. For example, the treatise on Physics which is quoted in Book VII. may be extant under a different name, or again, the reference may be to a projected treatise which was never accomplished.

on to investigate this reason, why antimony has more virtues than its metal. Its body is not fixed, and not sufficiently digested into its own perfection, as is the case with Saturn, whence it assumes a volatile property. But the very material out of which it is produced is privative, and of a cleansing character, from its own natural property, as we set down in our book concerning Generations. Hence it happens that it purifies gold and silver more than does the fire or any other element. Thence, too, it proceeds that it cleanses and purges the body, even as gold and silver are freed thereby from all their impurities. The magistry of antimony drives out leprosy in a more than credible manner. And so, too, must it be understood of the others.

Let us now approach the practice by which we teach the preparations of the magisteries from all these substances, in the following manner :

Take a marchasite, ground very small, and add to it so much dissolving water as will cover the breadth of six fingers. Let it be dissolved and subsequently putrefied for a month. Afterwards let it be distilled and separated, as we teach concerning the metals, which having done, you will have the magistry of whatever marchasite you selected.

CONCERNING THE EXTRACTION OF THE MAGISTRY FROM FATTY SUBSTANCES.

None otherwise must it be thought concerning the extraction of the magistry from fatty substances, as the fat of amber, of resins, of oils, and of other things, even as they appear in like material substances. Concerning these there are three methods of extracting their magisteries. One special method is that of amber, another of resins, and the other of fatty substances, such as oils, tallows, butter, and the like. For amber does not in any way admit of the same process as fatty substances, since its virtues would be lost. Resinous substances, again, do not allow the same practice as amber does, for it would be destructive to them. We will therefore teach the preparations of those magisteries in three ways, since such excellent virtues appear in fatty substances, and these in many forms. In cases where essences produce no effect these fatty substances render aid ; for they have that property on account of their specific and appropriate virtue, which is not found to be so perfect in other substances, neither, indeed, is it so. None otherwise than as the difference is between corals and gems when compared must it be understood of these things, since the practice is as follows ; and first concerning amber :

Take of amber well ground as much as seems good, and of circulatum a sufficient quantity. Digest them in a flat vessel in ashes for six days. Afterwards let the circulatum be distilled off from thence, and again poured on. Let this be repeated until an oil is found at the bottom ; which oil is the magistry of amber. This has revealed to us its wonderful virtues. May it continue so to do !

Resinous bodies are reduced to their magistery by the following method :

Take of turpentine, gum, or resin, as much as you will. Place this in a luted glass vessel and let it be digested by itself for a month in a warm digestion. Afterwards, having mixed it with dissolving water, let it be boiled in *vinum ardens* for half an hour only. Then distil it in a blind alembic and let all stand for one day. Thus you will find certain oils distinct from one another, which separate. Each one of these is a magistery in its own nature.

But the magisteries of oils are made without the addition of dissolving waters ; and these in like manner have virtues corresponding with the virtues of their matter.

THE EXTRACTION OF THE MAGISTERY FROM GROWING THINGS.

If we speak of growing things, we understand as growing things those which are green and afterwards wither, and again become green in their season, even as they were before. The magisteries of these are made and extracted from them in different ways, as, for instance, in one way from trees, in another from herbs ; the difference whereof consists in this, that the former is wood, the latter putrefiable matter. Therefore the leaves and flowers must be prepared as herbs are. Accordingly, we will set down these Magisteries separately. The preparation of the magistery of woods is as follows :—

Take wood, cut sufficiently small, which put into a glazed pot able to stand the fire, and closely shut up. Let it be burnt in a coal fire for four hours. Then take it out and putrefy it in glass for a month. Afterwards distil it in ashes even to its last spirits, and when these are perceived, presently cease, so that the magistery may not acquire any evil odour from the fire. In this way you will have the magistery of the wood which you undertook to prepare.

So, too, may seeds, roots, barks, and the like, which contain an oil in their material substance, be extracted. There lies hid in these extractions a greater art than is spoken of or understood, though the process is here shewn in its entirety.

Herbs, however, and other things of that kind, must be mixed with *vinum ardens*, and putrefied with it for a month. Then they must be distilled by the *balneum maris*, and that which is distilled must be again poured on. This must be repeated until the whole quantity of *vinum ardens* shall be four times less than the juices of the herbs. Distil this in a pelican with new additions for a month, and then separate it. When you have done this, you will have the magistery of that matter or that herb which you selected.

We now wish to make clear the magistery of wine, which, indeed, appears to be endowed with countless virtues, since it receives a nature of the same kind from many virtues lying hid in the earth, as we set down in our treatise on The Generation of Wine. Now, it should be known that the magisteries of wine are produced in two ways, one of which we pass over in

silence, because the practice thereof is common, such as we use in many extractions of wines. Some practical methods for this magistry of wine are here set down. Certain persons seek to extract it while the wine is still new and boiling, during the time of purifying. Some bury it, and leave it so a 100 days (or years). Most people separate it without fire. However, this may be done, I do not wish to write of it here. I will only hand down that method which I have proved experimentally. First of all, it should be known that wine is a very subtle spirit, though small in quantity, and contained in much phlegm. And although this be a quintessence, nevertheless, a magistry can be made from it, but by using a superior practice and process.

It should be known, too, that there are more and greater virtues in that wine which has not yet deposited its tartar, since there are sometimes more virtues in the tartar than in the wine itself. The age of wine, too, is more commendable than its youth or newness, for its spirit is more digested by the lapse of a longer than of a shorter time. Moreover, it must be borne in mind that the wine for this purpose has to be buried in the cold earth, and the vessel containing it must be closely shut below and above without any vent. In this way it is preserved for many hundreds of years without tartar. We are unwilling to speak here of any prolonged time, which would be tedious; but, nevertheless, let this be committed to memory. So, too, that is not a magistry of wine which is extracted out of must, or new wine, but a magistry of must. Nor is it a sign of art to distil it with its own fæces, or its own phlegm, as with *vinum ardens*, because in this way the spirits of the wine, which are in its essence, are destroyed. This should on no account be done. So, the oftener the best vinegar is distilled, the farther does it withdraw from the spirit of wine. Wherefore, the utmost care must be used so as to see that the quintessence shall not be in any way corrupted in the magisteries, but that it shall rather be increased and fortified in its virtues. Again, when it is separated without fire, it cannot in any way be a magistry, since the substantiality is lacking to it. Also, it should be known that the spirit of the wine must be kept along with its substance and not with its phlegm. For in wine two substances are found: the one is vinous, in which is the spirit of the wine, and from which it cannot be separated; the other is phlegmatic, which is mixed with the dregs, and with the sweet water. These should be separated from the true substance, as a metal is from its mineral, or from the earth.

It must be known concerning wine that the dregs and the phlegm are, as it were, the mineral, and that the substance of the wine is the body in which the essence is preserved, even as the essence of gold is latent in gold. According to which we put the practice on record, that so we may not forget it, as follows:—

Take very old wine, the best you can get as to colour and taste, and of the same as much as you please. Pour this into a glass vessel, so that a third part thereof may be full. Close it hermetically, and keep it in horse dung for four months at a continuous heat, which heat do not allow to slacken.

Having done this, then, in the winter season, when the frost and cold are excessive, let it be exposed to them for a month, that it may be frozen. In this way, the cold thrusts the spirit of the wine, together with its substance, into the centre of the wine and separates it from the phlegm. Throw away that which is frozen, but that which is not frozen you must consider to be the spirit with the substance. Having placed this in a pelican with a digestion of sand, not too hot, let it remain there for some time. Afterwards take out the magistery of the wine, concerning which we have spoken. As to those additional processes which are in existence, and are put in practice, we will speak clearly when we shall treat of elixirs. Coming to an end here, we will ignore some of those other processes concerning wine which have little attraction for us.

CONCERNING THE EXTRACTION OF THE MAGISTERY OUT OF BLOOD.

We wish also to unfold our opinion concerning the blood, in which there are very many and wonderful virtues, exceeding belief, but still sufficiently evident, chiefly on this account, that the blood exists out of the best root and most potent fountain of the heart, as we make clear in the treatise on *The Composition of Man*.^{*} In this exists, and can exist, no defect, for it has its conditions according to the nature of the heart, and is a costly treasure of the whole nature, with all that is therein.

Here someone may urge that the blood, when it has flowed out of the veins, will be soon deprived, by the nature of the case, of those virtues which renew and sustain that blood. But this is not so ; for it can be preserved in the essence, as we shall point out below. Let us, therefore, consider the small number of men who live with healthy body and blood. Wherefore, care must be taken that men of this kind be brought to a renewed quality and essence by arcana and the quintessence, as we have before mentioned, so that the blood may flow from them incorrupt and healthy. Nor do we speak of man's blood only, but also of the blood of the sperm, which we describe in our secrets, in which blood there is no disease or alteration, but the most wonderful blood of the human sperm, which we intend to take in this place, and this for many causes not here set forth. We speak also of the blood of bread, which is to be taken for the same use and in the same way. For there are in it such virtues as we are scarcely able to scrutinise thoroughly, nor do we undertake the task of doing so to the full. In the same way it may be understood of other nutriments and comestibles, in all of which blood is present, although we do not see it in them any more than in bread ; yet, nevertheless, by putrefaction, as in the stomach and the liver, it becomes blood. So also every condiment which is taken therewith is changed after the same fashion as in the body. We are unwilling to write of this blood more largely or at

^{*} The *Liber de Generatione Hominis*, to which allusion is apparently made, exists only in the form of a fragment, and is concerned chiefly with the seminal philosophy of Paracelsus.

greater length, especially for the reason that we cannot make the subject agreeable to any but ourselves. We determine, therefore, to take rest in sleep, and then, waking from our pleasant slumber, we will go on to speak further about this blood. Let each thing prevail so far as it can by its own virtues, and according to what it has in it: for out of a good thing much good proceeds, and this always stands forth for our consideration. Nor shall we speak only of the blood of edible things, but also of potable things, which exhibit simply blood to our body. There can also be extracted from blood quintessences as well as arcana; but of these former here we make no mention, having set before us to treat only of magisteries and to comprise each in this one:

Take blood, shut it up in a pelican, and suffer it to rise up so long in a *venter equinus* until the third part of the pelican shall be filled. For all blood in its rectification is dilated according to the quantity, and not according to the weight. When this time is fulfilled you must rectify it by a bath. In this way the phlegms recede, and the magistery remains at the bottom. Having shut this up in a retort, and hermetically sealed it, distil it nine times, as we have taught in the book, "Concerning Preparations." In this way you will arrive at the magistery of blood.*

* The treatise Concerning Preparations makes no reference whatever to the extraction of a magistery from blood.

THE SEVENTH BOOK OF THE ARCHIDOXIES.

FROM THE THEOPHRASTIA OF PARACELSUS THE GREAT.

CONCERNING SPECIFICS.

IT remains, now, that we speak also concerning specifics, in which reside many marvellous and great virtues, which do not derive their origin from Nature, so far as they are warm or cold ; but besides these qualities they have one nature and essence, as we have mentioned in several places. Such a specific takes its nature from externals, as when a piece of wood is thrown into the fire and is burnt ; that burning is not part of its peculiar nature, but the being wood is. Specifics, therefore, are produced from a conjunction, as when mastick and colophonia are blended, an attractive substance is generated, which is neither of these ; or, when terebinth is coagulated, a stone is produced therefrom which attracts iron to itself like the magnet. There are kindred substances which have such virtues, but from their compositions and from without. Ellebore, too, is compounded from the liquid of stone and earth. From the composition of these two a specific proceeds. So the oil of cherries and acetum after their digestion produce a laxative, though neither of them in its own nature has a laxative property. Wherefore, such specifics are produced out of their own nature by composition of elements and of the proper nature, just as tincture or colour, which is not derived from cold and heat, but from composition, as galls with vitriol produce ink, though neither the one nor the other is black by nature. So, also, sal ammoniac and urine produce a black colour, when both of them are white. It is after the same manner with specifics. They have their origin from externals ; but some things which assume such virtues from without may exist in any herb, not in any one kind only, which must be understood in the following way. Wherever the magnet has grown, there a certain attractive power exists, just as colocynth is purgative and the poppy is anodyne. This arises from the composition which exists in them. Hence it is that every magnet is attractive and all colocynth is purgative, But such is not the case with specifics from without, of which the condition is as follows : if one flint has the virtues of a magnet, and another like it has not such virtues, this latter would be an external specific.

But it seldom happens that a peculiar condition is found in one herb and not likewise in another which is similar to it. Then, again, though many

similar specifics arise from influences, nevertheless, we will not here discuss at length whether they arise from the same influences or not. We prefer to reserve this discussion for its proper place in our Physics, and to pass it over here. Moreover, many specifics are found—the odoriferous ones, to wit—which derive their origin from composition and digestion, as water of vitriol with sal ammoniac possesses the odour of musk, though neither of the constituents has this by itself. There are many such, which become odoriferous when they were not so before, and acquire a notable fragrance, like a rose or a lily, though they had no odour before, yet by labour, by digestion, and separation, this fragrance is eventually aroused. In like manner, cow-dung is a fœtid excrement, but if it be elevated, it acquires the odour of ambergris, while the residuum which is left at the bottom smells worse than human fæces.

There are some diaphoretic specifics, producing sweat, which acquire a similar virtue by composition, as a burning coal placed on fat earth emits a vapour. So ginger placed on a body burns, and is extinguished like lime when water is poured on it.

This heat accrues to the ginger from the sharpness or asperity which it contains within it, and with a warm element it is coagulated like a stone, which, when placed in the fire, is brought to the same degree of heat. Indeed, every diaphoretic is a calx of the liquid of the earth, as we state in our treatise on Generations. In like manner, purgatives themselves come from composition, as in the case of rhubarb, which is also the calx of a liquid, with a certain difference intervening: for as a Tartarus draught it is resolved into water, and has with it some liquid in itself when it is put in a damp place; so also rhubarb and other purgatives have a manifold origin, as being a calx of the earth. Some remove the cholera, as rhubarb which is like calcined tartar. Some take away phlegm, as Turbith—so written because the word was wanting in the autograph. With these realgar is dissolved, but nothing else. Others cure melancholy, like senna, which is to be understood after the manner of nitre, which resolves stones as nothing else does. Some act on the blood, as manna, which, like arsenic, resolves sublimates. Thus we must judge concerning the difference of these substances, seeing they are divided one from the other as we have mentioned. Some which are strengthening are derived from composition, as sperm lacking strength, from which, nevertheless, a glandule is produced according to its predestination. So then the strengthening specific is a certain predestinated body by the predestination of its composition. But the carline, which is not produced in this way, attracts to itself the virtues of other herbs, and takes away their strength, which it then possesses solely, just as the sun attracts to itself the moisture from wood, as we declare more at length in the treatise on Generations.

In like manner, also, some mundificatives acquire that virtue by composition, as when the calx of the earth is transmuted into another form by liquid, as resin, honey, gums, pitch, etc. Similar alterations exist in the flowers of Venus which at first are a purgative, as should be the case with a

calx. Afterwards they are reduced by fire into a styptic, so that they lose their purgative properties and have a mundificative effect. It is the same with corrosives which are salts, and sometimes calcined in earth, sometimes substantiated (if one may so say) into one matter, as we set it down in the book on the Different Species of Salts. Many and various are the properties of this kind in things, which we handle in our treatise on The Properties of Things, and about which we have said sufficient here. Also why some are hard and others, on the contrary, soft, this we are unwilling to disclose here. Our Archidoxies do not treat of the whole principle, but only the special subject of compounding specifics and bringing them to the highest grade of Nature. With these we will now deal in due order, putting forward our own experience of them, and leaving behind those crooked haranguers who talk about God and understand nothing but hypocritical rites and similar fables, who also are the enemies of such as practise these arts and arcana. They are plunged in worldly glory, romancing and cavilling through their capacity for much speaking. At it they go with both shoulders (as folks say); they flatter and pride themselves upon being wise, when they are only stupid and fatuous, and for filthy lucre's sake they befool their fellow men. Now, then, let us go on to treat concerning specifics according to our usual custom, and leave those University doctors, who only read and think—be their success what it may—to gnash their teeth against us if they will.

CONCERNING THE ODORIFEROUS SPECIFIC.

Now, then, let us speak of odoriferous specifics, in what way and in what form they are produced. And, first, as concerns their powers. An odoriferous specific is a matter which takes away diseases from patients, just as civet destroys ordure, with its odour. This specific mingles itself with the foul smell of the ordure; and the smell of the filth can no longer hurt or remain. The stench is tinged with fragrance, so that the good odour is as strong as the bad one was before. Since there is nothing which can take away the good odour from civet or musk, it is transmuted, as we prove in many passages. Hence it happens that occasionally some of the excrement is mingled with the musk, because this penetrates more readily than any lily with all its operations. It is well known that more of bad odour than of good is met with; for as tyrus is taken in theriaca in order to penetrate all the limbs at once with another influence, so, in our opinion, does the odoriferous specific act.

By means of the odoriferous specifics diseases are cured in persons who cannot take medicines, as in cases of apoplexy and of epilepsy. Many odours exist which relieve the epileptic; and many, too, which aid the apoplectic. They may not cure them, but they pave the way for a cure. A force of this kind, brought to bear on the body, immediately stirs up the blood, and by forcing this to the heart, revives it to an indescribable degree. We will therefore prescribe an odoriferous specific which shall

serve as a foundation for compounding such specifics against all diseases. The process is as follows :—

Take of white lilies, anthos, basilicon (carbon), cardamum, and roses, one handful respectively, with two handfuls of spike. Pound into a coarse paste. Add two quarts of the juice of oranges. Let all these be digested in a pelican for the space of one month. Afterwards separate them from their dregs with the hand, or, what is still better, with a press. Put this again in a pelican, and add one ounce each of mace, caryophylli, and cinnamon; half an ounce of ambergris, two ounces of musk, and one ounce of civet. Having ground these very minutely, put them in the aforesaid pelican, and digest them in dung with the other ingredients. Then add half an ounce of gum arabic in solution, also one ounce of similarly dissolved tragacanth. Place these in a closed glass vessel and indurate them with the clear part from white of eggs. You will presently see the mixture assume the form of glass. Break the vessel, take out the stone, and you will have the odoriferous specific, concerning which enough has now been written. It would, however, be well to add to it aurum potable.

CONCERNING THE ANODYNE SPECIFIC.

Many causes combine to induce us to write about this anodyne specific. There are some diseases in which all arcana fail us, with the exception of this anodyne specific, which works wonders. Nor need we be surprised at this, when we see water extinguish fire. Just in the same way the anodyne specific extinguishes diseases. There are many reasons why it does this, but we pass them over in silence.

That which rests or sleeps does not, in the course of nature, cause any discomfort. A paroxysm, if it sleeps, is not felt; if it does not sleep, its operation is accomplished. We console ourselves with the reflection that many anxious cares and cases of melancholia are removed by simply sleeping.

And note this : Sleep does not necessarily apply to the sufferer only, but may be predicated of the disease itself. We, therefore, compound a specific — which operates on the disease alone, not on the entire patient, as is the case in those applied to fevers. What we put forward would be deadly to the whole man, but is salutary in its application to the disease. We attack the disease itself, and so elaborate our remedy that the ailment shall have, or can have, positively no effect on the body. The following is the formula : Take of Thebaic opium, one ounce; of orange and lemon juice, six ounces; of cinnamon and caryophylli, each half an ounce. Pound all these ingredients carefully together, mix them well, and place them in a glass vessel with its blind covering. Let them be digested in the sun or in dung for a month, and then afterwards pressed out and placed again in the vessel with the following : Half a scruple of musk, four scruples of ambergris, half an ounce of crocus, and one and a half scruple each of the juice of corals and of the magistery of pearls. Mix these, and, after digesting all for a month,

add a scruple and a half of the quintessence of gold. When this is mixed with the rest it will be an anodyne specific, capable of removing any diseases, internal or external, so that no member of the body shall be further affected.

CONCERNING THE DIAPHORETIC SPECIFIC.

Let us now speak of the diaphoretic specific, whereby every disease is cured which can or should, from its nature and properties, be treated by sudorifics. Such a disease is removed barely better than by any medicament. By means of the diaphoretic, a cold disease grows warm, and is removed by that heat. It has often happened to us that a cassatum of twenty years' standing has been cured by the diaphoretic; and other diseases which they call intercutaneous, or which have their seat in the marrow. On these the quintessence has no effect, and still less the strengthening arcanum; principally for this reason, that there is not sufficient strength in the heart to drive away the cassatum unless this be done by the diaphoretic alone. As the sun warms a frozen stone, and liquefies the hardest ice, just in the same way the diaphoretic exerts its powers on a disease which can be overcome by no other power, however excellent and good. Now, although the flammula be a very warm herb, still its heat cannot be compared in the faintest degree with that of the sun; and so these same warm diaphoretics differ one from the other. Wherefore we put forward at this point a specific which, as it were, summarises the diaphoretic properties. Take one pound of ginger, half an ounce each of long pepper and of black pepper, three drams of cardamum, and one ounce of grains of paradise. Let these be ground to powder, and placed in a glass vessel with an ounce and a half of best powdered camphor and two ounces of dissolving water. Let this mixture remain in a sealed glass vessel in sand so long until its digestion is completed. Then separate therefrom the dissolving water, let it putrefy for one month, and circulate it for one week. Afterwards press and keep it. This is the best and most powerful diaphoretic, acting more vehemently than could be believed both in cassatum and in other diseases. Enough on this point.

CONCERNING THE PURGATIVE SPECIFIC.

We must also describe the purgative specific. And although we shall have to consider its complexions and the like, still we base our remarks on a more solid foundation, and accept only those specifics which exhibit not one disease or another, but all diseases. Hence it is gathered that whatever in the case of cholera is superfluous, and of no moment, is removed by this specific. Similarly also in cases where the symptoms show the phlegm or the blood at fault, or in melancholia, as also in abscesses and other affections which cannot be cured by mere complexions, nor be resolved by purgatives, as is the case with many diseases.

Our endeavour is solely to remove the peccant matter, whether it be corrupt or not, whether in the form of an abscess, or in complexion, or arising

from any admixture. Paying no heed to the prolix and useless discourses of the University doctors, we give our thought simply to sanitation, and, with this end in view, we shall build up our medicaments. Of such a nature, for example, is tartar, which, by its nature and properties, takes away all putrefactions and is not inclined to cholera, to melancholy, to phlegma, nor to the blood, but expels all that is useless from the body, or that can do harm to it. In like manner, vitriol purges every complication from which diseases arise. Coloquinth does not drive out all cholera or purge what arises therefrom; nor does rhubarb effect this. Neither does turbith arrest or evacuate all that proceeds from phlegma. Neither does lapis lazuli remove the impediments produced by melancholia, or manna drive out all bad blood; but these two, besides other of our purgative specifics which we do not mention here, accomplish this, principally in all those putrefactions and superfluous fæces of the body, whencesoever they arise, just as water washes linen rags, and soap clears them from all defilement and impediments of any kind. So also do these act singly on single diseases. Let us then lay down a specific drug which, to our thinking, acts thus in the way just described. Take the magistery of tartar and the magistery of vitriol, mix them together, and afterwards add equal parts of the quintessence of crocus. Put them in a pelican, let them be digested for a month in sand, and let the drug of which I have spoken be carefully preserved. Concerning the other things necessary for this, greater intelligence exists among the erudite than among the ignorant.

And not only human beings may in this way be purged of their diseases and superfluities, but also trees and herbs. For in growing things, just as in persons, infirmities prevail, and their remedies, too, have grown, as we remark elsewhere. The magistery of vitriol heals the defects of anthos, when it cannot vegetate perfectly, and causes it to grow excellently, as we state in our work on Plants.* With these few words, therefore, we now conclude this subject.

CONCERNING THE ATTRACTIVE SPECIFIC.

Before we begin to speak of the attractive specific, it should be known that this attractive specific draws to itself everything that is superfluous in the body, and leads out whatever evil may adhere to it. This frequently happens; and the result is proved to demonstration.

Some attractive specifics are so adapted to the flesh that they attract to themselves a hundred pounds of flesh, just as a magnet attracts iron. It has happened in our time that an attractive of this kind has drawn a man's lungs into his mouth and so suffocated him. It has also occurred that, in another case, the pupil of the eye was drawn from its position right down to the nose and could never be removed thence. Attractives are found to act not only on

* The *Herbarius Theophrasti* contains no reference to the subject, and selections have already been made from that chapter in *De Naturalibus Rebus* which is devoted to vitriol.

iron, but also on wood, herbs, flesh, and water. We have seen a plaster which attracted so much water that a vessel could be filled from it, and the water ran down from that plaster just as from the roof of a house. In the same way, lead, tin, copper, silver, and gold can be drawn by the composition of attractives. By these same attractives, too, the branches may be torn from trees, a cow lifted into the air, and many other effects produced, which we have detailed in our secret writings as a Thesaurus; so that we may admire and venerate that man alone who has brought it about by his art that so many discoveries should be made; demonstrating as we do these incredible operations which so far excel Nature as it is constituted in itself.

We will, then, lay down certain attractive virtues for the body, whereby what is evil and corrupt may be extracted from it and separated from what is good, so that the attractive may be applied on an emunctory to the particular spot where any defect has shewn itself, as on an ulcer which may be taken on an emunctory, or if a glandular swelling has arisen this must first be opened like an emunctory. We know from experience that by means of an attractive of this kind the pestilence has been extracted in a way that it would not become us to describe here. When this medicament has been used, no sick person has ever perished, however severe the disease with which he was affected. The following is the recipe for the attractive specific: Take of the quintessence of all gums of every kind one quart, a pint of the magistery of the magnet, one pound of the element of *carabis igneus*, of the element of *mastix igneus* and of myrrh, each three pints, and ten ounces of the element of scammony. Of these make an ointment with wax, gum, tragacanth, and turpentine, using it as directed above.

CONCERNING THE STYPTIC SPECIFIC.

We now have to speak of the styptic specific, the virtues whereof are very great, more so even than the others. When people see with their own eyes so many wonderful works of Nature, they urge us, in their delight, not to desist from them, but to tax our memory so as to impart what is offered by these arts of ours. And if, perchance, something was discovered by the old physicians and philosophers (which we deem by no means certain), that does not disturb us in any way, since all those things they wrote about were mere blind gropings. We delight in that great Nature which presents itself to our hands, and we rightly pass by the works of these ancients whom we esteem to have been blind, as we mention in many places. Is it not subject for wonder that styptics are so strong and possess a power in their quintessences, arcana, and mysteries, whereby two fragments of iron are so fastened together that afterwards they can only be separated by fire? What is still more remarkable is, that one piece of copper can be so joined to another by similar styptics that they can no more be disjoined either by fire or by water. By a like attractive styptic a heap of stones can be conglutinated into a mass like a rock. In like

manner, sand and lime, by means of such styptics, are welded together in perpetual compaction harder than marble. So far we speak of hard material. Let us go on to other kinds. By the same method we have seen leaves joined together so that they were taken for one concrete natural growth ; for instance, the leaf of the lily with the leaf of the rose in one combination. Blacksmiths, acting on my advice, have made their weldings as compact as though they had been originally one solid mass.

We have seen, too, by means of these styptic specifics, the lips of a person so firmly drawn together on a single washing, that afterwards they could only be separated forcibly by instruments, the blood flowing freely in the process. Some persons, too, for a joke, closed up another's anus with these styptics so firmly, that when it was necessary to go to stool it had to be opened with a gimlet ! So, too, in the case of wounds and in rupture of the bladder, we have seen the compaction made so effectually that no opening occurred in our time or during the life of the patients. Whatever limb this styptic material touched, it so contracted the orifice or the bare flesh that it could only be made smooth with a file. No water softens the force of such styptics, which is really much greater than we have described. So far, however, as relates to medicine, we will detail the styptic specific as follows :—Take quintessence of bolus, that is to say, of iron, and the quintessence of carabis, otherwise called cathebes, one pound of each. Let these be digested in ashes for a month, and afterwards put in a pound and a half of dried tartar. Keep this body until required. This and similar styptics are inscrutable in their own bodies, but when employed on separate substances, they attract in an incredible manner, through the nature and condition of their great dryness. So, then, these styptic specifics may be called styptic beyond all others.

CONCERNING THE CORROSIVE SPECIFICS.

We would now describe in addition the corrosive specific, wherein marvellous powers are naturally present. It has this wonderful property, as compared with the old corrosives, that it completely annihilates metals, so that no body is any longer found in them, just as wood disappears in the fire. It is true that the consumption of metals is brought about by aqua fortis, but still some part of their bulk remains undiminished and unchanged in its essential nature, so that it can be once more brought back by means of fire to its original body and matter. But this is not the case after consumption brought about by the corrosive specific, and for this reason : because no matter is any longer found in this case which can by any means be brought back to a metallic nature, any more than ashes can be again turned to wood. It should be known, too, that this corrosive acts upon flesh in a way to which nothing else is comparable. Its velocity in one moment penetrates the hand like an awl.

Now, we recount this in the interest of medicine, with the following end in view. In the body a good deal of putrid superfluous flesh grows up, in the way of ulcers, like fistulas, scrofulous cancers, etc., all of which can be cured

by corrosives of this kind. In this specific a styptic virtue exists of very great power, by which it acquires special curative faculties. It might really be called rather a fire than a medicament, seeing that it consumes iron chains and bars in a way beyond belief or power of description. We give the recipe for it as briefly as possible: Take one pound of aqua fortis rectified from its *caput mortuum*, half a quart of sublimated mercury, two ounces of sal ammoniac. Mix all these and let them be consumed; then add an equal weight of mercurial water. No adamant can resist this corrosive. Although the same is understood concerning the quintessence and the arcanum, namely, that the skin may be taken away by either mode of cautery, and new skin superinduced in its place, as in leprosy, morphea, serpigo, lentigo, pannus, etc., against all these this corrosive specific comes into use; but we omit it on account of its violent action. We choose in preference this mixture, with which the skin should be washed, when it falls off and is laid bare. Afterwards it can be consolidated in due course. The mixture should be as follows:—Take one pound of the juice of the flammula, four and a half of cantharides, and 3ij. of the Ignis Gehennæ aforesaid. Mix and use as above.

CONCERNING THE SPECIFIC OF THE MATRIX.

One would speak of the specific of the matrix for several reasons, specially on account of the affections to which it is liable. But in this place we hesitate to treat of those substances which warm or refrigerate it, since these results can be brought about by magisteries and arcana. Here, however, we set down two specifics, one for suffocation of the matrix, the other for promoting or restraining the menses. Suffocation can only be remedied by the specific, though not elementated or prepared for this object, but in its common form or essence, adapted to the said purpose even as the skin of the fig is. As soon as ever its fume enters by the vulva the disease is expelled. And this is chiefly remarkable on account of its being such a cheap simple; and though it be prepared, the essence of its fume, wherein lies its sole virtue, is not lost. For promoting the menstrual discharge the method is the spleen of a castrated ox reduced to a magistery or quintessence. This is an admirable provocative not only in young, but in old, women.

As to restriction, the best method is to use the quintessence of coral, the oil of iron, or *ferrum potabile*, which restricts more than anything else.* There is no need to describe the properties at greater length, since this would be too prolix for our Archidoxies. It should be remarked that, under the above-mentioned compositions, that is to say, the incarnatives, the conglutinates, and the specifics, are comprised laxatives, mundificatives, and the like, under purgations themselves; and so with others, as the deoppilatives under

* By this oil of iron every genus of humid, fluid, and flaccid ulcers, those also which have swollen and ruddy lips, are completely cured, and the older and more deeply rooted the ulcer is, so is the remedy more ready and easy.—*De Tumoribus, etc., Morbi Gallici*, Lib. X.

purgatives and attractives. Here we would conclude our book on Specifics, as an aid to memory, lest we forget them. In like manner the confortatives are also recounted in single chapters.

THE END OF THE SEVENTH BOOK OF THE ARCHIDOXIES FROM THE THEOPHRASTIA
OF PARACELSUS THE GREAT CONCERNING SPECIFICS.

THE EIGHTH BOOK OF THE ARCHIDOXIES.

FROM THE THEOPHRASTIA OF PARACELSUS THE GREAT.

CONCERNING ELIXIRS.

AFTER many of the most secret mysteries of Nature, we desire to treat compendiously of Elixirs; and that not in vain, since we see that there is latent in them the chief conservation, which compels us to bend our mind thereto without any rest.* For every elixir is an inward preservative in its essence of that body which shall have taken it, even as the extrinsical balsam is an external preservative of all bodies from putrefaction and corruption, a fact which is evident enough in balsam, that is to say, it preserves bodies so that they abide many hundreds and thousands of years without corruption or change.†

When, therefore, we see a gift like this in balsam, which preserves dead bodies and keeps them in incorruptibility, it is to be understood equally that by this same gift, or mystery, the sound and living body can be far better, more usefully, and more conveniently preserved. But we have not this naturally that these mysteries of Nature and those constituted above Nature, by which we may preserve the body inwardly and outwardly from all contrariety, should be known to us; but among them many things meet us which are most occult.

Concerning elixirs, then, it should be known that these have not their operations from Nature, nor from their complexion, but that they are mysteries rather than specifics, leading us to the very highest admiration of the Creator by many demonstrations. Yet they are implanted in Nature herself, so that they are in her, as is seen in the case of balsam. If, therefore, it be possible to preserve dead bodies, still more so living bodies themselves can be preserved. And there is no reason why we should heed the words or arguments of our adversaries, but rather it is well that we should disclose our own, by which means we desire to guide towards the true foundation of the internal balsam, not heeding their triflings and their useless words who talk of a limit

* The *Scholia in Libros Paragaphorum* define the elixir as a ferment, a quintessence, the pure substance separated from the impure.

† Of balsam in general, Paracelsus says that it is a temperate thing, neither sweet nor bitter, nor pontic; it is a liquor of salt and a salt of liquor. Therefore it most powerfully preserves from putrefaction. - *De Tartaro*, Tract. IV., c. 2.

of death and of its predestination, and close it in with determinate points. For God our Father gives us life, and along with it medicaments by which we are able to defend and sustain it. If, therefore, the limit of death were laid down at a precise point, it would of necessity follow that this other theory should be false, which is not the case ; but as long as we have power and knowledge, we possess the capacity of sustaining our life. For Adam attained to such an advanced period of life not from the nature or condition of his own properties, but simply from this reason, that he was so learned and wise a physician, who knew all things in Nature herself with which he sustained himself during so long a period. And there were many others, in like manner, who used similar remedies.

There were in the days of Adam many who died without reaching his age, and some did not even attain our limit, as we are now constituted since the Deluge ; and these died just as we die, because they were unskilled in those arts which Adam and others understood ; and hence it happened that they were deprived of life before their due time, nor did their foods or drinks help them.

Since, therefore, we are enabled from such examples as these to discover naturally that a protracted life proceeds from Nature, we desire to investigate what it is in which Nature and the gift of God consist. Some things preserve a dead body from putrefaction for one year only, as the *oleum laterinum*. Others preserve it for ten years, as the corrected oil of the philosophers. Some preserve it for twenty, as the water of honey. Some for fifty, as the distilled preservative. But some preserve it for ever without end, as balsam. Some preserve it only for eight days, as salt ; others for a night, as distilled water. Some preserve it longer, as *vinum ardens*. There are also some others which preserve the body from corruption in a new and strong essence of Nature when a man is confirmed by them, as aloes, citrine, and myrrh. Some preserve bodies from corruption only by their great tincture, which is so powerful that it admits no evil, nor suffers it to grow or to enter secretly, as gold, the sapphire, pearls, arcana, magisteries, and the like, as has been before written about these.

We purpose, therefore, to describe a preservative against all corruptions of the living and the dead body. But it is considered that a preservative of the living body must be taken at the mouth, so that there may be no member of the body which does not receive that same preservation, or which may not be informed by attracting to itself the benefit thereof. Moreover, it must be remarked that the spirits of the excrements existing in the bowels are so strong that they fight against a preservative, for this reason, that nothing which is putrefied can be embalmed or preserved, for it has not in itself any essence as recently dead flesh which is embalmed has. But this agrees with a preservative none otherwise than as worms do with the best herbs, and as a putrefied substance does with one that is incorruptible ; since whatever is putrefied cannot be further corrupted or be changed, since there is no move-

ment in it. On the other hand, a preservative cannot in any way be putrefied, for it is like gold, which never rusts. They are mutually separated one from the other, so that each fulfils its own proper function. This, therefore, is said, because, in lapse of time, the excrements are able to overcome the preservatives ; but this cannot occur in dead bodies, because they are disembowelled, or, if not yet disembowelled, they are coagulated by death, just as the blood withdrawing from the veins coagulates.

We call this preservative an elixir, as if it were yeast, with which bread is fermented and digested by the body. Its virtue is to preserve the body in that state wherein it finds it, and in that same vigour and essence. Since this is the nature of preservatives, namely, that they defend from corruption, not in any way by purifying, but simply by preserving. The fact that they also take away diseases is due to the subtlety which they possess. So, then, they do not only preserve, but they also conserve. They have a double labour and duty, that is to say, to prevent diseases and to keep the essence itself in its proper condition.

Nor do they do this in human bodies only, but in all bodies possessed of sensation. Thus, also, dead wood can be preserved from corruption, just as any body that is treated with balsam. Herbs, too, can be preserved in their essence none otherwise than a living body can : since those conservations which apply to herbs keep them in the same essence as that wherein they find them, so that they flourish and remain as fresh as in the fields and gardens, or elsewhere, to the fifth or sixth day. If they find them with flowers, they preserve these ; if with fruits, these also.

Nor wonder at this, when it is possible for dead wood to live again, and for iron to be so fixed that it shall never rust again, and likewise for sulphur to be made incombustible, all which things are beyond the understanding of a simple man. The cause of all these things we set down more broadly and fundamentally in the treatise on Conservations. Nor must they be considered impossible, since many other things which are deemed impossible can be most easily accomplished. We wish, then, to speak of the conservation of balsam by the distinctions of ages in the following manner.

ON PRESERVATION AND CONSERVATION BY ELIXIRS.

We purpose to write of the first elixir, which conserves the body in that essence where it finds it, and does not suffer it to putrefy or grow weak, but conserves it in the spirit of life, so that no accident can happen to it. It also brings it to a third period of life, or to more. As to its use, the operation on dead bodies differs from that on the living, since the dead must lie in the balsam nights and days, but the living and healthy bodies neither can nor need do this.

Wherefore, this elixir must be understood to be of use only for life, and for the heart and those parts especially in which the life chiefly flourishes, that is, the spirit of life dispersed throughout the entire body. And it preserves the

spirit of life in that virtue wherein a dead body or corpse is kept from putrefaction ; because, if a wound or an ulcer may be externally preserved from putrefaction and from every mishap, so, also the inner body is arranged so as to be defended from all adversity. Wherefore, we arrange the elixir which is directed to the spirit of life none otherwise than as yeast operates in paste ; and with reference to the body, as when a tree is tinged in its root, so that the same colour may never withdraw from it. In this way the whole body is preserved, when the tincture is more or less scattered amongst all the members and penetrates them none otherwise than as the whole metal is tinged into gold, and becomes gold, or is preserved from rust. So, also, is it in the conserved body ; there is no member comprised in it which is not full of the elixir.

After that, being dispersed throughout the whole body, it shall have acquired its virtue, and already is exercising its operation by itself, no corruption can happen to it by contact, because the life of every member is full of the elixir as the body is tinged with the balsam. But it should be understood that it is not necessary the whole body should be affected with the balsam by means of the elixir which has been taken ; for where the spirit of life has only been surrounded therewith at its root, this suffices for the conservation of the body.

Now we must come to the practical method ; and first of all treat concerning the elixir, which by the conditions of the powers of balsam preserves the whole body from decay. Then concerning that which preserves the body by the potential power of salt. Thirdly, concerning the elixir of sweetness, which supports the body in its conservation. Fourthly, we will treat of the elixir which enters the human body by the powers of a quintessence. Fifthly, another shall be appended which is truly noble by the force of its great subtlety : for it resists all the enemies of Nature, by which resistance it never suffers the body to fall into disease. In place of a conclusion, we will add that elixir which, by the forces of its own proper nature, is endowed with similar conservations.

CONCERNING THE FIRST ELIXIR, THAT IS, OF BALSAM.

Take of the true and very best balsam, well known to us, one pound. Let this be put into a glass covered with a blind alembic, and together with it pour in two ounces of the quintessence of gold and one ounce and a half of the essence of the greater circulatum. Let all these be digested together with a slow fire, so that the vapours may ascend night and day. Afterwards let the fire be increased so that some drops may adhere, and may fall down, drop by drop, for two months. At length let them remain in horse dung for four months, so that they may have their digestion without intermission. When this has been done the elixir is finished. It must be understood that this balsam or elixir becomes a fermentation which is developed and mingled with the root of life, and has the power of ruling the life in a good essence, so that no nature can resist it. None otherwise than as arsenic overcomes Nature for evil does this elixir, on the other hand, overcome it for good, defending

the body. The dead body is kept safe by this odour so that it cannot putrefy when it is put in the tomb, and is covered up so that it may not evaporate. Much more do its own virtues remain in a living body, which we hope to have sufficiently explained in this place.

CONCERNING THE ELIXIR OF SALT, BY THE FORCE OF WHICH THE BODY IS
CONSERVED.

There is no less power and virtue in salt than in balsam, whereof we have spoken ; for this reason, that flesh is preserved from putrefaction by salt for days, years, and long periods ; and that in different ways, and one way more than another. On the same basis it would be possible to conserve and to preserve the body ; not because we mean to use salt in the precise way as with dead flesh, but from it should be compounded the elixir of salt, which penetrates materially the spirit of life, so that it lives by the salt as salted flesh does. For this elixir is so subtle that it can be brought to bear on the spirit of life. Thus these two meet closely in one conjunction, so that the one is tempered by the other to perfection, just in the same way as salt perfects certain food in point of taste, without which it could scarcely in any other way be brought to perfection in respect of unity. And it must be remarked that the elixir of salt is a fermentation in which exists a certain tincture whereby the whole body is penetrated. It is also an inconsumable thing, which is not consumed in the body by digestion along with natural things, but is fixed as glass in the fire, which does not at all perish in the process. This fixed elixir so fixes the body that it becomes permanent in life, none otherwise than as when a metal is fixed, in which case no damp afterwards, no corrosive, or anything of the kind, can injure it, or produce rust in it. So, then, it may be inferred from hence that the elixir is a fixed body, like gold, into which nothing impure can penetrate so as to hurt it. The practical preparation of this elixir of salt we will set down as follows :—

Take salt, prepared in the best possible way, very white and pure. Let this be placed in a pelican with so much dissolving water as may exceed six times its weight. Let them be digested together in horse dung for a month. Afterwards let the dissolving water be separated by distillation, and again poured on and separated as before. Let this be repeated until the salt is converted into an oil, to which let there be added an eighth part of the quintessence of gold. Let them be digested together in a pelican and in horse dung for four months, and afterwards circulated for a month. Let there be added another part of circulated wine ; and let them so remain in ascension for a month longer. When that time has elapsed you will have the elixir of salt, concerning which we have made for ourselves a memorial according to rule for the relief of our ancient days.

CONCERNING THE THIRD ELIXIR, NAMELY, OF SWEETNESS.

• We are certainly assured that bodies may be preserved from corruption by sweetnesses ; but by what forces this is done we set down in the books of

the Generations of Honey,* Sugar, Manna,† Thronus, and the like ; and we are unwilling to repeat it in this place on account of the writings of the ancients. We are able to transmute sweets into an elixir, the preparation of which rather conserves the living body in its conserved essence than a languishing body. For it is the property of all specific sweetnesses, that they are neither corrupted nor do they allow this to be corrupted, unless by contrary things they become liable to corruption, as out of honey and bread worms and ants are produced, as also out of sugar and thickened milk. Out of manna and water is produced a corruption like dung. Many more similar compositions may be made, by which the sweets pass into corruption. That this may be obviated, the following is our intention and experience, namely, that in this composition such a thing should be taken as will not prevent the sweetness from remaining in its proper essence, and such as may be without the corruption of other things. In this way, it has the virtues of a balsam for preserving the dead fleshly bodies of corpses or other things. A like sweetness is the balsam of the earth, and some others of the dew, because it derives its origin from them. Now, therefore, we will set down the elixir of thronus, since no sweetness can be compared therewith, and it contains more mysteries than could be believed, as we state in our treatise on Generations. By the preparation of this may be gathered the methods of preparing other sweetnesses. Let that of thronus be as follows :

Take as much thronus as you will, which place in a pelican, and set in the sun for digestion during two months, or, better still, for the whole summer. Afterwards let there be added a fourth part of the quintessence of gold, and so let them be circulated together for two months. Keep this. Although this method is short, nevertheless the elixir made by it is wonderful in the case of very aged persons.

* In the description of the essence and property of honey, it must first of all be understood that the prime matter of honey is the sweetness of the earth which resides in naturally growing things, and is extracted out of the property of the same by magnets. Hence you ought to gather that in every prime matter all that concerns growing things is collected, just as when several colours are combined one only appears though all are present. Similarly, also, the seed is the wood, the leaves, and the branches, not actually and in the present, but for the future, if it be brought forth and grow. So, also, in the prime matter of things there is a similar composite from which all growing things attract what they require. . . . Now ye must know that honey in its first matter is a resin of the earth, but resin is a gum not of all flowers and growing things, but of some only. Of some there is a resin produced, of others a sulphur and bitterness, and of yet others something else. That which grows in flowers and locusts is conceived with the form and appearance of honey. It does not yet dwell in its ultimate matter, being perfected by the Sun and the Moon. These two planets, however, can bring nothing to its final perfection without all the assistance of a celestial operation, which in the case of plants, etc., is the summer star. . . . Honey, therefore, is a terrene spirit at first, but if there be applied the influence of summer, it generates a corporal spirit, that is, the spirit which in the sun and moon was terrene becomes a corporal spirit. Bees can remove the same and take it away to their hives. This is the prime materialised matter, for honey and wax are one ; if they be separated like chalybs and iron, it is then called a separated corporal from a materialised matter. For as the alchemists, in a circulatory or pelican, circulate the spirit of wine, so, also, the summer star in natural growing things circulates liquid. So honey emerges from the earth into the materialised matter, which is the subject of the bees, and this materialised matter requires further perfecting. . . . There is a threefold kind of honey in all growing things—the lowest, middle, and topmost. It is the last which the bees seek, and they find it in the flowers, where it is purest, the gross being always relegated by Nature to the lowest place.—*De Medie*.

† Manna is the chiefest and most excellent nutriment and the marrow of locusts. It is the highest natural preparation of the star. The food of those bees that are fruitful in honey and wax is this manna and tereniabin.—*Ibid*.

CONCERNING THE FOURTH ELIXIR, WHICH IS THAT OF QUINTESSENCES.

Similarly quintessences can be reduced to an elixir, which, like balsam, conserves living as well as dead bodies. In this place we make very slender mention thereof, because it has been previously demonstrated in the process of quintessences. So, then, advancing a little farther, we will set down such things as we are mindful of as making for preservation and conservation. Afterwards out of the elixirs of those processes we will teach the composition of one elixir equally profitable to the body as the three preceding. It must be understood that this elixir of quintessences has in it a secret virtue which daily tends to restoration, and endeavours to renovate and restore the whole body. So, then, it produces something more than a mere conservation; for it also renovates, not, however, so perfectly as we have described above concerning quintessences and arcana, but with inferior force, because the conservation and the restoration of these cannot co-exist; still, by this method renovation is disposed towards conservation, in the following way:—

Take the quintessence of chelidony and of balm, each two ounces; of quintessence of gold and quintessence of mercury, each half an ounce; of the quintessence of saffron and of all the mirobolanes, each one ounce. Let all be mixed together and remain in digestion of the sun, enclosed in a blind alembic, for two months. Afterwards add one ounce and a half each of the quintessence of wine and the magistery of the same, and let them be again digested as above for a month. Then keep it as a treasure, not only for preservation, but also for restoration.

THE FIFTH ELIXIR IS CALLED THAT OF SUBTLETY.

Now, we have thought that we ought to set down something concerning the elixir of purity or of subtlety, which conserves by the force of its great purity, as is the case with the corrected oil of the philosophers. This suffers nothing which has been anointed with it to putrefy. The same effect is produced by the corrected laterine oil, and many others, whereof the property, however, is not to preserve from putrefaction, but they acquire this, and take it as their property, from the preparation and the labour bestowed, as distilled or corrected wine does not allow putrefaction any more than digested wine does, and this, moreover, is not changed by the fire.

The water of honey by its preparation resists putrefaction, so far as concerns sensible bodies; though the crude substance thereof does not produce this effect, but is itself liable to putrefaction. Wherefore we set down an elixir of subtlety, since, just as mercury itself, which is volatile, is fixed and becomes permanent through its own water, so the human body also is fixed into consistency and permanence. Now, although this may be done by many other methods than that which we here describe, nevertheless, we mention only those which are experimentally known to ourselves. Not that on this account we wish to detract in any way from the others; only we say that all these things

have not yet come to our knowledge and experience. The process of this elixir is as follows :—

Take olive oil, honey, and *vinum ardens*, one pound of each. Distil them all together after the manner of the alchemists, and do this thrice. Afterwards separate all the phlegm from the oils, which are distinguished by their many colours. Put all these oils into a pelican and add to them a third part of the quintessence of balm and of chelidony. Digest for a month. Afterwards keep it for use. No sensible or insensible body can resist it, on account of many causes and properties which we are unwilling to set down in this place.

THE SIXTH ELIXIR, WHICH IS THAT OF PROPRIETY.

Equally from natural objects a perfect elixir can be extracted, as out of myrrh, saffron, and alœepatic. As to what forces it proceeds from, that we set down in our treatise on the Generations thereof. Here we only put forth the process, leaving the origin, which we often treat of elsewhere.

Take of myrrh, of alœepaticus, and of saffron, each a quarter of a pound. Put these all together into a pelican, set them in sand, and let them ascend for a month. Then separate the oil from the dregs by means of an alembic without burning. This oil suffer to digest for a month, together with circulum of equal weight. Afterwards preserve it. In this elixir are all the virtues of the natural balsam, and, moreover, such a conservative virtue for old persons, more than it seems right to assign to it. For not only one period of life seems to proceed from it, but four, seven, or ten. It is scarcely possible to express its force and natural powers, but, so far as our judgment goes, it has been sufficiently elucidated, nor do we think it requires fuller explanation.

THE END OF THE EIGHTH BOOK OF THE ARCHIDOXIES FROM THE THEOPHRASTIA
OF THEOPHRASTUS PARACELUSUS CONCERNING ELIXIRS.

THE NINTH BOOK OF THE ARCHIDOXIES,

FROM THE THEOPHRASTIA OF PARACELSUS THE GREAT.

IN the preceeding books we have treated of internal diseases. Now we have to write of those which arise without, and to set down remedies for the same. Although we insert nothing in these books as to the origin of diseases, internal or external, we will lay down the origins of the medicaments against them, and afterwards the composition of similar remedies for external ailments. Some refer only to wounds, and by these remedies a wound can be healed in twenty-four hours. This is to be understood in the following manner :—A wound that has been inflicted requires nothing else save that it be again connected or conjoined, just as two planks are connected with glue. You should on no account allow wounds to lie open, but should endeavour to refill them with flesh. This is a matter for the rustic rather than for the physician. Consider that when the lips of the wound are joined, as the planks by glue, they are more than half healed. What has to be done by some kind of medicament is to bring together each side as well and as closely as possible. Thence it follows that when the lips touch, and the compression of the medicament aids Nature, the cure is complete. So that no wound, in which no fracture of a limb is involved, can be so bad as not to be cured in twenty-four hours. Bones cannot be connected in the same way as flesh can ; so in this place we do not speak of them. You can understand the matter by an example. When some limb is altogether cut through, before the veins are dead, and while they are still warm and fresh, let them, as soon as possible, be moistened with the medicament, the wound joined together and its two sides connected exactly like two sticks fastened together with glue. Thus they are healed and grow together. This the medicament effects, which Nature takes care of by its power of resiccation, and heals through that power whereof we have spoken above. But it should be understood that the medicament for wounds should not be incarnative, or mundificative, or attractive, because such medicaments draw out the putrid fluxes and cause much matter to be formed. Moreover, the opening or cavity of the wound has to be filled with flesh ; and this is done very slowly and, in consequence, with a good deal of peril, and without a magistery. This is also the case with old-standing ulcers, which in course of time have become loaded with discharges,

whence it happens that they can only be cured with many accidents and much difficulty, indeed, sometimes can never be cured at all. Wherefore, there is urgent need of some medicament for them, such as we have mentioned, which also with a certain force compresses in like manner the skin and the cavities.

In like manner, it must be remembered in the cure of ulcers that the formation of flesh is necessary, and this cannot be brought about by mere compression. As we said in the case of wounds, so in that of ulcers, fistulas, and the like, all these ailments have to be cured by the force of medicaments. We lay down, therefore, two fundamental rules for this flesh-forming—one being incarnative and the other exsiccative.

And now to speak of other malformations of the skin, such as cicatrices, morphea, serpigines, pannus, spots, leprosy, etc., including all diseases arising from the skin. For these we prescribe the following method of treatment. First we ordain that all the skin shall be stripped off, just as the flesh is stripped from a calf. Afterwards a new skin must be induced by the proper medicament. It will be inferred that the skin must be removed by some medicament, and a new, pure, immaculate skin generated by some other in colour, like that which follows, so that not much of the flesh and the humour may be attracted thither; and thus, as we have said, any spots are removed. The origin of such removal we have not from the beginning mentioned here, because it has been treated of elsewhere, and it does neither good nor harm to our intention and to our present teaching. There are other diseases also, such as cancers, buboes, and the like, which require their special medicament to remove their origin, and to purge away all their impurities. This is best effected by the attractive specific. Then there is need of consolidation, as we show in our treatise on fistulas and the like.

Ruptures of the bones and the like can only be consolidated with an attractive styptic; and this we need not discuss afresh, since we have spoken of it elsewhere. In like manner, many superfluous growths are found, as strumæ, glandular swellings, etc., which ought first to be emptied and afterwards cured.

We will, therefore, divide surgery into three parts or methods of cure: one referring to wounds, a second to ulcers, and a third to spots. Cancer we shall cure only with an attractive specific, and afterwards treat with those medicaments which we shall describe below.

A REMEDY FOR WOUNDS.

If it be necessary to have such a medicament as by its special nature shall connect the lips of wounds, as glue joins two boards, this must be accomplished by its very great dryness and its styptic qualities, which act on the flesh only in the following manner.

Take Samech which has been well burnt and calcined to whiteness. To this add a smaller quantity circulated. Afterwards distil, in order that a very dry *caput mortuum* may remain at the bottom, and that the whole glass may

glow. Then pour in fresh matter again, as before, and do this until the circulated substance comes out quite sweet, as it is in itself. Then allow it to be resolved by itself.

That which is so resolved becomes a remedy for a wound ; in fact, it might be called "A Balsam for a Wound," because in our common German speech balsam is the same as Baldtzusammen, that is, *mox conjunctum* (soon joined), and the term is not derived from the Latin idiom. We are unwilling to speak in detail as to the virtues of this medicament, but generally, we assert, it has such an effect on all wounds that with one single washing we have cured many hundreds of these in a manner which is not credible, judging by natural methods.

A REMEDY FOR ULCER.

Ulcers, it should be understood, must, in like manner, be compressed by a medicament with the addition of a generative virtue. The writings of the ancients are not worthy of our imitation ; they are malicious and wicked. What we have to consider may be expressed thus : "Compel them to come in ;" and we do it in the following way :

Take of the aforesaid balsam for wounds, and of balsam similarly made from rust—of Samech, for instance—one pound each. Mix these together, and add a pound and a half of oil of iron. When all these ingredients are mixed together, let them be placed on the ulcers, which must be washed daily, as shall seem expedient. Let a consolidative plaster be applied such as we prescribe for ulcers. Follow up your ligatures thus to the end, until a cure is effected. It must be noticed that the members have to be compressed with these ligatures, as we have pointed out at sufficient length elsewhere. Let this suffice on the subject of ulcers.

A REMEDY AGAINST SPOTS.

We have sufficiently explained the removal of the skin by a corrosive specific, and together therewith the cautery—how it is to be produced and adapted for use. After the skin has been removed, and with it the spot, the cure is as follows :—

Take the above-mentioned balsam for ulcers, and add to this washed turpentine, oil of worms, and oil of eggs, equal parts of each. With this wash all the flesh when it has been stripped of its skin. After this treatment nothing more is required. The property of such a medicament is that it induces a new colour along with the new skin, and a natural hardness, so that it can be no longer defaced by the previous spots.

Although it is true that such spots can be removed by many waters, as for instance, the water of bean flowers, of sigillum Mariæ and the like, as well as by human dung, still these do not come within our scope, since their purpose is not uniformly compassed, and the spots are much more effectually removed by the method we have pointed out.

Nor let any be surprised that we set down so few and such concise remedies for the whole range of surgery, and do not follow those surgical methods which the ancients have described and the moderns have adopted, like them, for their own uses. For by that method of medicine, so long as we followed it, we could never find or perceive anything well founded and certain. But we have used our own remedies according to our experience, and in this way we have found out the best medicaments in the whole of surgery, and have comprised them here in three paragraphs only.

And although, no doubt, other diseases can be found besides those which we have mentioned here, such as bullæ, alopecia, etc., they are, nevertheless, comprised under spots and scars, and must be cured according to the treatment prescribed for them, for many causes which are not here brought forward, but left to our own experience; we had not forgotten them. We have had hundreds and thousands of these wounds passing through our hands, and when we saw them cured so quickly and so effectually by these remedies, why should we imitate the tedious and empty processes of the ancients, forgetting those nearest to ourselves? Why, then, we use mundificatives, lotions, sutures, ligatures, corrosives, and the like—which are all effectual against wounds, and destroy them most thoroughly—we have given the cause of all this at sufficient length in our book on wounds. Why do we use different plasters, ointments, unguents, and the like, even in the cure of ulcers? Why ligations, anointings, and the like? Well, to go through all this would be tedious since it only leads us to enter on a prolix, intricate, and foolish course, where we seek mere accidents without finding anything. It is a mere superstition to pin one's faith to antiquity. For in surgery to debate as to the nature of fistula, cancer, or ulcer, or the like, and then to assign to each its special remedy is mere vain talk and waste of writing, which will not repay the outlay in paper; when all can be thoroughly cured and removed by one single remedy—as, for example, external leprosy, alopecia, serpigo, spots, and the like, pustules, the itch, and scars, which can all be thoroughly removed by one medicament and one method of practice, as can also artetic wounds by spears, weapons and bullets. With these few words we would close our treatise on surgery and bring it to an end.

THE KEY OF THEOPHRASTUS PARACELSUS
BOMBAST VON HOHENHEIM,
OR
THE TENTH BOOK OF THE ARCHIDOXIES,*
From a German manuscript codex of great antiquity.

WE had decided to write our Archidoxies, as also other books concerning Medicine, with especial clearness and lucidity, inasmuch as all the highest medical arcana cannot be prepared without true chemical encheiries (undertakings), nor yet can they be speedily exalted in grade, and it is notorious that almost the whole world, through its devotion to riches and earthly wealth, zealously pursues tinctures only and transmutations of metals in order to amass the greatest possible amount of gold and silver, to obtain which they stand in the greatest need of chemical preparations, which also they would like to find in concise form and easily in our Archidoxies. Notwithstanding, it was in consideration of the very great evil which might thence arise, and at the same time to oppose their malice, that we have concealed our doctrine, according to ancient philosophic method and cabalistic practice. I shew this, my doctrine, clearly to the upright and the perfect, yet leave it none the less dark to contemptuous and impious men.

Our writing according to the method of cabalistic philosophy is not due only to the lachrymistæ who gape after gold, but also to the majority of the

* The following editorial preface introduces the tenth book of the Archidoxies in the Geneva folio :—Behold, gentle reader, the tenth book of the Archidoxies, which has been long demanded by the wishes of all lovers of chemistry, but till now has not been included among the works of Paracelsus, because, being in the possession of few, it has been held among secret things, as a most precious treasure replete with great arcana. Once, indeed, it was printed in the vernacular tongue of the author at Mentz, but the envy of certain persons, who gazed with a fierce eye at the revelation of the mysteries therein revealed, suppressed the majority of the copies, and compelled very many persons, studious in chemistry and in the writings of Theophrastus, to make transcripts for themselves. We, in order to consult the public good, have thought proper to add to the nine books previously edited, this tenth book, rendered from German into Latin, by one who is skilful in both languages, so that those who are studious in this science may be saved from transcribing, and the number of the Archidoxies may be complete. The author has denied in several places of this work that he would write the said book, lest he cast pearls before swine, and lest these arcana should come to the knowledge of the unworthy and the impious, but he changed his mind at the persuasion and prayers of his friends, who impartially weighed the disadvantages of giving their mysteries to the public with the advantages which could be derived to the human race by their communication. The latter seemed to preponderate by far ; consequently, they at last obtained this concession, that he would entrust the work to certain of his familiar acquaintances. It appears from the preface, which he prefixed, with how great an oath he bound each and every person who should obtain an exemplar that he should guard it with the greatest secrecy as a treasure of Nature and Art, and should have nothing to do with avaricious chemists, or with the ambitious and envious followers of Galen. Nor did the author forbid the publication without a reason ; he rightly rejoiced in the title of a key, whereby the doors of the preceding books are opened, and the bars removed, so that

followers of Galen and of Avicenna. The latter would very gladly avail themselves of our medicaments and arcana to repel chronic diseases, which otherwise, using the method of Galen, would be incurable—they would be glad, I say, to use them if they were able to find a short, sure, and easy method of preparing and administering the same, without renouncing the error of the heathen and false Christians, and providing also they could ascribe the honour, fame, and riches which they thence would obtain to the writings of Galen only and to themselves, out of envy ignoring my name and glorious achievements, but claiming the same for their own writings, keeping secret the fact that the whole art proceeds from me. For they themselves, being old doctors, do not wish to appear as if, at their advanced age, they were reduced to be disciples of an unpolished Swiss and younger apostle, and to make public profession of this circumstance, seeing that all detest him for subverting their principles. On account of this, their laziness, ambition, envy, and hatred, as also ingratitude, I have taught and philosophised in my Archidoxies, and in my other books, in the aforesaid manner, as has pleased me, which I will justify before God and my conscience at the last day, in order that those who desire to arrive at the fundamental principle of my Archidoxies, may publicly call themselves Theophrastics, acknowledge me as their monarch, follow me in their labours, frequent my school, and, *vice versa*, discard their old fathers. But although they may chance to secretly obtain some process from a miserable and simple rustic, or from elsewhere, they will not, however, understand the arcana of administering my medicaments, and will thence derive more shame than honour. Wherefore, although it has been shewn to them by Anicula, that the young of swallows, their cranium, and glue of the oak, are a sure remedy for the falling sickness, which is the case, yet even by this you will not effect a cure. Whence is this, and what is the cause? It is for this reason, namely, that you do not understand the mode of administering them and the great Ilech, nor will you learn from Galen unless you shall have frequented my school and learned philosophy according to Christ and not after Mammon.

an entrance for all is left open to the sacred and more secret penetralia of the divine chemical art. It is, however, by no means to be thought that anyone who has only slightly occupied himself with the school of Vulcan, who has seen nothing of importance, save obscurely, in this most noble art, or has tasted of its fruits for the first time, should fancy that the things herein contained are for his use, or should deceive himself with a false opinion, persuading himself with excessive credulity that they are intended for him. Let him not apply himself to putting in practice the prescribed formulas of the recipes, unless he wishes to be wise too late, like the Phrygians. No one, indeed, should suppose that food is here set before him which is made all ready for his palate; he who would obtain the kernel must first crack the nut, and then at length he will taste the sweetest fruits of chemistry. Not a raw recruit but a veteran soldier, not one slightly tinged but he who is completely permeated with chemical undertakings, not soiled by scholastic dust but by the smoke of coals and cinders, not accustomed to arguments which savour more of vain subtlety than of real usefulness, but acquainted with true and sound philosophy—those, in a word, who are most skilled in chemical practice—let such gird themselves to the execution of these matters. But let the profane crowd retire as far as possible. If any one doubt that this is the genuine production of the author, the peculiar style and mode of writing affected by Theophrastus should remove his difficulty, while the promises made in the preceding books and here fulfilled should place the matter beyond question. Nor let anyone be surprised that the author declared he would keep the tenth book locked up in his heart, or, to use his own expression, he would retain it in his occiput, whereas the prayers of his friends persuaded him to change his mind. Do you, therefore, gentle reader, being assured by this lawful witness of Theophrastus, enjoy the labour and work of so great a man, and accept with grateful mind our zeal in acquiring and publishing the treatises of our great doctor.—F. B.

Since, therefore, the glue of the oak does not fulfil your expectations, you imagine that it is too weak by itself, wherefore you correct it with other herbs, and make a great composition of sixty or more ingredients, which you digest and purge of dross. You do not, however, expel the disease even by this means, since you do not understand either simples or compounds, nor yet the method of administering them.

Had such persons, indeed, accepted my doctrine in a grateful manner, and had they cast out of doors the red bonnet, or fool's cap, received from Galen, and at the same time submitted themselves to my discipline, I would have put on them a better cap, that of Fortunatus himself, wherein is concealed more art than in all other writings. So, in the presence of none would they need to doff it, but, just as Fortunatus cured the king's daughter, might they cure chronic diseases.

But they are unworthy of better things, and are to be blamed for their mischief, since they are completely ignorant of the great secrets or the mysteries of the sanctuary of Nature, and as much concerning the celestial treasure, which, in these last days of grace, has been freely revealed to me from on high, which, indeed, make a true Adam and paradoxical physician, according to the days of Enoch, in the intellects of a new generation. But these ignorant persons boastfully refuse it. Wherefore, I pity them not, but leave them in their own ignorance.

There is no doubt, that in that very great multitude of men, mentioned in the fourth book of Esdras, the Lord God will reserve for Himself a small number of certain elect persons, who will desire faithfully to pursue my Theophrastic doctrine, to love the truth, and help their neighbours in their destitution and diseases, out of a true and unfeigned Christian love, not for the sake of filthy lucre or ambition, but for pure love of God; and also that out of Nature's light the marvels of God may manifestly appear. At the same time, all are not born under such a constellation as to be able to perceive the sense of our books, however diligently they study, without divine aid. It is on account, therefore, of their sincere intention and love, and that they may understand our excellent writings and arcana of medicines, and may arrive at a blessed end; and also, lest the most precious secret of Nature, divinely revealed to me should altogether be buried with me; that we shall write this book, therein shewing in full light the principle of our Archidoxies and universals, and shall teach the preparation of singular arcana, the quintessence, prime entities, and magisteries.

But, lest this clear light itself should reach the ungrateful and unworthy, I exhort all who have a supply of this book, I bind you by the very great sacrament and oath which you have given to God in baptism, that you shall hide all these things secretly and as the noblest treasure of Nature, lest you admit any unworthy person. Do you rather venerate that treasure as a most blessed talent, and help your neighbour in adversity.

May God grant benediction and favour, that whosoever partakes thereof may rightly use it!

THE TENTH BOOK OF THE ARCHIDOXIES

OF THEOPHRASTUS.

Comprised in Ten Separate Chapters.

CHAPTER I.

CONCERNING THE SEPARATIONS OF THE ELEMENTS.

IN all things four elements are commingled one with the other, but in each thing one of these four is perfect and fixed. That is the predestinated element in which dwells the quintessence, the virtue, and the quality ; but the other elements are imperfect, and each an element only, in which is no more virtue than in any other single element. These are all, as it were, the abode of the true, fixed, and perfect element ; whence, also, they are called qualified things. Now, the fact is that some persons think the body to be a true element and quality, and that it in some way displays the virtue of a true element. This is because the body, like the three imperfect elements, is tinged and qualified, each according to its own nature, by the fixed, perfect, and predestinated element, as by its indwelling inhabitant.

For example, in some bodies the element of water predominates, in others that of fire excels, in some earth, and in others, again, air. If, then, the predestinated element has to be separated, it is necessary that the house be broken up ; and this breaking up or dissolution of the house is brought about in divers ways, as is clearly said in my *Metamorphosis* concerning the death of things. If the house is dissolved by strong waters, by calcinations, and the like, care must be taken that what is dissolved from that which is fixed must be separated by common distillations. For then the body of the quintessence passes over like phlegm, but the fixed element remains at the bottom. But since we are little concerned about the house or the dwelling, it is necessary to find it in a fixed, predestinated element, and thence to extract it after the mode of a quintessence, so that that fixed element may be dissolved by other stronger artifices than calcinations, sublimations, and so on, and the pure separated from the impure. The pure is the quintessence ; but the impure is the superfluous tartar, which is mixed up with every generation, concerning which see the book on *Tartareous Diseases*.

But since my theory is given at length in other books of *Archidoxies*, of *Metamorphosis*, and the *Generations of the Paramirum*, I am on that account

unwilling to cause any weariness, but will briefly point out the practical method. Prepare a metal according to the process in the book on the Death of Things ; reduce it to a liquid substance according to the method which we have taught in the book on the Separation of the Elements ; separate by continual cohobations and putrefactions the three imperfect elements ; and then the fixed element, of whatever kind it may be, remains at the bottom, and in this way these four elements are correctly separated.

CHAPTER II.

CONCERNING THE QUINTESSENCE.

Abstract the volatile portion, which passes over in the separation of the elements, several times from that which is fixed, so that the quintessence, which partly was raised with the phlegm, may be again conjoined. Take the fixed element that remained after the separation of the three imperfect elements, of whatsoever sort it may be, then dissolve it in its proper water, each according to its nature, as we have said in the Archidoxies concerning the Quintessence. Keep it in the highest state of putrefaction, distil it by cohobation, and the rest by descent. Putrefy still a little, distil, and join all. Then distil it in a *Balneum Mariæ*, even to oiliness. Then break it up with the subtle spirit of wine by boiling ; the impure will sink to the bottom and the pure will float on the surface. Separate this by means of a tritorium, and, in order that it may at the same time lose the nature of the aqua fortis, pour on a greater quantity of the spirit of wine, which frequently abstract until the quintessence turns out sweet. Lastly, wash it in common cold water. In the same way, it must be understood of marchasites, stones, resins, herbs, flesh, watery and fixed substances, that first of all, according to the teaching of the book on Separations, the three imperfect elements shall be separated ; and that afterwards measures shall be taken with the fixed element according to the instruction given in the book on the Quintessence.

By eating or corroding water, understand *acetum* mixed with spirit of wine, and that which being frequently abstracted from the spirit of salt nitre becomes *acetum*. In this the fixed elements of marchasites should be dissolved, purified, and elevated by means of an alembic ; then, lastly, corrupted by spirit of wine, so that the impure may sink to the bottom, and separate itself from the pure.

With regard to the essence of gems, by radicated *acetum*, understand that you have a sharp *acetum* corrected with bricks, a sufficient number of times from the tartarised matrix of *acetum*. Dissolve therein the gems, which have been first calcined by sulphur, putrefy, and then separate the pure from the impure by breaking them up with the spirit of wine.

From fruits, herbs, and roots the essence is easily perfected, so that you dissolve the imperfect elements by the highest secret putrefaction of extreme heat. Then putrefy in dung, drive out by descent all that can go out, and

from thence abstract the injurious imperfect body of the moisture by distillation in a bath. Thereupon there will remain at the bottom the predestinated element. Separate this from the impure residuum by corruption with its proper spirit, or with spirit of wine. Abstract this, and you will have the pure quintessence.

The extraction of the quintessence from salts (for example, vitriol, common salt, salt nitre, antimony, etc.) is accomplished in this way : cohobate them frequently with their own proper liquid, or with water, putrefy with phlegm, and abstract the body from thence after the manner of phlegm, even to the fixed spirit. This dissolve in water, or its own proper liquid, and separate in heat with spirit of wine, the pure from the impure.

CHAPTER III.

CONCERNING MAGISTERIES.

Magisteries are deservedly to be called mysteries, on account of the great tinctures which they display in an appropriate body, such as *acetum* or wine ; and as we mention elsewhere, so here also we teach that the one thing to be considered is with reference to the agreements which are adapted to the extraction of magisteries. For if you take distilled *acetum* you must not tinge water but wine into *acetum* if, indeed, the tincture or the *acetum* was made from wine. If you have well and rightly understood the magistry of *acetum*, you will also sufficiently understand the book of Magisteries. In the magistry of *acetum* it is to be understood that from corrupted wine, by a fermentation which is naturally adapted to it—for example, by tartar—you make, first of all, the tincture, that is, the *acetum*. Then with a small quantity of this same *acetum*, you shall thoroughly tinge a large body of wine, previously corrupted and putrefied, in a short time, into the best *acetum*. If, therefore, you purpose to convert metals into a magistry, and altogether to tinge the whole body into an essence, you must take a principal and an open metal to which all the others in Nature are cognate. That you must corrupt in its own matrix which has been placed in water, and is called the Mother of all Metals, purge it from its superfluous elements and reduce it to its primal liquid entity, that is, the sharpest metallic *acetum*. As often as all the metals are digested therein, they are of necessity transmuted by it into *acetum*, that is to say, into a quintessence. But as wine must be already in some way previously corrupted, if, indeed, good *acetum* is to be quickly prepared from it, so, in like manner, metallic bodies, too, must be previously corrupted, or putrefied and mortified, as is said in the Metamorphosis concerning the Death of Things ; and then they are truly called potable.

In this manner, also, the magisteries of marchasites are to be prepared, in which almost more virtue is found than in metals, just as the other magisteries are prepared ; and by our dissolving water is to be understood the water of salt.

But the magistery from gems is that you first of all calcine them with sulphur for four hours, then reverberate them, and afterwards burn them with nitre. Then boil them with simple water eight hours, filter, coagulate, and extract them with spirit of wine.

The magistery from gums and resins, for example, from turpentine and amber, is made after the following manner : First boil in spirit of wine, then corrupt in fresh spirit of wine mixed with a dissolving water, of salt, for instance, then distil from it.

The magistery of herbs, in like manner, as also of all spices and fruits, is thus accomplished. First of all, let them be fermented like must. Then extract the spirit, as from the dregs of wine. In that spirit digest the putrefied herb, frequently renewing it with fresh herbs until the spirit shall have become quadrupled in quantity. But since frequent mention is made in our Archidoxies of First Entities, and since the chief foundation is hidden in them, we will here briefly add the preparation of our water of circulated salt, which is here required, but was omitted.

THE PREPARATION OF CIRCULATED SALT.

In our other books we have sufficiently shewn and made clear that the true element is water, or the sea, as if the true mother of all metals, and from its primal essence it received the sperm of the three principles, of which none before me has made any mention, only they built up their principles from sulphur and mercury, neglecting all mention of the third principle, that is to say, of salt which lies in the sea. But, having been taught by experience, I have in my other books touched upon the fact that the first entity or quint-essence of the element of water is the centre of metals and minerals ; and I have elsewhere added that every fruit must die in that wherein is its life, so that it may afterwards acquire a new and better life, and thus by laying aside the old body be brought back to the first entity. Wherefore we will add here the extraction of the centre of the water, in which metals ought to lose their body.

Take first the true element of water, or, in place of it, some other salt not yet boiled to dryness, or even purified salt of a gem. Pour two parts of water mixed with a little radish juice ; putrefy in an accurate digestion, the longer the better. Afterwards let it congeal ; putrefy again for a month, and then distil by a retort. Urge the residuum with a strong fire, so that it may melt. Reverberate it in a retort over a continuous fire. Dissolve it on marble. Pour upon it the water that flows from it, and putrefy it again. Distil it once more even to oiliness ; mix it with spirit of wine, and the impure will fall to the bottom, which separate, but the pure will be crystallised in the cold. Pour the distilled matter on it again, and cohobate until a fixed oil remains in the bottom, and nothing sweet afterwards passes over. Digest for a month ; and then distil until the arcanum of the salt passes over through the alembic. Do not grudge this protracted labour, for this is the third part

of all the arcana which are hidden in metals and minerals, and without it nothing fruitful, nothing perfect, can be brought about.

But although there are several ways for extracting the first entity of salt, this is the most useful and expeditious; and after this is that other way which we have mentioned as the elixir of salt, namely, that fresh salt being mixed with dissolving water, which is the distilled spirit of salt, should be putrefied and distilled until the whole substance of the salt shall be dissolved and reduced to a perpetual oiliness, the body being removed thence as phlegm. In this way it is taught that the arcanum or magistery of vitriol and tartar, and of all other salts, is to be prepared.

CHAPTER IV.

CONCERNING FIRST ENTITIES; AND PRIMARILY CONCERNING THE EXTRACTION OF THE QUINTESSENCE OR FIRST ENTITY OF COMMON MERCURY.

If the common mercury is to be reduced into its first liquid entity, then it must be previously mortified and brought out from its own proper form. That is done by various sublimations with vitriol and common salt, so that at last it becomes like fixed crystal. Then dissolve it in its own matrix, that is to say, in the first entity of salt. Putrefy for a month; corrupt with fresh arcanum of salt, that the impure part of it may be precipitated to the bottom, but the pure turned into crystals. Sublimate the stones in a closed reverberatory; when it is sublimated, always invert it until it grows to redness. Extract this sublimate with spirit of wine rectified to the highest point. Separate the spirit of wine, dissolve what remains upon marble, and digest it for a month. Pour on fresh spirit of wine, digest for a time, and distil it. Then the arcanum of the first entity of mercury will pass over in a liquid substance, which is called by the philosophers a very sharp metallic *acetum*; and in our Archidoxies the Greater Circulatum. And the same is to be understood concerning antimony, gems, and herbs.

CHAPTER V.

CONCERNING ARCANA.

What we say concerning arcana is to be thus received: that they are nothing else than a graduated quintessence or first entity. And under the first arcanum of the primal matter, we wish to be understood the first material or first essence of the limbus of man. Also we understand the first matter of the mercury of salt, for that is most closely conformed. Wherefore, according to the process of the first entity, you will reduce all to a liquid substance, then join it again with a monarchy, as if with the living unreduced body of that thing, and so promote it for distillation.

What we think concerning the arcanum of the Stone shall be made clear in the succeeding practice. But by the arcanum of the *Mercurius Vita* we in-

tend a living fire, so that the mercury of common life shall be essentialised with the quintessence of salt and be vitalised with the first ens of antimony, as if by a celestial life. But the arcanum of the tincture unfolds itself, wherefore we omit it here.

CHAPTER VI.

CONCERNING THE ARCANUM OF THE STONE, OR OF THE HEAVEN OF THE METALS.

What we have in one place and another theoretically advanced concerning the arcanum of the stone we here pass over; and I say that this arcanum must not be sought in rust, which many have wrongly named "flowers," but in the mercury of antimony. And this mercury of antimony, when it is brought to its perfection, is none other than the heaven of the metals, because its virtue is always vital, and nothing else than a perfect, pure quintessence. Therefore, even in the Deluge no virtue or efficacy was taken away from it; for the heaven, as though it were life itself, can be destroyed by no lesser thing. Its preparation I briefly subjoin here:—

Take antimony, purge it from dross and realgar, in an iron vessel, until the coagulated mercury of the antimony appears white and beautiful. And although it is an element of mercury, and has in itself a true, hidden life, yet all these things are potentially but not actively present.

If, however, you wish to bring it down to activity, it is necessary that you excite that life with what is like itself, such as living fire or metallic *acetum*, with which fire many philosophers have proceeded in different ways. Since, however, they agreed fundamentally, they all arrived at the destined end. One, with much toil, extracted a quintessence out of the coagulated mercury, and led down the mercury of the antimony therewith into activity. Others have discerned that a uniform essence exists in different mineral substances, as, for example, in fixed sulphur of vitriol, in magnetic stone, and thence extracted the same quintessence, and with that same have ripened their mercury or heaven, or have brought it into activity. And since they extracted their quintessence from a stony material, on that account they called that magistery a stone; and, indeed, their opinion is right. Nevertheless, that fire, or corporal life, is found much more perfectly and sublimely in common mercury, which is testified plainly by its flowing, namely, that there is hidden in it a consummate fire and a celestial life. Whoever, therefore, desires to bring his metallic heaven to the highest grade, and to lead it to activity, ought first of all to extract out of the corporal life (the common mercury) the first liquid entity (as if celestial fire), the quintessence of the sun and a very sharp metallic *acetum*, by solution with its mother, that is, to mix it with the arcanum of salt, and with the stomach of Anthion, that is, with the spirit of vitriol, and he should dissolve therein the coagulated mercury of antimony, should digest it, and, lastly, reduce it to crystals, that it may be like a yellowish crystal, concerning which we have made mention in our manual.

CHAPTER VII.

CONCERNING THE ARCANUM OF THE MERCURIUS VITÆ.

Just as out of herbs, as the vine, a temperate essence is extracted, by which from every kind of herb or root their own essence may be drawn, even so that the mercury of wine does not shew its own peculiar nature, but the nature of that with which it is essentialised, in the same way is it with metals and minerals, for a like mercurius or spirit is extracted from the open and middle metal (mercurius), if the essence be extracted out of the perfect metals with that same spirit. Then, afterwards, that essentialised mercury is joined to the celestial balsam of the quintessence in a closed reverberatory, by means whereof it acquires life, and is on that account called the *Mercurius Vitæ*. The virtues whereof seem to us admirable, and must be kept silent and occult by us, lest they should be despised.

CHAPTER VIII.

CONCERNING THE GREAT COMPOSITION, BEING THE CHIEF OF OUR SECRETS IN MEDICINE.

In our Paramirical writings it is made sufficiently clear, that is to say, so far as it is necessary for a philosopher or a physician, if it be necessary that the whole human body, not only in its corporeal and earthly mass, but in its celestial balsamic part, should be preserved from and healed of all heavenly and earthly diseases—it is made clear, we say, that in the work of healing such a composition should be made as does not consist of a number of ingredients. For example, if any one should think that by pouring together water and wine a real mixture ensues, this is false, because one part can be separated from the other without injury to either, which is not the case in our great composition. For here is made a uniform and concordant mixture, so that two things, distinct in nature and properties, are united, and neither can be separated from the other without injury on account of their remarkable agreement, as occurs also in the male and female semen. If, therefore, such a composition is to be prepared conformable in its condition to man, through the due proportion of heavenly and earthly things, it is fitting to consider the name of the microcosm and that man is a little world. Wherefore if he is to be cured universally of all diseases, that must necessarily be done by his like. Concerning which Hermes Trismegistus said that it was necessary for him who intends to make this composition to create a new world; and as God created the heaven and the earth, so also the physician must form, separate, and prepare a medicinal world. And in order that he might point out to his disciples with sufficient fidelity from what thing or material this composition should be made, and how, also, the concordances of heavenly virtues are discovered by us in the Valley of the Shadows, he wisely and truly adds, a little after, that what is beneath is as that which is above,

and that the inferior and the superior stand related to one another as man and wife ; and for the better understanding hereof he teaches that the heaven of itself agrees with the element of water, because it had its first spermatic matter in the water, and that the element of earth, coagulated and changed from its spirituality into corporeality and earthiness, is like the planets and the other stars, which also obtained their spermatic matter by their origin in heaven, and thence by separation passed over or were changed from a heavenly pellucid nature into a dense coagulated body.

In the primal creation, things above and things below, the upper and lower heaven, or water, the upper coagulated nature, or stars, and the lower terrestrial nature, were all mixed together and made one thing. But God separated the subtle from the dense, so that out of one water two were produced. The upper water was subtle, and to be considered as of the masculine sex, compared with the lower, denser, feminine water. But as God divided and separated still further the upper water, so that the subtle, airy part should be appointed for the stars, that thus the celestial bodies or stars may stand related to heaven as sons to a father, so, by parity of reasoning, has God appointed, together with this which is above, a separation also in the denser bodies, that is to say, in the female waters in the Valley of Shadows, and divided them into two parts. The seventh, clearer part He called water, and the other six dried parts, or coagulated portion, He called earth, which comprises in itself all the special fruits and planets which had their prime origin in water as their heaven ; as metals, minerals, and gems, which, in respect of the water, are reckoned as daughters in respect of a mother. So the superior heaven has a nature and properties like its own in its feminine nature, that is to say, in the inferior heaven or water ; and the superior terrestrial bodies, or stars, like the sons of a father—that is, heaven—have a similar agreement with and relation to their sisters, the earthly bodies. And just as by close relationship the higher heavenly bodies or stars are joined to their father, the heaven, so too, by a like and equal relationship, the lower earthly minerals and metals are connected with their heaven, the water, as with a mother. Whence the truth of the sentiment of Hermes is evident, which we commend to our sons of the doctrine in these words: that indeed the whole microcosm, so far as relates to the comprehensible mass, and to the living, moving, corporeal, generating spirit, ought to be collected and composed of these lower elements and dark waters which are their noblest essences. But as to the mental arcana, wherein consists the sound mind in a sound body, these should be attracted from the superior, heavenly waters, and their astral influences spiritually, in a mental manner, through the mind of the image of the Gamahela ; or, if these are not pleasing to us, they should be declined, as in our books on *A Long Life* we point out these things at length and with clearness. Since, both in other places and especially in the *Paramira*, we have included the theory of this grand composition, we pause at these words and add the practical method, namely, how the inferior world or heaven should be united

and conjoined with its earth, or the sun with its heaven. But because we have premised already the preparation of the heaven and have taught it under the arcanum of the stone, we omit it here. And since of itself alone, like the male semen, it can bring no advantage in the body of man, but only restores the celestial parts, that is to say, the radical moisture, or balsam of life, therefore it ought to be joined to its terrestrial corporeal mass, and be brought into concord therewith, that so also the carnal element in man may be refreshed and restored, and not only one member, but the whole body, be restored to soundness. Therefore let a corporeal mass be taken, which in nature is equal to the sun above, and embraces in itself the properties of all the stars, since it is impossible for all the subterranean stars and the coagulated bodies to be included together in the number of the ingredients. This coagulated essence of heaven, that is, the sun, in its essence and temperate element, is so elevated and graduated that it also fixes with itself its own habitation, that is, the superfluous elements, that it cannot be destroyed by any element, and the inhabitant or corporal balsam hidden in it is able to remain eternal. If, therefore, as was before said, the whole microcosm is to be healed, then the corporeal coagulated balsam should be united with the spiritual celestial balsam and the discord between the elements of the sun should be reconciled, so that the superfluous elements may be separated from the fixed predestinated element and altogether die out and leave the fixed element, as their inhabitant, alone. If this dead body of the sun be afterwards cleansed from superfluities and brought into a volatile spiritual nature, then is perfected the true, sublimated, and resolved mercury of the sun, not that horizontal which many try to prepare with common mercury and sal ammoniac.

CHAPTER IX.

CONCERNING THE CORPORAL BALSAM OR MERCURY OF THE SUN.

In order that you may excite discord among the elements of the sun, or the habitation of gold, you must draw out Sol in a strong solution, by means of the phlegmatic fire, or quintessence of tartar, into its proper heat. By this method the element of air in Sol is very greatly increased, and by the air approaching the fixed element of the sun, as being its proper fire, it is so graduated that it can conquer and destroy the habitation of the other three. Putrefy this destruction with the quintessence of tartar and with struthio. Convert it by a proper sublimation into the matter of mercury; and then the fixed mercurial element of Sol will remain alone without any habitation. But since this is still mixed with its superfluous tartar, therefore this must be removed from it. Dissolve it, then, in the circulated water of salt, corrupt it, and the tartar will be precipitated. Sublime the pure in a closed reverberatory of Athanor, dissolve it upon marble, and putrefy it. Thus is the mercury sublimated, graduated, and dissolved into the first matter of Sol, and is prepared in the highest degree.

CHAPTER X.

CONCERNING THE COMPOSITION OF THE SPIRITUAL BALSAM, AND OF THE
BALSAM OF THE COAGULATED BODY.

As is remarked in the Manual, this composition is made in the philosophers' egg. And so we put an end to this great work, in the name of God, to His praise and glory.

HERE END THE TEN BOOKS OF THE ARCHIDOXIES.

THE MANUAL OR TREATISE CONCERNING THE MEDICINAL PHILOSOPHIC STONE.

PREFACE TO THE READER.

READER. God, indeed, permitted the true spirit of Medicine to be brought into operation by Machaon, Podalirius, Hippocrates, and others, so that the true medicine, which shines forth from the clouds (where it cannot be fully and plainly known), should come forth into the light of day, and be manifested to mankind. By that same operation, too, He placed His prohibition on the spirit of darkness, so that it should not altogether overwhelm and extinguish the light of Nature, and that the mighty gifts of God, which lie concealed in Arcana, Quintessences, Magisteries, and Elixirs, should not be altogether unknown. God, therefore, has ordained certain means whereby, moreover, through the ministration of good spirits, research into such arcana and mysteries should be implanted in man, just as certain men have received angelic natures from that heaven which is familiarly acquainted with the angels. Such men have been able afterwards, as being endowed with a perfect intelligence of Nature, to search into Nature and her daily course more profoundly than other people, to compare the pure with the impure, to separate one from the other, and to adapt and modify what is pure in a manner that seems impossible to others. These, as being true and natural physicians, know how to supplement Nature, and by their arts to bring her to perfection. It must be, therefore, that all imperfect and diabolical operations give way before them, as a lie always gives way to what is true and perfect. We must, I assert, speak the plain truth if we would arrive at any happy result. And if it be lawful to grasp the truth by any means, no man ought to be ashamed to seek it in any quarter.

Let none, then, take it in bad part of me, that I myself have loved this truth and pursued it. I was forced to seek it, for it did not seek me. If a man wants to see a foreign city it is no good for him to stay at home with his head on his pillow. He must not roast pears at the fire, for in that way he will never become a doctor. No one will ever get to be a renowned cosmographer by sitting at table. No chiromancist ever became so in his chamber, or geomancist in his cell. So neither can we arrive at the true medicine save by investigation. God makes the true physician, but not without

pains on man's own part. He says: "Thou shalt eat the labour of thy hands, and it shall be well with thee." Since, therefore, seeing goes before truth, and the things which are perceived by sight gladden or terrify the heart, I shall not esteem it toilsome, or deem it beneath my dignity, to travel about and join myself to such men as fools despise, in order that I may discover what lies hid in the limbo of earth, and that I may fulfil the duty of a true physician, by exhibiting Medicine according to the ordinance of God and for my neighbour's good; and that it may not do more harm than good. An easy-going man will not take this trouble. Let him who will, then, sit in his cushioned chair. I like to travel about, to see and examine whatever God and the opportunity allow. For the sake of sincere readers, however, who desire to learn, and love the light of Nature, I have written the present treatise in order that they may know the foundation of my true medicine, pass by the absurdities of pseudo-physicians, and be able, in some degree, at least, take my part against them. For those distinguished fellows, of course, know all these things beforehand, and the asinine doctor has them all in his wallet, only he is never able to get at them. For a man must be a good alchemist who wants to understand this treatise, one who is not afraid of the coals, and whom daily smoke does not disgust.* Let those who will take pleasure in these matters, I force myself upon nobody. This alone, I say, the thing will not prove infructuous, however much my enemies, the sham doctors, blame and accuse me.

* I praise alchemy, which compounds secret medicines, whereby all hopeless maladies are cured. They who are ignorant of this deserve neither to be called chemists nor physicians. For these remedies lie either in the power of the alchemists or in that of the physicians. If they reside with the latter, the former are ignorant of them. If with the former, the latter have not learnt them. How, therefore, shall those men deserve any praise? I, for my part, have rather judged that such a man shall be highly extolled who is able to bring Nature to such a point that she will lend help, that is, who shall know how after the extraction of the health-giving parts what is useless is to be rejected; who is also acquainted with the efficacy, for he must see that it is impossible that the preparation and the science—in other words, the chemia and the medicine—can be separated from one another, because should anyone attempt to separate them he will introduce more obscurities into medicine, and the result will be absolute folly. By this distinction all the fundamental principles of medicine will be overthrown. I do not think I need labour very hard in order that you may recognise the certainty of my reasons. I give you this one piece of advice: Have regard to the effect of quack remedies. They first destroy wounds which are already aggravated by a succession of processes, miserably torture the patients, and having after all accomplished no good, but removed all chance of recovery, they do the unfortunate to death. . . . I who am an iatro-chemist, that is, one who knows both chemistry and medicine, am in virtue hereof in a position to point out errors and to profitably reject all pestiferous remedies, relegating them to their own place. My ardent desires and ready will to be of use prompt me to this. — *Chirurgia Magna*, Pars. I., Tract 1., c. 13.

THE MANUAL CONCERNING THE PHILOSOPHERS' STONE.

IN order that the Philosophers' Stone, which, for sufficient reasons, we call a perpetual or perfect balsam, may be made by means of Vulcan, it must first of all be known and considered in what way that Stone may be placed materially before our eyes, and become visible and cognisable by the other senses ; and, in like manner, how its fire may be made to come forth and to be recognised. In order, then, that this may be the more clearly set before us, we will take the illustration of common fire, that is to say, we will inquire in what manner its force shews itself and becomes visible ; and this is as follows :—First of all, by means of Vulcan, the fire is smitten out of the flint. Now this fire can effect nothing unless it meets with some substance that is congenial to it, and on which it is capable of acting, such as wood, resins, oil, or some other like substance, which, by its nature, readily burns. When, therefore, the fire meets with some such object it goes on forthwith to operate, unless it be extinguished or hindered by something of a contrary nature to itself, or unless the material wherein it should multiply itself be deficient. For if wood or some similar substance be applied, its violence becomes stronger, and operates in the same way until no more fuel is applied. Now, then, as the fire shews its effects in the wood, so is the same thing produced with the Philosophers' Stone, or the Perpetual Balsam acting on the human body. If that Stone be made out of proper material and on a philosophical principle by a careful physician, and due consideration be given to all the surroundings of the man when it is exhibited to him, then it renovates and restores the vital organs just as though logs were put on a fire, which revive the almost extinguished heat and are the cause of a brilliant and clear flame.

Hence it is clear that much depends on the material of this balsam, since it ought to have a special adaptation to the body of the man, and should so exercise its virtue that the human body should be safe from all the accidents which might occur to it from such matter.

Wherefore, not only much depends on the preparation of the Stone or Balsam, but it is of much greater importance, that before all things, the true matter adapted for it should be known, and then that it should be properly prepared, and above all that it should be soberly and prudently used ; so that

such a medicine should have power to purge away all impurities of the blood and induce soundness in place of disease.

On that account, it becomes the true and honest physician to have good knowledge, and not to regard ambition and pomp, nor to order dubious or contrary things, nor to trust too much to the apothecary, but to make himself well acquainted with the disease and with the sufferer ; otherwise you will be constantly treated wrongly, and the only result will be that the sick man is deceived and defrauded, solely by the pride and ignorance of the unfit and unqualified practitioner. For what else is it but a deliberate fraud, when a man asks money and fees for that about which he knows nothing, and tries to lord it, to his own infamy ; since many men think nothing of money if they can only get good advice. If this is not given, and they lose both their bodily health and their money, still it is considered quite laudable to demand a fee. Let him who will trust them. I, for my part, would provide marks for such a doctor in quite a different way. It is quite evident that of such doctors, who in their own conceit are most highly learned, there is not a tenth part who possess an adequate knowledge of simples ; much less of what they order to be done, or how the medicine is compounded by the apothecary. Hence it often happens that such a doctor orders some kind of simple to be taken, which he himself does not know, and the apothecary knows still less, and has not got in his store. Yet this medicine is called perfect, and is swallowed as such by the sick man, often at a high price. The result the sick man soon feels. Although it furthers his recovery in no way, still it is profitable to the doctor and the apothecary for filling their purses. If the doctor or the apothecary suffered from the same disease, they would not take the same remedy. Hence it can be well understood how nefarious their conduct is, and how highly necessary is it that they should approach the subject in a different way, should amend their errors, and follow a better course of practice. Still I fear that old dogs are very difficult to tame.

But to return to my subject, from which zeal for the suffering and solitary patients has led me astray. In order to do it justice I would say that I do not purpose to romance or to boast about this Philosophers' Stone, but the nature of the case requires that it should be made of the proper material, and that it should be prepared and used with due caution. You must know that many of the ancients in their parabolic writings have sufficiently indicated this material, and described the operation in figurative words, but did not altogether disclose it, so that unqualified persons should abuse it ; and yet they took care that it should not be concealed from their own disciples.* When, however, few

* The congeries of chemical philosophy, which has been the subject of frequent reference and citation in the first volume, contains excerpts from the *Manual Concerning the Medicinal Stone of the Philosophers*, which offer in some cases considerable variations from the above text. The most important passage is as follows :—Very many of the ancients have with sufficient clearness revealed this matter and its preparation for the ingenious, but still in parabolic and enigmatical words and figures, so that they might drive away the unworthy from so great a mystery at once of Nature and of art. A very few, nevertheless, even of those who are fit for this art, have sought the perpetual balsam of Nature and the perfect Stone, on account of the vast labour and intricate difficulty which meet the investigator at every step. Hence it is that sluggish and slothful dispositions stand aloof from this work. The avaricious, whom the greed

persons followed their meaning, or properly undertook the operation, in course of time their instructions were forgotten, and in their place the nostrums of Galen were introduced. As was the foundation of these nostrums, such was the superstructure, and matters daily became worse. This you see, for instance, in their herbaries, how they fuss over these, and how the Germans mix up Italy in the matter, when it is quite certain that Germany does not lack those imported herbs, but possesses in itself a full supply of perfect medicine. In order, then, that truth may not give place to a lie, and that the obscurities of Galen, with his accomplices, may not quench and suppress the light of Nature in medicine, it is necessary that I, Theophrastus, in this book, should speak, not as a quack, but as a scientist who is not ashamed of his achievements in medicine, who also, by the grace of God assisting him, has had proof of this matter in many cases which you, O Galenist, would not have dared to visit ! Tell me, Galenic doctor, whence comes your qualification ? Are you not putting the the bridle on the tail of the horse ? Have you ever cured the gout ? Have you dared to attack leprosy ? Have you cured dropsy ? I believe you will wisely hold your tongue, and acknowledge that Theophrastus is your master. If, however, you want to learn, learn and note what I here write and say, namely, that the human body does not need your clumsy herbal, especially in chronic or long-standing diseases which you in your ignorance call incurable. Your herbs are too weak for these cases, and by their very nature are impotent to get at the centre of the disease.

You will effect nothing by your pills beyond merely purging the excrements. And even here, on account of their unsuitability, you often expel the good with the bad, and this cannot be done without severe damage to the patient. So, then, these pills must be left off. Furthermore, your draughts do nothing beyond causing nausea in those who swallow them by their foul taste, which irritates the sick person, and by and bye they cause gripings and danger

for gold and silver—vile things that they are—has inspired with courage, have persevered most diligently of all in the work, so much so that for it they have neglected their life and substance. But because so much worldly happiness was not intended for them by God, they have wasted their oil and their labour. There is in truth need of the keenest zeal and judgment for this matter, that from various comparisons and similitudes the meaning of authors who write about this art may be detected. In order, therefore, that the more intelligent may comprehend up to a certain point, we will bring forward a fitting similitude by which is prefigured the matter of the perpetual balsam, agreeing with a like balsam in the human body for the purpose of restoring and conserving its highest state of health and driving away disease. Take common natural fire for an example. This is invisible to us, wherefore it must be sought in the air where it is latent, and is to be found by the striking together a flint and steel. Now it does not owe its existence to these, but to the air, and is only retained by some dry object such as firewood. For the dryness immediately takes hold of its heat and that which is like itself, and both operate in the same way in the subject until all the humidity is consumed, and there remains only a dry and ashen body subject to death, being deprived of the fire and food of life. In no other way should philosophers investigate matter wherein the food and fire of life are chiefly present. These should be drawn out by preparations so that they may increase the vitality of human life when it has begun to fail. For as the flame and life of the fire revive the wood all but consumed if there be left only a few bits of coal or sparks of fire, by adding appropriate wood and fuel, so in the human body the perpetual balsam, applied even to the smallest remaining atom of life, rouses this into a flame and into its pristine vigour. But a question arises as to the matter in which this rousing fire remains latent. It is not right, or even safe, to speak clearly and openly about this to everybody. Is not the grace of God sufficient for the children of light, whereby the faculty is given to them of bringing light out of the darkness of shadows, figures, and enigmas ? The sons of darkness are proved in this way, since for them, even from the light itself, nothing can be elicited save the merest shadows. Nature requires a nature like itself, and takes pleasure in it. As iron, too, is attracted by the magnet, so darkness begets darkness, and light brings forth light. This Stone is hard—who will be able to extract the kernel from it ? What is harder than the stone and steel, except it be the diamond ? Yet this is worn away. But by what artifice the Philosophers' Stone is to be disclosed, so

through their unnatural action. But I quit the subject of your absurd and useless medicaments, since they are in direct opposition to Nature, and never ought to be used. Since, then, those of which I speak are the true medicines (and no such true medicine can be found in Galen, in Rhasis, or in Mesne, which attacks and purges those diseases I named from the very roots, as the fire purifies the spotted skin of the salamander), it necessarily follows that the curative process of Theophrastus differs altogether from the fancies of Galen, since it emanates from the fountain of Nature. Were it not so, Theophrastus would stand disgraced like the others.

If, then, we are willing to follow Nature, and to use natural medicine, let us see what substances amongst those used in medical art are most adapted to the human body for keeping it in soundness up to the limit of predestined death by means of their virtue and efficacy. If thought be given to the subject, I doubt not but all must confess that metallic substances have the chief adaptation to the human body, and that the perfect metals, in proportion to their degree of perfection, and especially the radical humour of those metals, can produce the greatest effects on the human body. For man partakes of that salt, sulphur, and mercury which, though hidden, enter for the most part into the composition of metals and metallic substances. Thus, like is applied to like, and this process is most serviceable to Nature if only it be dexterously applied. This is the great secret in medicine, worthy to be called its very arcanum. What marvel is it, then, if great, unheard of, and unhopd-for cures follow, such as the ignorant believed impossible? Not to delay longer, I am constrained here to set down what I determined to write in this treatise. I purpose to treat here more clearly than elsewhere of true medicine. First, however, it had to be pointed out how man derived his origin from sulphur, mercury, and salt, regarded as metals. This I have sufficiently indicated in the Paramirum, and it is not necessary to repeat it here.* I will, therefore,

that henceforth we have fire and life enough, we do not see. The eyes of the mind must be opened, and the first consideration must be what medicine is by Nature and art congruous with human life before all others, so that it may be conserved and preserved in health to its predestined end, and also may be safe against all corruptions. Nobody—at least, no true physician—will doubt that the metallic essences, especially those of the perfect bodies, are the most durable and least corruptible of all that Nature produces. If, then, life be the fire and heat of the natural form united to the humidity of its own matter by light, as is clear from Genesis, and the light lives more brightly nowhere than in bodies least liable to corruption, what will prevent the heat of the fire and the radical humour in the metals, each being incorrupt, from rousing in the organs joined to human life this vitality that is well-nigh dormant? For these are sleeping in metallic bodies alone, and in a state of repose, as a man overcome with sleep lies as if dead, and is only moved by respiration, but not in his body. As the spirit of metals, if it be liberated from its bodily sleep, will perform movements and actions as if its own in any body that is applied to it, none otherwise must we judge of human bodies. While these are sick the vital spirits in them sleep; they are not able to breathe truly or freely on account of their corrupt domicile. But when the corruptions of darkness are removed from the body, not by an extraneous physician, but by Nature itself, fortified by medical aid, and with an accession of extraneous life, that is to say, of incorruptible metals, the vital spirits in men exercise their movements freely. It is no wonder, then, if miraculous cures are wrought by Spagyric physicians, otherwise impossible by the vulgar medicine of the Greeks, whence it came about that they considered those diseases incurable which they themselves were unable to drive away with their sleepy and, as it were, dead medicaments. Hence the distinction between the Spagyric and the Greek medicine is clearly seen. The latter sleeps with the sleepers; the former, watchful and free from all slumber, rouses the dormant faculties of life. But returning to our investigation of the matter, this cannot be noted better than from the errors of those who inquire into this branch of the subject.

* ON THE ORIGIN OF DISEASES FROM THE THREE PRIMARY SUBSTANCES.—There are three substances which confer its own special body on everything, that is to say, every body consists of three ingredients. The names of these are Sulphur, Mercury, and Salt. When these three are compounded, then they are called a body;

only shew how the Philosophers' Stone may be recognised, and according to what method it is prepared.

Know, then, for a fact, that nothing is so small but that from it anything can be made and can exist without form. For all things are formed, generated, multiplied, and destroyed in their proper agreement, and they shew their origin so that it can be seen what each separate thing was in the beginning, and what it becomes in its ultimate matter, while that which intervenes is a kind of imperfect condition which Nature intermingles in the process of generation. Since, however, these accidents can be separated by the action of Vulcan, so that they shall be rendered inoperative, Nature can, in this instance, be corrected. This is what is done in the Stone. For if you would make it of its proper material, which can be perfectly learnt from the circumstances pointed out, you must remove from it its superfluities, and you must form, multiply, and increase it as a separate thing in its adaptation, which without such adaptation cannot be done. In this instance Nature has left it imperfect, since she has formed, not the Stone, but its materials, which are impeded by accidents, so that it is not able to produce these effects which the Stone, after due preparation, *is* able to produce. Such material, without preparation, is, so far as regards the Stone, a mere fragmentary and imperfect substance, which has in it no harmony whereby alone it could be called perfect, or serve the human body for healing purposes. You have an illustration of this in the microcosm. See a man who is formed by the Mechanical Power only as a man. He is not an entire and perfect work, since he lacks harmony, but is only fragmentary until the woman is created like him; then the work is entire. Each of these is earth, and the two at last make the entire human being, capable of increasing and growing,

and nothing is added to, or coheres with, them save and except the vital principle. Thus, if you take any body in your hands, then you have invisibly three substances under one form. We have now to discuss concerning these three. For these three substances exist under one form, and they give and produce all health. If you hold wood in your hand, then by the testimony of your eyes you have only one body. But it is of no advantage for you to know this. The clowns see and know as much. You should descend and penetrate beneath the surface, when you would learn that you are pressing in your hands Sulphur, Mercury, and Salt. Now if you can detect these three things by looking, touching, and handling them, and perceive them separated each from the other, then at last you have found those eyes with which a physician ought to see. Those eyes ought to see these three constituents as plainly as the clown certainly sees the crude wood. Now this example may make you able to recognise man, too, in these three, no less than wood itself. That is, you have man built up in a similar form. If you see only his bones, you see as the clown sees. But if you have separated his Sulphur, his Mercury, and his Salt, then you see clearly what a bone is, and if that bone be diseased you see where it is faulty, and from what cause, and how it suffers. So, then, the mere looking at externals is a matter for clowns; but the intuition of internals is a secret which belongs to physicians. Now if these visible things must exist, and beyond their mere aspect medicine fails, then their nature must be deduced so that it may lay itself bare and be exhibited. Moreover, see into what ultimate matter these things are resolved, and into how many kinds. You will find these three substances divided from one another into just as many kinds. Now the clown cares nothing about all this; but the physician cares. The mere experimentalist neglects it, but not the physician. The quack thinks nothing of it; but the physician considers a good deal. Before all else these three substances and their properties in the great universe should be understood. Then the investigator will find the same or similar properties in man also: so that he now understands what he has in his hands, and of what he is making himself master.—*I amirum, Liber I.*

MORBIFIC EFFECTS OF SULPHUR, SALT, AND MERCURY.—With regard to Sulphur, its effect should be thus estimated. It never produces an evil effect by itself, unless it be astral, that is, unless a spark of fire shall have been cast into it. Then is power awakened by that spark. Is not the act of burning a virile one? Without it nothing is produced. So, then, if any disease declare itself from Sulphur, then, first of all, the Sulphur should be properly named. It is essentially a masculine operation. There are many sulphurs, such as resin, gums, botin, axungia, fat, butter, oil, *vinum ardens*, etc. There are some sulphurs of woods, some of animals, some of men, some of metals, as oil of gold, of Luna, of Mars; some of stones, as liquor of marble, of alabaster, etc.; some of seeds, and of all other things. each with their own special names. There is afterwards the fire falling upon each, which alone is their star, and this, too,

and this power is effected by indwelling harmony. So the Philosopher's Stone, which should renovate man no less than metals, if it be freed from its superfluous accidents and established in harmony with itself, performs wonders in all diseases. Unless this be done, all your attempts with it are in vain. But if you wish to establish it in its harmony you must bring it back to its first matter, so that the male may be able to operate on the female, that the outer part may act on the inner, and the inner be turned outwards, and so both seeds, the male and female, may be enclosed in complete concordance; that by the action of Vulcan they may be brought to more than perfection, and be exalted in degree, so that each, as a qualified, tempered, and clarified essence, pours all virtue into the human body as well as into metals. Thus will they render each sound, will drive away defilement by the method of expulsion, and introduce what is good into the human blood by its power of attraction to a due place, so that the microcosm which is situated in the limbus of the earth, and is formed out of the earth, may by this medicine, as by something like itself, be radically, and not in mere imagination, but most surely, led to health and kept therein. This is the Mystery of Nature, and such is the secret which every physician ought to know. And this, too, every one can comprehend who is born of astral medicine. But, that I may more clearly describe the nature and preparation of so excellent a medicine, so that the sons of learning, who love the truth, may be initiated, know ye that Nature has given a certain thing wherein, as in a chest, are enclosed 1, 2, 3, the virtue and power whereof suffice abundantly for preserving the health of the microcosm, so that, after its preparation, it drives away all imperfections, and is the veritable defence against old age. This we name the Balsam.*

with its distinguishing name. And this operation is, in one respect, peccant matter. Moreover, with regard to Salt it should be known that it exists of itself as a material humour, and introduces no disease unless it be joined with its star. Its star is resolution, which gives it a masculine power. Salt, no less than the spirit of vitriol, tartar, alum, nitre, etc., exhibits itself tumultuously if it is resolved. Now, whence can such a nature be infused into humours, except by a star? About this physicians have formed a conspiracy of silence. Even if they had been guilty of no other blunder save that in all their causes and cures they had omitted the star, that would have been quite sufficient to prove that they had built their house on a foundation of moss and sand. You should know, also, that salts are manifold. Some are limes, some ashes, some arsenical, some antimonial, some marchasitic, and others of a similar sort. And from all of these are produced and begotten peculiar diseases according to the body of the salt; which diseases thereupon take the name and nature special to each. So, too, understand concerning Mercury. This of itself is not virile unless the star of Sol sublimates it. Otherwise it does not ascend. Its preparations are many, but there is only one body. But the body of this is not like Sulphur or Salt, which have many bodies, from whence come different salts and different sulphurs. This has only one body, but the star changes this in different ways, and into various natures. So, then, from the same source many diseases are produced. Thus its masculine nature comes from the star, and by this nature it has its morbid effect. If, then, all diseases are comprised under these three heads, each with its own name and title, know that you must reduce to Sulphur all that is sulphureous, in the sense that it burns. What is Mercurial should be reduced by sublimation if it be adapted thereto. What is from Salt should be reduced to such salt as is appropriate. These, then, are the three general causes of disease, as we have grouped them together above.—*Ibid.* Some further extensions of the philosophy of Paracelsus concerning the prime principles in their relation to disease will be found in an appendix to this volume.

* We must know before all things that a balsam resides in our body by the virtue of which the body is preserved from putrefaction. That singular balsam is present in all members of the body, for there is one in the blood, another in the marrow, a third in the arteries, bones, etc. While this balsam remains entire and uncorrupted it is impossible for any opening of the skin to take place. But when by means of the preparation of salts it happens to be corrupted, then the principles of corrosion begin to act. For cure in this case the whole attention must be devoted to the restoration of that which has been removed from the balsam by corruption. This is effected by the balsam derived from other elementary bodies. This, I say, is found in external elements, by which also other generated things are preserved from putrefaction. Hence it is reasonably called the mumia of the external body of the elements, that is to say, of their fruits. Such balsam is found congenital in the radical matrices of all growing things. Every body pro-

In what substance Nature has placed such a number you must know beforehand ; since I am unable, for many reasons, to describe it more clearly. How it is prepared, Galen, Rhasis, and Mesne were ignorant, and it will not be reached by their followers. For this medicine requires such preparation as mere pill-sellers do not compass, and understand less about it than a Swiss cow. Moreover, it involves, as it were, celestial and special modes of operation. For it purifies and renovates, so to say, by regenerating, as you can read more at length in my Archidoxies, and at the same time study the origin and essence of metals and of metallic substances, together with their powers. He, therefore, who has ears to hear, let him hear, and see whether Theophrastus writes about lies or about the truth, and whether he is uttering mere inanities from the devil, as do you, O Sophist, utter your trifles—you who are from the devil and are surrounded by lies and obscurities, and call nothing good unless it be comprehensible by your fool's head, and that makes for your broth without any previous labour. For you, with your one eye, wander about at random, and cannot get straight to your kitchen window. By all means, twist your intricate thread, and try to find the centre of the labyrinth, by means of an obscure star ; this will in no wise offend me. But if you would only use your foresight sometimes, and see whereupon the art of Theophrastus is founded, and how feeble your patchworks are, Theophrastus would not be so opposed to you. But what things I now write briefly, and shall write, so that my astral disciples may be able to perceive them, and enjoy them, and boast of them, these, through the diligence of one who is not ashamed to learn, can be easily understood ; since there is nothing so difficult but that it may be understood and learned by labour and study. The practical method of this work, then, is as follows :—

THE PREPARATION OF THE MATTER OF THE STONE.

Take some mineral electrum in filings. Put it in its own sperm (others read, Take the immature mineral electrum, place it in its own sphere), so that all impurities and superfluities may be washed away from it, and purge it as

vided with life is vital by reason thereof. The first thing to be considered in its extraction is the quantity present in the given body, for our intention regards not the body, nor the form, but solely the inherent balsam by which it lives. The extraction of these balsams is almost accomplished by separation, that is to say, while the arcanum is being removed from the body which was sustained by the balsam. You must know that elementary balsam is nothing else than that which we are accustomed to call mercurial liquor in the three principles. Whence it follows that all curative efficacy resides in Mercury. Mercury of this kind usually appears most manifestly in theriacin and nostoch, as also in minerals of water, the fruits of the earth, and in the stars. Hence it is clear why antimony is so efficacious in the cure of ulcers, namely, because it contains mercurial liquor more abundantly than the other species of marcasite. In like manner the curative virtue of gold must be understood, for no body produced from the element of water contains a more copious or more subtle mercurial liquor. Thus also, among things which grow out of the earth, there is not a more arcane remedy than the mercurial liquor of cheirine and realgar. The same is to be understood of chaos and the firmament according to the method of their operations. But for the understanding of every mercurial liquor it is necessary to know that metals can be transmuted into a certain matter of this kind—as iron into crocus of Mars, Venus into flower of copper, tin into spirit of Jupiter. Yet these are not true liquors, but need a more exact separation according to their canons. There are extant various forms and descriptions of balsams according to the categories of the four mineral elements in the writings of the ancients. Some are wont to describe them according to the form of a plaster, others of a powder, others of the oil of water, etc. But I think that these descriptions ought to be completely rejected as purposeless, devoid of skill, plainly repugnant to Nature, and dependent on a dietary regimen which is the foe of Nature. The true and only balsam perfectly purges out and removes that which is separated, restoring the body to its original condition by the accession of fresh balsam.—*Chirurgia Magna*, Pars. III., Lib. V.

completely as possible by means of stibium, after the manner of the alchemists, so that you may suffer no harm from its impurity. Afterwards, resolve it in the stomach of the ostrich, which is born in the earth, and is strengthened in its virtue by the sharpness of the eagle. When the electrum is consumed, and, after its solution has acquired the colour of the calendula, do not forget to reduce it into a spiritual pellucid essence, which, indeed, is like amber. Then add half as much of the spread eagle as the corporal electrum weighed before its preparation. Frequently extract from it the stomach of the ostrich, by which means your electrum becomes continually more and more spiritual. But when the stomach of the ostrich becomes weary with labour, it is necessary to refresh it and always to abstract it. Lastly, when it again loses its sharpness, add tartarised quintessence, but so that at the height of four fingers it may be deprived of its redness, and may pass over together with it. Do this for so long a time and so often until it grows white of itself. When, now, it is enough (for you will see with your eyes how it will gradually fit itself for sublimation), and you have this sign, sublimate. Thus the electrum is turned into the whiteness of the exalted eagle, and with very little labour it is transferred and transmuted. Now, this is what we seek in order to use it in our medical practice. With this you will be able to succeed in many diseases which refuse to yield to vulgar medical treatment. You will also be able to convert this into a water, into an oil, and into a red powder, and to use it for all purposes for which you require it in medicine.

But I say to you in truth that there is no better foundation for all medicine than lies hid in electrum. Although I do not deny, nay, I write it in my other books, that great secrets lie concealed in other mineral bodies as well; yet they require greater and longer labour, and the right use of them is not easy, especially to the unskilled; so that if any one attempts them he causes more harm than good. For this reason it is not advisable that every alchemist should seek to practise the art of medicine when he has no acquaintance with it. Some prohibitory method should be devised which might debar such imaginary physicians. I, indeed, will not take their blame, or recognise them as disciples, since they do not pursue the truth, but I hold them as known deceivers, and lazy vagabonds, who take the bread out of the mouth of true disciples, and do harm to such deliberately, and think nothing of conscience or of art. In the prepared electrum we have described there lies hid so much power of healing men that no surer or more excellent medicine can be found in the whole world. The Galenists, indeed, those drug-selling doctors, call it poison and oppose it, not from any knowledge of it, but from mere pride and folly. I grant, indeed, that there is a poison in its preparation, as great as, or greater, than that of the Tyrian serpent which forms an ingredient in theriaca. But that after its preparation the poison remains has not been proved. For Nature, though by some blockheads this is not understood, always inclines to her own perfection, and much more, therefore, may be brought to perfection by proper methods. What is more, I grant that

after its preparation it is a greater and more potent poison than before; but it is such a poison as seeks after its like, to find out fixed and other incurable diseases, and to expel them. It does not suffer the disease to speed its course and do injury, but as if it were an enemy to the disease it attracts the kindred matter to itself, consumes it from the very roots, and washes it as soap washes the spots from a foul rag, along with which spots the soap retires also, leaving the rag pure, uninjured, clean, and fair to look upon. So, then, this poison, as you say, has a far different and better effect than your axungia which you employ to cure the French disease, anointing more frequently than the currier does a hide. This arcanum, which lies hid in this medicament, has within it a well-proportioned, well-prepared, and excellent essence, which can be compared to no poison, unless one understands it, as I said before; and it is as different from your quicksilver, which you use as an ointment, and from your precipitate, in virtue and efficacy, as heaven from earth. It is, therefore, called, and really is, a medicine blessed by God, which has not been revealed to all. It is better compounded than that dirty medicine which the slowly walking doctor has in his gown, or has filtered through his fillet or hood. Moreover, this blessed medicine has thrice greater force and virtue for operating in all diseases, however they may be called, than all the drug shops you ever saw. But I did not find this in idleness, by sitting still, and by sloth, nor did I find it in an urinal, but by travelling, or, as you say, by wandering, and by much diligence and labour it was necessary for me to learn it, so that I might know and not merely think. But you suck your medicine out of the old cushion and bolster on which some old witch has sat who has covered your celestial head with a blue hat for medicine and breathed on you. So, then, I shall never regret my travels, and I shall remain your master and follow in the steps of Machaon, which, indeed, spring from the light of Nature as a flower from the warmth of the sun. But in order that my proposed task may not be delayed and remain imperfect, observe further how the thing must be done, and what power and property of medicine Nature has given to the Philosophers' Stone, and how it leads on to its end.

HERE FOLLOWS THE REMAINDER OF THE PREPARATION.

Having destroyed your electrum, as aforesaid, if you wish to proceed further, in order that you may come to the desired end, take the electrum which has been destroyed and rendered evanescent, as much of it as you wish to bring to perfection, place it in the Philosophic Egg, and seal it closely so that nothing may evaporate. Stand it in Athanor until, without any addition, it begins of itself to be resolved from above, so that it looks like an island in the midst of that sea, gradually decreasing every day, and at last being changed into the resemblance of blacking. This black substance is the bird which flies by night without wings, which the first dew from heaven, with its constant influence, its ascent and descent, has changed into the blackness of a

crow's head. Then it assumes the tail of a peacock, and subsequently acquires the wings of a swan. Lastly, it takes the highest red colour in the whole world, which is the sign of its fiery nature, whereby it drives out all the accidents of the body, and warms again the cold and dead limbs.

Such a preparation, according to the opinion of all philosophers, is made in a single vessel, in a single furnace, in a single fire, the vaporous fire never being allowed to cease.

So this medicine is as if heavenly and perfect, or at least can become more perfect than the moon, by its own flesh and blood, and by the interior fire being turned outwards and prolonged, as was just now said, whereby all the impurities of metals are washed away, and the occult properties of the same are made manifest. For this more than perfect medicine is all-powerful, penetrates all things, and infuses health at the same time as it expels all disease and evil. In this respect no medicine on earth is like it. In this, therefore, exercise yourself and be strenuous, for this will bring you praise and glory, and you will not be a mere quack, but a real scientist, and, moreover, you will be compelled to love your neighbour. For such a divine secret no one can perceive and understand without divine aid, since its virtue is unspeakable and infinite, and by it Almighty God is known.

Know, too, that no solution will take place in your electrum unless it thrice runs perfectly through the sphere of the seven planets. This number is necessary for it, and this it must fulfil. Attend, therefore, to the preparation, which is the cause of the solution, and for your glorified, destroyed, and spiritualised electrum use the tartarised arcanum for washing off superfluities which accrue in the course of preparation, so that your labour may not be in vain. Of the arcanum of the tartar nothing will remain, only you must proceed circularly with it according to the number mentioned. Thus, easily of itself is produced in the philosophic egg and the vapour of fire the philosophic water, which the philosophers call *aqua viscosa*; it will also coagulate itself, and represent all colours, so that at last it is adorned with the deepest red. I am forbidden to write more to you on this mystery, such is the command of the Divine Power. Assuredly is this art the gift of God. On this account it is not all who understand it. God gives it to whom He will, and suffers no one to extort it from Him by violence. He alone will have honour in this work; Whose name be for ever blessed. Amen.

HERE FOLLOWS THE USE OF THE STONE.

And now it is necessary that I should write concerning the use of this medicine, and concerning its weight. You must know that the dose of this medicine is so small and so light as is scarcely credible. It should only be taken in wine, or something of that kind, and always in the smallest quantity on account of its celestial power, virtue, and efficacy. For it is only revealed to man for this reason, that nothing imperfect should remain in Nature, and it has been so provided and predestined by God that its virtue and arcanum

should be produced by art, in order that to man, made in the image of God, all created things should be made to do service, and that before all else God's almighty power should be known. Whosoever, therefore, has intellect from God, to him this medicine shall be given. That ignorant Galenist, Beanus, will not be able to comprehend it, nay, he will turn from it in disgust. For all his works are works of darkness, while this work takes effect and acts in the light of Nature. And so, now, in brief but true words, you have the root and origin of all true medicine, which no one shall take from me, even though Rhasis with all his base progeny should go mad, and Galen be bitter as gall. Let Avicenna gnash his teeth, and Mesne in a word measure the length and breadth, it will be too high for all of them, and Theophrastus will stand by the truth. On the contrary, the lame works of the ointment-people, and the unctions of the physicians and doctors, with all their pomp and authority, shall go to utter destruction.

There is only one thing more to say, since to many this description of mine will appear obscure. You will say, O my Theophrastus, you speak too briefly and abstrusely to me. I know your discourses, how correctly you impart your subjects and your secrets. Wherefore this description will be of no avail for me. To this I answer that pearls are not for swine, nor a long tail for a goat. Nature has not seen fit to bestow them. Wherefore I say that to whomsoever it has been given by God, he will find sufficiently and above measure, more than he wished for. I write this by way of initiation. Follow with foresight, and avoid not study and labour, nor let the parade of fools lead you astray, nor the diligence which is necessary turn you away. By constant meditation many things are found out, and this is not without its reward. So use to a good purpose what I here give you; let it be to you a fountain, and then you will have no need to drink from the troughs of the pill-sellers, nor will your lot be with the body-snatchers, but you will be able to serve your neighbour well, and to give praise and honour to God.

These things I determined to set down briefly, in my book on the Philosophers' Stone, lest men might think that Theophrastus cured many diseases by diabolical methods of treatment. If you follow me rightly, you will do the same, and your medicine will be like the air which pervades and penetrates all that lies open to it, and is in all things, drives away all fixed diseases, and mingles itself radically with them, so that health takes the place of disease and follows it. From this fountain springs forth the TRUE AURUM POTABILE,* and nothing better can anywhere be found. Take this as faithful advice, and do not annihilate Theophrastus before you know who he is. I am unwilling to set down more in this book, even though it might be necessary to say something, and to philosophise somewhat concerning the *aurum potabile* and the

* The lungs, the liver, the spleen, and the reins may all be sustained and nourished by potable gold, which preparation all physicians ought to have by them, because no physician is of any consideration who is without it. I am acquainted with its preparation and am possessed thereof. It would not yet be advantageous to publish it, but time will perhaps reveal it.—*Chirurgia Magna*, Part I., Tract I., c. 17.

liquor solis.* I only wished to note these things here, and if you prepare them rightly they are not to be despised in their powers. But since other of my books treat of these secrets and make them sufficiently clear, namely, what a true physician ought to know, I will let the matter rest, hoping that this book may not be altogether without fruit, nay, that it may be of use to the SONS OF THE DOCTRINE. May God grant His grace, to His own honour and glory! Amen.

* According to the treatise entitled *De Male Curatis Aegris Restituendis*, Lib. III., c. 30, Paracelsus in some cases made use of the *Liquor Solis* for the cure of leprosy.

HERE ENDS THE MANUAL CONCERNING THE MEDICINAL STONE OF THE
PHILOSOPHERS.

A BOOK CONCERNING LONG LIFE.*

SEEING that certain medicines are discovered which preserve the human body for a second and subsequent periods of life, which also protect it altogether from diseases, corruptions, superfluities, and other diminutions of its powers; nay, even when these infirmities and corruptions have broken in upon it, take them away, every physician must carefully study these medicines, and learn them from the very foundations. Indeed, numberless wearisome diseases and accidents of all kinds are taken away and extirpated from the very roots by this conservation of life.

So, then, when we propose to write concerning the preparation for a long life it must be understood that we do this in two ways. The one is theoretical, the other practical; for the subject of long life can be understood in both of these ways. And no physician ought to wonder that life can be prolonged—this also for two reasons. One is, that no fixed limit has been laid down for us, so that on some pre-determined day we must die; nor is this left in our own power. The other reason is, that we have medicine from Him who has made us, by means of which we can keep the body in that state of soundness wherein it was created, and expel from it all diseases whatsoever.

Now from this it may be gathered that death brings with it no disease, nor is it the cause of any. On the other hand, no disease causes death. And although the two coexist together, they are still no more to be compared one with the other than fire and water. They are no more akin one to another, nor do they agree better together. Natural sickness abhors death, and every member of the body avoids it. Death, then, is something distinct from disease. So far as relates to our present purpose what we wish is to speak to our own disciples from experience. We would speak to men who know those properties of things which are discovered by the highest art and by daily practice. To the mere pretenders and presumptuous men of medicine all these matters are perfectly occult and unknown. So it is that we write only for our own disciples, and not for those others. It is more

* The Geneva folio contains a considerable literature on the subject of long life, and this, as it will be readily understood, is full of repetitions and unimportant variations. At the same time, there is much in it which is only partially represented by the treatise translated in the text, so much, indeed, that it exceeds the reasonable limits of foot-notes, and it has, therefore, been thought better to print the *Book Concerning Long Life*, which pretends to be complete in itself, without annotations of any kind, and to reserve the additional materials to be dealt with in a separate appendix.

certain than certainty itself that the restoration and renovation of the body do take place, and that by these processes the whole frame can be transmuted to something better. In like manner, we see with our eyes that all metals are in their bodies purged so that they are protected from rust, and that even wood and the dead bodies of corpses are embalmed so that they suffer no further decay.

If, therefore, such things as these are possible to Nature, why should any one shrink from our writings, supported, as they are, by examples, although put in a brief space, or stand aloof from them because we draw a comparison between the bodies of metals and those of men? We do not suppose them to be one and the same. We know that they are altogether different; but in both we see the same method of conservation, and this is just what would have been inferred from experience, for if a dead body, by means of embalming, can be conserved, by how much more can a living one be kept from decay?

First, then, it should be known that this conservation, so far as it refers to the body of man, is to be considered in three parts: firstly, with regard to early youth; secondly, with regard to middle age; and thirdly, with regard to old age. Hence it can be understood why we begin severally from youth, from middle age, or from old age, since the end cannot be expected at any determinate period of life. The young life is sometimes destroyed in the mother's womb, sometimes in the cradle, sometimes during the period of growth, and sometimes, again, by the inordinate use of food or drink, whereby the nature being depraved and the strength diminished, it fails to reach the true limit of human existence. In a case of this kind the physician cannot but compare this period of life to old age, because it is equally defective and stunted in its nature. When, therefore, as often happens, children are born diminutive and sickly from their mother's womb, directly they come to the light they ought to be imbued with these conserving substances, by smearing the mother's nipples therewith, as is more fully explained in our practical method. By this method life and strength can be promoted, just as they can in the case of old men who were not so treated in their infancy. But in the matter of bodily power there is considerable resemblance between the old man's last span of life and that early period in which children are sometimes so broken down that they cannot attain to old age unless that first period of existence be fortified for them.

That is considered middle age when the body has ceased to grow and gray hairs begin to appear. At that time should anything occur to weaken or break up this period of existence, such as excessive work or debauchery, a similar method of treatment should be adopted before old age supervenes. If there be too long delay old age may never be reached at all, because that aid came too late.

The final period of life may be said to begin when the hair grows gray, and it lasts up to death. If this stage be complicated with weakness and decay, again the same method must be adopted in good season. But where the

powers are sound and strong the method of conservation need only be used in proportion to the requirements. This, then, is the three-fold division of life to which we alluded ; and in whatever period the regimen of conservation shall have begun, in each alike existence starts afresh from youth, and goes through the different stages according to its limits.

Now, although we are supposed to be talking with our own disciples, yet this argument, amongst others, might be brought against us by empirics. Since we have such a means of attaining long life and driving away disease and death, how comes it that so many princes, emperors, kings, and other great persons die premature deaths ? Why do they suffer from infirmities when they could purchase immunity for money, and even ward off impending death ? We answer those who make such enquiries thus : We have never read or heard of a prince or king who used these remedies, with the single exception of Hermes Trismegistus. Many others have existed, as we point out in our book on Restorations, but they are unknown to the dwellers upon earth. And, though we do not consider them as a solution of the difficulty, yet still it must be remembered that the physicians of these emperors and princes understand less about medicine than the clowns who spend their lives in the fields. Hence it happens that they more frequently promote and conduct their princes and heroes to death than to life. Acting upon the advice of their medical men, it would be quite impossible for them to reach their proper period of life, and this on account of the ignorance of the faculty, who are physicians only in name. The argument, we repeat, is not thus answered ; but we might also put forward the irregular life of princes, who often shorten their own existence, and this more as a punishment than through devotion. Then, too, there are many princes to whom these and the like remedies are altogether unknown.

By these three cases we consider that we have answered the argument advanced against us.

In what has been just said, we desire to point out not that this three-fold division of the periods of life is alone to be considered, but also something else which is by far more important, and this in two ways : one, namely, where bodies lay themselves open to diseases by irregular life, whence proceed dropsy, jaundice, gout, the falling sickness, pleurisy, and other like diseases, chronic or acute. Not only the division of the periods of life, but each disease in particular has to be taken into account by itself.

In the other case diseases occur in conjunction with irregular life through the seasons or by means of accidents, as in the instance of pestilence, mania, and other visitations which are destructive of life. These two methods involve the process of long life. In this way we shall have to understand what diseases arise naturally and what from external causes connected with Nature ; then those which derive their origin from something beyond Nature, as from incantations and superstitious practices, about which last there will be much more to say. For where such a disease occurs it must often be considered as a punishment, and on this account is not curable. We admonish our disciples

to abstain from such practices. But so far as the visitation proceeds from Nature, this we teach how to cure and guard against by natural means.

Although we know and do not forget the effect of rings, images, and the like, which guard life against death, still we set down nothing on that subject here, but pass it by, because it has to do with astronomy. We speak, however, of these matters elsewhere, and proceed by another method, which is well worthy of all attention.

We first set aside diseases which do not arise from the bodily constitution, or from debility, but from some other source, before we speak of means of conservation. So, too, secret diseases will have to be examined. If they were diseases like gout in the feet or the hands, falling sickness, etc., they would not have to be set aside on these grounds, but would be cured by methods of conservation. So, then, there are three different classes of disease : one of a long-standing character, such as fevers, hyposarcæ, jaundices, and the like ; another of diseases proceeding from within, as pestilences, pleurisy, abscesses, and so on ; and a third of chronic diseases, as gout, falling sickness, and others of like nature. The first we must pass over, for the second prescribe remedies, and in the third case suggest methods of conservation, so that they may be guarded against.

Then, again, we must not omit those diseases which have a mental origin, and arise from the sufferer's own imagination, or from that of another person, as in the case of incantations, superstitions, and the like.

With such a division as this, it must be understood, by way of conservation, that those diseases which have a mental origin are in like manner removed by mental treatment : those which proceed from the patient's own ideas, by some objective mode of treatment ; those which arise from imagination, by imaginations ; and those which arise from incantations, by counter-incantations ; while those which come from superstitions have to be relieved and cured by counter-superstitions. Then, after ailments of this kind have been removed from the body, there follow at once seven means of preservation, one directed to the natural strength or weakness ; another against casual or accidental diseases, and the like, with the view of guarding against them for the future ; a third against mental attacks ; a fourth against incantations ; a fifth against imaginations ; a sixth against the patient's own notions ; and the seventh against superstitions.

Marvel not that no mention is here made of temperaments, because the preservation of the whole body does not depend upon these, or upon their proportions, but rests on the virtue of Nature alone, from which all other excellencies arise. For the sole virtue is that which resuscitates and re-kindles the humours, which are four in number, but of which no account need be taken in medicine. The physician who bases his treatment on the natural temperaments may be fitly compared to a person who extinguishes a fire and leaves coals still burning. It is better worth considering how to preserve the root than the branches of a tree, because from the root the strength of the tree

issues forth. If by chance anything happens to the branches—as may occur to the root of life from the temperament and the humours—this is merely an accident which in no way brings health, but rather takes it away. That we said was to be guarded against, when we were speaking of the three classes of disease, with the idea of resuscitating and re-kindling the life of the root, and, together with the branches, deriving its own nutriment thence, according as the complex qualities suggest their own remedies. When we seek to compare a short life with a long one it is necessary to know what life is, where it is, and how it may be diminished or augmented, as also whether it is something analogous to sight, touch, taste and smell. Judging by Nature, it would be impossible for us to know what it is which produces sight, and how it supplies it, as we have set down in our treatise on the Bodily Faculties, or which of those powers possessed by the body can be investigated by natural means. It is not so with life, because life does not derive its origin from natural seed, but has a spiritual source, though its origin is still natural. It is just as when the flint is struck by the steel, the fire leaps forth. There is no fire in either, and yet fire is produced from them. They are not fiery by nature, neither in their elements nor in their combinations are they combustible bodies; they rather resist fire more than other stones and metals do, as is seen in their transmutations, wherein no fire is elicited or can be obtained. None otherwise life takes its origin from something wherein is no life, as from the seed, the root, the sperm, and the like, just as the spark comes from the flint by the force of the *ens*, not of the *esse*. So, also, the life of man proceeds from the *ens*.

And then one has to consider whether this life can be produced, improved, or strengthened, seeing it is an incorporeal, volatile something, like a fire to which the more wood you supply the more fiercely it burns. In like manner, life, the more of the humour of life it has, the more the spirit of life abounds in that life. *How* the fire bursts forth from some substance in which is no fire, it is impossible for us to know. Some think that it is due merely to hardness; but how this can be the cause of a substance supplying that which is not contained in it, is not a subject for discussion in this place, where we treat solely concerning life.

Since, then, we see that life is, as it were, a burning and living fire, in this way it is illustrated to us in a material fashion and in a sense which comes under our ocular observation, that life belongs to the same category as fire, and we know that fire lives in wood, as also in resins and oily substances. None otherwise life according to its goodness or evil is strong or weak. Whatever of good or evil fire there is in it, as in the wood, we are able naturally to amend, or to add that in which it delights, or by which it will be rekindled; we can regulate it at our pleasure, can supply something stronger and stronger when another thing fails, substituting something else in its place exactly as the fire is renovated with fresh wood. Though it had been well nigh extinguished down to its last spark, it is again kindled, and burns more

brightly than before. It is increased by those replenishments, or by any other mode of regulation we see fit to adopt.

Nor let us think that we must die on some precise day, sooner or later, or that it is derogatory that a Christian should believe it possible to prolong life by medicaments created by God for that purpose. Nay, it is altogether a mark of idolatry or of idiotcy not to believe that this is put in our power, just as we said above of fire. Our only defect is that we do not know the special kinds of wood by which we can kindle our life. It is not against Nature that we should live until the renovation of the world: it only passes our comprehension. For the most part we lack wisdom, so that we are unable to judge what there is in existence which is useful for us, especially since we altogether ignore our powers in this respect. Adam, whom we think the wisest of mortal men, had perfect knowledge of these matters. Although he was deprived of the tree of life, this is not a matter of theology, but of medicine. There *is* a natural tree of life—the tree of the soul.

Since, then, we are writing and teaching about long life, we should, in due course, at this point consider that kingdoms, districts, states, and valleys more or less contribute to the prolongation of existence. Some are more useful for the purpose than others. They afford more joy, more fresh air, and humours which are healthful to life. Among these exist causes which we ought to understand, connected with the land, the elements, the winds, the stars, and so on, which can make life longer than the common span of human existence. From the earth is produced everything that nourishes and supports our life; and also that which destroys it and makes it perish. Hence we can gather that evil arises to our bodies not only from such things as poison and opiates, but from those things by which life is chiefly supported, as from gold and balm. Nor should it be thought that medicaments were created only for use against disease, as, for example, the Tyrian remedy against poison, nor should it be inferred that these have no operation in healthy bodies. For we should know that to keep the body in health just as many things have grown up as for taking away health. We can, by our daily food and drink, at one time injure our bodies, at another benefit them and keep them in health, according to our use or abuse of these things. Whatever we use of these elementary things becomes useful or hurtful to us according to our reception of them. For whatever the fire in us consumes as it burns, that the fire restores to us when it is extinguished. Whatever loss is brought about by the one or the other the air itself compensates. It never refuses life or deserts us; it is we who do this for ourselves when we withdraw from the air. In this way, whatever one element takes away from us, some other element supplies in the way of conservation; and by an alternation of this kind those elements are regulated, so that they may do us as little harm and as much good as possible.

And although the air may sometimes destroy us by the infection with which it is occasionally contaminated, still we are able to discover this, and

even in another direction turn it to our advantage. The air is both particular and universal, good in one place, bad in another, just as one land is better than another. In like manner, it is compared with water, which, like the air, is sometimes to be avoided by us, and the same is the case with fire. For from one kind of wood a better and more healthful flame proceeds than from another. So, also, influences and the stars above ought to be understood, since they have the power of breaking up our health in different ways, and of destroying our health. In like manner, it must be remarked, that among these some have the power of conferring health and of prolonging life. For there is no section, species, or kind so bad but that some good also exists therein, though we are not able to twist and turn this, or to regulate it for our advantage, as, for instance, that we should be able to appropriate to ourselves Jupiter and to reject Mars, or to select for ourselves other useful and convenient stars, as we do with herbs, some of which we choose and others we reject. We have not the same kind of power over superior objects of rejecting the one and selecting another; though even here we have some power when we bring it about through some means that they exert their influence on the inclinations, as when we use the rings or images of the planets, and other methods which we will explain more fully and clearly as we write. Furthermore, too, it must be considered that sometimes our life depends upon the aforesaid causes, and similar ones, either to be diminished or prolonged. We will say at greater length what good or evil can result to us from these, so that we may be able to understand the powers of God and His creation; not that we would presume to scrutinise these from their foundation, or fully describe them from the beginning, but only give some fragmentary thoughts concerning them.

More at length we have to consider in what essential way such things as diet, medicines, places of habitation, and the higher bodies exert their influence over us, so that we may be able to avail ourselves of the virtues contained in them, and to extend our life, and understand what their influence is, as also how they are able to do us good and help us. Their virtue far exceeds ours, because it is less subject to any sensible virtue, and it may help us just as a log is not able to burn unless some oiliness survives in it. The virtues of the things we have spoken about by far surpass ours in their consummate strength, and this in the following way: Their essence and property, their nature and quality, are incorruptible and permanent, since they do not die like mere sensible bodies, or as man dies, who is deprived of life and stripped of all his powers when his body becomes a corpse. Yet herbs and like objects do not perish essentially. For the substance of these things, even when the material body putrefies, remains, an incorrupted essence indeed, in the earth, passing on in turn to its own like until the remaining earth is consumed. They are taken up for its use, and their essence passes through their decaying bodies into the earth. But in the case of man, his virtue, essence, and properties do not remain with his corpse, but withdraw themselves from decay.

Hence it is gathered that we are not able to receive into our bodies the essence of herbs and the like, so that those bodies may be increased and nourished by the virtues of those herbs, simply because we receive the properties of the herbs, so that if one takes a pound of the quintessence of hellebore it relaxes the body as that herb does, or if a man eats gold his body shall become golden. By no means. Here is the difference: the one is appropriated, and the other remains in a material form within the body, with all its virtues abiding in itself. This is an essence, not a property, but a certain *esse* from which is produced an essence endowed with all its properties and appropriate natural gifts. Such an essence, when it has entered the body, mingles with the humours for sustaining the spiritual life. This essence is a humour, and constitutes the life of the thing, and for this reason the two humours combine in one, and agree in their intermixture so that the inner receives the *esse* of the outer. The one is united inseparably with the other, just as one wine is mixed with another. Moreover, it must be remarked that consumption goes forth from that body because the humours of man's body are always mortal, and liable to decay; whence it occurs that essences are deteriorated and weakened for the future. There are, then, in this one two contrary things, whereof one is corruptible as the humour of life, but the other, which is fixed, consists of the essences of things, their humours, and liquids. That which is fixed gives assistance until it is consumed, just as talc does, which fire has no power to injure, but, nevertheless, in process of time it is consumed in another way. With regard to long life, we complain bitterly, because we are deprived of the power to understand what we should take when weakness seizes on the fixed substance, and we become weak, like a lion worn out with a long fight, and no more abounding in strength, or when we have no wood to add to a fire that is going out.

We know that there are some medicines and some regions in which there is no death, in others it is slow, and life is very long because the harmonies which prolong life are in these places most abundant. Although there are in these places some who are mortal, still they live a very long time, concerning whom I do not purpose at present to write more fully. We should know also that some persons are immortal, so that we ought to learn what is mortal and what is not, as also what the grades of the universe are, what vast natural powers exist therein, and how supremely man may be beautified by a long life. This can be understood in two ways. That is mortal which cannot remain until the destruction of the world. That is immortal which will await such destruction, though these very things are themselves mortal. This lower world is not going to remain for ever in its substance. What is born therein is divided into mortal and immortal, so far as natural things are concerned only in common speech. For the world is not one and undivided, but partitioned off into regions, namely, Paradise and the outer world. In the latter we live with such hope as we can. But in Paradise, which is the other world, there is no death. This is no miracle, but purely natural, because the

nature of that world allows it. Just as our gold preserves one from leprosy, so does Paradise preserve us from death, not by a miracle in either case. Nor must it be understood as though our dead body was to rise, which would be a miracle, as we have said in our book on Heaven and Earth. It is most necessary we should know that in Paradise is born a being immortal in its substance. Moreover, in the essence of the outer world we have nothing but a fixed essence and a corruptible body, which are both preserved in Paradise. But to write much about this belongs not to our experience, beyond what the earthly essence teaches, which affords a centre. Nor ought we to discuss at length about these matters, since they far exceed our imagination, and every faculty which seeks to learn whilst on earth the order of Paradise. We speak of these things after a spiritual manner, rather in a dream than waking, and only for this reason to shew that the life there is enduring, up to the consummation, or perhaps beyond it, but this is to us occult.

Whatever, then, is from Paradise is able to render our life immortal, and not the Nile itself could wash away that attribute or despoil us of that virtue. We are by our materiality, by our place of abode, and by our pursuits deprived of a certain amount of power, and so we will not write further about these matters. Still, we will endeavour to teach in the sequel about a long life, so far as it shall be in our power to look into the matter, leaving those things which we are not able to grasp, and rather considering the predestination of each in particular.

In order to write more fundamentally concerning long life, weighing everything that conserves and defends it, it should be known that mind and being are the two methods by which soundness is either taken away or secured. In these two the health of our whole body, and everything that we do, is established. Out of the mind those matters regulate us which are therefrom produced, which also specially belong to it, as incantation, imagination, thoughts, and influences, all of which operate in the mental sphere. From the being those things govern us which belong to that department, such as the complexions, the qualities, the limbs, and the bones. Furthermore, this must be known and understood, that incantation, estimations, imagination, and influences are submerged in our mind when our thoughts are so plentiful and so powerful as to master our reason and our mind. So, too, from the most powerful forces of imagination, estimation, and incantation, the reason is submerged like the fragrance from the rose, whence it happens that it introduces syncope and madness amongst its influences, and so rules in the mind that it masters it and dominates it, not because it is produced in the mind, as the three preceding things are, but it has such a power of inclination, that it can turn it to good or evil, just as the sun shining through some glass tints according to its own nature whatever is contained in it. No otherwise does our mind exert a transmuting power according to its natural life, like ice melting in the sun. Those things which proceed from the being bring to us bodily infirmities from our complexions and qualities, which complexions

originally arise from the being, and this is conserved by the humours, according to the bodily organisation.

It is in no way necessary to consider diseases of this kind, or the origins, beginnings, and essences of the mind and the being, nor again to inquire what the cholera is, or the phlegm, or the blood, or melancholy, but only to proceed generically, as will be shewn below. First, then, we will approach our practical method, because those other matters have no relevance to mental affairs, or mental things to them. So we will assign to bodily things each its own substantial medium, and, while remaining silent about mental things, we will point out the effect which these others have in the curative process. Understand, then, that the bodily substance must be conserved in the humour alone, as being that wherein is the life, and from which the complexions, and so on, are regulated. It is not the complexions or the qualities that have to be conserved or purified, nor need the losses of the liver or the spleen to be taken into consideration. Conservation itself removes all these things, and blots out all defects of a similar kind, together with all that is superfluous in the body, and thus reduces it to a state of equilibrium. Conservation of this kind does not operate thus by means of some grand specific of its own, but by means of its altogether incorruptible essence.

We determine, therefore, to forget for the present higher matters, and to point out the practical method in its due order. Here the regimen must be first of all preserved, afterwards the disposition of the body must be considered, and thirdly, medicine. On these three the conservation is to be established. Regimen, from which we start, as regards regions, scarcely comes into the question amongst other matters, as it needs the least precautions, and only the convenient order and disposition of medicine. We put, therefore, our chief trust in that medicine which not only conserves man in youth, but also affects brutes. The chief essence of the same, which is present in natural objects, kindles the body with so excellent a virtue that no strength or virility can be wanting to it. At the same time no disease can affect it, since, through the conservation of youth, no decay is suffered to take place, no putrefaction can occur, no disease arises. It does not even admit the excrescence of superfluities, whence it follows that no disease proceeds from superabundance, whilst, at the same time, it prevents the body from being corrupted, and so no evil can arise from corruption. Finally, it so protects the body that none of those diseases can enter which flow out from imagination or impression. In like manner, those diseases which proceed from tartarus are unable to adhere to it, and if any has fastened upon it beforehand it is removed. When you have once received what we lay down concerning a long life, there is nothing left which you can wish to understand from common sense, since we disclose our meaning only to those who have a good and extensive knowledge.

Now, then, we will explain our method and practice as briefly as possible, though they will not be intelligible by common persons. We write only for those whose intelligence is above the average.

Its practical use is that one dram of this conservation should be taken once every month in the best wine, if the nature, up to that time, has not become debilitated. If decline has commenced, a dram should be taken every week. In the same way, if ninety or a hundred years have been reached, the same quantity mentioned above should be taken every three days. It should be carefully noted that if any one has been deprived of virile powers, the weight should be increased as necessary. For the natural power of man is virile in its own degree, and more potent for suffering in one than in another. All this must be taken into account in cases of conservation for the reason we have mentioned in the words preceding. Sometimes the constitution of a man is so weak that he cannot be conserved, as in the case of those who from birth have no good foundation or root. As a sponge cannot admit fire in the same way as wood does, so these persons do not admit of conservation in the same way as others do. So, then, though the medicine be perfect, still, on account of defect in the subject, in the way of constitution and perfection as required by Nature, the operation is weakened.

Concerning the female sex, too, it should be understood that, so long as this method of imagination is applied, the menses will not fail for another period of life, nor yet fecundity for conceiving and bearing children ; provided only that the women, by their natural constitution, are qualified for this. For the spirit of life which is in them expels every contrary influence and conforms everything as it ought.

So, too, of the yet unborn fœtus. If at birth it be thus conserved it acquires a thoroughly sound constitution, proof against all diseases and preserved for a long life.

A long life depends on three things : the vital spirit which conserves life in us all : after this arise the different temperaments and qualities, like the trunk and branches from a single root. We place the reception of conservation herein, and endeavour to defend the rational spirit, by our conservation of the nature, from all those accidents which could be occasioned by temperament, such as excessive sorrow or joy, which arise from the humours. These, again, are fourfold, varying with the temperament and the qualities, and so on. For these no special medicine need be used. If the vital spirit only be conserved, these vital humours are conserved also, and if these exist without any defect, no perverted elements, such as temperaments, can arise. So, by this method, the body, and all that is therein, is rendered sound and healthy. Hence, too, it happens that no evil can occur to the rational spirit through the aggravation of the body, but it is conserved in a good essence and nature, just as it can easily be understood that it will be conserved with all its faculties, such as sight, hearing, taste, etc., in due proportion. The process of conservation, then, which we have already mentioned, we describe in two ways, one by means of simples, the other by arcana. Yet, we would not wish to separate altogether simples from arcana, but, on the contrary, join them together, since simples of themselves have such marvel-

lous virtues and powers that some of them conserve for forty years, others for a hundred, and this, so far as conservation is concerned, we place on a par with the powers of the arcana. The essence of such simples which secure so long a life we consider in no way inferior to an arcanum. Take, for instance, the leaves of the daura, which prevent those who use it from dying for a hundred and twenty years. Its virtues we describe in the treatise on the Nature of Things, and here, for the most part, we preserve silence about them on the account of the incredulity of men. In the same way the flower of the secta croa brings a hundred years to those who use it, whether they be of lesser or longer age. There are many more of these no less worthy of regard which we do not set down here. The arcana, it is true, have greater powers of conservation than the simples we have named, because they fortify and nourish the radical humours more than the simples do, just as flesh and herbs nourish men, but in unequal degrees, since one has more power than the other, but Nature derives satisfaction from this rather than from that, and partakes of it with greater advantage. We give the recipe, then, for conservation during two or three periods of existence, for men or for women, as follows :— Take of cut flowers ʒj. ; of leaves of the daura ʒv. ; of essence of gold and of pearls each ʒss. ; of the quintessence of saffron, chelidony, and balm, each ʒv. Mix them all together according to the artistic method, and keep as a compound for use, in glass vessels as above. This medicine is also sufficient to cure and to drive out any accidental diseases which may subsequently occur in the subject.

Now we have to speak of mental affections and assign to each its special remedy. Mental diseases, either those which proceed from the mind or come into the mind from without, may occur in different ways, as we have before said. And though we cannot ascertain exactly the origin and nature of these latter, since they are invisible to our eyes in their seats, and consequently in their powers, still we speak only of their effects which we can see, and of the operations which they shew us. On these we base our practical treatment, saying that their effects are produced in the spirit of the mind (as we have elsewhere remarked), as our mind is merged in them.

We neither wish nor are able to hinder the course of the heavenly bodies, yet we have the power of resisting them, just as a strong wall can be assailed with bombardment and with engines. The sun impresses its influence on a stone. If that stone be thrown into the water, the sun can no longer bring its powers to bear on it, and thus the stone is preserved. Similarly, influence can enter a man in two ways : in one, when it is impressed upon him by ideas. This cannot be hindered, as the grass in the meadows cannot vegetate and grow without the sun. The cause of this we set down in another place. In like manner, there is one kind of influence which conserves and sustains us as nutriment does the body. Such is the influence of the constellations. The other is accidental, and this does us injury by hindering the former so that it cannot exercise its operations upon us. We know this of planets and the like.

We adopt measures of preservation against them so that their effects may have no power upon us. Such methods of conservation against the planets consist of rings and images specially constructed against their influences. What we have said on the subject of imaginations should be carefully noted. The rings of the planets have power of defending us from accidents, and so affect long life. But they are not satisfactory, for several reasons. And here is something to be known, namely, that the mental influence should be directed to some other object. For example, if Mars should be disposed to destroy me, and there be a mental inclination from him in my mind, which might induce mental disease, I construct my homunculus, that the operation of Mars may be directed to this image, and I may get off safely. It is easier to affect the homunculus, and so the planet is able to work its will more gently and without resistance. It takes the easier course, and leaves the more difficult one. The material is the same by means of the opening that has been made. To this material Mars was inclined with the view of injuring my nature; but he begins to operate on that which is easier, is satisfied therewith, and remains therein. Other reasons may be assigned for this, but we do not put them forward, since they have no bearing on the conservation of long life.

In this way there is produced a conservation of the mind, that is to say, the heavenly bodies are distorted towards something less resistant, so that the mind may be freed from the heavy yoke of those heavenly bodies by means of which death is often inflicted.

Against incantations, too, we would prescribe something, so that a long life may not be taken away by means of these. Remedies of this kind we have mentioned in several places, not as conservations, but simply for a cure of incantations. But the same is to be understood concerning them as in the case of the malefic stars. Incantations, that is, are to be guarded against in the same way as mental influences transferred to a homunculus. A similar operation holds good in its reversal to that which binds our minds and mental organs and our beings, the seat whereof is in the mind, as we remark in our treatise on Incantations. It must be directed to some other subject, and not to that which we have from the stars, but to its own incantation in the following manner: I construct a homunculus of wax to serve my purpose, and this I put in its place. Then, whatever attempt is made against me by way of incantation will be fulfilled on this image. For that proceeds from my mind, and the incantation from his mind, so that the minds meet, and on neither side is any harm done, or any effect produced. Under this form we have made clear the mode of resisting and preventing incantations by means of images.

So, too, imagination destroys an imagination directed against us. It may happen that I am being killed by the imagination of another. Such an imagination, which should be fulfilled in me, should be diverted elsewhere, lest health and long life be taken from me thereby. This I illustrate by the following example. If anyone feels great enmity against me, so as continually to

wish for my death, and is not an incantator, but still a most persistent enemy, and if I do not know this, but his evil disposition is hidden from me, I, on the other hand, settle my mind in the greatest possible repose, by this method of protection being hostile to none, hurting none. By means of this piety, such great envy which is directed against me cannot be carried out; for piety is the principal and most consummate means of preservation against bad imaginations which can possibly be devised.

Estimation, in like manner, which is in ourselves, may operate in the same way. When I think more of myself than my reason warrants, such estimation is a submerging of my reason, so that I may lose my reason by the inordinate mixture of self-esteem, as we have said elsewhere on the subject of estimation. Against such estimations as these the best method of conservation is not to impose more on the reason than it can bear, which is the way in which such estimations are fulfilled. Here is another method of conservation. For instance, where we make false estimates of God, a subject which surpasses our reason, we betake ourselves to a homunculus directed towards the stars, which homunculus is of the same nature as ourselves, and so our speculation, which might corrupt us, passes to the homunculus. For there is no resistance to such speculations being fulfilled without loss, by a subdivision of the senses existing in me and in the homunculus, with a difference of perfection and imperfection.

By means of estimations and imaginations many superstitions are fulfilled, which are not impressions, or incantations, or estimations, but simply superstitions capable of being understood by a similar example. I suppose myself imbued with the superstition that when I hear crows chatter on my roof I esteem it the sign of some one's death (there are many similar examples which need not be quoted). This superstition may make me ill myself, or kill my sick friend, the cause whereof I set down in my treatise on Superstitions. My method of conservation is this: that I regard such chattering as natural, and that it does not operate according to the foolish idea of men and of myself. By this means my superstition is destroyed, for it is rendered doubtful when I attribute it to my folly. Nothing destroys superstitions more thoroughly than considering them to be follies. Thus all harm is taken out of them. It is the consensus that leads to action, and this consensus is at once removed if I think of my own simplicity and the folly of such empty credulity. And this does not happen only in the case of crows, but with many other things, which it is not necessary, nor would be useful, to rehearse in a treatise on long life. Enough has been said on the subject of conservations.

As to the fact of our being hard to understand, that happens only to those who understand neither us nor Nature herself. Yet is what we say of some moment. For those who do not understand us on the subject of long life, we decline to teach them more plainly. For those who have any depth, we are conscious that we have written of our processes at sufficient length, and have disclosed them with ample clearness.

Concerning the regimen of food and drink, we will only set down so much as bears on long life, reserving the rest to be treated in another place and by another method. First, it should be known that foods ought to be prepared according to a process, just as medicine, so that they may expel all the superfluities of humours which lie hid and grow in the body. These humours, by means of conservation through food and drink, are completely removed. Next, it is necessary to know that the cures of all internal diseases are accelerated and promoted by suitable medicines, and also by Quintessences. As to the origin of diseases and medicines, we say nothing about these matters here, because they are extant in many parts of our Physics. This only we say, that for a long life the following is the best regimen : moderate diet. We do not give this in detail, because it is well known to every physician. One thing we will add, that food ought to be separated from all its impurity, as we teach in our treatise on the separation of the elements. The use of such separated food with moderate diet exhibits a wonderful sustentation and conservation of life ; it restores the flesh and blood, so that no disease can do harm to the body through external foods, which is not the case with other foods and drinks. The use of such separation of foods for the foundation of a long life we set down for those who wish to live long ; and we do this for many reasons, not necessary to specify here. This we do affirm here, that this is a regimen by which the complexions of the blood and the flesh are nourished. Nevertheless, conservation belongs to the vital spirit and its humour. Thus we believe we have said enough on the regimen necessary for a long life.

We describe the separations of foods and drinks in the treatise in our Archidoxies on the Separations of the Elements, the pure from the impure. In like manner, in the book on Regimen, in the same place, we set down what may be best and most conveniently adopted for a long life. We do not repeat here what we have written at sufficient length elsewhere.

What air, earth, and elements are best, we will indicate in the same manner. In the element of fire no watery disease can arise, and *vice versa*. So, in like manner, we must understand of the earth and the air. Whatever lives in the fire is free from other infirmities except those of fire.

What has to be considered, then, and assumed necessarily for practice, is a certain desired equilibrium of elements, wherein long life consists. This is the work of wisdom alone, in which work are comprised the operations of the elements with the perfection of their forces, so that the fire shut up in man shall avail to take away all diseases, drive them out, and keep them at the greatest possible distance. We look upon this work of wisdom as another earthly Paradise, in which no disease could germinate or remain, no venomous animal could dwell or enter, and health could never be destroyed. This we could wish conceded to us by the Lord God, that we might write freely, without the contempt of idiots, what experience has taught us about this work of wisdom. But, on account of those idiots, one has patiently to hold one's tongue with regard to the miracles and marvels of that work of wisdom, wherein is

reserved the earth of the wise. Since, then, I must be silent about this, I determine to describe it only among my secrets, that it may remain buried within me, though without any end of life.

Thus far have I written on the subject of Long Life for our own and other disciples who are endowed with a happy and subtle intelligence.

HERE ENDS THE BOOK ON LONG LIFE.

THE BOOK CONCERNING RENOVATION AND RESTORATION.

BY THEOPHRASTUS, PHILOSOPHER AND PHYSICIAN, OF GERMANY, CALLED
PARACELSUS THE GREAT.

FIRST of all we must understand what Restoration and Renovation are ; what those things are which restore and renovate, and also what that is which can be renewed and restored in the creation of things. All minerals, indeed, are thus brought back to youth, are renovated and restored, so that rusted iron can be again brought back to new iron, and the rust or flower of copper into its copper. So, likewise, minium can be brought into lead, and Saturn into Mercury (or, as others read, the calx of Jupiter into tin). In this place, therefore, renovation and restoration signify that process which brings back a destroyed, or rusted, or consumed substance to its youth and its perfect essence. But still this renovation which we have here introduced cannot be in any way compared to that restoration or renovation which we purpose to expound. For though rust and verdigris are not a metal, still none the less in their essence the essence of the metal has not yet perished or been consumed. So, then, that renovation cannot, in this place, be taken for an explanation of restoration and renovation, because in the human race such rustings and ablutions do not occur ; and hence it is that men do not require a renewal of this kind.

In this manner, if a decrease be understood to happen to an old or decrepit man, like a kind of rust in his substance, then, in like manner, his body will be capable of being brought back from its state of decrepitude to youth, and there is a restoration from any kind of disease to health, but concerning this we have no desire to write at present. This, too, may be accounted a kind of restoration when out of salt, sulphur, and mercury a metal is made naturally. When this perfection is completed and brought to the actual metal, that metal may again return to its three primal elements, so that the salt, sulphur, and mercury again appear as they were at its first generation, insomuch that the metallic element altogether passes away, and there is no longer any metal present. So also it may happen that the matter of the three primal elements may return again to a metal as before, namely, if from the three primal elements of copper, copper be again made, and so on. This, too, in the case

of metals is a restoration or renovation, when a kind of regeneration takes place from a metal previously complete into a metal again, perfect and complete. But that is not to be thought of as renovation or restoration if it be referred to man, because we cannot be brought back to our three primal elements, or reduced to our sperm, from which, again, we might be again renovated and restored, as in the case of metals quoted above. For then we should have the power of improving ourselves by a second generation better than the first was; even as iron, which is reduced into its three primal elements, and afterwards to silver or gold, and becomes incorruptible by this very process; or as Saturn, which is again reduced to its mercury, is at length changed to an incorruptible metal. None otherwise should we, too, be able to produce or create from ourselves an incorruptible creature, whereas we have no power to do this. For we lack that primal matter,* and are unable to go back, so as to be constituted an irreducible mass, but we must progress as we have begun, and in no way are we able to recover or to possess that out of which we proceeded.

Restoration, then, or renovation, is twofold. One, as applied to metals, we have introduced and made clear. Another, when an old picture is renewed with fresh colours, so that it appears recent and new as it had been before. But we must not, therefore, understand in this place that a new matter is made out of an old one, but that the old picture is so draped that it may appear new. Wherefore, again, this kind of restoration cannot be cited with reference to the restoration and renovation of man. But restoration and renovation must be understood in this way: that man's radical moisture, acting upon and energizing the spirit of life, shall not be diminished or driven back, but rather shall be increased in its powers and pushed forward, as a tree to which aid is given for the production of its flowers and fruits, so that when these drop off and are done with others are again procreated as before. But, although the example here quoted does not in every detail illustrate our theory, nevertheless, it affords the means for understanding how to promote the radical moisture of life just as we shewed in the case of the tree. We intend renovation and restoration to be understood thus: that they are not produced in the radical moisture,† but in that which is generated from the aforesaid moisture and derives its origin materially and corporeally therefrom. For as a bell made by fusion does not receive its sound from the tone, but from the body, so restoration or renovation does not receive its operation in the spirit of life, but in that which makes this same spirit; that is to say, the one is material, the other substantial. But when all this substance in which the radical moisture is

* It should be noted that while all things are constituted in the three prime principles, they cannot be separated without the destruction of the simple matter itself; for in separation the virtue of Mercury, of Sulphur, of Salt, vanishes and goes back into the first matter, as may be seen outside the Microcosm, Mercury being transmuted into soot, Sulphur into oiliness, Salt into alkali, whence it is manifest that the first matter cannot pass into the ultimate matter in the absence of a medium.—*Chirurgia Magna*, Tract III., Lib. III.

† For the conservation of the radical moisture in its proper quality a medicine is required which is also a material humidity, and while this is administered, no disease can be contracted. — *De Morbis Metallicis*, Lib. II., Tract IV., c. 5. In the same treatise alum is said to contain an elementary humidity against the fire of the Microcosm.

present shall have been purified, its tone will be also improved, and the better the tone is the better the body will be. And when we say that the radical moisture proceeds from the body and the members, we understand it in this way, that the radical moisture itself, and that which proceeds from it, are just like the root and the tree, of which the one cannot live or subsist without the other.

Equally must it be understood here that these two things are so intimately united and conjoined as to be incapable of being separated. The radical moisture and the spirit of life,* together with the moisture of life, are in bodies and in limbs, just as in metals is the tone, which is not seen, only heard. For the spirit of life and the radical moisture are truly in bodies. It would be idle, therefore, if we endeavoured to purify it or to renovate the body by its means; but it is just that the body and the matter which are born and have their origin therewith should be restored and renewed. Hence, it may be gathered that restoration and renovation are transmutations of members existing superfluously in the body; so that all which proceeds from the body, and not from the radical moisture, falls away, and something new is born in its place, just as we perceive in a tree, from which all the leaves, the flowers, the fruits, and the fungi fall away, and are born again, yet the wood itself is in no respect changed, so as to fall away and be re-born, but it remains. So, too, does the radical moisture remain. This is the life in the body; and when bodies reject from themselves hair, nails, teeth, and such things, these are presently re-born. This is restoration and renovation, whereby that very thing which should be restored and renovated is restored and renovated. For every restoration and renovation occurs in superfluities, and in those things which have their origin and are born from the substance. By what method the body is able to be restored and renewed may be sufficiently understood from the demonstrations which we have made, and from the superfluities which do not form excrescences on material effects, as the hair, the teeth, the skin, and the nails; but are in the body as something in excess, which are not absent from matter or corporeal substances, but remain in their essence as four complexions†

* The spirit of life is a spirit situated in all the members of the body, however they may be denominated individually. In all and each of these the said one spirit abides, and it is the sole virtue indifferently of them all. It is that highest and most noble grain whereby all the members have their life. But being extended and diffused it manifests in various ways, according to the variety of its seats. . . . Nevertheless, its potences are one. The virtues which sustain the bones are in no way feebler than those which nourish and fortify the heart, nor do they abound more in the brain than in the marrow, although the opposite may seem to be true. There is the same necessity of the marrow as of the brain, and the virtues of both are the same. A like law prevails through all the members. Some of them may appear to be of greater importance, but, nevertheless, one spirit of life is the moderator, virtue, power, and operation of them all. The spirit of life originates from outside causes or generations, not from those which are natural according to the flesh. While the generation of other things is twofold, that of the spirit is simple. — *De Viribus Membrorum*, Lib. I., c. 1.

† Concerning the four complexions—cholera, blood, melancholy, and phlegm, we would by no means be identified with that opinion which asserts that they are or do derive from the stars or the elements. We do not regard this as true even in the least degree. The principle or beginning of cholera is from bitterness; melancholy is acidity; phlegm rises from sweetness for every sweet thing is cold and moist. Blood is from salt; whatsoever is saline is sanguineous, that is, warm and moist. The four complexions, therefore, are acidity, sweetness, bitterness, and saltiness. If salt in any man predominate from the ens of the complexion, then is he sanguine; if bitterness, then he is choleric; if acidity, he is melancholic; if sweetness, he is phlegmatic. Thus, therefore, the four complexions exist in the body as in a certain garden, wherein flourish amarissa, polypodium, vitriol, and salt nitre. And all these may coexist in the body, but so, nevertheless, that one alone will prevail. — *Paramirum*, Tract III., c. 10.

(otherwise humours), whereof one proceeds from coldness and humidity, which is retained in the whole body, and is born, not having any special place, nor any beginning or initial point from whence it proceeds, as is proved concerning the four complexions. Another springs from the exact contraries of the former, namely, from heat and dryness, which, too, are similarly in the body and have no special abiding place or origin, and also produce liquid. The third is cold and dry, deriving its birth in the same way. The fourth is warm and moist, itself also proceeding as the others did.

And here it must be noted as happening that these four humours* do not all exist in all bodies at all times, but sometimes one only, sometimes two, sometimes three, at other times four. Of them it must be remarked, too, that, in the process of renovation and restoration, they are consumed and expelled, for this reason, that Nature and the life of man are able to exist without them, and stand in no sort of need of them, since they exist only as superfluities, like the dregs in wine, or the froth flowing from it at the time of vintage.

Concerning the four complexions thus displaying themselves in man, this, too, is to be noted: that these are not renovated or restored, because they spring from no one of the members, either greater or lesser. Neither are they in the blood, nor in the flesh, nor in anything like these. Nor, again, is it true that the sanguine complexion proceeds from a liver abounding in blood, or the melancholy from the spleen, the choleric from the gall, and the phlegmatic from the brain, and the like; since the aforesaid members do not supply their complexion to man, but those complexions come at birth itself and last right up to death. These points we do not undertake to discuss in this place, because they are too remote from our text concerning renovation and restoration.

Since, then, no one of the four complexions has its place or origin in the bodies we have spoken of, but exists in the spirit of life and in the radical moisture, complexions cannot be renewed or restored. But when the body shall have been clarified, their nature, too, shall be made clear.

In like manner do we point out as foreign to our text the division of complexions according to age, region, and regimen, because no complexions are impressed on a body by these three. It may, indeed, happen that old age brings sadness to bodies, but this is not a complexion. In like manner, the dwelling place may induce phlegm, but the complexion is not on that account phlegmatic. Bile may make one acquire a yellow colour, which need not be discussed here since it is made clear when we treat of the Construction of the Body.† For a division of this kind a special phase of intelligence is required,

* There are four humours contained in man—blood in the veins, moisture in the flesh, viscosity in the nerves, grease in the fat. These four have each their natural purpose. — *De l'este, cum additionibus*, Lib. II., Tract III. At the same time, the doctrine of the four humours as commonly expounded at his time was rejected by Paracelsus, because it was a thing hard to believe, founded upon faith only, whereas medicine is established, not in faith but in sight, and nothing in such a matter should be accepted upon faith, except the diseases of the soul and eternal salvation. — *Paramirum*, Lib. I., c. 1.

† Paracelsus has a treatise on jaundice, which will be found in the first volume of the Geneva folio. As in so many other cases, there is no work which precisely corresponds by its title to that named in the text.

since it must be remarked that they are not only humours, but sometimes minerals too, and sometimes corruptions, which all exist as superfluities contrary to Nature and virtue. In like manner it must be said concerning the principal members which resist renovation and restoration, that is to say, in this way, that they do not perceive it, for they do not receive them into themselves, but they take up everything that passes through them, and is prepared with them, just as they take up food, not a medicament. But wherever by any chance humours or superfluities are produced in them, they would be expelled. So, also, of the other members, too, it must be equally understood, namely, of the bones, the marrows, the brain, the heart, the liver, the lungs, the kidneys, the spleen, the stomach, the intestines, the cartilages, the muscles. And of the blood, too, it should be known that corruption or superfluity exists in it, though it be only an accident. And so equally of the flesh. This accident is, as it were, purged away in the process of renovation and restoration. Not, indeed, that another blood is produced, but that what is depraved is removed from it, and the good is preserved and predominates. The same judgment, too, is passed concerning the flesh.

To explain briefly what are those things that can be restored and renovated: leprosy, falling sickness, mania, pustules, gout in the foot, or in the hand, or in the joints, and other like ailments are removed in renovation and restoration, unless, indeed, it be some disease taking its origin from birth. This will not be removed.

But concerning leprosy, or any more severe disease which may exist, it is well to know that it undergoes transmutation in the body, not, indeed, that there is a separation of the pure from the impure, but that the leprosy is converted into health, as copper or iron are transmuted into gold. And no one ought to be staggered by this conversion, for renovation and restoration consume, none otherwise than fire in silver or in gold, its falsities and impurities, and leave it pure. In the same way the falling sickness and gout are taken away; for all things which are in the whole body are forthwith renewed, the blood and the flesh, with the other things which are embraced in it. For, as alkali purifies mercury into the very best silver, so also renovation and restoration transmute the body into a good essence, as has been said above.

Renovation and restoration, then, expel whatever is superfluous and incongruous with Nature in the body, and change all this which Nature does not want, or which was of no account, into something good. In this way it re-establishes everything and causes it to grow again, as we have said above, brings back the entire body to youth, and so on; for this cause, that nothing can resist those things which are in the nature itself.

And now we must see by what method the body is restored and renovated, namely, by the kindling of the renovating and restoring medicament, which it has in the spirit of life and in the radical moisture, by which kindling the operations are prescribed like the burning forces of a nettle. For who is so sagacious that he can investigate rightly forces of this kind when they do

not appear to us in natural act, but are sensibly apprehended? In this way, also, renovation and restoration are accessions to Nature produced by forces which we cannot express. This, however, is openly known to us, that every visible thing is cleansed and purified with fire. Nature, indeed, demands that this one process shall be accomplished by fire, and that it shall not be possible by any other means. We understand, therefore, a two-fold fire, a material and an essential fire.* The material fire operates by flame; the essential by means of the essence and the virtues, like cantharides, burning the skin and raising it in pimples as a very violent fire does; yet still it is not fire, nor is felt as fire. A flame and a nettle produce the same effect, as we have often said.

It is in like manner certain that renovation and restoration in this way accomplish their operations when they come into the body or are joined in union within it, because a like operation takes place thereupon as is the operation of Saturn or Mars in Mercury, which are cast into the fire with their realgars, and although neither of them is warm or fiery, they are, nevertheless, burnt up like wood, and in the bottom the perfect metal is found which before appeared altogether leprous.

And, again, who can altogether trace or investigate how it happens that when a migdalio has been powerfully liquefied by means of vitriol, it becomes copper, in all respects and throughout its entire substance like copper, though before it had no likeness to copper at all. None otherwise must renovation and restoration be thought of by us than that they accomplish their operations like lime, which is extinguished by water, and purifies itself, so that all its powers and acridities are taken away and removed by its essential fire.

The renovation and restoration of our nature are none otherwise than in the case of the halcyon, which bird, indeed, is renewed in its own proper nature; and many other like animals are found which have the power of doing this, of which we have made mention in different ways in our Archidoxies, and still more in our Secrets,† from which could be quoted more examples were they not too far removed from our text concerning renovation and restoration, where the demonstrations we make come to be understood equally in this place concerning renovation, while we say again and again that we cannot sufficiently know how the fire operates, though we see it consume the wood, because by its excessive heat it overcomes and consumes everything else. But, leaving this, let us betake ourselves in another direction.

Since, then, we have spoken at sufficient length thus far concerning the beginning of renovation and restoration, let us now point out those things which do renovate and restore. We have, indeed, in our Archidoxies taught

* Fire in its nature is four-fold, that is, the sun and moon govern one part in water, the second and the third, which are resident in air and earth, are ruled in like manner by the sun and moon, and there is hence conjoined in all creatures that magnetic virtue concerning which there must be nothing more openly spoken, for herein is the knowledge of the labour of Sophia, the mother and fountain of the Magi; I have said.--*De Pestilente*, Tract II., s. v. *De vi magnetica munia in homine*.

† The reader of Paracelsus may not unreasonably be disposed to think that his secrets are synonymous with his whole philosophy. At any rate, there is no individual treatise under this title.

in writing how to prepare them, and entitled them with their proper names so that they may be known and marked. Now it is our intention to lay down the composition thereof, and first of all the processes. But while we teach concerning simples and arcana, it must be understood that their operations are brought about in different ways. For some are found which violently purge leprosy by means of renovation and restoration, but beyond that touch no other disease; yet, nevertheless, they are perfect in renovation and restoration. Beyond these, in the distinctions of these kinds of diseases, are the Quintessence, the Magistery, and the Element of Antimony, which purifies the body from leprosy, none otherwise than silver and gold liquefied therein, and in these it leaves no trace of impurity.

In like manner the element of the sun and its quintessence, as also the oil of the same, and aurum potabile, take away leprosy, together with all diseases, renovate and restore. So also the quintessences of hellebore, of chelidony, of balm, of valerian, of saffron, of manna, and of betonia renovate the body, with the exception of those diseases which we have mentioned above, for these they in no wise diminish.

The quintessence of pearls, too, or of unions, of smaragdines, sapphires, rubies, granates, jacinths, renovate also the body and bring it to entire perfection. They take away tartareous diseases, as the calculus, gravel, gout in the hands, feet, and joints, together with congelations and coagulations, and similar diseases which arise from tartar. So also the quintessence and magisteries of minerals and of liquids renovate and restore the whole body from any defect, and free it from the falling sickness, syncope, suffocation, and all diseases which happen with a deprivation of the senses, such as mania, vitista, and the like.

The magisteries and the essence of tartar and alkali also renovate the body with perfect restoration, take away all abscesses, and remedy the putrefactions and the grossness of the humours.

In like manner, the essences, extractions, and magisteries of the greater drugs renovate and restore the whole body, take away fevers, both quotidian, quartan, chronic, and ephemeral. Likewise the first elements of the submargarites can renew and restore the whole body, and remove all diseases from women, with their accidents, and also render mankind fruitful, both the husband and the wife. The same arcana in like manner take away all long-standing and incurable diseases by renovation and restoration of the body to its highest powers.

None otherwise, too, the quintessence extracted from balsam renovates and restores the body. It takes away pleurisies and pestilences by its admirable operations and power of perfection. Of this class, too, are many more things which are also enumerated elsewhere, of much greater virtue than can be attributed to them.

In these matters, however, it must be understood that the compositions have to be carefully watched. For though there are many of them, still no

one suffices generally to cure all diseases by itself, but such diseases are to be expelled by the medicaments of renovation. Finally, therefore, we purpose to demonstrate the manner and the practice of our intention, though we may not set down all the processes, for this may not be necessary. He who understands us will perceive the drift of our writings. He who does not understand us is not capable of being taught by our writings, yet none the less we will set down all the processes in sufficient detail. In truth it would be a heavy task for us to write those things which have been written by many or are already known beforehand. This doctrine cannot be conveyed better than by the first entity, in which there is a singular nature for operating upon the body and transmuting its essence. For that first entity, indeed, is an imperfect compound predestined to a certain end and to corporeal matter. And because it is not perfect it is able to alter everything with which it has been incorporated as Mercury can, which is like a primal imperfect entity, in respect of its own imperfection. Although this be determined and limited, nevertheless it is not changed from imperfection, but still it is limited thereby.

Mercury, also, has the power of renovating the whole body because there is in it a powerfully laxative force, and an alterative as well, which cannot be sufficiently explored. Yet, nevertheless, it is as a whole imperfect and useless in its operation, because, so to say, it is mercury, and its first entity should not be predestined into another body. For such as it is itself, such is its perfection. Nevertheless, we speak of a first entity, which is perfect for renovating and restoring the whole body, as is the first entity of gold, and for this reason, because it embraces altogether the spirit of gold and is most subtle, far more subtle, indeed, than the true body itself, that is, than gold.

Hence, also, the first entity of the sun, or gold, is penetrable, even as mercury in metals, and does not contain within itself the spirit of salt, whereby it may be coagulated. For the spirit of salt coagulating the first entity takes so much power away that the gold becomes not by a hundredth part so powerful in its effects as its first entity is. In the same way, generous wine coagulated by frost never again returns to its pristine power.

Now, in order that we may speak and write perfectly concerning renovation and restoration, it should be known that the first essence, that is, the first composition of gold which exists as a liquid not yet coagulated, renovates and restores whatever it lays hold upon, not only man, but also all cattle, fruits, herbs, and trees. And this must be understood, just as of the universal form of any metal, which is endowed with far greater virtues than its own metal, seeing that there is in the mineral form the spirit of arsenic and salt of sulphur and of mercury, all of which are lost in the purgation of the metal, the said metal remaining in one essence alone.

The very same thing is, in like manner, to be understood concerning the first entity of marchasites, as of antimony, which ought to be known no less than the first entity of gold. In the first entity of antimony, indeed, there exists such

a virtue that of itself, by its own special nature, it transmutes everything of which it takes hold, none otherwise than antimony itself does by fire. For the virtue of that same separates from the body everything which is generated by the radical moisture, and altogether renovates the said body from its very foundation; for its first entity becomes so fixed in that predestination that such an essence proceeds out of it, and goes forth from it as heat does from a fire. No otherwise must it be understood concerning the first entity of resins. The first entity of sulphur is an entire transmutation of the body into certain renovations and restorations; and it is so vehement that it tinges all the first entities of metals into its own essence, takes away their operations, reduces them again to their first matter, and afterwards brings them to a perfect and new body. Indeed, the first entity produced from sulphur has such power over the body of man that it renovates all the radical humours in it, in all its places and parts.

In like manner, also, may we speak concerning the first entities of gems, which, indeed, by their primal essence most powerfully reinstate the whole body in its pristine powers, cleanse it from all its impurities, and renovate and restore it none otherwise than the fire changes lead into purest glass. For the first entity of the emerald regenerates and renews itself since it exists from the first as a perfect body. So, too, green marble, which, from its own predestination, has such a nature that it renovates itself from all uncleanness and impurities, and coagulates a second time until it becomes pure. Sometimes it renews itself thus a third and a fourth time, and returns to its youth; and the oftener it regenerates itself in this way, the purer and more enduring does it become. So far, then, as the virtues of first entities are known to me, these certainly far excel all the rest.

So, also, concerning the first entities of salts it should be remarked that, like their spiritual virtues, they are by far greater than in their perfection. Thus, the first entity of vitriol transmutes all white metals into red, and overcomes and masters all the perfections comprehended in them. It renovates and restores all the imperfect bodies of the metals, as tin into its first entity, and again into tin, in which there are more virtues than in the original tin.

In the same manner, it brings back to the radical moisture whatever proceeds from those radical moistures, and renders that same renovation and restoration more perfect, more plentiful, and more full: for nothing else operates so powerfully on the radical moisture.

In no way different are the first entities of herbs and trees, which, before they have received their body, that is, their stalk or trunk, are a thousand times more powerful than when incorporated. Even so, the first entity of balm renovates and restores the body far more powerfully than seems possible to be done in natural things. It should be known, that the halcyon is not thus renovated or restored by its own nature, but because its nature is such that it should be nourished and live on first entities in this way: When it eats the bodies of herbs, or of seeds and the like, its stomach, by digestion, reduces

them to their first entity, and afterwards, by means of that first entity, it perfects the operations of its own renovation and restoration. For its digestion was by Nature predestined only to first entities, whence it happens that it first of all transmutes all its food and drink into a first entity. On which account, also, it eats those bodies only which regenerate and restore, with which from the very time when it is hatched it is furnished and nourished by the parent-birds. In the meantime, this is its own nature, that after death it is renewed and restored ; on this account, forsooth, because all these first entities cannot have their progress in the bird whilst it lives, since the life of this bird takes away all the power of those entities by turning them into blood and flesh ; but when it is dead it flourishes according to the annual seasons ; and just as first entities put themselves forth in the earth, thus, in like manner, do they then put themselves forward in the bird itself, and so renovate and restore the dead flesh, which, indeed, in Nature itself is a wonderful argument for its powers and virtues. If these things did not lie open to our eyes, they would be incredible, though they should be written down by many persons. From this cause, also, it happens that halcyons renovate themselves at irregular times, some sooner, some later, as they have earlier or later eaten the first entities ; for some are born and come forth sooner or later than others. Also many worms are renewed and restored for this reason, that they are fed and nourished on first entities while they are still imperfect in the earth. There are many marvellous things which are occult, and far more than are known or openly investigated, concerning which one could write more copiously, were they not too far removed from the text of a book on renovation and restoration.

And although, as we have previously written, we cannot very well take first entities, or have them in the same essence ; still it is possible for us to do so. For if we know where the mineral of gold lies hid, we shall also find its first entity in the same place if we come before its perfection. For there are certain signs by which it may be known how the form of the metal is placed. So whilst it is in its first entity it makes trees fruitful, and renders fertile its foundation, that is, the earth. It renovates old trees which for twenty years have borne no fruits ; for when the first entity of gold has seized upon them, or upon their roots, they begin again to live and flourish as before. But although there are many more particulars concerning the first entity of gold which are worthy of our admiration besides those we describe, these suffice for a demonstration of the first entity of gold, namely, that it is there.

But when flames and sparks are seen, then it must be inferred and noted that the metal is being produced out of its first entity, which metal has betaken itself to the process of coagulation. These are reckoned as signs concerning the origin of minerals which apply to gold, silver, or the other metals ; for the signs of the other first entities as to their origin are like those whereof we have spoken.

When a sign of this kind has been seen or found it must be understood that this same first entity is not gathered up in one heap, as it is when it lies

in its perfection, but that it is spread over the whole of the land in that district. Wherefore, this land is in the power of the first entities, and out of it these are drawn, as it is with the celandine when it is not yet composited. Its first entity is in the earth, where it has its position. For this reason similar earth should be taken, and from this at length an extract should be made, as we have pointed out concerning the virtues of celandine. It must be noted that between the first entity and the perfection there is this difference, namely, that the first entity has power to renovate for the reasons before mentioned : but when perfected it has only the virtues of the natures, so that it tends in that direction, but not perfectly. Thus it may be gathered that if it be wished to have from these virtues of the same kind as those of the first entities, it is necessary that they should be removed from their coagulation, and should be corrupted, as is pointed out in arcana and quintessences. But that every thing has greater powers in its first entity, let not philosophers wonder, because even out of any earth in which a herb is produced essentially, before it is incorporated, all the virtues of that herb can be extracted, so that the virtues may be preserved and the earth be put back into its own place, so that for the future it shall be mere earth, and have no fruitfulness in it, because its first entity is taken away, which had lain hid in the earth.

In this way it often happens that the power of a first entity of this kind may be enclosed in a glass, and be brought to such condition that the form of that herb grows of itself without any earth, and even when it has quite grown it has no body, but something shaped like a body, the cause of which is that it has no liquid of the earth. Hence it happens that its stem is nothing more than a mere apparition to the sight, because it can be again rubbed down to a juice by the finger, just like smoke, which shews a substantial form but is not perceptible by any sense of touch. In growing things of this kind the quintessence is entirely incorrupt and in its highest state of perfection, as in the earth.

Wherefore, from the first entity of gold is produced, in this way, the finished gold, which to the touch is like red water, and is stirred up and exalted like gold.

So far concerning these things. Now, let us next in order betake ourselves to the practice of those things which renovate and restore, if they be prepared by the power and rule of art. These things, although briefly written by us, are sufficiently patent, nevertheless, to intelligent men, that is to say, those who have good instruction in medicine and philosophy.

First of all, then, must we know those things which renovate and restore, as we have pointed out, and their first entity must be extracted, and by that the work of renovation and restoration must be done. As a deduction from this argument we set down four mysteries, that is to say, of minerals, gems, herbs, and liquids, as follows :—

THE FIRST ENTITY OF MINERALS.

Take of mineral gold, or of antimony, very minutely ground, one pound, of circulated salt four pounds. Mix them together, and let them digest four months in horse-dung. Thence will be produced a water, whereof let the pure portion be separated from that which is impure. Coagulate this into a stone, which you will calcine with cenifiated wine, separate again, and dissolve upon marble. Let this water putrefy for a month, and thence will be produced a liquid in which are all the signs as in the first entity of gold or of antimony. Wherefore, with good reason, we call this the first entity of these things. In like manner, it will have to be understood concerning mercury and other things.

THE FIRST ENTITY OF GEMS.

Take of emeralds, well ground, ʒj., calcine them in dissolved salt until they be turned to a white colour. Afterwards let them be dissolved, and enclosed in a phial hermetically sealed, and placed over an open fire. Let the matter be suspended on high in a naked glass vessel, so that it shall not touch the bottom, and let this be continued until, from its spiritual nature and condition it falls down to the bottom into a body like the liquor of honey. This displays the virtues of the emerald. Wherefore, it may rightly be called the first entity of the emerald.

THE FIRST ENTITY OF HERBS.

Take celandine or balm; beat them into a pulse, shut them up in a glass vessel hermetically sealed, and place in horse dung to be digested for a month. Afterwards separate the pure from the impure, pour the pure into a glass vessel with dissolved salt, and let this, when closed, be exposed to the sun for a month. When this period has elapsed, you will find at the bottom a thick liquid and the salt floating on the surface. When this is separated you will have the virtues of the balm or of the celandine, as they are in their first entity; and these are called, and really are, the first entities of the balm or of the celandine.

THE FIRST ENTITY OF LIQUIDS.

Take the mineral of sulphur and of dissolved salt; let them be completely resolved into water by themselves, which distil four times. First will ascend a certain whiteness which displays all the virtues of the first essence of sulphur. Therefore with good reason we can have it in the place of the first entity of sulphur, and so name it.

Now that the four first entities have been thus described generally, it must be further remarked in what way they are to be utilised, so that their virtues may be perceived. This is the method. Let either of those first entities be put into good wine, in such quantity that it may be tinged therewith. Having done this, it is prepared for this regimen. Some of this wine must be drunk every day about dawn until first of all the nails fall off from the fingers, after-

wards from the feet, then the hair and teeth, and, lastly, the skin be dried up and a new skin be produced.

When all this is done that medicament or potion must be discontinued. And again, new nails, hair, and fresh teeth are produced, as well as the new skin, and all diseases of the body and mind pass away, as was declared above. Herewith we would conclude our little book on renovation and restoration.

HERE ENDS THE BOOK CONCERNING RENOVATION AND RESTORATION.

A LITTLE BOOK CONCERNING THE QUINTESSENCE,*

BY THE GREAT THEOPHRASTUS PARACELSUS, MOST EXCELLENT PHILOSOPHER,
AND DOCTOR OF BOTH FACULTIES.

MANY have written concerning the quintessence of those things which either lie hid in the bowels of the earth or grow and sprout therefrom, concerning the quintessence, namely, of metals, salts, saps, stones, trees, herbs, roots, quadrupeds, fishes, and other animals, etc. To few, however, has it been vouchsafed to point out the method or process whereby the quintessence can be extracted from the said things, so that a certain hope might, indeed, be left for the human race, not only that a certain quintessence of this kind resided in things, but also that the glorious and honourable body of man might become partaker of the same essential blessing. Wherefore, I am now about to teach in part, avoiding the method of those loquacious triflers, who merely threaten with railing, but do not strike. It has often been stated that an implanted quintessence inheres and dwells in all things; but I shall, in addition, indicate how it is to be extracted, not only from metals, stones, salts, and saps, etc., but also from roots, herbs, animals, and all other things which have anywhere been formed by the Creator.

All essential and created things contain in themselves water, oil, and salt; hence it will be a matter of very great moment to separate the salt and the oil from the water. During the process of distillation the waters first appear, next the oils, lastly the salt. However, frequently the oil, the water, and the salt remain conjoined together. Thus, if juniper oil be extracted from berries in which salt is present, then the oil is separated by reason of its levity from the water, which is somewhat heavier. No one, notwithstanding, has hitherto succeeded in separating from it the salt, which is the most precious of all. Moreover, I am convinced that it is a true quintessence of juniper.

Further, no fresh water proceeds from sulphur, but only oil. Yet, under that oil lie hidden salt and concealed water. Nor can it be properly designated oil unless the salt and the water have been previously removed and separated

* This treatise is not included in the Geneva folio, and is derived from the Basle octavo of 1582. As the fourth book of the Archidoxies has already discussed at considerable length the subject of quintessences, and much further information is scattered through previous books, there is no need for annotation at this point.

from it. Moreover, oil and water are present in common salt, but it can not be properly designated salt until the water and the oil have been separated from it.

In plants and things growing in the earth each has its own water, salt, and oil, yet in a distinct manner. Thus, the warmest things have the most salt, the coldest the most copious supply of water. The lukewarm contain equal proportions of oil, salt, and water; each in its own grade and kind. Thus they differ from one another in colour, odour, and savour. Also the subtlest and purest spirits which are in these things are extracted, and justly and rightly deserve to be described as salutary to the life of man.

Growing metals, as are gold, silver, iron, lead, tin, copper; also arsenic, marcasite, lapis lazuli, rust of copper, green of the mountain, calamine, vitriol, are the first and chief. These are followed by gems, as the emerald, carbuncle, amethyst, which is also called pyrops, cyamus, hyacinth, which is also called chrysolite, corals (white and red), also pearls, etc. And, indeed, the last possess the highest virtues of them all, provided that they be duly prepared; although in addition to the above-mentioned stones various stones are found, as tiles, wherein no small efficacy for preserving the health of the human race is discovered—alabaster, bolus armenus, and others. But before the rest we desire here to speak of the more excellent. In the third place, order demands the mention of vegetables growing out of the earth, as trees, shrubs, herbs, roots, and similar vegetables, their marrow, and other things under which both the saps and the liquors which proceed from growing things are comprehended. Thus, wine, various kinds of oil, as of olives, of nuts, of flax, of the berry of the laurel, of the nutmeg; as also gums distilling out of trees, shrubs, and from the stalks of other vegetables, as Chian turpentine, myrrh, mastic; also from the cherry and heliotrope, from the plum tree and the blackthorn, and others innumerable, each of which has been formed by the Creator of things for the profit and use of mankind. In the fourth place follow the animals, in which no small virtue and healthy operation lie hidden in many ways. Firstly, they are in the blood, which is most certainly the soul of every brute; secondly, in the marrow or fat. Also, there is a force lying hidden in the flesh of animals provided with blood; and equally in fishes, which have it not, from all which things the quintessence can be extracted to the unspeakably great advantage of man. Moreover, that I may at once shew by means of what things and methods this is effected, I will take the essence of the blood of a stork as an instance. This is a most excellent remedy against any poison which has been taken, a result which arises solely from sympathy and compassion. Moreover, the blood of man when distilled abounds in these powers, because if its essence be kindled, it burns without ceasing, as long as the man whose blood it was, lives, and is extinguished when he dies. If those great doctors do not hold it as a nigromantic exorcising, the cause will be that they do not understand the natures of these things. But there exists not a more excellent cordial than that which is extracted from pearls or margarites, which possess such marvellous powers that

by its means I could restore dying men who are already in the agony of death, revive them, and enable them to speak again. It has also given me no small aid in raising up and restoring a man both paralysed and convulsed, who (in the judgment of all the bystanders) was solely in God's hands. The man afterwards spoke, wrote, and begat children. Nor do the other gems possess less efficacy, yet each after their kind. Concerning herbs, roots, and the family of the same, there is no doubt that even with the doctors who follow Galen they possess unspeakably great power and efficacy. What shall I say with regard to the excrement of men and of other animals? If so many virtues reside in this cast-away and refuse thing, how much greater virtues must dwell in the noblest metals, in gold, silver, antimony, etc. But how great a virtue must reside also in marcasite, since, without the addition of any other medium, it is a most salutary medicine and purge for all fistulas, for cancer, and similar ulcers? I will say nothing here of vitriol, antimony, and other things which abound in virtues in no wise inferior to the former with reference to diseases of this kind, yet each according to its mode and genus. The same also is (perhaps the essence) of gold thus prepared, whereby I have frequently purged and cured an exceedingly foul leprosy and elephantiasis. I pass over the fact that I have cured gout of forty years' standing, contractions and relaxations (of the sinews) and other (ailments) by means of this and other adjuncts. Nor are marrows and fatnesses to be altogether rejected, especially that of a man, the badger, pigs, rams, bulls, stags, apes, and similar animals, living either in water, air, or land, none of which things has grown or has been formed except as a special boon (to mankind), as is proved by the fact that the minutest Spanish flies, and the dung of the fly and the moth, have their respective properties, all of which matters we have thoroughly enquired into, have examined completely, and have ascertained that nothing remains which has not received its powers and its virtues for the use and profit of man. But to approach our theme.

CONCERNING THE QUINTESSENCE OUT OF OIL, ALSO OF THE SALT OF
THE SAME.

Take of the purest gold, reduced to minutest grains and lunated, or of gold calcined together with plumbago. Add to this 100 parts of the most excellent white wine discoverable, and 10 parts of the white pine. Leave them to be macerated in a glass for 40 days. Pour out the wine. Pour on the same quantity of fresh wine. Similarly macerate. Do this a third time. Pour these three relays of wine into a glass. Seal well, and distil in a strong fire, so that it may come forth strongly. When it has been distilled, place the glass with water (liquor) upon hot ashes, being well sealed up with a blind alembic, the ashes being too hot for the fingers to bear. Let them stand under till nine parts are consumed or dried up, and the tenth part alone remains. Add the same quantity of the albumen of eggs to the water that remains. Shake together. Distil together, at first slowly; when white water comes forth, separate this. Next distil more strongly until the boccia glows,

and the matter comes forth in the form of a somewhat attenuated honey, of a strong (offensive) odour. Retain this, for this is the Quintessence of gold, the royal medicine. Place somewhat whitish and thick water in a glass. Cook until it be consumed. You will then find white and excellent salt. This is salt of the sun. However, the half of your gold will have gone, that is to say, the superior, which enters into the Quintessence. It is permissible to call this same essence the oil of the Sun.

CONCERNING THE OIL OR QUINTESSENCE OF SILVER AND ITS SALT.

Take silver reduced to the thinnest filings. Cut them up into the smallest parts in the form of a denarius. Do the same with particles of cinnabar. Place together in a glass, layer by layer. Let the glass be half filled and perfectly closed up. Then place it in a cupel for 30 days. Keep in a continuous fire. At last let it cool. It will then have extracted the soul or essence, and the silver will have been reduced to the form of a sponge. Purge the cinnabar with lead, and you will find the soul of silver in the residuum, and this is the most excellent silver that can anywhere be found. Reduce the said silver into the minutest grains, and pour on the strongest vinegar of wine. Let them stand in a glass, and the silver will become blue. Take away the blue and reserve it. Pour on other vinegar. Let it become a second time blue; remove this again, repeating the process of adding blue matters till the silver be totally removed. If there were two ounces of silver, take one ounce of camphor. Let it be dissolved in the said blue silver and vinegar. Distil it as follows, at first slowly, then stronger and stronger, until the water commences to be tinged with a swarthy hue. Then remove the water from its receptacle, place and retain in another glass. After pressing the residuum through a bag, distil with a very strong fire from the fæces until the bocia glows, and you will find a quintessence in the glass, like a dark or coarse beer of somewhat caustic quality. This is that oil and quintessence of Luna. Cook the water retained until it be consumed (as in the case of the salt of the sun), and it will become a green salt, which is salt of silver.

OIL OF MARS.

Pound up crocus of Mars into a most minute and delicate powder. Wash this with fresh water. Pour out the water of the lotion. Let it stand until it sinks. Then separate the water from that which sinks, and let the crocus be dried up. Take any quantity of this, and make a paste with the yolk of eggs. Let it be again thoroughly dried. At last beat it into a powder, and spread on a smooth glass slab. Place in a wine cellar, and it will be dissolved into a clear oil. This is the oil of Mars, suitable for all external ulcers.

OIL OF SATURN.

Take viii. oz. of spume of silver. Beat and pound extremely small. Place in a jar, which must lean in the fire to the side, as cinders of lead are usually produced. Stir the spume with an iron spoon. When it is sufficiently

heated pour it out into an iron frying-pan. Let two measures of sharp and boiling vinegar be injected. The oil will then separate itself from the spume, when let the oil be again poured into the frying-pan. Let it be consumed until scarce one quarter of one measure remains. This oil has a marvellous sweetness. If you mix it with stale urine it will grow white like ceruse, and if it be boiled in an iron frying-pan it will subside and become like silver. Further, if a small quantity be placed in a vessel and it be left until it dries, there is produced from it a tenacious matter like thin (delicate) gluten. Let the matter which produces the oil be distilled through a well-sealed retort; you will then have the pure and clear oil which is called the Quintessence of Saturn.

OIL AND SALT OF JUPITER.

Let Jupiter be calcined in the following fashion: that is to say, let him be placed in a crucible and cooked by means of a secret fire, that is, by descent, for forty days. You will then have the powder which they call tin cinder. Take of this ℥v. , and of juice of lemons ℥lxxv. Let these subside for the space of twenty days. Then wash away the ash. Afterwards wash the cinders. Pour on it again the said juice of lemons. Do this a third time. Afterwards let these be distilled, and let them be poured again over the cinder. Let them once more subside twenty days as before. Finally let them be distilled through the alembic, until at length pure water comes forth. If you perceive its colour to be red, apply a strong fire. The water which first comes forth is to be thrown away; there will next issue a water mixed with oil, which is to be separated. You must then rectify the oil in the heat of the sun, and this is the oil of Jupiter. The second water is to be diminished by boiling to the tenth part. This you next allow to subside until it commences to have rays of such an extremely beautiful green colour as to almost surpass the colour of the emerald, and this is the salt of Jupiter, which also I judge as the spirit of Jupiter.

OF THE QUINTESSENCE OF ANTIMONY.

This is the most excellent and most sweet matter of all things which has ever existed; it also excels all things proceeding from Art or Nature. I except potable gold, because it is surpassed by the quintessence of our Stone, which not unfittingly but truly, we call by its true name, the Stone of the Philosophers. Take, therefore, antimony, which breaks into long and sharp grains which glow. Let it be pounded and sifted until it becomes a powder most thin and most subtle. Let this be imbibed in strong and good wine for thirty days. Let the vessel be well closed. But notice that for a pound of antimony there must be taken two measures of wine. Let these be put in the sun; afterwards let them be distilled in a fire, slow at first, then stronger, until at last the water coming forth commences to redden. Then bring out another receptacle. Keep the water, having sealed it up well in the vessel, sufficiently long to permit it to subside. Then, within the space of

nine or ten days, something black will appear at the bottom, from which take the water which swims above it, and for every ℥v . let there be taken an ounce and a half of carline thistle cut up small. Let these again be distilled together. The other water, which is also red, needs in distillation a strong fire so that the lid may glow, whereupon you will see upon the water a red oil, which must be separated from it. In this manner is produced juniper oil. Each must be kept in a separate place. Also in this way are extracted those three waters out of antimony, which contain in themselves the Quintessence. The process for extracting it is as follows: While these three species of waters are subsiding during the period of 30 days, you will find something earthy at the bottom of the glass vessel, just as was done previously with the first water. Then let the waters be strained, and the clear separated from the turbid; the former are to be retained, the latter rejected. Afterwards let them be distilled in the first grade of the fire only for 30 days, among cinders, until the matter be coagulated and become a hard stone, like to granite in colour. Let the stone be beaten up and dissolved in distilled vinegar; afterwards let these be distilled through the alembic. The water which comes forth is to be placed in a glass vessel over cinders in the second grade of the fire. You will then find a red stone like to spinetum, and this is the quintessence of antimony. It was never previously known that it was useful to humanity, but it cures all leprosies and removes all fistulas, also the French disease; indeed, all the incurable diseases of that type, as also all pellicles and small specks in the eyes. It is neither bitter nor acrid, but has a sweet savour; its consistency is like oil, its colour that of red wine. It is the special cure of dropsy, for it quickly consumes (removes) the dropsy if the patient take the quantity of one pea of this medicine in the water of violets. It also heals paralysis, apoplexy, and epilepsy, if with three drops of potable gold the quantity of one third part of a scruple be taken, for this stone is dissolved therein. Lest it should perish, it must be kept in dry places, and preserved in seed of millet; for if it be placed in humid situations it corrupts in four months' time.

CONCERNING OIL AND SALT OUT OF MARCASITE.

Pound as subtly as possible such marcasite as is found on the mountains. Pour over it strong wine; then, in order that it may overflow, let it be stirred with a stick daily, and after three days let the wine be poured out, fresh being added. Let this be done until to 10lb. of marcasite an addition has been made of 20 measures. Let the wine strained or poured out be distilled with marcasite until water issues forth, which water is to be retained. Next close the aperture of the tube in the glass vessel, in an effectual manner, with lute. Apply a somewhat fierce fire, so that the matter in the upper part of the cucurbite, which resembles pure silver, may attach itself to the sides. Keep this and cast away the dross. Afterwards diminish it by boiling, so that a single measure only may remain. Put the white matter, which was in the upper part of the cucurbite, previously well pounded over a stone, into a

cellar, and beneath let there be placed a small vessel into which oil flows. This is a most excellent remedy against fistula, cancer, and other diseases of this kind. That is called the quintessence which is extracted from immature metal. However, again distil the water cooked in this manner. Diminish it by boiling till half has departed, that is to say, till half remains. Let this subside for the space of 30 days. Throw into it straws and pieces of wood cut small, upon which there will collect a salt like to crystal, except as regards colour, which is slightly green. And thus you have oil and salt out of marcasite, which two are by no means the smallest aids to the preservation of the life of the human race and its health.

OIL OUT OF COMMON SALT.

The confection of oil out of salt is not a useless and unproductive labour, since that wherewith it is prepared possesses the greatest diversity in nature from it, not so much in point of provocation of thirst, and removal of putrefaction, as of sweetness of savour. For oil painlessly eats into and consumes in a single hour all things whatsoever which are smeared therewith, and are putrid by nature, whether it comes in contact with them in wounds or other injuries. On the other hand, salt nourishes whatever is putrid, and prevents its consumption, and is sharp. Moreover, salt excites thirst, whereas oil repels it, as may testify several subjects of dropsy, who, having taken some, were free from thirst between nine and ten days. Lastly, as regards the savour, the oil is not sharp as the salt, but forcibly reminds one of the sweetness of honey, or of the juice of wild apples.

OIL AND SALT OF CORAL, ALSO OF CRYSTAL.

Crystals of the first quality are found in the Helvetic Alps. Let these be reduced by pounding to the smallest powder, over which let there be poured the juice of lemons; let them be put into a cucurbite with a narrow neck on hot cinders as deep as the matter which is in the glass. Let them subside for 40 days. Then the crystals will be dissolved, and from them is produced a gross water. Add to these vinegar, equal in quantity to the juice; let them subside for 20 days again. Afterwards let there be added musk, which is good, in order that the matter may further ascend; then let all be distilled in a well-closed glass vessel. All the water which issues forth must be retained, for no oil comes out, and care must be taken lest the fire be too fierce, otherwise the matter would be burnt up. Next cook the water until half be consumed, and distil until it acquires a gold colour. Afterwards pour it out and distil it in a strong fire until there comes forth pure water of a yellow hue. But if it be turbid let it be preserved apart, and that which is coarse (gross) is to be distilled in a glowing cucurbite, wherein, while it cooks, you will find a yellow oil swimming on the surface of the water. This is the quintessence of crystal. Collect all the waters, the white, also the yellow, and that which comes out last, into a glass vessel. Put thereupon small and thin straws of the length

of a finger. Seal up the glass vessel well, place in a cellar, and leave it for 40 days. Then upon the said straws there will grow a matter having rays like salt nitre. Dry these, and you will then have salt of crystal of a marvellous nature, virtue, and efficacy.

OIL AND SALT OF PEARLS.

Arabian pearls, and those which are fetched from India, are among others the best. They require to be purged with pure and warm water ; next to be dissolved in vinegar nine times distilled. You will be able to renew the vinegar every three days ; pour out into a glass vessel, well sealed up, and keep therein. And if they be altogether consumed and dissolved, the vinegar must be abstracted by means of distillation : that which remains at the bottom must be again dissolved into vinegar, and again distilled as before. Then a portion of the pearls or margarites will distil. Keep the distilled water until nothing remains of the pearls. Add to one measure of the same water half an ounce of camphor, which is of so great a virtue that it will not suffer any dross, but renders that which is earthy and heavy light and volatile, so that it can ascend. These are to be distilled again, and the vinegar consumed by boiling to the twentieth part. This must be done in an open glass vessel having a large and wide mouth. Let the remainder be distilled through the alembic until pure water flows. When this has commenced to turn yellow put another glass vessel beneath. Subject it to a fire which increases in vehemence, and then there will proceed a gross matter resembling thin honey. This is the quintessence of pearls, a true crown of human life. But salt is confected from the water which precedes the yellow colour. Let that be cooked until it becomes a salt. This salt is beautiful, white, and soft, yielding the sweetness of camphor.

OF THE ESSENCE AND SALT OF THINGS GROWING ON THE EARTH.

There exists no better method of extracting the essence of herbs and roots than to cut them up as small as possible and boil them in strong wine in a jar, well closed, lest any of the spirits should evaporate. Let the wine be separated by frequent straining. Also let fresh be poured in again until they lose their strength. Then no further process is needed except to collect all the wines and distil them together through the alembic. This can be done as frequently as you desire, but the aperture of the glass vessel must be effectually sealed up. It is then necessary to wait until the virtue which resides in the wine, and circulates throughout the vessel, collects into one place, for the smaller the quantity of the essence of these things, the better and more subtle the quality. But when at length the waters have boiled after the first and second distillation, salt is discovered at the bottom. Note, however, that in order to the extraction of oil from most herbs it is requisite that both herbs and roots be distilled. But in the case of those which are fat, their leaves alone, when exposed to the sun in a glass vessel, yield an oil, whence

ultimately a quintessence can be extracted, and in the same manner also a salt. Wherefore it is impossible to assign to each herb its peculiar operation. Nevertheless, we shall distinguish between those which have oil in them spontaneously, and distil it of their own accord, for instance, nutmegs, the rind of a species of quinces, or golden apples, and the like. Eggs, nutmegs, berries of the laurel, and similar fruits must be melted up and roasted a little in a frying-pan over the fire, so that they may acquire a savour of burning. Afterwards press out the oil. This method of extracting is simple child's play, but there exists scope for skill in extracting from that oil something yet more subtle: just as no small art is required to extract oil from cinnamon, ginger, cloves, and the like, in which the method is quite dissimilar to the above. Indeed, these are distilled through the pores like juniper oil. Consequently, the same amount is not extracted from these as from other matters, although they be more excellent, whereas the berries of the laurel, nutmegs (they are also called *myristicæ*), and similar things out of which an oil proceeds without any process, as aforesaid, yield a larger supply than those things which are light and tender, or are even pressed.

THE METHOD OF SEPARATING OIL AND SALT FROM OIL OF OLIVES.

Oil which proceeds out of olives also contains salt, though not of special quality. It is extracted more abundantly out of old oil than out of fresh. Out of this is produced a red water, which, marvellous to say, is a most speedy remedy for the stone, whereas it is manifest that no oil contains an aqueous humidity, nor is of such a nature as to break the stone. Wherefore let those who exclaim "How can this or that be done?" speak with more deliberation and modesty. They bring forward the argument that it is contrary to its nature and property, but they totally ignore the fact that cooking involves so great an alteration as to frequently effect what otherwise lies not in the essence or nature of a thing. Similarly, our silver, although it be not gold, is reduced to such an extent by coction as to arrive at the most excellent gold. Thus also iron is converted into genuine and most excellent copper. The matter of which we are here speaking takes place in the same way.

THAT RED WATER OUT OF OIL OF OLIVES IS MADE IN A SIMILAR WAY.

Take lb. iiij. of oil. Place in a kettle of copper. Heat it so that it may commence to smoke; let it cool again, and put in a bocia. Close up its neck most effectually with a sponge. Superimpose a helm well stopped up with lute, lest any vapour should escape. Distil the matter in a slow fire; at length the virtue begins to issue forth. The fire is to be maintained at an equal temperature—not at one moment hot, and at another cold. The water will then become red. If it commence to thicken in the upper part of the receiver, it is necessary to cease operation and proceed no further. And this is the water which is extracted out of oil. It cannot long be kept entire by reason of the putrid nature it contains in itself. Notwithstanding, it dissolves in a moment, as it

were, the stone in the bladder. For nine days daily let three spoonfuls be administered, one in the morning, one at noon, and one in the evening. After this the patient must fast a whole hour. The savour of this water is nauseous, and frequently affects a man so much as to give him a headache.

SALT IS MADE IN THE FOLLOWING FASHION.

Distil oil out of which the red water has been made ; abstract it through the alembic by means of a moderate fire, and if it flow in excess, remove the fire. If it cannot endure great heat you will find turbid matter at the bottom of the bocia. This is to be removed into a small glass vessel. There must be added to it as much pure fountain water as there is matter. The oil will then float on the top, and must be separated from the water, in which there is no fatness. Distil it again and you will have pure water, which must be cooked in a glass vessel until it be consumed. You will then discover at the bottom a somewhat black salt, most suitable for purging ; it is also a strong laxative.

METHOD OF EXTRACTING THE OIL AND SALT FROM PEPPER.

Beat the grains to a fine powder. Add thereto the sap of the alder, sufficient to cover the powder. Let it settle, exposed to a very hot sun, as during the dog-days, for nine days. Afterwards press through a bag. When the water has been distilled pour it again upon the fæces, and let it settle for nine days. Next, when the water commences to recover colour, let it be removed. Put out another vessel in the place of the first. Extract the oil with a strong fire. If any water has been mingled with it, it must be separated by means of a glass funnel. The last water must be added to the first, and again distilled, and consumed, till but a quarter remains, by coction. Let this settle for 30 days in a glass vessel well secured over a capella. A salt will then be found at the bottom, possessing the savour of pepper, most excellent as a pickle for food, by reason of the extremely excellent odour it yields. It is wonderfully hot, and adapted for cold limbs and nerves.

OIL OUT OF GUMS.

Take myrrh, mastic, and gum, or like things, which must be pure and clear. Let them be pounded and sprinkled over fresh eggs, which have been cooked hard, split through the middle, and placed in sand in a pan, which must be put in a cellar until the powders are dissolved into oil. This cures all wounds and alleviates gout. A man's face is rendered fair if it be anointed therewith after a bath. In like manner it preserves the flesh from putrefaction so that the same can never ensue.

PREPARATION OF COLOCYNTH.

Take an apple of colocynth and remove all the seeds. Cut them up small. Let marrow be taken to the weight of three coins of Ravenspurg. Let it be placed in a glass vessel. Add thereto of

Cinnamon	}	The weight of three coins of Ravenspurg.
Cloves		
Ginger		
Nutmeg		
Mastic		

Pound them all together and place in the glass vessel where the colocynth was put. Pour over five tablespoonfuls of good wine. Let it settle for eight hours. If you desire to use it, it must be prepared about twelve o'clock, mid-day, and must be taken at night. It is next necessary to lie down, then purgation will commence at midnight, or at one o'clock. Note, before taking this medicine, that it must be pressed through the bag, and it must be eaten. But be careful not to press it out too violently. Take only that which penetrates by itself, so to speak, spontaneously, about seven or eight drops, lest it become too violent. When, therefore, the purgation has occurred several times, take, about seven o'clock in the morning, some soup wherein peas have been cooked, but which contains neither salt nor butter, only a slight admixture of flesh. Take it as hot as can be borne, for two hours, without anything else being eaten.

HERE ENDS THE BOOK CONCERNING THE QUINTESSENCE.

ALCHEMY: THE THIRD COLUMN OF MEDICINE.*

THE third fundamental part, or pillar, of true medicine, is Alchemy. Unless the physician be perfectly acquainted with, and experienced in, this art, everything that he devotes to the rest of his art will be vain and useless. Nature is so keen and subtle in her operations that she cannot be dealt with except by a sublime and accurate mode of treatment. She brings nothing to the light that is at once perfect in itself, but leaves it to be perfected by man. This method of perfection is called Alchemy. For the Alchemist is a baker, in that he bakes bread; a wine merchant, seeing that he prepares wine; a weaver, because he produces cloths. So, whatever is poured forth from the bosom of Nature, he who adapts it to that purpose for which it is destined is an Alchemist. Hence you may understand the difference between this art and all others, from the comparison which has been set before you. For, consider, if any one should put on a rough sheep's skin for garment, how rude and coarse this would be compared with the work of the furrier and clothier. Equally rude and coarse would it be if one had anything taken straight from Nature, and did not prepare it. Nay, this would be much more rude than the former. For this is concerned with the body itself, its life and health. Hence it has to be handled and dealt with much more carefully. Now, these universal methods of treatment have rivalled Nature, and have so mastered her properties that they can express the nature itself in everything, and elicit that

* This treatise constitutes the third section of the *Liber Paragranum*, wherein are described the four columns upon which Paracelsus built his system of Medicine. These are Philosophy, Astronomy, Alchemy, and Rectitude. The first distinguishes between the false and adulterated philosophy of Aristotle, and that sure and genuine species expounded by Theophrastus himself. The latter alone enlarges that knowledge whereby the physician is instructed in the matter of all diseases. There is no other way by which the truth concerning the body of man and its nature can possibly be estimated. Outside it there is only pure imposture. Disease itself is of Nature, Nature alone understands and knows disease, and Nature also is the sole medicine of disease. The matter out of which man is made testifies to the physicians concerning that which is produced therefrom. Man, as the exemplar and type of all things, contains within himself all knowledge and wisdom which are required in Medicine. There are two species of philosophy—one is of heaven, the other of earth. The philosopher is he who is acquainted with the things of the lower sphere; the astronomer, on the other hand, is he who is familiar with the things of the sphere above. In their medical aspect philosophy is concerned with the earth and water in man, and astronomy with the air and fire which exist in the same subject. For man is heaven, air, water, earth. As there is a Zodiac in heaven, so is there a Zodiac in man; as there is a firmament in heaven, so is there a firmament in the body. Man has his father in heaven and in the air. He is the son, made and born from air and the firmament. Heaven operates in us. This operation can be understood by no one who is ignorant of the essence and nature of heaven. The star is the basis of celestial knowledge; he who is acquainted therewith is already the disciple of Medicine, and is on the way to understand the heaven in man. So far concerning the first two pillars of Medicine. But the fourth is the probity of the physician, which consists in the certitude of his art, and the rectitude and sincerity of his faith in God, which forbids him to falsify anything, and makes him a fulfiller of the works of God.

which is the chief feature in each. But in Medicine, where it is most specially necessary, this power exists in the smallest degree; so that, in this respect, Medicine is most rude and unpolished. How can man be more rude than when he eats raw flesh, clothes himself in undressed hides, and has his dwelling in the nearest rocks, or is exposed to the rains? In the same way, how can a physician be more dense, or the preparation of medicine than what ointment-sellers use for decocting substances? * Nothing can be more objectionable than this method for pounding, subduing, and mixing medicines, or for polluting them in any other different way. As its own special art dresses the hide, so so does its own special art prepare the medicament. And since, in this place, the true basis of preparing remedies, in which lies the whole essence of medicine, is laid down and established, be well assured of this, that such a foundation must be extracted from the most secret recesses of Nature, and not from the imaginative brain, as a cook dresses a mess of pottage, according to his own judgment. For in this preparation the extreme and ultimate condition of things is posited. Thus, if philosophy and astrology—that is, the nature of diseases and their remedies, with all their combinations and conjunctions—be understood, it follows next in order, and is chiefly necessary, that you should decide how you will use and avail yourself of your knowledge. Nature, indeed, of herself teaches you on these subjects, and you should give her your chief attention in order that you may reduce your medical science down to practice. As summer puts forth the pears and the grapes, so should you do with your medicine. If you act thus you will assuredly compass the results you covet. And if it so be that as summer puts forth its fruits, so you do with your medicine, be certain that summer does this by means of the stars, and in no case without their aid. Now, if the stars accomplish this, take care so to regulate your preparation in this case also that it shall be duly directed by the stars. These it is which complete and perfect the work of the physician. Now, if the stars have this effect, it is right that medicine should be understood, and naturalised in all respects, with reference to them. Let it not be said: This is cold, this warm, this moist, this dry; but rather let it be said: This is Saturn, this Mars, this Venus, this the Pole-star. In such a way the physician proceeds by a straight road, especially if, beyond this, he also knows how to subject, conjoin, and harmonise the astral Mars with that which is produced from it. For here is situated the covering or nucleus which none of the physicians from first to last before me has ever arrived at. This must be understood, that medicine should be prepared with reference to the stars, so that they exert their astral influences. The higher stars weaken and cause death, but they also heal. If any of these effects is to be produced, it cannot be done without the stars. But if this is to be done by the help of the stars, it will be done after such a manner, and in such a way, that the preparation will be reduced to practice, so that medicine will be compounded and prepared by means of heaven, just

* The text at this point is unintelligible, as the comparison is not completed. It has been rendered literally in translation.

as prophecies and other acts are settled by heaven. That is, you see, that the stars presage and prognosticate unfavourable weather, that they foretell diseases, and the deaths of kings and princes; the stars, moreover, portend battles and wars, pestilences, and famine. All these things are indicated by heaven. It makes and produces them. What it produces it naturally predicts. All these effects come from this source, and from it, too, proceed all the branches of this science. So, then, if they are produced by heaven, and come from heaven, they will also be governed by heaven, so that all those matters which have been mentioned and pointed out will be produced at its will and pleasure. The occurrences which have been predicted from heaven come to pass at its pleasure; so that heaven produces and regulates them. Moreover, lay this well to heart. If Medicine is from heaven, without any contradiction it will remain subject to heaven, will accommodate itself thereto, and be regulated according to its will and pleasure. Now, if this be true, it is absolutely necessary that the physician should form an opinion concerning degrees and complexions, humours and qualities, and, whether he will or not, he must learn that Medicine is in the stars; that is, he must judge the nature of Medicine according to the stars, so that he shall understand the superior as well as the inferior stars. Since Medicine is worthless save in so far as it is from heaven, it is necessary that it shall be derived from heaven.* And this bringing down from heaven means neither more nor less than the abolition and elimination of every earthly element which exists in it. Heaven does not rule it except these earthly elements be separated from it. If you have effected this separation, then Medicine is in the power of the stars, and is ruled and protected by them. For instance, everything relating to the brain is led down to the brain by means of Luna. What relates to the spleen flows thither by means of Saturn; all that refers to the heart is carried thither by means of Sol. So, too, the kidneys are governed by Venus, the liver by Jupiter, the bile by Mars. And not only with reference to these, but in all other respects, this must be, in an ineffable manner, perceived. For of what use is the medicine which you exhibit for the matrix of a woman unless it be directed by Venus? What remedy would there be for the brain unless Luna gave it its origin? So judge with regard to the rest. Otherwise all remedies would remain in the bowels, and by-and-bye, being ejected through the intestines, would produce no effect whatever. Thence it happens that, if heaven does not aid your efforts, but refuses to direct your medicaments, you will profit very little. There is need of heaven as the regulator. Herein consists true

* The stars, therefore, have generated physicians constituted in the light of Nature, so that they might not deviate from investigating by their own skill the various arts. The first source of their discoveries was in the stars and influences, which, turned into alchemy, in no slight degree enriched the medical art. For alchemy is but a medical pyrotechny, whereby marvellous preparations, transmutations, transubstantiations, etc., of things medical are artificially produced. For such is the affinity of the firmament of the constellation with the nature of terrestrial bodies, that he who is informed with celestial doctrine is not debarred from the desire of the knowledge of terrestrial things, and when these are combined there is joined to them an influence from heaven, and so out of those three, thus united, there arises the true physician. A physician generated after this manner will never lack those remedies which suddenly become necessary for a pressing purpose.—*Chirurgia Magna*, Pars II., Tract I., c. 16.

art, that you should not speak after this fashion : "Melissa is a herb that acts on the matrix, marjoram on the head." Thus speak the inexperienced. The matter rests with Venus and Luna. If you wish to attain the ends you anticipate you must have heaven kindly and benignant to you, otherwise no effect will be produced. This is the source of that error which is so abundant in medicine. "Do you at least drink it. If it does you good it does, and there is an end of it." Any clown can practise this art. There is no need of an Avicenna or a Galen for it. You physicians, who have sprung from them, are wont to say that we must have directories for the head, the brain, the liver, etc. And how can you dare to lay down these directories when you understand nothing about heaven? That is the sole director. Moreover, you forget one thing, which convicts you all of folly. You have, indeed, found out what things direct the brain, the matrix, the anus, the head, the bladder, etc.; but of what things rule disease you are utterly ignorant. Now, if you do not know what rules a disease, you are ignorant as to where the disease is situated. You do just the same with the principal parts which you say are affected as the sacrificers do with their gods. They put the whole of them in heaven, although very many of them lie buried in the infernal regions. So, according to you, all diseases arise from the liver or the lungs, though sometimes they affect the rectum.

This is because heaven rules by means of the stars, but not so the physician. So medicine must be reduced to air, that it may readily be ruled by the stars. Can a stone be lifted up by the stars? No, unless it be volatilised. Hence it is that many, by means of Alchemy, hunt after a fifth essence; which means nothing else than that the four bodies shall be separated from the arcana. Then, what remains is an arcanum. This arcanum, moreover, is a chaos, as easy to be deduced from the stars as a feather to be swayed by the wind. Such, then, should be the preparation of medicine, that the four bodies shall be taken from their arcana. To this should be added the knowledge as to what star is in any arcanum. Then it must be known what is the star of this disease, and what is the star in medicine that operates against this disease. Hence, at length, proceeds a direction. If you drink a medicament, then the belly, which is your alchemist, is compelled to prepare this for you. But if the belly can reduce the medicament to such a condition that it is received by the stars, then that medicament is directed. If not, it remains in the belly and passes off with the excrement. Now, what, I ask, is more worthy of a physician than a knowledge of the concordance existing between each star? In this consists a knowledge of all diseases. In this respect Alchemy is an external bowel, which prepares its own sphere for the star. It is not, as some madly assert, that Alchemy makes gold and silver. Its special work is this—To make arcana, and direct these to disease. To this it must come, and here it is symmetrical. For all these things proceed from the guidance of Nature, and with its sanction. So ought Nature and man to be conjoined, brought together, and estimated one by the other. The whole principle of cure and sanitation rests

in this. Alchemy perfects all these processes ; and without it not one of them can exist.*

Now if all arcana belong to Medicine, and all medicines are arcana, and, moreover, all arcana are volatile, by what right, I ask, can that sausage-stuffer and that sordid concocter of the pharmacopœia give himself out as a dispenser and a veritable concocter ? In undisguised truth he is a dispenser and concocter, but of mere trumpery. How great is the folly of those doctors who trick people by means of such clownish concocters with their electuaries, syrups, pills, and ointments, which are based on no foundation, or art, or medicine, or knowledge ! Not one of you, if put on your oath, would dare to examine what works conscientiously and truly. The same, too, is the principle of your Uroscopy. From the urine you divine as to the blue sky, and you persist so strongly in your trifling as to confess that there is nothing but divination and conjecture in the whole matter, nor any coincidence except what occasionally happens by chance. In your surgeries you lie so consummately, and with your washings and your decoctions you assume such a magisterial air, that nobody could think otherwise than that the whole kingdom of heaven is affected by you, whereas you conceal nothing save the mere bottomless pit of the infernal regions. If you would put aside these your incapacities, and would examine arcana, what they are, what director they have, and how the stars rule disease and health, then at the same time you would learn that your whole foundation amounted to nothing but phantasy and private opinion. The ultimate and sole proposition is that the principle of medicine consists of these arcana, and that arcana form the basis of a physician. Now, if the sum total of the matter lies in arcana, it follows

* Thirdly and lastly, there is alchemy, wherein the physician should eminently excel. For if he does not thence take his preparation, his practice is nothing worth. Herein consists all the art of preparation. It is also the art which teaches how to separate the stars from the bodies, so that those stars obey the stars and firmament in direction, for the direction is not in the bodies, but only in the firmament. Hence it also follows that everything which the brain produces is a sign to the Moon through its course ; that which the spleen produces Saturn attracts to himself ; that which the heart produces is attracted by the Sun ; and in this manner the external firmaments are the directors of the interior. So do they speak wrongly who say that Melissa is good for the matrix and sage for the cerebrum. For unless Venus and Luna direct them thither, they sink into the stomach and pass out through the intestines. Therefore that which does not separate in medicine is not directed by heaven, that is to say, the course of heaven is absent, and so nothing operates. So has every part its director from stars, and they are called stars. But heaven directs nothing except that which is separated from the body—that is, heaven directs only the arcanum, not the body itself ; just as it directs reason to man and then reason directs the body—so heaven directs substances, which, if they be in the stomach are cooked therein, and then it directs one thing—that is, the arcanum. The stomach, indeed, is an alchemist, that is, one who fulfils the function of alchemy ; but this takes place much more usefully without, before the substance sinks into the stomach, for then its operation will be much more powerful. Unless this be done, it will be like raw flesh, which the stomach digests much more thoroughly if it be assimilated after cooking. But if so much care be required over the preparation of food, how far more is necessary in the case of medicine. Many have despised alchemy as a senseless search after the confection of gold and silver, but it is not our intention to give a more prolix definition here. I have decided only to deal with the preparation—that is to say, how much virtue and efficacy there is in medicine which is devoid of a body. He, therefore, who contemns alchemy, herein despises that which he does not understand. Although I know well enough that not even apothecaries, barbers, and servants about the baths, will cease from their cookings ; nevertheless, if you double the faith which you at present have in your medicines, the congeries of your recipes sufficiently proves that you are nothing but fools. It is evident enough whom ye cure, how, where, and when. Since, therefore, I am decided thus, lastly, to teach of alchemy, which is itself the fountain and pillar of medicine, it must be stated that without this art no one can be a physician, for he who lacks it has the same relation to a physician as his own cook has to that of the prince. All Nature therefore recognises alchemy, and desires that it should be understood by the physician, and that the same, being skilled therein, should not ever be cooking soups and colewort. — *Fragmenta Medica*.

that the foundation of all is Alchemy, by which arcana are prepared.* Know, therefore, that it is arcana alone which are strength and virtues. They are, moreover, volatile substances, without bodies; they are a chaos, clear, pellucid, and in the power of a star. If you know the star, and know the disease, then you clearly understand who is your guide, and wherein your power consists. So, then, these arcana prove that there is nothing in your humours, qualities, and complexions, that such terms as melancholy, phlegma, cholera, and the rest, are falsely imported into the question, and that in place of these should be introduced Mars and Saturn, so that you should say, "This is the arcanum of Mars, this of Saturn." In these, true Physic consists. Who of you, my hearers, will venture to reject and turn away from this foundation? Only your teachers do this: and in this respect they are like the old and case-hardened students.

If, then, it be right for the physician to know such things as these, it will also be convenient that he should ascertain the meaning of calcination and sublimation. And he should not only know this as a matter of handicraft, but as one of transmutation, which is far more important. For by these methods, as they are met with in preparation, there are very often produced such maturations as not even Nature herself is able to bring about. Towards this maturation the physician should direct his art. It is the autumn, the summer, and the star of those things which he ought to bring to perfection. Fire is the earth; man is the order; and the thing operated upon is the seed. And, although all these things are simply understood in the world, they are in result various and manifold. So also are they manifold in the locality of the result. And yet by our process all arcana are born and produced in the fire. That fire is their earth; and this earth is also a sun; and so the earth and the firmament, in this second generation, are one and the same. In this the arcana are decocted; in this they are fermented. And as the seed in the earth putrefies before it is reborn, and fructifies, so here also in the fire a dissolution takes place, wherein the arcana are fermented, lose their bodies, and, by means of ascension, go off into their exaltations, the times of which are calcination, sublimation, reverberation, solution, etc.; and, secondly, into reiteration, that is, into transplantation. Now, all these operations take place by means of motion, which is given by the time. For there is one time of the external world, and another of man. But the operation, or force, of the celestial motion is truly marvellous. And, although the artificer may be disposed to rate highly both himself and his work, still here is the sum of the matter, that heaven, in an equally wonderful way, decocts, digests, imbibes, dissolves, and reverberates, while the alchemist does the same. The motion of heaven, too, teaches the motion and regimen of the fire in the Athanor. So also the virtue which is in the sapphire, heaven draws forth and discloses by means of solution,

* Alchemy indeed brings forth many excellent and sublime arcana to the light, which have been accidentally discovered rather than sought for. Wherefore let alchemy be great and venerable in the sight of everyone, for many arcana are in tartar, in juniper, in melissa, in tincture, in vitriol, in salt, in alum, in Luna and in Sol.—*De Caducis*, Par. IV.

coagulation, and fixation. Now, if by these three methods the heaven is thus constituted in its operations, whilst it reduces them to this point, it necessarily follows that the solution of the sapphire shall also, in like manner, be made up of these three points. The solution is of this nature, that bodies are thereby excluded and the arcanum remains. For, hitherto, while the sapphire remained entire, there was no arcanum. But afterwards, analogously to the life in man, so this arcanum has been infused by heaven into this matter. Therefore, the body, which impedes the arcanum, has to be removed, For, as nothing is produced or begotten from the seed, unless it be dissolved, which dissolution is nothing but a putrefaction of the body, not of the arcanum itself, so, in this case, is it with the body of the sapphire, save in so far that it has received an arcanum. But now its dissolution is brought about through the same processes which caused its previous coalescence. The seed corn in the field has no little experience of the industry of Nature during its own progress to the corn-ear. For there is an elixir, and a most consummate fermentation, which is retained in Nature beyond all other places. Afterwards follows digestion ; and hence begins increase of the substance itself. Whoever wishes to become such a natural originator must gain his end in this way. Otherwise, he will be a mere cook, or scullion, or dish-washer. For Nature demands that in all respects the same preparation shall take place in man as in herself ; that is, that we shall follow her as our guide and not the follies of our own brain. But you, doctors and ointment-sellers, what do you ferment, or putrefy, or digest, or exalt? Nothing, save when you make up some medley of sauces which you serve out and shamefully palm off upon people. Who can praise a physician when he has not learnt the method and principle of Nature? Who will trust him? The physician should be nothing but the skilled advocate of Nature, who, in the very first place, knows its being, properties, and condition. If he is thus ignorant about the composition of Nature, what, I conjure you, can he know of its dissolution? Understand that dissolution is a kind of retrogression. Whatever things Nature has gradually formed by composition, those things you ought to be able to dissolve by a reverse process. As long as you or I shall be inexperienced in, and ignorant of, this solution, so long, at all events, we shall act the part of robbers, murderers, rascals, or simple novices.

What, I would ask, can you produce from alum, in which are latent as many arcana for diseases of the body as for wounds? According to your method of proceeding, who ever, by following the pharmacopœists, applied it to that use in which it is chiefly powerful? The same may be said of mumia as of alum. Where will you seek it? Beyond the ocean, among the heathen? O, you simpletons, who fetch from afar what is before your very houses, and within your city walls! Because you are ignorant of Alchemy, you are on that account ignorant also of Nature.* Have you persuaded yourselves that,

* I also assign the greatest weight to experience, as most helpful in the attainment of a proposed end, especially in alchemy, by which things unheard of, and indeed scarcely credible, are produced, whence also fertile science and

because you disparage Avicenna, and Savonarola, and Valescus, and Vigo, that you are as capable as these men? These are mere trifles. Apart from this arcanum, nobody can inquire into the true composition of anything in Nature. Bring together into one spot all your doctors and writers, and tell me what corals contain, and what they can do. However much you may chatter, and whatever blatant nonsense you may talk about their powers, directly you begin to reduce it to practice, it is proved that you have not one particle of experience or of knowledge about corals. This is the reason why the process of the arcanum has never been handed down in writing. But if the process is accomplished, then its virtue is ready to hand. So great is your simplicity, however, that most of you think everything consists in pounding, and that it suffices if you write: "Let these things be strained and mixed. Make a powder with sugar." What Pliny and Dioscorides wrote about herbs they did not prove by experience, but gathered from the famous authors who knew many such matters, and then they filled many books with their feminine chatter. Dare to make the experiment for yourselves whether what they hand down is true. Will you never be able to reach the goal of experiment and proof? What do Hermes and Archelaus say about vitriol? They mention its vast virtues, indeed; and these are present in it, but you are ignorant what powers are in it, whether the green or the blue. Can you be masters of natural things and not know this? What you know, you have read, indeed, but you profit nothing and do no good by it. What do the alchemists and other philosophers teach about the potencies of mercury? Their teaching is copious, indeed, and full of truth. That you know truly, but how it is to be verified you know not. Cease, then, to shout. In this respect your academies and yourselves are novices and mere tyros. You skim over all these matters in your reading, and you say, "This property is in one thing, that in another; one is black, another is green. God is my witness, I know no more. So I find it written." So, unless it had been thus written, you would have known nothing about it. Do you think that I am wrong in laying and fixing my foundation in the Alchemical Art? This reveals to me what is true, and that you are unskilled in proving the truth. Is not such art worthy to come into the light? And is not that deservedly termed the foundation of Medicine, which proves, augments, and establishes the knowledge of the physician? But what is to be thought of

notable experience are gathered in the light of Nature. I could state on oath that from such experience the greatest and most notable fundamental principle in medicine has arisen. Who without it will ever be a physician, or know and understand anything?—*De Caducis*, Par. III.

* We assume no person will doubt that the chemical art has been devised to supply the deficiencies of Nature; for although Nature supplies very many most excellent remedies, she has, notwithstanding, produced some which are imperfect and crude; for the perfection of these a separation must be effected, by which the pure is set free from the impure, so that it may at last fully manifest its powers. We desire the surgeon to be versed in this art, without which he does not indeed deserve his name. The preparation of medicaments is of great importance, so that they may be brought to their highest grade of action. God does not will that medicines should ready too easily at hand; He has created the remedies, but has ruled that they should be prepared by ourselves. The chemical art must not therefore be repudiated by the surgeon. As long as physicians are content with the preparations of the pharmacists, they will never accomplish anything worthy of praise. Furthermore, the alchemists themselves, despite the excellence of their remedies, will find their operations barren until the arts of medicine and chemistry are completely united. — *Chirurgia Magna*, Tract II., c. 9.

your judgment when you say "Serapion, Mesne, Rhasis, Pliny, Dioscorides, Macer, report about verbena, that it is useful for this or that purpose"? You cannot prove that what you say is true. What sort of a judgment can even you yourselves think this? Be yourselves the umpire: Is he not more powerful who is able to prove that true which is within? And this you cannot do without the aid of Alchemy. Even though you should read and know twice as much as you do, all your knowledge would be of no avail. Let any one read my work, and then how can he have the face to make it a charge against me that I lay these things before you and explain them to you? You do not reduce to action those powers and virtues which you parade and boast that you possess. Answer me: if the magnet fails to attract, what is the cause of the failure? If hellebore fails to make you vomit, why is this so? You know what causes purging and vomiting; but what are the arcana of healing just now spoken of? In this matter you are the very brother of Ignorance. Tell me in whom confidence should be placed as to the operations and powers of natural things? In those who have only written about such things without ever having tried or used them, or in those who have put them to the proof, though they may not have written about them? Is it not a matter of fact that Pliny has proved none of his assertions? Where, then, is the use of his statements? What has he heard from the Alchemists? And if you know nothing of these you can be at best but a travelling quack-doctor.

If, then, it be of such vast importance that Alchemy shall be thoroughly understood in Medicine, the reason of this importance arises from the great latent virtue which resides in natural things, which also can lie open to none, save in so far as they are revealed by Alchemy.* Otherwise, it is just as if one should see a tree in winter and not recognise it, or be ignorant what was in it until summer puts forth, one after another, now branches, now flowers, now fruits, and whatever else appertains to it. So in these matters there is a latent virtue which is occult to men in general. And unless a man learns and makes proof of these things, which can only be done by an Alchemist, just as by the summer, it is not possible that he can investigate the subject in any other way.

Now, seeing that the Alchemist thus brings forth what is latent in Nature, you should know that there is one kind of virtue in the twigs, another in the leaves, another in the unripe fruit, and yet another in the fruit when ripe; and that the difference between these is so palpable that the later fruit of a tree is altogether unlike the earlier, and this not only in form but in virtues. Whence the knowledge should be of such a kind that it shall extend from the first to the last. This is Nature. And since Nature thus manifests herself, so also does the Alchemist when dealing with those matters which Nature defines for

* I include Chemia in the circle of medical perfection for many reasons. It supplies true simples, magnalia, arcana, mysteries, virtues, powers, all things which pertain to the science of remedies, much more perfectly than ordinary pharmacy. But you object that alchemy is universally unpopular. I ask for kind words. Other arts also—astronomy and philosophy—are contemned, but are not the more imperfect for this.—*Fragmēta Medica.*

him. For instance, the genestum keeps the process of its own nature in the hand of the Alchemist. So does thyme, with its flower, and the rest. One thing does not contain a single virtue, but several. You see this in flowers. They have not one single colour, and yet they are in one thing, and are themselves one thing ; and every colour is severally graduated to perfection. So is it with the different virtues which are latent in these things. Now the alchemy of colours is so to separate Art and Nature, that this separation shall extend not only to the colours, but to the virtues. As often as a transmutation of colours takes place, so often occurs a transmutation of virtues also. In sulphur, there is yellowness, whiteness, redness, darkness, and blackness. In each colour there is a special power and virtue ; and other substances which possess these same colours have not the same, but different, virtues lying hid in these colours. And there is a latent knowledge of colours just as there are latent colours, and a latent cognition of virtues, as there are latent virtues. And the manifestation of virtues is the same as in form and colours, where are first the twigs, then the pith, afterwards fronds, flowers, and leaves, then the beginning of fruits, then their mid-period, and, lastly, their full development. If the virtues ripen by a gradual process of this kind, and thus increase, then the indwelling virtues are changed in degrees and in number every day, nay, every minute. For as time and not matter gives its purgative effect to the elder, so that same time confers its powers on other virtues, some in one way, and some in another. As time again assigns styptic powers to the acacias, which do not naturally arise from time, and as is the case with other wild growths, so time also in this case imparts the middle virtues before the final term. For these signs or intervals must be carefully noted in Alchemy, on account of the knowledge as to the true end of operations, and of the autumnal period by which the time of mature or immature virtue is defined ; and the same is carefully attended to in Medicine. So, also, these ripenings are divided into buds, fronds, flowers, pith, liquids, leaves, fruits ; and in each of these are their own proper beginnings, mid-periods, and ends, divided into three ways or principles, namely, into laxatives, styptics, and arcana. Those things which loosen and constrict are not arcana. And none of these is conducted at once to the final end, but they exist in the primary and middle virtues. How evident is this illustration in the case of vitriol, which is now everywhere very well known to all, and the virtues whereof are especially patent. Now, I propose in this place not to obscure its virtue, but to unfold and manifest it more widely. First of all, then, vitriol puts forth its laxative virtue, being the chief of all laxatives, and possessing the greatest power for the removal of obstructions. There is not in the body any member, external or internal, which is not penetrated and affected by it. This effect arises from the first time. The second time gives it a constrictive power. As powerfully does it now constrict as in the beginning of the first period it loosened. And still its arcanum is not yet at hand, nor have buds, fronds, and flowers burst forth. If it has sped to fronds, what is more effectual in the

falling sickness? If it proceeds to flowers, what is more penetrating? It is like an odour which most readily diffuses itself on all sides. If it issues forth in its fruits, what is more excellent for promoting heat? And there are many other qualities in it, reckoned by its appropriate periods. At all events, so much we have endeavoured to explain, how the arcana in any one thing separate into many parts, and each part is borne on to its own special period, and that, moreover, the limit of periods in things is an arcanum.

So in the first transmutation of tartar; what excels this arcanum in cases of itch and scab, or other similarly disagreeable affections? In its second period, what is more effectual for the removal of obstructions—not in the way of a mere laxative? What, at length, is more powerful in the healing of wounds? Now, it is Alchemy which opens and manifests these qualities. Then, why not raise the foundation of Medicine hereupon? Learn from this, at all events, and dismiss these dirty ointment-vending quacks, who do not know this process, but, together with their teachers, are double-dyed asses, and so mad as to presume to think everything of this kind false and impossible. They are so ignorant and experienced that they have not learnt even the beginning of a decoction, and yet health and safety for the sick are to be sought from such men as these. What else do you find in them but desire for money and thirst for goods? It is all the same to them whether their medicines do good or harm, whether they remove or increase diseases. Is it not right, then, that ignorance of this kind should be publicly revealed? I do not adopt this course from any hope that they will imitate me. They will feel no shame on this account; but rather hatred and envy will so take possession of them that they will persevere in their ignorance. Yet, notwithstanding, whoever wishes to pursue truth alone, will turn aside to my monarchy, and not to any other.

Mark, I beseech you, my readers and hearers, what a wretched and distorted process is adopted in the falling sickness, not so much by the ancients as by those writers who are contemporary with me; and this to such an extent that they are scarcely able to rescue or to cure a single patient. Do I act unjustly when I despise such writers and such teachers, who demand, as a matter of right, that people should use their remedies, though they are not of the smallest power? On the other hand, if any one investigates another method, by which help can be given to patients, they call him a vagabond, a chatterer, and a fool. What is rather true is that their prescriptions, like their diagnoses in the case of falling sickness and other diseases, are mere lies. This is proved by results. The patients themselves bear witness to it, while the nature of things cries out and proves the foundation on which Medicine must be built up. No one disease can they heal by a well considered and consistent system of

* If, therefore, it be the part of the physician to cure, and the foundation must be taken from the four things named above, how shall he conclude? By alchemy alone. What is alchemy? That which prepares Medicine, making a pure and precious remedy, exhibiting it perfect and entire, whereby the knowledge of the physician is completed. If such then be Medicine, and the knowledge of the physician must be acquired in this manner, how, I say, dare those square and knotty doctors and masters, without forfeiting their honour, blame me because I do not deal with trifles, but with truth itself, that I may establish science more fundamentally and exactly, for they adhere to their antiquity.—*Fragmenta Medica.*

Medicine, since God does not call and choose such uncertain and erratic men to be physicians, but rather well assured and experienced men. If He supplies an assured and experienced husbandman or quarryman, much more will He give a physician who is certain about his art and confirmed in its practice, since on him rests more responsibility than on all other men. But they call the foundation itself doubtful, and place it in the hand of God. So, then, the hand of God is stretched like a veil over their imposture and ignorance; and they justify themselves, but accuse God, when they say that their art, indeed, is perfect, but that God interrupts it and stands in its way. What is impiety and imposture, if not this? But see by what unshaken argument I will establish Alchemy as the foundation of Medicine. I base it on this: that the most severe of all diseases, such as apoplexy, paralysis, lethargy, the falling sickness, mania, frenzy, melancholia or gloom, and other similar ones, can be cured by no concoctions of the ointment-sellers. As meat cannot be boiled with snow, so much less can this kind of medicine be brought to any successful issue by the art of the drug compounders. For as the magistry of each several substance is that to which it specially looks, so it should be noted of these diseases that they have particular arcana. Hence, they require special preparations. What I say of these special preparations I would have to be understood in the sense that particular arcana require particular administrations, and different administrations in like manner demand different preparations.* Now, in the surgeries there is no other preparation beyond some kind of kneading and decoction, such as one would see in a cookshop. By this kind of cooking the arcana themselves are stifled and result in no energy whatever. Nature must be kept under proper restraint and management. Thus, you see, there is one kind of preparation required for bread, another for meat, and so on. In the same way is it with herbs. By parity of reasoning it should be inferred that Nature never mixes up in disorderly confusion foods, drinks, meats, and breads in one mass, but deals with each separately and by itself. Now, this arises from no trifling causes, though to recount those causes here would be a work of unnecessary labour. Now, if Nature admonishes us hereby that in all things due order is to be kept, we are also in another way warned by the same mistress how to prepare medicines, and how to adapt the several medicines to their special diseases. The thirsty liver demands wine or water. But think how often wine is pre-

* If the seed, that is to say, the matter, be present, it requires preparation. But it is prepared by nothing save alchemy. This is not that which teaches cooking and preparation, which Nature has instituted for the benefit of man. Thus, Nature is acquainted with many virtues in S. John's wort, but for every virtue there is another preparation. Nature orders this to alchemy, saying, as it were: Prepare for one disease thus, and for another after another manner. Then arises the physician, and is famed in the medical art, for he knows the foundation, he knows also what cooking or preparation is here needed. But for what purpose do ye scintillate, ye men of Montpellier, of Leipsic, or of Vienna? Ye must turn hither, hither, ye who would know what is philosophy, and what is alchemy, what preparations Nature institutes, and by what methods she instructs her alchemists. Where, then, will ye remain, ye apothecaries and sordid cooks? For it is a shame and disgrace that your whole business is nothing but sheer fancy and wickedness, opposed to the whole art of Medicine. Strange, if all this become publicly known, that is to say, how many tortures are hidden in your golden gallipots and in your solemn concoctions – how great will be the measure of your opprobrium! Yet the matter must be completely brought into the light. But though you multiply scorpions in my food, the venom will only operate in yourselves, and not in me, and will overflow your wily and mendacious designs, and will break your own necks, not mine.—*Fragmenta Medica.*

pared, and, as it were, reborn, before it satisfies the thirst of the liver. In like manner, the bowels require food. Here, too, notice how variously the food is changed and prepared. Believe it to be the same with diseases. Now, if you are going to undertake a pure and artistic method of cure, you will make no difference, but act just as if apoplexy were a thirst for which there was need of a particular medicine and a special preparation thereof. Or suppose that the bowel is falling, and that it requires for its restoration another preparation, and one which acts on the stomach. Imagine, again, that mania is like the spermatic vessels, and demands that its necessities shall be supplied by other methods. So you will come to the same conclusion as to medicines and their preparation in cases of mania. I admonish you, then, with due cause, that if you have chanced to meet with effectual remedies and arcana against diseases, you should not let them be tampered with and wasted by these mere decoctors. Are these things not to be brought into the light? Truly, indeed, they are, in order that such errors may be avoided, and patients may advance to those sure arcana which God has designed for their use and requirement. You will gather from hence how necessary it is to act on my prescription rather than on yours. In this respect you have to follow me, not I to follow you. Though you fulminate ever so much against me, nevertheless, my monarchy shall stand, while yours goes to destruction. It is not in vain that I write at such length concerning Alchemy, but I do it with this purpose and for this end, that you may well and surely know what is latent therein, and how it should be understood. Nor should you be offended hereby because you get no gold or silver by it. Rather its result should be that by means thereof arcana shall be unveiled, and the seductions of the ointment-sellers shall be brought to light, since by these the ignorant folk are deceived, while they sell them for a florin what they would not buy back for a penny. So precious, in this sense, are their secrets!

Who will deny that even in the very best things a poison may lie hid? All must acknowledge this. And if this be true, I would now ask you whether it is not right that the poison should be separated from what is good and useful, that the good should be taken and the evil left. Such should certainly be the case. If so, tell me how it is separated in your surgeries. With you all these elements remain mixed. See your own simplicity, then, if you are forced to confess that a poison lies hid, and are asked how it is to be got rid of. Then you bring forward I know not what correctives, which shall drive out and take away the poison. Comfrey, for example, they use to correct scammony, which is then called diagridium. But what kind of a corrective is this? Does not the poison remain afterwards as before? And yet you boast that you have so corrected it that the poison no longer harms. Whither has it gone? It remains in the diagridium. Try it, if you are wise. Exceed the proper dose, and you will soon see where the poison is. You will not be long in finding out. So you correct turbith also, and then call it diaturbith. These are your methods of correction, fit only for clowns, and useful to drench

horses with ! Risk an excessive dose ; you will see whether you do not feel the poison. To correct is to take that which has been corrected. A criminal who has broken the law is punished ; but his correction is not extended farther than the free will of the culprit lasts. Such are your corrections. The power is in them, not in you. In such a case, all the physician thinks of is how to eliminate the poison. This must be done by separation, For example, a serpent is venomous, and yet it is used for food. If you take away the poison you can eat the flesh without injury. And so it is with all other substances ; only a similar separation is absolutely necessary. If this is not brought about, you cannot be sure of your work, unless, indeed, it come to pass that Nature supplies your place, or some special interposition of providence favours you. You have no protection in your art. If a sure foundation be necessary for the extraction of the poison, that is afforded by Alchemy. It must be so arranged that if there be Mars in Sol, Mars must be taken away ; or Saturn in Venus, the Saturn must be separated from the Venus. As many ascendants and impressions as there are in natural substances, so many bodies are there in them. But when the bodies are contrary, it is absolutely necessary that one of them should be taken away and removed, so that in this way all contrariety should be eliminated, and so the evil which you are searching for should be separated from the good. As gold is useless except it shall first have passed through the fire, so medicine is much less useful unless it, too, shall have passed through the fire. It is necessary that everything which is to benefit man shall have passed by fire to a second birth. Should not this, then, be deemed the right fundamental principle of every physician ? A physician should exhibit not poisons, but arcana. But all the preparations of your surgeries, how many soever they be, do not contribute the smallest tittle of learning. They are employed simply in correcting, which is just as if a dog should break wind in a room and you should kill the stink with fumigations and juniper wood ; but does not the smell remain in the room as much after as before that process ? Although the smell is not perceptible by the olfactory organs, could anybody say that the stink was separated and no longer remained ? It is there, though corrected by the fumigation. The stink and the fumigation enter the nose together. Of such a sort also are the corrections of the drug-vendors who disguise alöepaticum with sugar, that it may not offend the palate. The sugar and the honey form a magistery in this case. So, too, they correct theriacum with gentian. Are not all these operations instances of asinine ignorance ? And yet these people boast themselves the physicians of princes, and sell their skill for money ! Yet who is so dense as not to scent the fact forthwith that all this is worthless ? What else can they trumpet forth about their remedies beyond saying “ This electuary is sweet, being compounded of spices, sugar, honey, and other condiments, and is held in very great esteem ? ” And thus you mock your patient with your medicine, though all you can say in its favour is that it is nice. Just think how idle it is to lay your foundation in compounds of this kind, and to entrust everything to fatuous doctors. This

method differs as widely as possible from the true basis of Medicine; and is nothing but a worn-out and ridiculous phantasy.

So, then, up to this point, we have sufficiently discussed this Column of Medicine, that is to say, Alchemy, in which consists the fundamental principle of all Medicine. Whoever is not built up on this foundation is washed away by every wave, the wind blows away his work, the new moon breaks through it. Every new moon destroys that building, or the shower softens it and casts it down. In view of a system of Medicine built up on such a foundation, do you, reader, judge whether I am an irregular doctor of Medicine or a heretic, disregarding truth, and with a mad brain. Do I deservedly, or undeservedly, gird at my opponents? What right have they to rise up against me? Let who will care for their cudgel. When once it has grown warm in their hands they will not readily lay it aside. Any fools can do this; but a wise man should not imitate them. A far-sighted man throws away one cudgel and seeks another. What matters to me their persecution? I shall not try to stop them. What I shall do is to shew them up, because they rely entirely on fraud and impostures, and have no foundation save what is elaborated from their own phantasy and their own brain. Whoever is a trustworthy and honest man to his patients, whoever in his practice tries to imitate Nature, will not avoid me or turn away from my teaching. But those who live in this century do not follow Christ; in fact, they despise Him. Why should I expect such a privilege as not to be despised by any? At first, indeed, I ploughed by no means inactively in the same furrow with them. But when I saw clearly that from such art arose only murders, deaths, paralyses, mutilations, and other forms of destruction, I was compelled to retrace my steps and to follow truth by an altogether different road. Then they complained that I neither followed nor understood Avicenna or Galen, or knew their writings. They boasted that they understood all these things. Out of all this boasting it arose that on every side they injured, tortured, and murdered far more people than I, in my ignorance, did. This is really as much as to say that there is one and the same mode of operation for the one who understands and for the one who does not understand, and that neither the one nor the other is worth anything at all. But the more I contemplated the havoc wrought by them and by myself, the more I began to burn with hatred for the system, and I advanced to such a point as to perceive that it was nothing but a patchwork and a hotchpot mixed up with imposture. And I do not wish the matter to be concluded here; but in all my writings I shall make it clear how, and in what way, all these matters are combined with ignorance. Every day I grasp more and more that not in Medicine alone, but also in Philosophy and Astronomy, these people rest on no good and praiseworthy foundation, as I have already said. A vast tumult will be stirred up against me because I reject those who, for so many ages, have alone occupied the throne of glory and magnificence. But I confidently predict that the time will come when they will be cast down from that throne of glory and magnificence. Their force is nothing but

phantasy ; and I shall not end with the single expression of this sentiment, but shall assiduously bear the same testimony in all my writings. If the academies do not approve of me, what matters it ? They will by-and-bye fall to the ground and be humiliated. Meanwhile, I will expose and oppose your errors with so much severity that to the very end of the world my writings shall be truthful and acceptable. Yours, on the other hand, shall meet with this fate, that, full as they are of bile, and venom, and the poison of asps, they shall be cast out by all like toads, trodden under foot, and shunned. I do not attempt to destroy you and level you with the ground in a single year. It is better that at some future time you shall decay and die by your own infamy and ignominy. I shall judge more of you when I am dead than now I am alive. You may demolish my body, but you will only destroy its refuse. Theophrastus will struggle with you even when he has no body !

But those who shall hereafter be physicians, I would admonish that they deal more cautiously with me than with their own teachers, and that they rather weigh our disagreement with due care and judgment than condemn the other and absolve the other without maturely thinking the matter out. Weigh carefully, I beseech you, with yourselves what it is you would aim at, namely, the healing of the sick. If this be your aim and the subject of your argument, tolerate me as your teacher, since my sole object is to lead you towards this healing of the sick. On what basis, and with how much seriousness, I do so has already been said, and shall every day be more copiously set forth. Let not my writings be an offence to you because I stand alone, because I make a new departure, or because I am a German. By these writings and not by any others, the Art of Medicine must be discovered and learnt. Above all, I would enjoin that you carefully read and consider the works which, by the divine favour, I am to finish. I would name particularly one volume on Medical Philosophy in which all the causes of disease will be investigated. Another will be on Astronomy, with a view to sanitation. A third, and last, will be on Alchemy, that is, the method of preparing medicaments. If you read and understand these three books ; even you, who before disagreed with me, will become my followers. Nor shall I fix my limit here, but as long as the divine favour illuminates me I shall go on to regard the Monarchy in certain separate treatises published for this special purpose. Indeed, if I had not been oppressed by the unseemly hatred and envy of certain prominent men in Medicine these treatises would have already for the most part seen the light. I can already easily foresee that the astronomers also, like the philosophers, will noisily set themselves against me. It will be that they fail to understand me. They will raise a precocious clamour against me, but at last they will be silent, and betake themselves to their dens. Let not these things affect you, my hearers. Rather do this—read their writings while they follow mine in full cry. Thus you will find what you seek. At all events, I have set myself to write in what position, and on what basis I build up my system of Medicine, so that you may be able to gather what I wish to erect on this

foundation. I lay it before you so clearly that you shall not be able hereafter, with any show of justice, to repudiate me at the suggestion of your fathers and teachers and professors. Take care that you be not led away by vulgar physicians, surgeons, or bath-keepers. These like to look great and powerful, and pour out their long words, which have no science in them, but plenty of ambition and boasting. These are like psalm-singers in a choir, who, indeed, chant the psalter, but understand not its meaning. Such are the physicians who constantly chatter and shout. And just as the nun sometimes understands a single word, but then turns ten pages without comprehending them, so the physicians sometimes make a hit, and then go astray again. Think over these matters with yourselves, and be your own witnesses as to what basis most of these people have for their studies. Even in Medicine it is no new thing for these accusations to damage any one. Medicine in their estimation admits any amount of rascaldom, and is directed only towards persecutions and injuries. All these are signs of doubtful and uncertain art. Those who make such professions give themselves up entirely to wallow in envy and hatred, and wherever one man can stand in another's way, he thinks he has reached the highest point in his practice. So the devil governs them. From him they have derived their discipline ; this you cannot doubt. This is attested by their constant rendings and tearings of one another. The hand of God is not the cause of such things as these.

THE "LABYRINTHUS MEDICORUM"

CONCERNING THE BOOK OF ALCHEMY, WITHOUT WHICH NO ONE CAN BECOME
A PHYSICIAN.*

ANYONE who would become a physician must learn the book of Alchemy thoroughly by heart. Its name, no doubt, will prevent its being acceptable to many; but why should wise people hate without cause that which some others wantonly misuse? Who hates blue because some clumsy painter uses it badly? Who reviles a stone because it has been broken by the quarryman? In like manner, who will hate Alchemy, which is innocent? He deserves hatred who is guilty, who does not take in the Art, or use it properly. Does anybody hate him who has injured none? Who will blame a dog if he bites anybody who seizes him by the tail? Which would Cæsar order to be crucified, the thief or the thing he had stolen? I trow the thief. No science can be deservedly held in contempt by one who knows nothing about it.

Now, in good sooth, this same Science or Art is of great use and necessity. Into it is dove-tailed the Art of Vulcan, and we know how useful a work Vulcan can accomplish. Alchemy is an Art, and Vulcan is the operator therein. Whoever is a Vulcan, he has power in this Art. Whoever is not a Vulcan has no power herein. In order that you may understand this Art more thoroughly it is necessary to repeat, first of all, that God made all things out of nothing. Out of nothing, I repeat, he made something. Now, this something is the seed which gives the result of its own predestination, its own special office. And, although all things are created from nothing for their own end, there is, nevertheless, nothing which is entirely adapted to its end. That is, it is adapted to its end, but not wholly so adapted; and it is Vulcan

* The *Labyrinthus Medicorum Errantium* distinguishes eleven books out of which the physician ought to obtain his art and experience. Of these the fifth is alchemy. The others are wisdom, which is knowledge as opposed to surmise and guess work; the firmament, of which book the stars are the alphabet; the elements, which are all essentially present in man; the greater anatomy, by which the physical body of the microcosm is made known; experience, because the whole of medical science is nothing but a great and certain experience, and whatever acts or operates therein is founded exclusively thereon; the entire natural world, for this is the great storehouse of apothecaries and doctors: theoretic medicine, which must be founded in Nature, even as theoretic theology is founded in God; magic, because medicine should not be constituted in speculation but in manifest revelation, because disease and the medicine thereof are alike hidden, and magic is the science which makes manifest that which is concealed; the book of forms, for all medicines have their forms, of which one is visible and the other invisible, one corporal and elementary, the other spiritual and sidereal; finally, the book of the generation of diseases and their Iliastic and Cagastric seeds.

that must complete the adaptation. All things are created with this view, namely, that they should be placed in our hands, but not altogether perfect. Wood grows to its proper end, but not to coal; clay is created, but a vessel is not formed from it. The same reasoning applies to all growing things. Carefully study, therefore, this Vulcan. We will explain the matter by an illustration. God created iron, but not in the form it should afterwards assume; not as a horse-shoe, a sickle, or a sword. These modifications are entrusted to Vulcan, and so this Art is good. Unless it were good Vulcan would not bring about these adaptations. Hence it follows that iron must be first separated from its ore, and then wrought, for this the artificer requires. Now, this is Alchemy. This is the metal-founder, named Vulcan. What the fire operates is Alchemy, whether in the kitchen or in the furnace. He who tempers the fire is a Vulcan, whether he be cook or heat-producer. And the same is the rule of Medicine. It is created, indeed, by God, but not fully prepared for its final end. It is, so to say, hidden in the ore. Now, the work of Vulcan is to separate the ore from the medicine itself. What you saw about iron is also true of Medicine. That which the eyes perceive in a herb is not Medicine, nor what they see in stones and trees. They see only the ore; but inside the ore the medicine is hidden. First of all, then, the ore has to be removed from the medicine. When this is done, the medicine will be ready to hand. This is Alchemy; this, the special office of Vulcan, who superintends the pharmacopœia, and brings about the elaboration of the medicine. And as it often happens that gold and silver are found in a pure state, so medicine also is sometimes found in a state of purity, and its subsequent separation is then the easier, just as the pure gold needs only fulmination and fusion. When all that is necessary has been done, if in this way, by means of Alchemy, the medicine has been prepared and produced, then it is given to the sick as a remedy, or to the sound as food. Take an illustration from bread. The external Art of Alchemy cannot produce the ultimate material in the furnace, but only the intermediate substance. That is to say, Nature produces the first material up to the time of the harvest. Then Alchemy reaps, grinds, bakes, and cooks this up to the very time when it is taken into the mouth. Thus, the first and the intermediate matters are perfected. Then, at length, the Alchemy of the Microcosm begins. This takes up the first matter in the mouth, that is, it masticates it, which is the primary operation. Then it deals with it in the stomach, which is the second matter. It decocts and digests it until, at length, it becomes flesh and blood. This is the ultimate matter, though afterwards another Alchemy may intervene in the shape of weakness, which is a primary matter. To this succeeds decline, a secondary matter; and at last death, the ultimate matter. Moreover, then ensues putrefaction as a first matter. Next to this is decay; at last, dust and earth. Thus Nature deals with us by means of her creatures. And this makes good my position that nothing is created in a state of perfection for its ultimate matter. All things are created for their first matter. Then Vulcan is applied; and,

thanks to the alchemical art, reduces this to its ultimate matter. This is seized upon by the Archeus, or inner Vulcan, who, by circulating and preparing, according to the nature and difference of each separate substance, by sublimation, distillation, and reverberation, puts the finishing stroke to the process. All these arts are prefigured and practised within the body of man, no less than without, in Alchemy. It is here that Vulcan and the Archeus differ. This, indeed, is Alchemy, which directs to its final end everything which has attained some intermediate end; by reducing lead ore to lead, and afterwards shaping lead into whatever it is designed to make. Thus there are Alchemists of metals, Alchemists who work with minerals, who reduce antimony to antimony, sulphur to sulphur, vitriol to vitriol, and salt to salt. Know, then, that this only is Alchemy, which, by preparation through fire, separates what is impure, and draws out what is pure. Though all fires do not actually burn, still they are fires and they remain fires. So, also, there are Alchemists of wood, such as carpenters, who prepare timber for building purposes, or statuary, who take away from the block of wood whatever does not form part of the contemplated statue. So, too, there are Alchemists of Medicine, who take away from medicine what is not medicine.

Hence, then, it is quite clear what sort of an art Alchemy is, such an art, namely, as separates the useless from the useful, and reduces it to its ultimate matter or nature. The reason why I define these things more at length in this book is because most printed books contain no art at all, but are crammed full of elisions and senseless punctuations, so that swine would rather eat dung than taste such a concoction. Since such ill-digested mixtures are of no use or force, God has put in their place Alchemy, the true and sublime Art of Nature herself. That crass and rude preparation of medicines which the drug-vendors of Montpellier produce is not worthy to be called an art, but is mere cramming, and a most abominable concoction. Yet this is how they make up their syrups and laxatives, or compound other like matters. Those printed books of the pseudo-physicians teach the same artifice, or, at all events, they put it forward. Yet not even syrups or laxatives, such as the practitioners of Montpellier prescribe, should be prepared in this way, but as the science of Alchemy teaches Medicine. So has God appointed and arranged. This should suffice for every physician that, since God has created nothing in its state of ultimate finality, but has committed the finishing stroke to the Vulcans, he, too, should fully perfect his medicines, and not weld the ore with the iron into one mass. Take another illustration. Bread is created and given to us by God, but not in that shape which the baker confers upon it. Those three Vulcans, the farmer, the miller, and the baker, produce from that first matter a second, namely, bread. The same should be done with medicaments, and the same mode of reasoning applies to the Vulcan within us. So, then, the physician should not be ashamed of Alchemy; but in all things

proceed according to the method which has been pointed out. Unless he does this he will not be a doctor, but just a freshman dubbed doctor—a doctor only to the same extent as that is a man which is seen reflected in a looking-glass.

HERE ENDS THE BOOK OF ALCHEMY FROM THE LABYRINTHUS MEDICORUM.

CONCERNING THE ALCHEMICAL DEGREES AND
COMPOSITIONS OF RECIPES AND OF NATURAL THINGS.*

THEOPHRASTUS BOMBAST, EREMITES OF HOHENHEIM, DOCTOR AND PROFESSOR
OF BOTH FACULTIES, TO THOSE DESIROUS OF THE MEDICAL ART,
HEALTH IN THE LORD.

SINCE Medicine alone among all branches of learning is necessarily accorded the commendable title of a divine gift by the suffrage of writers both sacred and profane, and yet very few doctors deal with it felicitously at this day, it has seemed expedient to restore it to its former illustrious dignity, and to purge it as much as possible from the dross of the barbarians, and from the most serious errors. We do not concern ourselves with the precepts of the ancients, but with those things which we have discovered, partly by the indications found in the nature of things, and partly by our own skill, which also we have tested by use and experience. For who does not know that very many doctors at this time, to the great peril of their patients, have disgracefully failed, having blindly adhered to the dicta of Hippocrates, Galen, Avicenna, and others, just as though these proceeded like oracles from the tripod of Apollo, and wherefrom they dared not diverge a

* The Geneva folio adds the two other dedications which here follow :—THEOPHRASTUS, EREMITES OF HOHENHEIM, DOCTOR OF BOTH FACULTIES, PHYSICIAN IN ORDINARY AT BASLE, TO HIS MOST FAMOUS D. CRISTOPHORUS CLAUSERUS, THE MOST LEARNED DOCTOR OF THE PHYSICIANS AND PHILOSOPHERS OF ZURICH, GREETING. It is the most excellent and the best sign of a true physician to be acquainted with medical truth, and to know whether he possesses the secret or not, exactly as you, O Cristophorus, most eminent of the physicians of Zurich, do nothing in your medical capacity which is contrary to your judgment and your most tender conscience, to which thousands rightly appeal. But understand this authority which I exercise in this our Monarchia. There is inborn in me a medical virtue derived from the soil of my fatherland. For even as Avicenna was the best physician of the Arabs, Galen of the men of Pergamon, and Marsilius of the Italians, so also, most fortunate Germany has chosen me as her indispensable physician. You know well that experience is the very mother of all physicians, yea, also of our whole Monarchia. But since each country is autonomous and a foreigner cannot be properly identified with it, but on the other hand an alien can well be compared with the man who corresponds to him, so this observe, that you may compare me to Hippocrates and Averroes; you may compare Rhazes with us three together, each according to his country. Thus, the Arabs, the Greeks, and Germans stand on the same level, even as a triple hound, and they equalize the amber of Germany with the Greek amber, with storax, turpentine, balsam, and mumia. Nor are you unaware that each country contains within itself the matrices of its own element, and produces that which is needful for itself. So amber is amber to its own country, and though perhaps there can be no comparison of the Chaldean rose to that of Arpinum, what has this to do with diseases, since each rose is for its own country? Exactly in the same way every nation brings forth its proper and peculiar physician; and that from its own Archeus. For every want gives work to an artificer, and the same necessity is the teacher and parent of every physician. Therefore the Italians can dispense with the Greeks and the Germans with both, since each of these have their own need, and its own minister, one for the nature of each nation. There is no call that any one should copy the mind or morals of the Arabs or the Greeks. If there be error at home, there is arrogance abroad. For this takes place at random, as by a dream, and without any reason—and hence a physician must be generated out of these

finger's breadth. From these authorities, when the gods please, there may indeed be begotten persons of prodigious learning, but by no means physicians. It is not a degree, nor eloquence, nor a faculty for languages, nor the reading of many books, although these are no small adornment, that are required in a physician, but the fullest acquaintance with subjects and with mysteries, which one thing easily supplies the place of all the rest. For it is indeed the part of a rhetorician to discourse learnedly, persuade, and bring over the judge to his opinion, but it behoves the physician to know the genera, causes, and symptoms of affections, to apply his remedies unto the same with sagacity and industry, and to use all according to the best of his ability. But to explain the method of teaching in a few words, I must first speak of myself. I, being invited by an ample salary of the rulers of Basle, for two hours in each day, do publicly interpret the books both of practical and theoretical medicine, physics, and surgery, whereof I myself am author, with the greatest diligence, and to the great profit of my hearers. I have not patched up these books, after the fashion of others, from Hippocrates, Galen, or any one else, but by experience, the great teacher, and by labour, have I composed them. Accordingly, if I wish to prove anything, experiment and reason for me take the place of authorities. Wherefore, most excellent readers, if any one is delighted with the mysteries of this Apollonian art, if any one lives and desires it, if any one longs in a brief space of time to acquire this whole branch

things. But he who in spite of this randomness and slumber is raised up as a physician by the need of his country, he at length becomes the perfect physician of his nation, and is plainly its true Hippocrates, Avicenna, and even Lully. However, in this place, I cannot praise the men because they were raised up by this necessity, since their own country will not permit that I should pass over their errors in silence. For how, I ask, did Rhasis benefit Vienna? What good did Savonarola do to Friburg or Arnold to the Swiss? What did Gentilius or the commentaries of Jacoh de Partibus and Trusanus to the physicians of Meissen? What did Avicenna confer upon them all, since the health of the sick is the one thing to be considered? This, therefore, is the faculty by which I write, which also my fatherland gave me, and this by that necessity whereby I said that I was born. Hence I dedicate the whole of this book to you. But I am persuaded that some ignorant person will not once reply, and I again shall make answer; so is it manifest and clear on both sides that the whole duty of every physician is concerned with the health of the sick. But those whom I love most dearly will perhaps give interpretations of some obscure places herein, though not my oldest friends of all, namely, the foxes. My crowd of physicians is divided into two parts, the false of tongue, and the false both of heart and tongue. Now you understand what I wish. I will shortly send you some prescriptions, together with my improvement of the oil of colcothar. Act as a friend always, and be careful. Farewell.—*Given at Basle, the fourth day of the Ides of November, 1526.* THEOPHRASTUS OF HOHENHEIM, DOCTOR OF BOTH FACULTIES, AND PHYSICIAN AT BASLE, TO THE MOST EMINENT ASSEMBLY OF THE STUDIOUS AT ZURICH, HEALTH. Alas, how wretched is the estate of mortals, because there is scarcely any joy which is not presently followed by sorrow, a most fine company of helpers! Hitherto I have not fully perceived my blindness, for I did not consider in the present that the wise man must most diligently observe not only those things which are at his feet, but those which are behind him, like a two-headed Janus, and those also which are in all directions around him. The reason is that your most delightful assembly, which I lately enjoyed, and do still recollect with gratitude, had so enchanted my heart and eyes that I forgot all about the future. My mind presaged no disaster; I thought the whole matter was well managed and deemed that joy would be obtained and perfected without the company of grief. Now when I see those things which I ought to have foreseen, how, I say, shall I restrain myself from grief and mourning, since the dearest friend I had at Basle, whom I left in health and strength, has been killed by the accident of a sudden fall from an upper storey, where he was accustomed to sleep? He had been freed by me from the heaviest chains into which he had been thrown by the petty doctors of Italy; by me was he restored to health, of which fact Erasmus of Rotterdam is a witness, with all his family, as the epistle written by his own hand sets forth. Now when I was thus feasting with you, and taking life easily, he died whom I had left in good condition; he, I say, whom I loved as my own eyes; being snatched away by the accident I have mentioned, namely, John Frobenius, the parent and tutor of all learned and good men, being himself also wise and good, the most diligent promoter of all kinds of learning. Wherefore also have I need to fear the same suddenness in death which has overtaken him. What shall I say to myself? Death is common to all. Wherefore be warned. Watch, most excellent fellow-learners, and if to any extent we fail in our office, attribute it to that severe grief wherewith I am now tortured, and can find no relief. Farewell, most sweet companions. Love your Theophrastus.—*Basle, from our Library, the third Ide of November, 1527.*

of learning, let him forthwith betake himself unto us at Basle, and he will attain to far other and greater things than I can describe in a few words. But to make it clearer to the studious, we do not, for instance, shrink from submitting that we in no wise imitate the ancients in the method of complexions and humours. The ancients gave wrong names to almost all the diseases ; hence no doctors, or at least very few, at the present day, are fortunate enough to know exactly diseases, their causes, and critical days. Let these proofs be sufficient, notwithstanding their obscurity. I do not permit you to rashly judge of them before you have heard Theophrastus. Farewell. Look favourably on this, an attempt at the restoration of Medicine.
—*Basle, the Nones of June, 1527.*

CONCERNING THE ALCHEMICAL DEGREES AND COMPOSITIONS OF RECIPES AND OF NATURAL THINGS.*

BY THEOPHRASTUS, OF HOHENHEIM, DOCTOR OF BOTH MEDICINES.

BOOK THE FIRST.

CHAPTER I.

BEFORE I begin to treat of Degrees, two complexions of Nature should be noted : one is hot, the other cold. Moreover, each of these has in itself a certain inborn diathesis : for everything which is hot is dry, and that which is cold is moist, nor can heat or cold be alone. So these two natures, heat and dryness, are one thing, and in like manner, cold and humidity. Hence, therefore, degrees are easily determined, how each and every thing exists in its own degree, and what degree each thing respectively occupies. At this point, no doubt, those who are suffering from cataract and have familiarity with works of darkness will cry out that there are four complexions, hot, cold, dry, and moist, from which they gather that cold is present in moisture and in dryness, and in like manner heat is conjoined with both. According to this opinion they have arranged everything, that is as much as to say that the cold may be dry, and heat may be moist, which is a contradiction of terms. If they had approached more nearly and made a more searching investigation into Nature they would have found our arguments, which here follow, to be nearer the truth. They did not sufficiently understand that these four are two only, and so they falsely ascribe to the four elements those which are nothing less than they are elements, as philosophy clearly demonstrates.

CHAPTER II.

But in order to more clearly understand what I have said about the two complexions, take the following. Whatever the elements have produced in

* While there is some matter in this treatise which is outside the purpose of the present translation, it has been thought well to include it in the section devoted to Hermetic Medicine because it enters at length into a subject, or, more correctly, a class of subjects, to which there is frequent reference in Paracelsus—that, namely, of degrees and complexions. It is not very clear in itself, and it adopts an arbitrary terminology, which will be dealt with in the Vocabulary at the end, but it will help to illustrate the obscurity of previous references, and may perhaps give a little light indirectly.

the nature of things is either cold or hot. If cold, it has in itself a certain innate individual humidity. Where there is humidity there is cold, and so what is hot is dry, for dryness subsists in heat alone. It cannot come about that the cold is dry and the heat is moist. For these are elemental conjunctions which come from Ares, as is clear from the example of a man and a woman. A man has in himself what is warm and dry ; a woman that which is cold and moist ; but they contribute to the complexions only according to their several degrees. From the very first, therefore, it must be remarked what is moist, what coagulated, and what, lastly, is resolved dryness. For hence arises a common error which is apt to spread even amongst the chief physicians. For example, take a crystal which appears cold, dry, and arid, since it dries and renders arid, but this appearance is delusive. For the most arid force of the crystal is a coagulated moisture, and in its action it masters everything, transmutes and forcibly changes it into a coagulated moisture, which is finally dissolved like ice. Similarly in petroleum, the dryness is not resolved as it appears to be, for the dryness is resolved in the substance of its own body. Wherefore I lay down this definition in place of an epilogue, that degrees must be observed in a twofold manner, the warm and the cold. Moreover, the dry is double and the moist is double, that is to say, dry *per se* and a resolved dryness, moist *per se* and a congealed moisture. The remainder of what is requisite at this point is contained in the Philosophy itself.

CHAPTER III.

Although in this place more was to be said on the subject of degrees than I have so far set down, still, since these matters are well established among those who are any way skilled in medicine, I pass them over in silence here, and speak of those subjects which have up to the present been put forth falsely, and with a certain amount of pervading error. This is what should be accepted. In the first place, it is not only necessary to observe the sum of the elementated degrees, because this only serves in the case of elementated ailments ; but attention must also be paid to those things which concern mundificatives, incarnatives, laxatives, constrictives, repercussives, diaphoretics, narcotics, cicatrizers, and other things of this kind. For this purpose it is of prime necessity to acquire a full knowledge of diseases, and, moreover, of the special degrees of each kind of disease. In the case of wounds, one has to know the degrees of incarnation ; in hyposarcha, the degrees of drying ; in gutta, the degrees of strengthening ; in epilepsy, the degrees of specification ; in cachexy, those degrees which arise from commixture. If you have thoroughly examined all these matters, then at last approach the composition of recipes.

But we should not omit to mention that for the perfect knowledge both of diseases and of degrees there is required not only the medical but the astrological profession ; and, moreover, the Spagyric form. All these require

perfect, and, moreover, a prolonged experience ; since thereby alone, and not by constant reading, or by a judgment, however exact, the scope of this book is made clear.

Lastly, if you miss anything in this place on the subject of degrees, seek it in daily practice, to which I relegate you all, so as to learn the virtue of anthera, more particularly of tereniabin, which is remarkably ennobled ; and, lastly, as respects the flower of cheiri.

CHAPTER IV.

Before, however, we come to the degrees themselves, we must observe certain rules of the degrees, by which method the degrees are at one time intensified and at another relaxed. In the first place you will observe this method. Whatever proceeds from the elements of the earth, that occupies the first degree. Of this kind are the lettuce, the violet, the anthos, etc. In like manner, whatever is of the air, such as pestilence, pneumonia, fever, is in the second degree. That which is produced from the element of the water holds the third degree, such as lead, sapphire, topaz, etc. But those things which spring from the element of fire, as ice, crystal, snow, claim the fourth degree, either hot or dry. It must be noticed, therefore, that whatever sensitive thing comes from an element is the same as the element, as the frog whose sperm is in the third degree ; in like manner, camphor. That which is of the earth, as man, is in the first degree, as Rebis. What comes from flying things is in the second degree, as vua. What comes forth from the fire, like the Salamander, is in the fourth degree. In what respects one excels another will be made clear in the following chapters.

CHAPTER V.

Furthermore, in order that the degrees may be more clearly marked in their points, take the present example. As the degrees of herbs have been divided into four, so all of them, how many soever there may be, are referred to the first degree, but still not all on an equality. For one is sometimes more than another as to the beginnings, middles, and end of both ; but still so that whatever descends from the element of earth remains in the first degree, and must not be placed outside that same. Among you the nenuphar occupies the fourth degree, and with you Saturn is allotted the third, though in coldness it exceeds nenuphar by almost eight degrees. So, then, they cannot be arranged in the same degrees. So, too, whatever exists in the second degree, there also the first point excels the fourth degree of the element, which is of the earth, and the fourth point is higher by four degrees than the last point of the first degree. In the third degree the same judgment must be formed, and likewise in the fourth. Thence are gathered sixteen points, which mount as if by stairs to the true degrees, even to the six hundred and sixty-third. Deservedly, then, we say that those have been in error who collected camphor, the

sperm of frogs, nenuphar, and alums into one degree ; since from these a true and certain degree could not in any way be taken in recipes, as will be shewn in the following modes for compositions.

CHAPTER VI.

But in order that you may have in particular both the degrees and the points of those things which induce heat, remark : Whatever makes ashes or lime or glass is in the fourth degree of fire, as fire itself, mercurial water, aqua fortis, etc. So whatever produces a biting effect and brings things to an Ischara, so as to cause putrefaction, occupies the third place. Of this kind are colcothar, arsenic, sal ammoniac, borax, pigment of gold, and others of that kind, as alkali. But as to the virtues of these things in which some things excel others, that is a matter of points, not of degrees. Moreover, whatever produces scars or blisters belongs to the second degree, of which kind are rabeoia, cantharides, flammula, melona, and others of that genus ; for although flammula be in the first degree, nevertheless, in another way it affects the second, because the spirit of salt in it reduces the flammula so that it is just comprised in the first point of the second degree. Lastly, whatever warms, but does not attain to the signs above mentioned, such as ginger, cardamum, abrotanum, and other things of that kind, exists in the first degree, together with its higher and lower points. But it is to be observed in this rule that the degrees are not arranged according to the nature and proportion of the elements, but are, independently of them, condensed into the present rule, for this reason, because the present rule is taken from the first three principles and serves for them, namely, those which predominate in salt, mercury, and, lastly, in sulphur, wherefore, in this place care must first be taken not to use the present rule in elementated diseases. For they are only, as it were, gathered from these, and serve for diseases which can be healed by the first three principles.

CHAPTER VII.

But in order that you may ascertain the degree of cold, apart from that which belongs to the elements, take the following : Whatever congeals humours belongs to the fourth degree, of which kind are those things which are born of the element of fire. But whatever refrigerates (to use a common expression), yet does not injure the vital spirit when administered as a remedy in a proper dose, as narcotics, anodynes, sleeping draughts, the sperm of frogs, hemlock, belongs to the third degree. Whatever extinguishes unnatural heats and allays paroxysms is in the second degree, and, lastly, whatever prevents a disease from breaking out into a paroxysm is of the first degree. This rule does not differ much from that one which applies to heat, for these offer a direct enantiosis to the aforesaid. But whatever degrees they occupy which are of the elements, that same remains, according to what has before been

prescribed, together with the present degree ; so that now there is produced a double degree of Nature, and it operates exactly according to the proportion and nature of the elements.

CHAPTER VIII.

Moreover, the rule concerning colours must be noticed, since these, at the same time, indicate the nature of the things in which they exist. For instance, the centaury, which is red, is therefore of a warm nature ; the lily, which is white, is for that reason of a cold nature. But of colours which are external, nothing certain can be defined, except in this way. The rose is red, yet of a cold nature, on account of the anther lying in it which attracts the heat of the rose. Again, wherever there is any yellow in a red flower, there is the heat, but the redness is judged to be of a cold nature, and so must it be concluded with regard to other flowers in like manner. Moreover, there are flowers which, though by nature they appear warm, are nevertheless cold ; among these is the minium. Others, again, seem cold when they are warm, as copper is. In order to ascertain these things, observe the following rule : Whatever is green, as soon as it is gathered from that with which it may be mixed, is warm. So, too, is the body under which these colours lie hidden. Silver is, by its nature, cold, and keeps the colour of a cold body, for finally it passes into the colour of lazurium. Mars is naturally of a cold colour, and admits of being transmuted into a warm nature ; but, nevertheless, it preserves the force, and so the universal virtue of its own proper nature. Black colours are of no special nature, for they are nothing but sulphur, which is burned, and nothing underlies this, but it belongs to the elements. Whatever is white, livid, black, and hyacinthine, is cold ; the other colours are warm. Whatever is variegated belongs to one nature, presumably that of its principal colour. So, also, in green, though cold be present, yet it is comprised under its own head.

CHAPTER IX.

Whatever is fat, and, moreover, moist, is cold, even although it exists in something green ; for the greenness is changed into a cold nature. Whatever, on the other hand, is dry, assumes a warm nature. Moreover, whatever comes from Sulphur, Mercury, and Salt falls under each nature, the warm and the cold, and that on account of the three principles. Summarily, whatever burns is sulphur, and of a warm nature, unless it exists in warm colours. But whatever goes into sublimation or calcination admits a warm nature. So whatever resolves itself or is brought to an alkali is warm. Moreover, whatever is austere is cold. Sweet and bitter assume a warm nature unless affected by the former rules. Whatever dries the skin is warm ; that which constricts it is cold. If you would judge by the odours of these things you can define nothing accurately, except so far as they retain the same nature as the body. Lastly, there are other rules which are to be admitted, so long as they do not oppose those given above.

CHAPTER X.

Moreover, it should be noticed that there are certain things wherein, besides those which are natural, degrees are concealed in two ways, and that according to two bodies, as is the case with metals, gems, and stones. According to this view, mercury is chief among the metals, and embraces in itself a certain peculiar nature, warm and cold, nor can this be taken away from it. Now, if from thence be generated a metal, in iron or lead, beyond that nature it acquires another, and so two natures will be in one substance. Wherefore, from henceforth lead will be in place of mercury, if the leaden nature which it has acquired, together with its own, shall be suitable to your affairs. In the same way it must be judged concerning tin, silver, iron, and copper, because they return into their own body. Thus the liquid in gems remains in its own nature, and that a mercurial nature. If, now, it be congealed into a gem, it equally puts on a two-fold nature, because the constituent parts are reduced into their primal liquid. So, too, must it be judged concerning common stones. In certain herbs, too, a similar nature is present. Wherefore, read, and read again, and finally recall for experiment whatever is committed to your memory concerning the nature of things. And so recall it that you may now not merely think, but know exactly each of these things ; for in this lies the essence of a true and sure philosopher.

CONCERNING
DEGREES AND COMPOSITIONS IN ALCHEMY.

BOOK THE SECOND.

CHAPTER I.

ALTHOUGH I have written concerning the relollea of Nature, according to its reason and nature, that it belongs both to the cold and the hot, together with its innate essence, still there are other things which the natural Ares has produced which in many respects excel what I have treated of in my former book. And, to begin from this point, if you wish from the beginning to speak exactly concerning accidental complexions, you will find that in this place the former relollea of Nature are little approved, and for this reason there are two natures universally in things which are both together in one substance, although only one of them appears. These are the innate accident and the elemental accident. Moreover, everything in its own nature is warm. The first matter of things is warm *per se*, nor does it change the innate accident, because all the three principles in the complexion remain even to their ultimate matter; that is, in whatever nature they are found before the relollea in that same nature do they still remain until the relolleum departs. In whatever way, therefore, experience compasses the end, in that same way the beginning is manifested in itself. But before we pass on to those simples which are in the degrees we must observe that neither heat nor cold is an innate accident of them, but rather an elemental and external accident.

CHAPTER II.

Nature sends forth absolutely nothing from herself, as the man experienced in medicine easily gathers, but she keeps the innate accident so long as the thing or the body, in which that innate accident is, remains. You have an illustration in fire. In this the heat is an innate accident, and the nature of the three principles, which is evidently hot. Moreover, it cannot be otherwise but that the substance passes away together with the heat, if you wish to confer that heat on something else. Although that heat warms, still it is nothing more than a dead heat, nor does it heal disease or confer any other advantage, but is a certain superfluous heat added from without to the body. In this manner every innate accident puts forth and displays its power without any

help to a sick person. Whatever, therefore, is adapted for the healing of disease should be prepared in the following manner : In the first place bring your medicine to him who separates the two essences, the one in the substance, the other in the vital spirit ; for wherever we wish to exhibit medicine, there it is necessary for the vital spirit to depart from the substance and to agree with the offending matter of the disease. Then the medicine will appear alone in its own body, and this in proportion to the three principles. The external elementated accidents go to that part where the disease lurks. And so I gather that in the universal nature of things a two-fold accident exists, an innate and an external. The innate confers little benefit on the health, but only the external. In fire there is no external accident, and therefore I assert that it is an imperfect work of nature.

CHAPTER III.

In the beginning, when Nature brings forth in its proper element, the Archeus* prepares the same according to the proportion and nature of its peculiar Iliaster, so that the Ares consists altogether of three things, and generates in the same thing the substance of the body. This generation, *per se*, is, for the sake of the body alone, that it may appear the same with the relolleum. But what is this to the sick man ? For the fire is equally a relolleum accident, as is also snow. But they do not heal sicknesses, nor have any power in them for doing so, because they are a relolleum *per se*. Moreover, the external elements make up the cherio of Nature, which, also, you must bring to the relolleum, because, although you take this together with the cherio, it is the cherio that heals all sickness. Remark in this place concerning the cherio that the cherio is nothing but the heat or cold of these things which leaves the body and goes away into Nature. You have an illustration of this in camphor. This has its frigidity from the cherio, and so is a

* *The Archeus of the Metals.*—Ares contains within itself the first matter of all the metals, but with regard to the manner in which it distributes that matter over the globe, it must be held that it expels all matters not excocted into metals along a trinal line into the Yliadus, and separates them in division. Thus in one place there are branches of copper, in another branches of tin, and so of the other metals. Further, if thus they are brought from Ares along the triple line, out of some of them there is ejected a metal, such as tin, lead, iron, or copper, etc., before any of the marcasite, bismuth, cachimia, or zinc have been previously purged, or collected into fæces, but while they are all present, and according to their smaller or larger proportion an excellent or base metal is generated. For it is endowed with hardness in the triple line, when Archeus has extracted it out of Ares. For then they are found in Yliadus according to various modes and forms. By that preparation of the Archeus various colours are produced, no one colour being repeated, for just as from all fruit trees no apple or pear is exactly like another, so also these are not alike, as they philosophize concerning Thisma. But silver and gold are frequently found solid and pure, for this reason, that the marcasite, bismuth, and other metallic matters, have been properly separated from the metals, and are sent back along the triple line. Accordingly, when the metal has been made pure, gold and silver are produced. The other extraneous metals have already been expelled ; the rest, therefore, are found pure as Archeus has ordained them. Sometimes, also, spumes are found on the surface of the rocks which look like plates of silver, sometimes, again, in meadows like flames of gold. Then also in Yliadus there are many other forms. They are most frequently found in waters, because pure gold of this kind is compelled by the force of the waves, together with grains of sand to assume the shape of a bolt. It is afterwards deposited in grains, as takes place by the Rhine and other rivers. Cataracts of water, if they pass over the triple line where this kind of gold remains, then the water ejects it. The larger quantity is washed out by violent inundations, etc., on to the beach or coast. It also happens that two, three, or more metals are found mixed, as gold and silver are found in copper. The cause is that by the expulsive operation of Archeus in Ares, two or three are sent in company into Yliadus. This occurs chiefly in the case of cognate metals. While, therefore, they are mixed, and, being mixed, are coagulated, they cannot be separated again, but remain joined together.—*De Elemento Aqua*, Tract III., c. 10.

most opportune remedy in case of inflations ; but in the substance of its first elements it remains warm, as sulphur and the spirit of salt, together with the mercurial. Such, also, are gems and herbs. Moreover, whatever Nature produces has its cherio, that is, its external elemental accident. Wherefore, at this point, on the subject of degrees, I assert that there is a greater portion of cherionic heat, or cherionic cold, in one body than in another. Thus has the Archeus disposed all things, and that for the sake of the microcosm.

CHAPTER IV.

But in order that our council concerning the compositions of recipes may be more clearly known, it must be noticed that, as I have before mentioned concerning relolleum and cherio, so, in this place, it is necessary that you again understand this with reference to the body, namely, that those sicknesses which are only of a cherionic nature lurk in the body and descend into the body without involving the destruction of the first three principles of the body wherein they exist. For, just as the Iliaster in the four elements, like a mother, produces the relolleum and cherio, so man exists in the four elements and receives, as it were, hereditarily, the sicknesses which forthwith germinate in the body, so that, eventually, they burst forth into external elementated ailments. Wherefore, for arranging cherionic recipes, it is necessary that the external elementated things should leave their own bodies, together with their substances, and should converge on the vital spirit. Thus, the sick person is set free. It should, therefore, be noticed that death is not cherionic, but relollaceous ; although it arises hence that in no direction can death occur. For who can separate what is individual from that in which it lies hid ? Here, however, we are speaking of cold and heat in cherionic not in relollaceous matters. The remaining desiderata on this topic you can read in the treatise on the Origin of Diseases.

CHAPTER V.

As in the former book, I have conveyed a knowledge of the nature of things, with regard to cold and heat, together with many and various rules, so in this place the present rule must be observed with regard to herbs. Most of them are cold and dry, and these put forth a certain obscure greenness. These, though they are pointed out as hot, are in fact cold, as the verbena and the shepherd's purse. Some are reputed to be cold when they are hot, as the bugloss and the anise. The reason is that the coagulated moisture produces by its congelation great aridity, and the resolved dryness does not become dissolved without some little moisture on account of its cherionic nature. For it is certain that in no other way can anything be produced from the element of earth but it must be hot, nor from the element of water without being cold. This is the rule of Nature. But the reason why nothing of this kind takes place is that the external elementated condition corrupts and breaks

through the former nature. Wherefore, it must be dealt with according to its cherionic nature, by the guidance of experience. Moreover, since the same nature, whether it be cold or hot, does not form the body under which it lies hid, there is no need that you should labour for the body, but you may spend all your experimentation on the aforesaid three natures, as we have prescribed in the first book.

CHAPTER VI.

Lastly, the physician will have to observe the bodies of those things which lack sensation. For all those bodies in which these things lurk are nothing but a liquid under which is hidden that which is cherionic. But the liquid is congealed like its own element, just as the Iliaster produced it. Wherefore, the separations of Nature once again resolve that which Nature has congealed, and in this resolution the two above-mentioned natures are separated. Hence it is clear that the external elementated things of Nature are the relolleum—accident of nature, and exist apart without any virtue. So, likewise, it is clear that another nature is fully and perfectly present while the innate property and the accidental property remain each in its own separation. Hence it is gathered that nothing which is cold or hot is congenitally so, and more that whatever is inborn can do neither good nor harm to any person. But there is in addition a certain other nature which does induce heat or cold, and by which we judge the heat or the cold, that is to say, by the cherionic indication. When this interposes, all sickness can be healed. For that same coldness or heat, from the moment of its entrance, turns to the ailment—a thing which the innate property never does. All these matters are contained in the book on the Conjunctions of Things in the properties of the two natures, according to the three principles, and that according to the prescription of philosophy. Moreover, in the following chapters you will see the order of the degrees according to the reason and nature of their elements.

CHAPTER VII.

Those things which come forth from the earth have a warm nature in the first degree of heat, and among these are the following :—

Dittany	Gentian	Clary
Lion's-foot	Elceampane	Filla
Anthos, or	Cypress	Calamus
Rosemary flowers	Great Sparge	Hirundinaria
Lacca	Gallingall	Peony
Dodder of Thyme	Philipendula	Ginger
Fig	Bloodwort	Flammula
Broom	Laudanum	Herb of Paradise
Costus	Cloves	Lavender
Pennyroyal	Monk's Rhubarb	Mustard

Humulus	Macropiper	Galbanum
Lencopiper	Fennel	Gamandrea
Hartwort	Grains of Paradise	Liquorice
Cretamus	Citonia	Succory
Scammony	Balm	Cubebs
Teazels	Chamæpitheos	Cardamoms
Basil	Bdellium	Marjoram
Horehound	Fumitory	Mother of Thyme
Sagapin	Thistle	Opopanax
Agrimony	Cheiry	Ammoniacum
	Mellilot	

Things which belong to the air are in the second degree of heat. These are :—

Tereniabin	Clouds	Chaos	Heat
------------	--------	-------	------

Things which proceed from water are in the third degree of heat, as :—

Vitriol	Granate	Realgar
Sulphur	Red Marcasite	Cachimia of Sulphur
Golden Talc	Congeaed Salt	Chimolæa Calcis
Copper	Sal Gemmæ	Jacinth
Topaz	Gold	Chrysolith
Carniola	Smaragdine	Ogorum
Red and White Arsenic	Copperas	Alumen Plumosum
Cachimia of Salt	Liquid Salt	Ruby
	Quicksilver	

Things which come forth from the fire are in the fourth degree of heat, and are these, namely :—

Hot Lightning	Hot Hail	All Ætnean Fires
---------------	----------	------------------

CHAPTER VIII.

The things which are here enumerated are of a cold nature.

Among these those which are produced out of the earth are cold in the first degree.

Dodder	Chestnuts	Pisa
Strawberries	Water Lily	The four greater cold seeds
Comfrey	Lentils	Flowers of Mulberry
Branca ursina	Eyebright	Ribes
Mandrake	Bitter Vetch	Dates
Rose	Mallows	Beans
Acetum	Herb Mercury	Galls
Ciconidion	Pomegranate	Crispula
Gourd	Henbane	Ash
Sanders of all species	Purslane	Darnel
Tragacanth	Citron	

Nightshade	Mirabolanes of all species	Lily of the Valley
High Taper	Ripe Apples	Cucumber
Lettuce	The four lesser cold seeds	Greater Arrow-head
Endive	Melon	Fleawort
Gladwin	Snapdragon	Poppies of all species
Bread Flour or Corn		

Things which are produced from the air are cold in the second degree, as Nebulgea.

Things which are produced from the water are cold in the third degree. They include :—

Lead	Antimony	Silver
Camphor	Hematites	Alumen Entali
White Cachimia	The three kinds of Tin	White Talc
Electrum terræ	Alumen de Glacie	The three kinds of Coral
Thalena alterrea	Silver marcasite	Lotho
Thalena frigida	Iron	Aqua Glariona

Things which proceed from the fire are cold in the fourth degree.

Crystal	Cold Lightning	Citrinula
Arles	Citrinæus	Snow
Beryl	Cold Hail	Ice

CHAPTER IX.

It is, therefore, to be observed that the law which rules the procedure of each thing from a particular element, rules also that it should possess the same degree. The development of sensitive things from the elements is shewn in the following table.

Those which proceed from the earth occupy the first degree of heat, as:—

Men	The Lion	Rams
Boys	The Horse	The Wolf
The Goat	Oxen	Cocks
The Leopard	The Bear	Foxes, etc.

Those which inhabit the air belong to the second degree of heat.

The Eagle	The Phoenix	The Sparrow
The Ostrich	The Swallow	The Heron

And generally all winged animals which are not referable to water.

Those which relate to the water occupy the third degree of heat, as the Beaver.

Those which inhabit the fire belong to the fourth degree of heat, as the Salamander.

The following are of a cold nature, and, among these, those which proceed from the earth occupy the first degree of cold :—

Women	Cows	All Species of Sperm
Girls	Menstruum	

Those which belong to the air are in the second degree of cold, as doves storks, etc. Those which are referable to water occupy the third degree of cold, as fishes, worms, tortoises, frogs, etc. To the fourth degree of cold are referred those igneous creatures known as Gnavi, or Gnani, and Zonnetti.

CHAPTER X.

Moreover, there are certain other simples which, by the intervention of composition, attain to the second grade. These, although they do not acquire their grade altogether according to the manner and nature of the elements, yet such as are in the first grade acquire the second; those which are in the second attain the third; while those of the third, in like manner, acquire the fourth grade, as shewn in the ensuing table.

SIMPLES.

Rose	Nenuphar	Flowers of the Centaury
Violet	Camomile	Flowers of the Bullace
Solatrum	Flowers of Tapsus	
Anthera	Flowers of Hypericon	

ADDITION OF COMPOSITIONS.

Oil	Vinum Ardens
Crude Vinegar	And all fatty substances
Distilled Vinegar	

Further, although Nature by herself is not so frigid, yet composition effects such a reduction that, by means of addition, there results a certain grade of cold or heat, as is obvious in the case of the oil of roses, the vinegar of roses, and other matters of this kind. There are others which, properly belonging to the third grade, attain the fourth, as camphorated vinegar, oil of lead, etc. Moreover, there are grades which, by means of separation, ascend from the first into the fourth, as also from the third into the fourth grade, as will be seen in the third section of the Grades of the Spagyrist. Again, there are those things which are not intensified at all, of which kinds are snow and ice, by reason of their relollesous nature. Then there are those things which do not manifest their nature unless prepared, as is the case with the sperm of grass, the crystal, and sulphur. There are also those which are reduced from a hot grade into a cold, as gems, and others from a cold into a hot, as camphor, corals, etc. Lastly, there are those which lose their grade in preparation, as those which are congealed or resolved. Item. There are certain things which do not operate in the substance of their body, as oil of Jupiter, and the like. Experience will point out those matters which are omitted in this place.

CONCERNING
DEGREES AND COMPOSITIONS IN ALCHEMY.

BOOK THE THIRD.

CHAPTER I.

AT the beginning of this third book, you are to observe that, besides those essences which I have already mentioned, there is another essence and nature which is called Quintessence, or, as the philosophers say, the Elemental Accident, or again, as ancient physics term it, the Specific Form. It is called quintessence for this reason, that in the first three essences there are four hidden, which in this place is called the quintessence, and is neither warm nor cold, without any complexion in itself. But to make the matter clearer by an example, the quintessence alone infuses robust health, just as the strength or robust health which is in man, without any complexion, is brought to its end. Thus virtue lurks in Nature, for whatever rejects diseases is nothing else than a certain confortative, even as, relying upon your strength, you repel a foe. It is part of the nature of things that there is nothing in the nature of things which is lacking in virtue, unless it be of a laxative quality. The same is the case with quintessence, because this is without complexion. But although coldness elsewhere relaxes, as also sometimes heat, yet it is beyond Nature, and from the virtue of a relollaceous nature. Whatever operates according to Nature possesses a quintessence, for its virtue is so ordered that it removes superfluities from the body, just as incarnatives for curing ulcers in such a manner promote the growth of new flesh, that by the intervention of their virtue the offensive matter is removed. These three are of a triple essence, but there is one virtue, which is justly termed the quintessence.

CHAPTER II.

In order to become acquainted with the grades which exist of the quintessence, and specially of those things which are confortative, there are four points to be observed at the outset: firstly, whatsoever is of the earth holds the first grade of health; secondly, whatsoever is from the air is referable to the second grade; thirdly, whatsoever is of water belongs to the third grade; fourthly, whatsoever is produced out of fire holds the fourth grade. But,

further, it is labour in vain to seek a quintessence out of earthly things, equal to that which is extracted out of air. In like manner, that which is from air can never be compared with that which derives from water. Judge as follows of the fourth element. For example : To extract the quintessence of chelidonia is nothing else than toiling after the quintessence of the phoenix by that quintessence. Similarly, by the quintessence of the phoenix, the quintessence of gold ; by the quintessence of gold, the quintessence of fire ; but although in chelidonia, in melissa, and in valerian, there is more of the arcanum than in the rest, yet the grade excels so that by this superiority that arcanum is by far surpassing. Thus in every grade one thing is higher than another. Wherefore, with regard to earthly things, notice whether chelidonia is superior to melissa, as melissa to valerian. Judge in the same way concerning the three other elements.

CHAPTER III.

Whatsoever has been dealt with in the former chapters has been with a view to proceeding subsequently to the following signs of the grades, so as to elucidate after what manner the grades stand in the elements. Platearius, Dioscorides, Serapio, and others, their followers, who have written much, but falsely, of the quintessence, do not signally differ from us herein. Yet do you, whoever you be, seek a knowledge of the quintessence from experience, for thus you will understand the grades in their division. That the manner in which diseases are repelled by the quintessence may become clear, we must first diligently notice the concordance of things in diseases. For some virtues contend only in synochia, others in mania, others in acutis, and yet others in lethargic complaints, as is the case with concordances. In this place I think it worth while to know that which lies hidden in Nature, as in gelutta (carlinum) and melissa, which renew and remove disease without any virtue of grades, namely, in the restoration and repair of youth. The manner and the efficacy by which these things are done are indicated in the treatise, *De Vita Longa*, as certain peculiar mysteries which exist in the nature of things besides arcana. Wherefore, I think proper to pass them by here, and at length continue what I have begun concerning the four grades of the elements. Hence, although there be many and various virtues which cure maladies, some through their aperient nature, others through their narcotic nature, others again by other means, I leave such matters to those who devote their attention to theorems.

CHAPTER IV.

Everything which strengthens is tempered. No hindrance will arise from the substance which, although it be cold or hot, will, however, not incommode the Quintessence in its body (*others read*, in its work). Moreover, every specific is a quintessence, without any corruption of its body. Furthermore, nothing is tempered except the Quintessence ; all bodies are elementated in nature and their accident.

GRADE OF HEALTH.

Those things which proceed out of the earth hold the first grade of health.

Herbs	}	of all kinds.
Seeds		
Roots		
Sponges		
Animals		
Flowers		
Barks		
Fruits		

Things which proceed from the air hold the second grade.

These are all kinds of winged creatures.

Things which proceed out of the water hold the third grade, as :—

Metals	}	of all kinds.
Marchasites		
Cachimæ		
Salts		
Minerals		
Resins of Sulphur		
Fishes		
Gems		
Stones		

Things which proceed out of fire hold the fourth grade, as the

Tincture and the Philosophical Stone.

However, there are certain other virtues to be noted which are concealed in herbs, but not in winged things, nor in metals, as ursina and white thistle indicate, which, beyond their grade, admit foreign virtues. Among these there is also the emerald, which admits a foreign efficacy into itself, yet such in no wise conduce to health, for they are only external virtues which have no internal effect whatever.

CHAPTER V.

Enough having been said of confortatives, we will now turn to laxatives and their grades. Accordingly, first observe that we shall not here make use of that classification whereby the laxatives are divided into four natures. They are described in this fashion according to ancient custom. The coliquintida and scammony purge cholera; turbith and hellebore purge phlegm; manna and capillus veneris purge the blood; while lapis lazuli and black hellebore purge melancholy.

Moreover, there are others also which ward off *cholera vitellina*, others which ward off the rust-coloured and yet others the citrine-coloured water of dropsical subjects, with things of like kind, as elsewhere has been sufficiently described.

CHAPTER VI.

As in the former chapter I made mention of the grades of laxatives, so in this place, to impress it more deeply on the mind, I repeat the same—namely, that laxatives in no wise follow the four grades of the elements, but they have their grades mixed without any respect to the same. Wherefore, more diligent attention must be paid to the nature of the disease, lest you should carelessly misuse the confortatives designed for its cure. These should rather be accommodated so that they may agree with the nature of the disease. The grade and the disease should also be invariably compared. But lest with unwashed hands, as the saying is, we should rush in upon this question of purgations, it is needful to proceed as follows, namely, observing that the functions are sometimes unequal in the same operation in the fourth grade, as hellebore sometimes removes that which sea-lettuce cannot, and in like manner cataputia where both the above would fail. At one time precipitate, at another esula, and at yet another cassia, will prevail in the removal of fistula. Moreover, if we speak of fevers, such a laxative as centaury will occasionally purge febrile humours, and hellebore, another laxative, will be of use in an epileptic complaint. So, also, agaric, and things of this kind, will prevail in the case of worms. The reason is to be sought in Nature, not in the humours, for Nature has been equipped to remove whatever is melancholic, choleric, or phlegmatic, or, indeed, anything which could be mentioned here.

CHAPTER VII.

Note the following things for very vehement and very gentle purging.

I.	II.	Lazuli
Polypodium	Mountain Osier	Scammony
Locusta Botim	Cyclamen	Centaury
Hairs of Venus	Turbith	IV.
Turpentine	Azarabachara	Either Hellebore
Locusta Sambuci	Hermodactylus	Coloquintida
Senna	III.	Sea-lettuce
Gamandrea	Rhubarb	Serapinum
Stomachiolum	Esula	Cataputia
Locusta Ebuli	Vitriol	Præcipitate
Succory	Diagridium	
Serum of Milk	Agaric	

CHAPTER VIII.

Observe the following things concerning incarnatives and consolidatives. They contain in themselves the four grades, while the consolidatives, in the same manner as the laxatives, exclude the elements. In the first place, therefore, we must observe the manner wherein the ailments which we desire to heal stand in their grades. For out of these proceeds the grade of natural

things. Now, some heal fractures of bones, others cure wounds, others ordinary ulcers, others eating ulcers (others fleshy). Hence arise four grades in the following fashion.

I.

Broken bones are cured by Alchimilla, Periwinkle, Perfoliata, Diapensia, Aristolochia rotunda, Consolida, Serpentina.

II.

Wounds are healed by Natural Balsam, Artificial Balsam; the oils of Hypericon, Bullace, Turpentine, Laterinum, Centaury, Anise, Benedictus; apostolic plasters and unguents; apostolic powders; potion for wounds.

III.

Imposthumes and common ulcers are cured by Emplastra Gummata, Emplastra Mumiata, Emplastra Apostolica, and Unguenta Apostolica.

IV.

Cancrous and eating ulcers are healed by composition of Mercury, of Brassatella, and of Realgar.

CHAPTER IX.

There are, moreover, others besides the above which equally possess their own grades, of which kind are poisons, wherein the grades should indeed be specially observed. First, by reason of their elementated nature, they should be admitted into the composition of recipes. At the outset, therefore, have regard to the quantity of the poison; the weight must then be prepared, and that in the following way.

POISONS IN THEIR GRADES.

I.

Simples by themselves : Colcothar and Alum.

II.

Reverberated : Spirit of Jupiter and Spirit of Saturn.

III.

Calcinated : Tartar and Scissum.

IV.

Sublimated : Arsenic and Mercury.

The other species of poison, as those of the spider, toad, scorpion, lizard, and serpent, as also the small dragon, among many, I pass over because they are not ingredients, except the Tyrian poison, which might be named. There are, moreover, those which provoke the courses in women, which also, being specially adapted for this purpose, may be placed among other recipes, according to the manner of their grades. There are others which suppress tumours, some which provoke the flow of urine; all these and their like are to be sought from experience and concordance. Now for the Grades of the Spagyrist.

CHAPTER X.

Out of the spagyric industry four grades precede in the same manner with the four elements, and so surpass the other grades in their quantity. Further, wherever the last grade comes to an end, there the first point in the spagyric grades begins, and after this manner.

I.

Oil derived by distillation from all herbs, roots, seeds, resins, gums, fruits, fungi, and tree mosses.

II.

Oil of the vulture, the dove, the heron, the crow, and the magpie.

III.

Water of vitriol, liquor, mercurial water, oil of quicksilver, viridity of salt, aluminous waters, calcined oils, oils of metals, liquors of gems, potable gold, essence of antimony.

IV.

Oil of crystal, oil of beryl, tincture, stone of the philosophers.

All these are hot, for the grades remove that which is elementated, and over that which is element they advance their own grades. Therefore, to become acquainted with those grades there is needed full and perfect experience, so that you may see the preparation of these things which proceed out of the elementated, where they surpass the elementated.

Things which proceed out of the earth occupy the first grade of the Spagyricists, as, for example, out of the seeds of Anise, Juniper, Cardamum, Clove Tree; out of the roots of Jusquiam, Repontic, Angelica, Masterwort; out of the woods of Ebony, Juniper, Sandal.

Things which proceed out of the air occupy the second grade, as, for example, out of the fruits of Nuba, Ilech, Tereniabin; out of winged creatures, as the Phoenix, the Eagle, and the Dove.

Things which proceed out of the water occupy the third grade, as, for example, out of metals, as Gold, Mercury, Silver, Copper, Lothon, Iron, Lead, Tin, Electrum, Sapphire, Smaragdum, Granate; out of gems, as the Topaz, the Ruby, the Hyacinth, the Amethyst, and Corals; out of minerals, as Marcasite, Cachimia, Talk, Realgar, and Vitriol; out of salts and alums.

Things which have their origin from fire hold the fourth grade, as out of the Beryl, the Crystal, and Arles.

And the things which descend from the above-mentioned four elementated substances, as out of the earth, Water of Life, Distilled Balsam, Circulated Waters, Distilled Liquors; out of the air, Distilled Birds, also Tereniabin, Cloud, Ilech, distilled by retort; out of the water, Potable Gold, Sublimates, Resolutes, Liquor of Silver, Calcinates, Congelates, Resolution of Mercury, Reverberates; out of the fire, Liquor of Crystal, Liquor of Beryl, Liquor of Arles.

CONCERNING DEGREES AND COMPOSITIONS IN ALCHEMY.

BOOK THE FOURTH.

CHAPTER I.

THOSE herbs which are of a frigid nature and from the earth, are not altogether adapted to all diseases which are of a warm nature, nor, again, are those herbs which are of a warm quality adapted in all cases to diseases of a frigid nature. Hence, seven genera of diseases and seven genera of heats and colds are distinguished, and among them those of the heart as well as other members. This difference, therefore, should be very carefully observed, that those things which are wanting to the liver, whether it be warm or cold, may be sought from the same herbs. So, also, those things wherein the cerebrum is deficient require their special herbs. However, although herbs in general are either cold or hot, yet those which are for the spleen are in no wise appropriate for diseases of the reins. Wherefore, after an acquaintance with the grades there is required that of the difference between herbs in the manner following.

CHAPTER II.

In the first place, herbs are divided into seven species, together with the rest of the elements, and this on account of the nature of the star, which, equally with these, is divided into seven species. Further, in the same way as they admit of a sevenfold division, the body also is subject to the same classification, and they correspond one to another, so that those things which are under the sun are appropriate to the heart, and these are twofold; while those under the moon are, in like manner, appropriate to the brain, and that in either grade. Those things which are under Venus are heating to the reins; those things which are under Saturn strengthen the spleen; those which are under Mercury defend the liver; those under Jupiter have regard to the lungs; finally, those subject to Mars are considered wholly adapted to the gall. Moreover, though herbs are not regulated together with simples of the planets, nor the planets regulated by them, there does certainly exist a singular supremacy in every element without mixture of another.

CHAPTER III.

In order to become acquainted with those elements which pertain to the heart, we must, in the first place, observe that whatever regenerates is akin to the heart, as gold, balm, nuba, etc. Moreover, whatsoever removes phlegm, of which kind are the rose, camphor, musk, amber, etc., are brought to the brain through the medium of their native fragrance. In like manner, whatsoever heats or cools the blood is serviceable to the liver. What provokes the flow of urine or increases the semen benefits the reins. That which preserves long life benefits the spleen; that which purges, the stomach. Experience gives acquaintance with these things, but it is rather the experience which is derived from philosophy than from medicine, from regeneration rather than from disease, even that which is produced from transmutation. For when both medical and philosophical experiments concur there is derived a genuine diathesis of everything.

CHAPTER IV.

When, therefore, you have become acquainted with the transmutation which indicates seven species, both of the hot and cold, you must observe that whatever regenerates or expels an evil growth, and purifies or restores the matter to wholeness, and thus to an incorrupt state, comes to be included under the same species, whether it arises from the heat or cold of the elements. Moreover, everything in transmutation consumes superfluous humours, as salt removes leprosy of the moon, whence it is a most speedy remedy for the cerebrum. In this place you may observe that the herbs are not to be administered in this fashion, because they are Lunar, but because they reduce and compel Lunar things into their power. By silver or the Moon the brain is in no wise healed, but by those things which are opposed to these. Moreover, whatsoever prevents rubefaction and putrefaction, and conserves into an essence, as fixed things which obtain in the transmutation of metals, in the same manner preserves the spleen incorrupt. Similarly whatsoever resolves a substance and a body into liquor strengthens the liver and expels that which is repugnant thereto. But whatever dissolves to such an extent that the contraries are separated from one another, is beneficial to the stomach. Of this kind are the alkalies in tin. Finally, whatever prepares things and renders them suitable for the augments of transmutations—of which kind are the conjunctions of arcana—is to be used above all. Seek an experience of these things from the transmutation of Nature, but waste not your whole life in those miserable grades, nor in the profitless catalogues of herbs, which are found in senseless codices. For these are inimical rather than beneficial to the stomach.

CHAPTER V.

The following table will indicate the manner in which the seven aforesaid species are distinguished in the four elements, namely, which have their

origin from earth, which from air, fire, and water. Hence you may judge concerning the method of composing recipes, as follows :—

Those which come from the earth, and are of a hot nature :—

THE CEREBRUM, *Viriditas Salis*, Liquor of Vitriol, Liquor of Lunaria. THE HEART, Essence of Melissa, Quintessence of Gold. THE REINS, Correction of Sibeta, Essence of Satyrion. THE LIVER, Liquor of Brassatella, Liquor of Manna, Xylo aloes. THE SPLEEN, Mystery of Black Hellebore, Mystery of Valerian, Mystery of Verbena. THE CHEST, *Extractio de Pulmone*, Extract of Tree Moss. THE GALL, Quintessence of Chelidony.

Those which come from the earth, and are of a cold nature :—

THE CEREBRUM, Essence of Geloen, Essence of Anther. THE HEART, Matter of Laudanum, Matter of Pearls, Matter of Sapphires. THE REINS, *Materia Sintocorum*, Matter of Lettuce Seed. THE LIVER, Liquor of Senna, Quintessence of Blood, Quintessence of Gamandrea and Cichorea. THE SPLEEN, *Compositio Candi*, Confection of Dubel Coleph, or Dubelteleph. THE CHEST, Matter of Dew, Matter of Sulphur, Matter of Ologan. THE GALL, Composition of Agresta (verjuice), Composition of Pomegranate Flowers.

CHAPTER VI.

Those which come from the air, and are of a hot nature :—

BRAIN AND HEART, Nuba, Symona. REINS AND LIVER, Ilech, Hallereon. SPLEEN, CHEST, AND GALL, Tereniabin.

Those which come from the air, and are of a cold nature :—

BRAIN AND HEART, Halcyon. REINS AND LIVER, Crude Ilech. SPLEEN, CHEST, AND GALL, Crude Arles.

CHAPTER VII.

Those which come from the water, and are of a hot nature :—

BRAIN, Oil of Mercury of the Moon, Essence of Silver, Essence of the Sixth, *i.e.*, of Venus. THE HEART, Potable Gold, Liquor of the Sun, Oil of the Seventh, *i.e.*, of Saturn. THE REINS, Essence of Vitriol, Quintessence of Sulphur, Flower of Venus. THE LIVER, Mystery of Mercury, Mystery of Antimony. THE SPLEEN, Mystery of Asphalt, *Rubedo de Nigro*. THE CHEST, Flower of Jupiter, Extract of Tin, Resolved Talc. THE GALL, Crocus of Mars, Topaz from Iron.

Those which come from the water, and are of a cold nature :—

THE BRAIN, Juice of Amethyst, Liquor of Granates, Composition of Gems. THE HEART, Composition of both Marcasites, Composition of White Talc. THE REINS, The Tincture, The Physical Stone. THE LIVER, Spirit of Saturn, Essence of Lead. THE SPLEEN, Mystery of Coagulated Mercury. THE CHEST, Flower of Crude Jupiter. THE GALL, Dust of the fifth metal.

CHAPTER VIII.

Things which come from fire, and are of a warm nature :—

Warm Nostoch.

Things from the same element, but of a cold nature :—

Arcana of Crystal, Mastery of the Beryl, Citron Liquors.

CHAPTER IX.

When you have become acquainted with the grades and their species, you must then advance to the composition of recipes, according to the direction of the rule following. For as there are four elements, so four recipes are to be prepared. There are some kinds of diseases which require earthy remedies, more require atmospheric, others aqueous, and yet others igneous. In the first place, therefore, you must notice the diseases in the seven members, among which the elements are distributed. Hence simples are to be extracted of which you may prepare a composition according to the nature both of the grades and the species thereof. Accordingly, with elementated diseases, as, for example, terrene, a composite is not to be prepared higher than its own grade, but is to be left in that same grade. Similarly, with regard to the atmospheric, nothing out of a foreign element is to be introduced. Judge in this same manner concerning the other elements. This, then, is the crucial point, to accommodate each disease to its proper element, for hence arises that common error which is continually recrudescant in the case of gout, paralytic diseases, and others of this kind, by reason of the preposterous healing method which is adopted by unskilled men. Take epilepsy as an instance ; a species hereof is subject to the element of water, wherefore it is to be healed by means of minerals.

CHAPTER X.

Take general rules for the composition of recipes as follows. All those which are prepared for elemental diseases consist of six things—two of which are from the planets, two from the elements, and two from narcotics. For although they can be composed of three things, one out of each being taken, yet, these are too weak for healing purposes. Now, there are two which derive from the planets, because they conciliate and correct medicine ; two derive from the elements, in order that the grade of the disease may be overcome. Lastly, two are from the narcotics, because the four parts already mentioned are too weak of themselves to expel a disease before the crisis. Observe, then, concerning composition, to forestall the critical day. Recipes prepared in this manner are very helpful for diseases in all degrees of acuteness.

CHAPTER XI.

Lastly, concerning weights, observe the following rule. Observe the grade, whether it be surpassed by the medicine, or whether the medicine

agree with the grade. But in order that the three species may not corrupt one another, dispose the weights as follows: The proportions from the planets should be as four, from the elements as three, and from the narcotics as one.

CONCERNING GRADES AND COMPOSITIONS.*

BOOK THE FIFTH.

CHAPTER I.

IN the prescription of recipes divide the disease into four species, and distribute these among the elements, taking the grade which occurs, and proceeding in the following manner : If the disease passes from one grade into another, take the same grade, for thus are healed diseases of the first grade, which are of the earth ; of the second grade, which are of the air ; of the third grade, namely, of the water ; while that which attains to the fourth grade must be cured by the Tincture alone, for otherwise there is nothing which can be accommodated to this case. Moreover, although in the fourth book I have prescribed that the recipe should be constituted of six parts, it could, notwithstanding, be confected of three, or the six might be doubled. Again, they might be distributed as follows : Of those which are of the planets take four drachms ; of those which are of the elementated take three drachms ; of those which are of the narcotics take one drachm. Thus the matter consists in the weight, not the number of the simples.

Again, the strength, and what is more, the effect of those things which are admitted into the description of this recipe, are referred neither to the weight nor to the recipe, but to the dose, so that in those things which are of the planets you obtain greater efficacy than with the elementated things. But this is of the dose, not the weight or the recipe. Wherefore the above method is to be observed. Finally, signal skill in medical matters is herein required, to avoid premature application of the healing process ; you must rather proceed so as to purge where there is need of purgation, heal where healing is required, and consolidate where consolidation is necessary.

CHAPTER II.

You must know that everything which comes to be tested by Nature pertains to that subject which the physician makes his province. That only which is of ocular demonstration is to be considered in doses. Every dose,

* The treatise *Concerning Grades and Compositions in Alchemy* consists of seven books, but of these the last three are so much outside the purpose of this translation that they have been compressed into a very small space. All the information which the Hermetic student is likely to require on the subject of complexions and qualities is embodied in the first four books.

according to its proper arete, is either hot or cold. With regard to the composition of recipes, neither the humid nor the dry is to be considered in doses. As there are only two complexions, so there are only two doses. Whoever is acquainted with the grade of hot or cold, will know that there is joined thereto not only dry and humid, but also a dry resolute and a humid coagulate. No arcanum or aniadus resides in the warm or dry, inasmuch as no disease occurs which only seeks one of these. The chief point is in the hot or cold, for that diathesis dominates either in the hot or the cold. The sole inclination of every disease is that the physician should simply observe whether it be hot or cold. Every grade is the dose of its disease, and from every grade should the dose be taken, as may be understood by the comparison of fire, which has only one grade, and yet it is abundantly sufficient to consume its contrary, which is, indeed, according to heat. So every disease has its own grade, neither more nor less. The dose has a like relation to each and every disease. But natural things are not graded equally as to the disease in the matter of the dose; each has a grade equal to its disease, and that is the grade of the dose.

CHAPTER III.

Since there is only one grade, and nothing is graded higher in warm or in cold, equality is the chief help to ascertain the dose. There is one grade in disease and in things of Nature. No disease becomes worse because the grade of its medicament is higher. It becomes worse only according to the capacity of its nature. The extent of the disease regulates the amount of the dose. Wherefore the physician must know with what weight the disease is loaded, for the dose demands for it the same weight of medicine. The weight, therefore, and not the grade, is to be administered. Herein consists the chief principle of administering any dose: this ought to proceed from the number, not the body of those things. The end is that the ares of the microcosmus, and not the medicament, should effect the cure. As soon as the disease has been brought to an equality, Nature herself cures that which is contrary to her. The quantity of the dose must therefore not exceed the number which is taken from the disease. There are twenty-four numbers in Nature, and within this number the medicine should also be confined. In the anatomy of Nature there are twenty-four *minuta* of diseases. Medicine, therefore, has twenty-four lotones. The physician should administer his medicines with reference to these two series, so as to produce the same number of each in the microcosmus. When this is done Nature will cure the sick. The absence of such an equilibrium will sometimes cause death, when the disease itself has run its course.

CHAPTER IV.

While any disease in itself is one, it has, as we have indicated, twenty-four numbers, degrees, or minims, and the lotones of the medicine must

correspond. The proportion of the dose to the disease in any particular case cannot be learnt from theory, but is gathered from experience only. The anatomy of the dose must correspond to the anatomy of the disease. It must not exceed the number twenty-four. Indeed, the object is to restore health, both to the nature of the Microcosm and to that of the external elements, when these agree in the body. The conjunction is the same as zinobrium, which is graded by minium. In that elementated exaltation, they afford their own exaltations to the virtues of the Microcosm, and so the grain passes into the scruple, the drachm, and loton, some, indeed, into the pound, some also into the kist, and others into the talent.

HERE ENDS THE BOOK CONCERNING DEGREES AND COMPOSITIONS.

CONCERNING
PREPARATIONS IN ALCHEMICAL MEDICINE.*

TREATISE I.

CONCERNING ANTIMONY AND MARCASITE OF SILVER.
CONCERNING WHITE AND RED CACHIMIA.
CONCERNING TALC, FLUIDIC AND SOLID.
CONCERNING THUTIA, CALAMINE, AND LITHARGE.

CONCERNING ANTIMONY.

The virtues of Antimony obtain in Morpew, Leprosy, Elephantis, Wounds, and Ulcers.

HERE FOLLOWS THE PREPARATION OF ANTIMONY FOR THE SEVERAL
SPECIES OF LEPROSY.

R Of the best pounded Antimony, lb.j.
Of highly distilled (*sic*), lb.iiij.
Of crude white Tartar, lb.ss.

Reduce to a fine powder in a phial, distil by retort, and a red oil will result.

The preparations of Antimony vary with the diseases for which it is administered. That which is used for wounds differs from that which is applied in the case of leprosy. And so of the rest. To take the same preparation of Antimony both in wounds and in leprosy would be a serious error.

ELEPHANTIS.

The preparation of Antimony for Elephantis is, however, the same as for leprosy.

THE PREPARATION OF ANTIMONY FOR MORPHEW.

R Of the best pounded Antimony, lb.ss.
Of calcined Tartar }
Of Alum } an equal quantity.

Arrange in alternate layers ; reduce in a fire of reverberation of the fourth grade ; then distil, and a thick red oil will come over. By alternate layers

* It is in every way highly desirable that this important collection of Hermetic prescriptions should find place among the Hermetic Medicine of Paracelsus. It is of very considerable value as evidence of the extent to which mineral, and especially metallic, substances were applied by Theophrastus in all varieties of disease. The author's intention seems to have been the compilation of a whole alchemical pharmacy, and there is a small fragment extant of a second book, under the title *De Nascentibus ex Terra*.

understand one layer of the Tartar and Alum, afterwards a layer of the Antimony, and so forward.

THE PREPARATION OF ANTIMONY FOR WOUNDS.

R Of Antimony }
 Of calcined Tartar } an. lb.ss.
 Of Alcool of Wine, 1 kist.

Mix ; distil by the alembic till the matter is resolved.

R Of the substance dissolved as above, ʒj.
 Of Alcool of Wine, ʒiiij.

Dry by coagulation, and reduce into oil on a marble slab.

There is no greater cure for wounds than that which is obtained from Antimony, except in wounds of the head. The Antimony should be distilled upwards till what is below becomes aqueous.

THE PREPARATION OF ANTIMONY FOR ULCERS.

R Of Antimony }
 Of Colcothar } any equal proportion.
 Of Flos Aeris }

Reduce S.S.S. to the grade of reverberation. Make an extract with red wine, and reduce into alkali.

The said alkali made into an unguent with olive oil and laid over ulcers is of great healing virtue.

ADDITIONS OF ANTIMONY FOR LEPROSY.

R Of the said Antimony, ʒj.
 Of Oil of Wine Fæces, ʒj.
 Of Oil of Bitter Almonds, to the weight of both the above.

Mix. If there be no hoarseness of the voice, anoint once or twice every seven days. If the voice be hoarse, it is useless.

ADDITION IN MORPHEW.

R Of the said Antimony, ʒj., with Kist, *i.e.*, Alcool of Wine.
 Of Tragagantum, ʒij.
 Of consolidated Royal Mucilage }
 Of Psyllus Seed } each ʒij.
 Of Gum Arabic }

Make an unguent. The process is the same for Morpew and Alopecia. The unguent is to be applied warm, once or twice in every seven days. By this means the scab will rise up. If it peels off, the ulcer may be healed with the following unguent.

R Of Spermiola }
 Of Camphor } each ʒj.ss.
 Of Oil of Ceruse to the weight of both.

Make an unguent. After the scab has come off the place must be anointed with this unguent every eight days.

ADDITION FOR WOUNDS.

℞ Of the said prepared Antimony, ʒvij.
 Of the juice of White Tartar }
 Of Oil of Myrtles } each ʒv.

Mix. Apply once every other day, and no mischance need be feared. Note.—
 In summer, add camphor at pleasure.

ADDITION FOR ULCERS.

℞ Of the said prepared Antimony, ʒiij.
 Of Oil of Colcothar, ʒss.
 Of Oil of Mastic (*Oleum Lentiscinum*) to the weight of both.

Make an unguent. Anoint around the ulcer. This does not cure cancer, elephantis, or esthiomena. *Oleum Lentiscinum* is oil from the bark of the mountain osier.

CONCERNING LITHARGE.

The virtues of Litharge obtain in Cancer and Fistulas, in Tentigo Prava, Esthiomensis, Red Jaundice, Persian Fire, and Wounds.

HERE FOLLOWS THE PREPARATION OF LITHARGE FOR CANCER.

℞ Of pounded Litharge, lb.ss.
 Of Salt Water }
 Of Alum } each lb.j.
 Of White Vinegar, lb.iiij.

Reduce over hot coals till their moisture is consumed. Take of the said Litharge with an equal quantity of spring water: reduce *ad colores* for a night, and dry.

The same preparation of Litharge prevails in fistulas.

PREPARATION FOR ESTHIOMENSIS.

℞ Of Litharge, lb.j.
 Of Calcined Tartar, lb.ss.
 Of Spring Water, or *Aqua Fuliginis*, a sufficient quantity.
 Of common melted Salt }
 Of Rock Alum } each ʒvj.

Reduce according to the fourth grade of reverberation with the aforesaid water into an alkali.

Aqua Fuliginis is water from sooty roofs obtained during rain.

PREPARATION FOR RED JAUNDICE.

℞ Of Myrrh }
 Of Frankincense } each ʒj.
 Of Litharge, ʒiiij.
 Of very strong Vinegar, lb.ss.

Reduce into a decoction.

PREPARATION FOR WOUNDS.

R Of Litharge, with four times Whitened Vinegar, lb.ss.
 Of the juice of the herb Pellitory
 Of the lesser Comfrey
 Of the round Aristolochy (Birthwort) } an equal quantity.

Make a compound with *mucilago lumbricata*.

PREPARATION OF LITHARGE IN TENTIGO PRAVA.

R Of washed Litharge, 1 lb.
 Of Rock Alum, lb.jss.

Mix. Pound well, place in the fourth grade of reverberation for four hours, then extract the alkali with spring water, together with the remaining litharge and rock alum in equal quantity. Pound as above till all the litharge has been used.

The process should be as follows : When the litharge has been placed for four hours in rock alum, take of this distilled alkali, of fountain water, and of soot, each half a pound, and mix together.

PREPARATION OF LITHARGE FOR PERSIAN FIRE.

R Of Litharge, lb.j.
 Of Red Realgar, ʒij.
 Of Sal Ammoniac, ʒss.

Mix, and place in a sublimatory. This must be done ten or twelve times. Then pour on warm water, and let the litharge be separated.

ADDITION IN TENTIGO PRAVA.

R Of the said Litharge, ʒj.
 Of Common Realgar, ʒj.
 Of the juice or water of Chelidony, a sufficient quantity.

Make into an unguent, anoint very thinly, and apply four or five times. The skin turns red, and the rank smell goes away. Then use the following recipe :—

R Of the said Litharge, ʒjss.
 Of mucilage of Fœnugrek
 Of Lumbrici Nitri } an equal sufficient quantity.

Make into an unguent. Lumbrici Nitri are worms found in dung.

ADDITION IN WOUNDS.

R Of the said Litharge, ʒiiij.
 Of Oil of Camphor, ʒj.
 Of Crocus of Mars, ʒiiij.

Make into an unguent.

Apply to the wound once or twice daily, and rub in well.

ADDITION IN ESTHIOMENSIS.

R Of the said Litharge, ʒiiij.
 Of Powder of Chelidony
 Of Oak Apples } each ʒij.

Reduce to a powder.

- R Of the said Litharge, ʒij.
 Of Mucilage of Consolida
 Of Lumbrici Nitri
 Of Oil of Myrrh } each a sufficient quantity.

Make into an unguent. The disease is cured thereby.

ADDITION IN CANCER.

- R Of the juice of Marrubius
 Of Persicary
 Of prepared Litharge, ʒij
 Of Oil of the Yolk of Eggs, a sufficient quantity.

Compose an unguent.

ADDITION IN RED JAUNDICE.

- R Of prepared Litharge, ʒss.
 Of Rock Alum, ii.oz.
 Of Salt Water, ʒjss.

ADDITION IN PERSIAN FIRE.

- R Of Elect Vitriol, ʒiiij.
 Of Oak Apples, ʒss.
 Of Frankincense, ʒj.
 Of prepared Litharge, to the weight of all.
 Of Wine and Vinegar, as may be wanted.

When it boils (? ferments) then it is to be used, and the more it boils the better it is.

CONCERNING MARCASITE.

Gold or silver Marcasite has angles like tiles. The virtues of Marcasite are in Restriction of the Blood, the Menstrua, and Hemorrhoids.

PREPARATION OF MARCASITE.

- R Of Marcasite, ʒiiij.
 Of Pitch
 Of Colophony } each ʒvi.
 Of Resin of the Fir, to the weight of all.

Reduce to calx.

To reduce into calx is to place in a brick kiln and burn till the resin flows out twice or thrice until it glows.

PREPARATION IN RESTRICTION.

- R Of best pounded Marcasite, ʒij.
 Of Oil of Flax, ʒvij.

When these two are conjoined and set on fire, the true matter will remain.

PREPARATION FOR HEMORRHOIDS.

- R Of Marcasite, ʒjss.
 Of best dried Alcoool of Wine, lb.j.
 Mix.

ADDITION IN RESTRICTION OF THE BLOOD.

℞ Of the said Marcasite, ʒj.
Of Corals, ʒss.
Of Plantain Seed, ʒss.

Reduce to a fine powder.

The powder is to be sprinkled upon the wounds, or mixed with vinegar, and be bound up below the wound ; thus it will hold it together. Those who, by reason of an accident, bring up blood, should drink it.

ADDITION FOR MENSTRUA.

℞ ʒss. of this Marcasite, and as much as suffices of Oil of Sandarach. Make into an ointment.

If the menstruum flow to excess, let the umbilicus be anointed twice or thrice.

ADDITION FOR PILES.

℞ Of the said Marcasite, ʒiij.
Of Sal Gemmæ }
Of Mumia } ʒj. each.

Make into a powder.

The swollen piles must be cut and then anointed.

CONCERNING CACHIMIA.

The virtues of Cachimia obtain in Dysentery, Diarrhœa, and Lienteria.

PREPARATION FOR DYSENTERY.

℞ Of Cachimia well ground, ʒvj.
Of Rust of Iron, ʒss.

Reduce by the second grade of fire for six or seven hours. Afterwards take out and reduce into alkali.

PREPARATION FOR DIARRHŒA.

℞ Of prepared Cachimia as above, and of Nutmeg what is sufficient for incorporation. Reduce to the second grade in the form of a bolus.

PREPARATION FOR LIENTERIA.

℞ Of Cachimia prepared as above, and of Gum Arabic dissolved in plantain water. Make a bolus. Reduce to second grade.

ADDITION FOR DYSENTERY.

℞ Of the said Cachimia, ʒss.
Of Boiled Dove, a sufficient quantity.

ADDITION FOR DIARRHŒA.

℞ Of the said Cachimia, ʒj.
Of Theriaca, ʒiij.
Of Sealed Earth, ʒss.

Make a bolus, the dose containing from ʒj. even to ʒij.ss. Administer morning, noon, and evening. Abstain for three days. Afterwards repeat it. Do this thrice.

ADDITION FOR LIENTERIA.

- ℞ Of prepared Cachimia, ʒj.
Of Crocus of Mars, ʒij.
Of Red Corals, ʒss.
Of Theriac, as required.

Make a bolus; the dose is from ʒij. even to iij. morning and evening. Let a portion of this be administered daily.

CONCERNING THUTIA.

The virtues of Thutia are for spots in the eyes.

PREPARATION FOR SPOTS IN THE EYES.

- ℞ Of Thutia, ʒj.
Of White Vitriol
Of Juice of Eyebright } equal quantities.

Make into a bolus with Gum Arabic, and bring to the second grade of fire. It becomes an unguent beneficial to the eyes.

PREPARATION FOR WHITE SPOTS IN THE EYES.

The Thutia must be extinguished in milk and placed for the night in rose water. This water removes the white speck when applied to it.

FOR WENS.

- ℞ Of Thutia, ʒiiij.
Of Fused Salt
Of Live Calx } each ʒvj.
S.S.S. ʒvj.

Arrange S.S.S. Apply fourth grade of fire; reduce into alcali.

ADDITION FOR THE SPOTS OF THE EYES.

- ℞ Of the said Vitriol, ʒss.
Of Spawn of Frogs, ʒij.
Of Laterine Oil, ʒss.

Make an eye salve. If yellow spots appear in the eye and sparkle, they return.

ADDITION FOR WENS.

- ℞ Of the said Thutia, ʒj.
Of White Vitriol, ʒvij.
Of pounded Camphor, ʒjss.

Make a mixture with water of roses or fennel. This disease attacks all pedal animals. The wen assails the eyes of goats, other animals, and men. In the case of human beings camphor must be administered with it, lest inflammation supervene.

ADDITION FOR WENS.

- ℞ Of the said Thutia, ʒj.
Of Sal Anatron, or Gall of Glass
Of Fused Salt
Of distilled urine, lb.ss. and ʒiiij. } ʒj. each.

Mix. The process consists in administering this potion to such as are afflicted with wens, in the morning and in the evening, for three or four weeks. This medicine removes all wens, except *grisonum*.

CONCERNING TALC.

The virtues of Talc obtain in ulcers and humid wounds.

PREPARATION FOR WOUNDS.

℞ lb.j. of Talc and an equal weight each of Cinder of Beans and of Oats. Reduce at the fourth fire for a day and night; cleanse and dry. Talc dries the bottom or base of the wound, so that it does not change into a fistula. It also powerfully desiccates ulcers. It must not be used beyond the third day.

ADDITION FOR WOUNDS AND ULCERS.

℞ Of the said Talc, ʒj.
 Of Liquor of Mumia }
 Of Washed Turpentine } each q.s. for an unguent.

Cures eating, cancerous, and other suppurating ulcers.

CONCERNING CALAMINE.

The virtues of Calamine are suitable for plasters, eye salves, and the Persian fire. Add Calamine both for ulcers and for wounds, for plasters where a growth of fresh flesh is required, also for eye salves where neither albugo or spots of the eyes are present, as in the case of red eyes, where the greatest experience is requisite.

PREPARATION OF CALAMINE FOR PLASTERS.

℞ Of Washed (that is pure) Calamine, ʒj.
 Of Colcothar }
 Of Live Sulphur } each ʒj.ss.

Arrange in layers and apply the fourth fire for a day and night. Reduce by the second ablation.

PREPARATION FOR UNGUENT.

℞ Of the said prepared Calamine, ʒiij.
 Of the Oil of the Yolk of Eggs, ʒj.

Make a bolus with gum arabic; reduce at a fire of the second grade for four hours, then reduce by ablation.

FOR THE EYES.

℞ Of the said prepared Calamine, ʒj.
 Of Distilled Vinegar, ʒvj.

Make an extraction; then dry it.

PREPARATION FOR PERSIAN FIRE.

℞ Of Crude Calamine, lb.ss.
 Of Water of Water Lily, ʒvj.
 Of Alumen Plumosum, ʒss.

Reduce these by digestion in a glass for the space of a week, and distil.

It is a recipe of Geber. Petrus de Archilata errs in the process : for the medicine is to be used for pandaricia, but not for combustions.

℞ Of Apostolic Plaster, ℥vj.
 Of the said Calamine, ℥ss.
 Of Camphor, ℥j.

Make a plaster.

FOR UNGUENTS.

℞ Of Agrippine Unguent, ℥iiij.
 Of Unguent of the Flower of Copper, ℥ss.
 Of the said Calamine, ℥x.

Make a mixture. Most excellent for ulcers, itch, and scab.

ADDITION FOR EYE SALVE.

℞ Of the said Calamine, ℥j.
 Of Water of Eyebright }
 Of Water of Fennel }
 Of Water of Roses } ℥iiij.

To be applied at night.

ADDITION FOR PERSIAN FIRE.

℞ Of the said Calamine, ℥vj
 Of Waters of Vitriol and Oak Apples

Some use cobblers' atrament for Persian fire and red jaundice.

TREATISE II.

CONCERNING BLOODSTONE, ARSENIC, SULPHUR, SAXIFRAGE, ORPIMENT.

CONCERNING BLOODSTONE.

The virtues or chief arcana of Bloodstone are for bloody ulcers, resolved menstrea, premature profluvia of the matrix, lax dysentery, diarrhœa.

PREPARATION FOR BLOODY ULCERS.

℞ ʒiij. of Bloodstone, and ʒiij. each of *lutum Lephanteum* (that is, clay from which small cucurbits are made), and of Bolus Armenus. Make a bolus with traganth dissolved in vinegar: Reduce by the fourth grade of reverberation; then extract the alkali.

In the case of wounds, of lupus, and of herpata, bloodstone proves extremely beneficial. It binds the veins so that the flow of blood ceases. Let it be sprinkled upon the parts.

PREPARATION OF BLOODSTONE FOR MENSTREA.

℞ Of Bloodstone, ʒiij.
Of Mastic dissolved, ʒx.
Of Carabe, ʒjss.

Make a mixture with a decoction of water of alum; reduce by ablation.

The flow of menstrea should be checked when it causes pallor in the face. The use of this preparation is safe, and effects a complete cure. After decoction for seven hours lute is produced from bloodstone, out of which trochisks are made for menstrea.

THE PREPARATION FOR IMMATURE MENSTREA IS AS FOLLOWS:—

℞ Of Bloodstone, ʒj.
Of Oil of Nutmeg
Of Oil of Grains of Actis } ʒiij.
Of Petroleum

Reduce into a composition. The dose is ʒj. It ought to be administered with water of roses, decocted with roots of plantain, or with water of plantain.

Bloodstone stops profluvium *sine torsura*. But if there are gripings, it is the generation of the stone.

PREPARATION FOR LOOSE DYSENTERY.

℞ Of Bloodstone }
Of Red Corals } v.ss. each.
Of Spodium }
Of Tanacetum, to the weight of all.

Make trochisks with mucilage of the glue of *botin*. The dose is ʒss.

PREPARATION FOR DIARRHŒA.

℞ Of Ice Alum
 Of Bloodstone
 Of Crocus of Mars } equal quantities.

Make trochisks of gum arabic dissolved in plantain water. The dose is from ʒj. to ʒj. ss.

Water of plantain is to be extracted from the roots and herbs. The cornelian, if carried in the hand, stops blood, but not so bloodstone.

ADDITION FOR BLOODY ULCERS.

℞ Of Prepared Bloodstone, ʒss. (al. ʒj.)
 Of Oak Apples, ʒss.
 Of Seraphinus, ʒj. ss.
 Of Oil of Kerua (Keyri) from Violets, sufficient for incorporation.

Let an unguent be made. In cases of acute ulcers, add in place of Oil of Keyri a proportion of the Liquor of Mumia, as in the case of herpeta, and in eating and cancerous ulcers.

ADDITION FOR MENSTRUUA.

℞ Of Bloodstone, ʒj.
 Of Long Pepper
 Of Nutmeg } each ʒss.
 Of Cinder of Frogs' Follicles, ʒiiij.

Make trochisks with Mint Water. The dose if from ʒss. even to ʒj. ss.

ADDITION FOR DYSENTERY.

Let the prepared Bloodstone be given in red wine. Therein let iron be extinguished or let it be given with Tyriaca.

ADDITION FOR DIARRHŒA.

℞ Of the said Bloodstone, ʒiiij.
 Of Pearls, ʒss.
 Of Liquefied Mumia, to the weight of all.

Mix. The dose is from ʒiiij. to iij. or iiij.

CONCERNING SAXIFRAGE.

By Saxifrage understand any stone which removes growths like tartars, mosses, sand, frost, and hail.

Saxifrage is properly a pale crystal, called also Citrine Stone or Citrinole Stone. Citrine Stone stands between crystal and yellow beryl. Let the liquor be produced after the mode of an alkali. The dose is ʒss. in good wine.

FIRST PREPARATION FOR SAND, MOSS, FROST, HAIL.

℞ Of Saxifrage, ʒj.
 Of Borax, ʒij.
 Of Salgemmæ, ʒvj.
 Of Fused Salt, ʒj.

Reduce S.S.S. at a fire of reverberation through the fourth grade, from the setting of the sun till morning. Reduce into alcali. The dose is ʒss. in white wine.

SECOND PREPARATION.

Take of the said Saxifrage ʒj. Reduce it by itself to the fourth grade of reverberation. Also take :—

- ℞ Of Reverberated Saxifrage, ʒj.
 Of Cinder of the root of larger Radish, ʒj.
 Of Alkali of the roots of Petroselinon, ʒj.

Make a mixture by itself. The dose is from ʒj. to ʒiij. or iijj.

FIRST ADDITION.

- ℞ Of the said Saxifrage, ʒj.
 Of Millet of the Sun, ʒij.
 Of White Wine, ʒx.

The dose is from ʒiij. to vj.

SECOND ADDITION.

- ℞ Of the Saxifrage, ʒj.ss.
 Of Seed of Parsley }
 Of Rocket } each ʒj.
 Of Clarified *aqua mulsa*, ʒx.

The dose is from ʒiij. to vj. or vij.

It is necessary to continue this prescription as long as the tartarised urine issues.

CONCERNING ARSENIC.

The virtues of Arsenic are for ulcers, wounds, and other openings.

Arsenic is a soot out of metals, and especially from lead, and it is realgar or fulgurr (or soot) out of metals.

THE FIRST PREPARATION IS THE REDUCTION OF ARSENIC INTO MUMIA.

During the preparation the venom must be removed. Nothing cures ulcers and wounds more perfectly than prepared arsenic. It also cures *syrones* and all ulcers, gangrenes, and fistulas. The arsenic from lead is the best. Next, that which exudes from iron and resembles copper.

THE SECOND PREPARATION OF ARSENIC IS THE REDUCTION OF ARSENIC INTO BALM.

THE THIRD IS THE REDUCTION INTO LIQUOR.

Arsenic has three preparations, into Mumia, Balsam, and Liquor.

- ℞ Of White Arsenic, ʒvj.
 Of Fused Salt, }
 Of Colcothar, } ʒj.ss.

Mix and reduce to the second grade of reverberation for three or four hours. Take out.

It must be removed from the top five or six times, pounded, and again prepared as above. This must be repeated five or six times.

PREPARATION OF BALSAM.

- R Of White Arsenic, ʒx.
Of Talc, ʒiiij.
Of Live Calx, ʒxv.

Make a subtle mixture. Reduce to the fourth grade of reverberation for 24 hours. It is like glass and the venom sticks at the bottom of the calx. That which is removed from the top is to be pounded and placed in a glass vessel. Let it be set in a cellar, whereupon an oil or balsam will come forth.

PREPARATION OF LIQUOR.

- R Of Crude or White Arsenic, lb.ss.
Of Saltnitre, lb.j.
Of Salgemmæ, ʒss.

Pound. Reduce in an open reverberatory for twenty-four hours.

If these being united are placed over a fire of reverberation, the Arsenic glows for three hours; afterwards it liquefies. In this condition it is poured into water, and coagulated after the manner of an alkali.

ADDITION FOR BALSAM.

- R Of the said Balsam, ʒiiij.
Of Oil of Yolk of Eggs, ʒx.
Of Distilled Turpentine, ʒj.

Mix. Like Mumia, the balsam is to be applied for the space of twelve hours.

ADDITION FOR LIQUOR.

- R Of the said Liquor, ʒxv.
Of Skins of Pomegranate, ʒvj.
Of the Bark of the Frankincense Tree, ʒij.
Of Mucilage of Botin, to the weight of all. Mix.

CONCERNING ORPIMENT.

Orpiment is a Yellow Minera like gold.

The virtues of Orpiment obtain in fistulas, cancers, and eating ulcers.

PREPARATION FOR FISTULA.

- R Of Orpiment, ʒj.
Of Calcined Tartar, ʒiiij.

Arrange in alternate layers.

Reduce by fourth grade of reverberation for a day and night, that is, for twenty-four hours.

It melts when thus decocted. Let it be removed again, pounded, and poured into water, whereupon a white powder will settle at the bottom, which is the prepared Orpiment.

If it be put into a glass, an oil results, which must be injected into the fistula, or it may be applied by means of a rag. But let ulcers be sprinkled with the powder.

PREPARATION FOR CANCER.

- R Of Orpiment, ʒv.
 Of Fuligo, ʒss.
 Of Sal Ammoniac, ʒiij.

Reduce by the fourth grade of reverberation a day and a night. Reduce into alcali. Alcali is the chief arcanum for cancer.

PREPARATION FOR ESTHIOMENIS.

- R Of Orpiment, ʒiij.
 Of Calcined Alum, ʒvj.

Reduce by the fire as above with extraction of alcali.

ADDITION FOR FISTULAS.

- R Of the said prepared Orpiment, ʒss.
 Of Resin of Pine, ʒj.
 Of Wax, to the weight of all.

Make into a cerotum. It is to be applied for fistulas.

ADDITION FOR CANCER.

- R Of prepared Orpiment, ʒv.
 Of Cinders of Pigeons' Dung }
 Of Oil of Yolk of Eggs } q.s. for unguent.

This is used for cancer.

ADDITION FOR EATING ULCERS.

- R Of Orpiment, ʒv.
 Of Liquor of Mumia, ʒij.
 Of Oil of Roses, ʒj.ss.
 Of Mucilage of the Seed of Fleawort, to the weight of all.

Make an unguent or cataplasm. Should the sick person complain of heat, the ulcer must be anointed with oil of camphor previous to application of the remedy.

CONCERNING SULPHUR.

The virtues of Sulphur apply in cases of very acute imposthumes and asthma; they serve to maintain health. Imposthumes include pleurisy, pest, and the like.

THE FOLLOWING IS THE PREPARATION FOR EXTREMELY ACUTE ULCERS.

- R Of Live Sulphur, lb.j.
 Of Colcothar }
 Of Fused Salt } each lb.ss.

Make a fine powder; reduce by sublimation. As soon as it has been sublimated, make an addition again, and sublimate thrice as above. Live Sulphur coheres in fragments, and is not yet dissolved.

PREPARATION FOR ASTHMA.

℞ Of Fused Sulphur, lbj.
 Of Shavings of Red Sandal
 Of Cypress Shavings } each to the weight of the Sulphur.
 Of Pine Shavings

Arrange in layers. Reduce by fire of reverberation, finally into alcali.

℞ Of this Alkali, ℥x.
 Of Myrrh, ℥v.

Sublimate.

PREPARATION TO CONSERVE HEALTH.

℞ Of Sulphur, ℥iiij.
 Of Oriental Crocus
 Of *Myrobalani*
 Of *Chebuli*
 Of *Bellirici* } each ℥j.
 Of Oil of Juniper Seeds, sufficient for incorporation.

Sublime by a very slow fire.

ADDITION FOR VERY ACUTE IMPOSTHUMES.

℞ Of this prepared Sulphur, ℥ss.
 Of Oil of Nutmeg, ℥j.
 Of prepared Aqua Veronica, to the weight of all.

Make a potion.

ADDITION FOR ASTHMA.

℞ Of the said Sulphur, ℥ss.
 Of corrected Thebanus, ℥ij.
 Of Tyriaca, q.s.

Make a bolus. The dose is from ʒj. to two or three.

ADDITION FOR CONSERVATION OF HEALTH.

℞ Of the said Sulphur, ℥ss.
 Of Red Myrrh
 Of Oriental Crocus } ℥ss. each and ʒj.
 Of Aloepaticus, to the weight of all.

TREATISE III.

CONCERNING GEMS, TRANSPARENT AND OTHERWISE ; OF CORALS, THE MAGNET,
THE CRYSTAL, RUBIES, GARNETS, SAPPHIRES, EMERALDS, HYACINTHS, &c.
EVERY STONE POSSESSED OF MEDICAL VIRTUES IS A GEM.

CONCERNING CORALS.

The virtues of Coral are for menstruum and profluvium ; poison taken internally ; thunderings or rumbling of the stomach ; charms, if any be enchanted ; obsession, if any be mad ; nervousness, if any be timorous ; melancholy, for those who appear wise in their own eyes but are foolish. The virtue and the substance is one and the same. Virtue is a thing by itself. Coral simples restrict urine and evacuation, and after a long time the menstrea. When prepared their operation is sudden and safe.

PREPARATION OF CORALS TO RESTRAIN MENSTRUUM AND PROFLUVIUM.

R Of Corals, ʒss.
Of Oil of Myrtles, ʒj. (*al.* ʒss.)
Of Olibanum, ʒj ss.
Of Fused Salt, ʒij.

Make a mixture ; reduce by calcination through the fourth grade of reverberation for twelve hours or more ; afterwards reduce by ablution with water of plantain. Corals restrict urine but not menstruum.

PREPARATION OF CORALS AGAINST INTERNAL POISONING.

R Of Corals, thoroughly pounded, ʒij.
Of Waters of Ligusticum, lb.ss.
Of Sal Gemmæ }
Of White Vitriol } each ʒij.

Reduce by digestion in the second grade of fire for a month ; take out the red and coagulate. For poisons the medicine must be without a body ; for poison is also without a body. The red which settles at the bottom is a good remedy against poison.

PREPARATION FOR RUMBLINGS IN THE STOMACH.

R Of Corals, ʒvi.
Of Cinders }
Of Roman Cummin } each ʒiii.
Of Beans }
Of prepared Alum to the weight of each.

Mix these. Reduce by digestion with lb.ss. of desiccated alcool ; desiccate. It becomes yellow all over. This preparation of corals ought to be used for *diacymimum*. The colour becomes red when the corals have been prepared. Separate and desiccate.

PREPARATION OF CORALS AGAINST CHARMS, OBSESSION, NERVOUSNESS,
AND MELANCHOLY.

- ℞ Of Corals, ʒiij.
 Of Glue of Oak, ʒiiij.
 Of St. John's Wort, ʒiiij.
 Of *Storax Calamita* }
 Of Laudanum } each ʒj.ss.
 Of Gum

Of distilled wine add lb.ij. Reduce by decoction in a closed alembic for a day and a night. Distil and pour over again as above.

Corals, if prepared in this manner, become red and exceedingly hard. Consequently, they must first be pounded.

ADDITION FOR MENSTRUUM.

- ℞ Of prepared Corals, ʒj.ss.
 Of Tanacetum }
 Of Plantain } each ʒj.ss.
 Of Long Pepper }
 Of Nutmeg } each ʒss.

Make a powder. The dose is ʒj. in a tempered egg.

When salt is injected into the egg, it must also be eaten, otherwise it does no good.

ADDITION FOR CORALS AGAINST POISON.

- ℞ Of prepared Corals, ʒv.
 Of Theriac, ʒss.
 Of Root of Larger Lapathius, to the weight of all.
 Of Alcoool of desiccated Wine, lb.ss.

Reduce by digestion for a week. The dose is from gr.xv. to ʒij.

One who has drunk poison should have administered to him ʒij. of water of bullace or of roses. Let it be repeated several times, so as to produce perspiration, until the evil be felt no longer.

ADDITION FOR RUMBLINGS.

- ℞ Of the said Corals, ʒij.
 Of Species of Diacymini, ʒiiij.
 Of prepared Blood of the Goat, to the weight of all.

Make a physical powder with Saccharum ; the dose acts as a sedative.

The Goat of the Spagyrist is the castrated young of a coney. It must be fed with aperient herbs, then it is good.

ADDITION FOR THE OTHER THREE SPECIES.

- ℞ Of the said prepared Coral, ʒviiiij.
 Of Masterwort, ʒj.
 Of Angelica, ʒv.
 Of Glue of Oak, ʒj.ss.

Mix with water of St. John's Wort : the dose is from ʒss. to ʒvj.

This is the best medicament at the commencement of *tympanis*.

CONCERNING THE MAGNET.

It has a virtue for wounds and ulcers *cum flaxis et ramentis*.

PREPARATION FOR THE ABOVE.

R Of the Magnet, ʒj.
Of Calx of Eggs, ʒij.

Make S.S.S. in the fourth grade of the fire of reverberation for a day and a night. Remove the calx of eggs.

ANOTHER PREPARATION.

R Of Magnet, ʒj.
Of Calx of Eggs, ʒvj.

Set in layers in a crucible. Place in a fire of reverberation a day and a night. Extract, and it will be prepared.

Otherwise, if not prepared by pounding, it misses its true extractive efficacy. But if previously prepared, then pounded and mixed, the oppodeltoch has an excellent effect.

ADDITION FOR WOUNDS CUM FLAXIS ET RAMENTIS.

R Of the Magnet, ʒss.
Of Carabe, ʒij.

Make a subtle powder with lb.ss. of the plaster oppodeltoch or plaster of apostolico. Reduce to a wine by shaking.

This plaster when applied extracts splinters of bone, and bullets received from guns, out of ulcers and other wounds. If the magnet be pounded in unprepared condition, it loses its efficacy, but if you pound and mingle with *apostolico*, it extracts by itself. Unprepared it effects nothing.

CONCERNING GEMS.

The crystal has the property of producing an abundance of milk if administered internally to women.

PREPARATION OF GEMS BY DIAPHANITAS.

The preparation of gems is fourfold. First, by reverberation. Secondly, by calcination. Thirdly, by elevation, and in the fourth place by means of distillation.

A woman requires over lb.j. of crystal before she experiences an increase of milk. Accordingly prepared crystal is necessary.

REVERBERATION OF CRYSTAL.

R Of Crystal, lb.j.
Of Water of Entali, lb ij.

Make a mixture by imbibition. Reduce by reverberation for twenty-four hours.

Thus there is left from lb.j. a *verto* (that is, a kind of weight). Dose ʒij.

CALCINATION OF CRYSTAL.

R Of Crystal, ʒiiij.
 Of Mastic
 Of Colophony } ʒij. each.
 Of Sulphur

Reduce in an athanor. The dose is ʒj.

An athanor is a furnace in which things are burnt.

ELEVATION OF CRYSTAL.

R Of Crystal, ʒj.
 Of Sal Ammoniac, ʒiiij.

Reduce in a sublimatory to powder. The sublimation is to be performed five or six times and the crystal is always to be removed.

R Of the said elevated Crystal, ʒss.
 Of common distilled Water, ʒiiij.

Reduce to an alkali. Dose ʒss.

DISTILLATION OF CRYSTAL.

R Of elevated Crystal, ʒj.
 Of Water of Nitre, and
 Of Alumen without distillation } ʒij. each.

Reduce into digestion for three or four days; then distil; coagulate that which is distilled, and dissolve the coagulate.

Coagulation must take place over a slow and small fire. This coagulate, if placed in a cellar, passes into water, which is the last preparation of the crystal. The dose is ʒj. With all other valuable gems the preparation is as with the crystal.

The chief virtue of rubies is for dysentery. The dose is ʒj. if crude, but if reverberated then the dose is ʒij. After calcination the dose is ʒj. After elevation, ʒss. After distillation, ʒj.

Also garnets, thus distilled, constitute a most powerful salve for spots of the eyes.

Emeralds, if prepared by means of distillation, are beneficial to those with bloodshot eyes.

Sapphires, being prepared to the third or fourth preparation, remove trembling of the heart if prepared into distillation. The dose is gr.v. Sapphires dispel *synthēna* and palpitation.

The case is the same with the other gems. Bartholemew, the Englishman, has written voluminously concerning gems and precious stones.

ADDITIONS FOR THE GENERATION OF THE MILK OF CRYSTALS.

R Of the said Crystal prepared, ʒij.
 Of Spermaceti
 Of Seed of Lettuce } ʒ iiij. and ss.

Make a powder with administration of water of almonds.

ADDITION OF GARNETS FOR TREMBLING OF THE HEART AND
BLOODSHOT EYES.

℞ Of Garnets, ℥ss.
 Of Aloë Epaticus, ℥iii.
 Of Prepared Sulphur, ℥j.ss.

Mix with clarified Zuccarum. The dose is from ℥ij. to ℥j. This medicine must be diligently administered and continued for five days, although the trembling of the heart may disappear previously.

ADDITION OF SAPPHIRE.

℞ Of Sapphire, ℥ij.
 Of Dissolved Amber, ℥j.ss.
 Of Storax Calamita, ℥j.

Make a mixture. The dose is from ℥j. even to ℥j.ss.

The Emerald strengthens women in labour, and is the sovereign arcanum for their ailments if prepared by distillation, as crystal.

℞ Of the said Emerald prepared, ℥j.
 Of Liquor of Melissa, ℥j.
 Of Southernwood, ℥ij.

Mix. The dose is from three to six drops.

ADDITION FOR PREPARED JACINTH.

℞ Of Prepared Jacinth, ℥j.ss.
 Of Laudanum, that is, gum, ℥j.ss.

Mix. This is a chief arcanum for fevers arising from putrefaction of air or of water. Should fevers of this kind be usual with any persons, let them drink, every new moon, four or five drops ; thus they will be safe from being attacked a second time, and will be absolutely secure during the new moon.

TREATISE IV.

CONCERNING SALTS.

SAL GEMMÆ, SAL ENTALI, SAL PEREGRINORUM, ALUMINOUS SALT, SAL ALCALI,
SAL NITRI, SAL ANATRON, SAL TERRÆ, SALT FROM VITRIOL.

All Salts are from the element of water, as also are all alums.

CONCERNING VITRIOL.

The virtues of Vitriol obtain in falling sickness, suffocations of the Matrix, Siphita Stricta, or Noctambulones, Gutta, and Obesity.

The varieties of falling sickness are Analentia, Catalentia, Epilentia, etc.

The administration of Vitriol is the same in all.

℞ Of cuprine Vitriol, 1lb. Reduce by separation from the phlegmatic part. Reduce the said phlegmatic part over its colcothar. Distil. Reiterate in the fourth grade of fire. The dose is from ʒss. to ʒj. before and after the paroxysm.

If the disease arises from the element of Vitriol, it is cured by Vitriol. The disease of falling sickness is occasioned by salt of Vitriol. The medicine is to be administered during the paroxysm and on the day when it is expected. Epilepsy is a mineral disease; its cure is also mineral, that is, by the salts of Vitriol, and by the spirits before and after the paroxysm. Before the paroxysm the body is in great agitation; after the paroxysm the patients sleep. The medicine should be given after the sleep, while the body is still under the excitement thereof. When the body is healthy it should not be administered.

PREPARATION OF VITRIOL FOR SUFFOCATION OF THE MATRIX.

℞ Of Vitriol, purged from Phlegma and Colcothar, ʒij.
Of Pennywort, ʒiij.
Of Alcool of Wine, ʒss.

Reduce by distillation. The dose is from ʒss. to ʒj. This is the most efficacious medicine for the complaint in question.

PREPARATION FOR GUTTA AND SIPHITA STRICTA.

In Gutta—

℞ Of the said prepared Vitriol, ʒij.
Of Alcool of Wine, ʒij.
Of Jamen Alum, ʒss.

Reduce into liquids by the fourth grade of fire; applied externally, the dose is ʒss. Applied internally, the dose is from six to nine grains.

Jamen alum is white, like that of Crete, and sweetish.

The outside application is on the place of the Syntheoma, and this is where the disease begins, that is, *in pulsu*, which is the Syntheoma thereof. But if the patient still walks, the medicament is then to be bound about the pulse of the wrist and the neck. For siphita parva castigation is an effectual medicine, but it is of no use for siphita stricta. In gutta the medicament should be placed on the tip of the tongue. The paralysis being arrested, apply to mouth and tongue. It is the best medicament for the complaint.

ADDITION IN EPILENTIA.

℞ Of the said Vitriol, ʒj.
Of the Viscous Liquor of the Oak with Orisons, each ʒss. and gran. iij.
Mix.

The Syntheoma of Caducus is in the nape of the neck. In the case of young persons to anoint the nape of the neck with castor oil after the paroxysm is an excellent method.

ADDITION IN SIPHITA STRICTA.

℞ Of the said prepared Vitriol, ʒj.
Of Seed of St. John's Wort, ʒss.
Of Amber, gr.vj.
Mix. Seed of St. John's Wort takes away Siphita Stricta.

ADDITION IN SUFFOCATION OF THE MATRIX.

℞ Of the said Liquor of Vitriol, gr.vij.
Of Grains of Actis, ʒj.
Of Alcool of Wine, to the weight of both.
Make into a composition.

Unless the spot is on the umbilicus let it be applied thereto. Should there be suffocation attended with vomiting, the medicaments previously mentioned are to be taken internally. The most important preparation of vitriol is to separate it from colcothar. Then add an equal quantity of alcool of wine. This done, place burnt bread (namely, bread made *ex furfure scalino*, which is dried so that it can be pounded in a mortar) in liquor of vitriol. Next set it for a month in horse-dung. Then prepare alcool, by means of a bath of the first grade, from vitriol. If the vitriol has lost its acitivity, its strength is gone.

CONCERNING WHITE VITRIOL.

There are external species, as scotomia and spots of the eyes.

The virtues of White Vitriol obtain in affections of the external parts of the eyes, and in Neutha. Sometimes a cuticle covers the eyes or the ears of children at their birth. Neutha are pellicles growing anywhere from time of birth, as on the face, on the mouth, the eyes, ears, etc. White vitriol is a great cure in such cases, and also for exterior complaints of the eyes.

PREPARATION FOR EXTERNAL DISEASES OF THE EYES.

- ℞ Of White Vitriol, ℥v.
 Of Oil of Siligo, ℥ss.
 Of Oil of Camphor, ℥ij.

Putrefy for a month by means of horse-dung, and distil by descension.

Oil is produced out of Siligo. The Siligo is placed on a red hot iron plate, when it becomes encircled by a kind of grease, which is the oil in question. If, after birth, a pellicle covers the neighbourhood of the eyes, it must be most carefully treated with water of eyebright, of roses, or of fennel.

PREPARATION OF VITRIOL IN NEUTHA.

- ℞ Of White Vitriol, ℥j.
 Of Oil of Tartar, ℥vi.
 Of Laterine Oil, ℥v.

Distil together.

Neutha (Teutha) should never be cauterized.

ADDITION IN EXTERNAL COMPLAINTS OF THE EYES.

- ℞ Of prepared Vitriol, ℥j.
 Of Liquor of Eyebright, ℥ij.
 Of Red Poppy, ℥j.

Make an eye salve.

ROCK ALUM.

The virtues of Rock Alum obtain in open ulcers, scab, itch, eating ulcers, putrid, lascivious, and humid ulcers.

FIRST PREPARATION.

- ℞ Of Rock Alum, lb.ij.
 Of White Vinegar, lb.ss.
 Of Burnt Salt, one verto.

Mix till it passes from ebullition to coagulation. Then distil.

If open (cavernous) ulcers are washed with this water, the result is wonderful. If they are not thus cured nothing else will avail.

ANOTHER PREPARATION.

- ℞ White (? Alum), lb.x.
 Of the Juice of Chelidony }
 Of the Juice of Plantain } each lb.j.
 Of Pellitory, lb.ss.

Distil. Take of this water lb.j., and of common water lb.x. Make a lixivium. Foment warm in the case of alopecia, tinea, and ulcers.

ALUMEN PLUMOSUM.

The virtues of Alumen Plumosum obtain in paralysis, lethargy, and benumbed limbs.

PREPARATION FOR PARALYSIS.

℞ Of Alumen Plumosum, ℥vi.
Of resolved Colcothar, ℥iiij.ss.
Of Sal Ammoniac, ℥iiij.

Resolve. Alumen Plumosum confers strength imperceptibly. Hence it is the best medicament for paralysis.

ADDITION FOR LETHARGY AND BENUMBED LIMBS.

℞ Of the said prepared Alum, ℥j.
Of Dragon's Blood, ℥iiij.
Of Liquor of Mummy, ℥vij.

Make an unguent. The seat of the disease is in the occiput and in the nape of the neck.

CONCERNING ENTALI.

The virtues of Entali are in profluvium and hæmorrhoids.

PREPARATION.

℞ Of common Tartar, }
Of Entali, } each ℥ij.
Of Karabe, ʒj.
Of Mastic, ℥ij.

Reduce by reverberation to the second grade, and afterwards into alkali.

In profluvium the seat is in the umbilicus; in hæmorrhoids it is in the spine.

ADDITION IN PROFLUVIUM.

℞ Of the said prepared Entali, ℥j.
Of burnt Bolus, ℥iiij.
Of corrected Hematite, ℥j.ss.
Mix.

ADDITION IN HÆMORRHOIDS.

℞ Of the said prepared Entali, ℥iiij.
Of prepared Corals, ʒiiij.
Of Oil of Nutmeg, as required.

Make an unguent.

CONCERNING ANACHTHRON.

Anachthron is a salt growing in rocks, and is like a moss in appearance. When the said moss is decocted a salt results, that is, glass gall. Its virtues obtain in fistulas, cincilla or cintilla (diarrhœa), and scropulas. Cintilla is from the diaphragm, and it is cured by pure anatron.

℞ Of Anatron, ℥vj. (al. ℥j.)
Of Bean Ashes, ℥ij.

Reduce by the fourth grade of reverberation for twelve hours; extract the alkali.

Anathron with deer grease is good for cincilla. Anathron possesses a volatile Mercury, which must be corrected. It is then an addition in fistulas, cincillas, and scrofulas.

℞ Of the said Anatron, ʒij.
 Of crude Butter, ʒiiij.
 Of the Fat of Marmots, ʒij.

Make an unguent. The said unguent is the best for fistulas, cincillas, and scrofulas.

CONCERNING SAL GEMMÆ.

Sal Gemmæ is called Sal Granatum by the Spagyrist and Sal Lucidum.

It is a laxative of intense salt, *i.e.*, of cholera, and is like colocinthis. It cures jaundice, yellow dropsy, and sufferings arising from corrupt blood.

PREPARATION IN DROPSY AND JAUNDICE.

℞ Sal Gemmæ
 Of Tithymal, *i.e.*, Esula Major (al. Minor) } each ʒj.
 Of Gum of Cherries, to the weight of both.

Make a bolus. Reduce by the third grade of reverberation for two hours; extract the alkali. The dose is from eight to twelve grains.

You may use it in place of diagridium, and add trochisks of alhandal.

ADDITION.

℞ Of Sal Gemmæ, ʒss.
 Of Rebotium (*i.e.* true Mumia), }
 Of Liquor of Centaury, } each ʒiiij.

Make a compost. The dose is from four or five to ten or twelve grains in an egg.

PREPARATION IN OTHER DISEASES.

℞ Of the said Sal Gemmæ, ʒj.
 Of the Juice of Cataputia, ʒij.
 Of Ground Flour, to the weight of all.

Make a roasted loaf. The dose is from ʒj to ʒij.

CONCERNING SAL PEREGRINORUM.

The virtues of Sal Peregrinorum obtain in fortifying the digestion, also against infection of the air, and against future imposthumes.

PRESCRIPTION OF HERMES.

℞ Of Burnt Salt Nitre, }
 Of Sal Gemmæ, } each ʒj.
 Of Galanga, }
 Of Mace, } each ʒj.
 Of Cubebæ, }

Make a powder. The dose is three grains in the morning. It prevails against seasickness, and confers long life on old persons.

PREPARATION OF SAL PEREGRINORUM.

℞ Of the said Salt, ℥iij.
Of dried Alcool of Wine, lb.ss.

Extract the alkali.

℞ Of the said Alkali, ℥j.
Of the Liquor of Juniper Seeds, one kist.

Make a compost. The dose is one grain.

CONCERNING SAL NITRI.

Sal Nitri obtains in pleurisy and open ulcers.

PREPARATION IN PLEURISY.

℞ Of Sal Nitri, lb.ss.
Of Crude Tartar, lb.j.

Distil in *sextum alembicum*. The dose is from ℥j. to ℥j.ss. in spring water or good wine, in the morning, at evening, and at midnight. Administer often. It purges through the urine.

PREPARATION IN OPEN ULCERS.

℞ Of Alumen, }
Of Nitre, } each lb.ss.
Of Spring Water, lb.ij.

Distil into water.

ADDITION AGAINST PLEURISY.

℞ Of the said Nitre, ℥ij.
Of Aqua Regis, ℥ss.
Of dried Alcool of Wine, ℥v.

Mix. The dose is ℥ss. or ℥i.ss.

ADDITION FOR OPEN WOUNDS.

℞ Of Plantain Water, }
Of Chelidony, } each lb.j.ss.
Of Oak Leaves, }

Use for ulcers of the legs.

TREATISE V.

CONCERNING METALS.

CONCERNING GOLD, SILVER, TIN, COPPER, IRON, LEAD, MERCURY.

CONCERNING GOLD.

The virtues of Gold obtain in Paralysis, Synthena, Fevers, Palpitation of the Heart, complaints of the Matrix, Ethica, Peri-pneumonia, and in acute diseases generally.

PREPARATION FOR PARALYSIS, PALPITATION, AND SYNTHENA.

℞ Of pure Gold, purged from its alloys, ʒij.
Of the water of Sal Gemmæ, ʒvj.

Reduce into one by separation with alcool of wine. Then—

℞ Of the Crocus, ʒij.
Of corrected Alcool, ʒvi.

Mix. The dose is from three or four to six grains.

PREPARATION IN FEVERS AND ACUTE MALADIES.

℞ Of melted Leaves of Gold from the Water of Honey, ʒj.
Of Alcool of Wine, ʒij.

Reduce by separation from the honey. The dose is from ʒss. to ʒj.

PREPARATION FOR COMPLAINTS OF THE MATRIX, ETHICA, AND PERIPNEUMONIA.

℞ Of Gold extinguished in Chelidony Water, ʒxiiij.
Of Indian Myrobalani, } each ʒj.
Of Chebuli, }

Reduce to digestion for a week by separating the superfluous aquosity. The dose is from ʒj. to ʒj.

ADDITION FOR PARALYSIS, PALPITATION, AND SYNTHENA.

℞ Of the said prepared Gold, ʒj.
Of Lavender Water, with corrected Alcool of Wine, and Spicula, each ʒi.
Dose, ʒj.

ADDITION IN FEVERS AND ACUTE STAGES.

℞ Of the said prepared Gold, ʒiiij.
Of the juice of Centaury, }
Of the juice of Sage, } ʒij.

Dose, from ʒss. to ʒi.ss.

ADDITION IN COMPLAINTS OF THE MATRIX, ETHICA, AND PERIPNEUMONIA.

℞ Of the Oil of Nutmeg, ʒss.
Of the Oil of Cloves, ʒj.
Of the said prepared Gold, ʒj.

Dose, from ʒss. to ʒj.

PROCESS FOR WATER OF SAL GEMMÆ.

℞ Of Sal Gemmæ, lb.ss.
 Of Rain Water, lb.j.

Distil by retort till the whole substance of the salt is perfected.

PURGATION OF GOLD.

℞ Of Gold, ʒss.
 Of Antimony, ʒij. or ʒiij.

Melt into a regulus. By this means the antimony takes up the impure part, and the gold remains at the bottom.

CONCERNING SILVER.

The virtues of Silver obtain in complaints of the cerebrum, the spleen, the liver, and in the retention of the profluvium.

PREPARATION IN COMPLAINTS OF THE CEREBRUM, SPLEEN, AND LIVER.

℞ Of Laminated Silver, ʒij.
 Of Sal Gemmæ, ʒvi.

Arrange in layers. Reduce to the fourth grade of reverberation for twenty-four hours, and extract the alkali. The said alkali is placed for three or four days in sublimated wine, when the silver becomes like the wine itself. Let stand. Evaporate. The alkali sinks to the bottom, and, being received into a glass, liquefies in a cold place. The dose is from five or six to twelve grains.

PREPARATION IN PROFLUVIUM.

℞ Of filings of Silver, ʒj.

Reduce into calx by means of Aqua Regis.

℞ Of the said Calx, ʒij.
 Of crude Tartar, ʒiiij.

Reduce to the fourth grade of reverberation with extraction of the alkali.

PROCESS FOR AQUA REGIS.

℞ Of Alumen, }
 Of Vitriol, } lb.ss.
 Of Nitre, }

Distil into sweet water.

METHOD OF THE EXTRACTION OF ALKALI.

℞ Of the said Silver, as required.
 Of Alcool of Wine, }
 Of Water of Chelidony, } each ʒx.

Reduce as above. The dose is from ʒj. to ʒj.ss. If the red flows forth with the profluvium it is a sign that it is going to be restrained. ʒj. of the said water should then be taken.

PREPARATION OF SILVER FOR ALL THE ABOVE COMPLAINTS.

℞ Of Laminated Silver, ʒj.
 Of Purged Sulphur, ʒiiij.
 Of Pine Resin, ʒij.

Make a bolus, set alight, and reduce to preparation with spring water. The dose is from $\vartheta j.$ to $\vartheta j.ss.$ When thus prepared it is good in all the cases, but the first is more efficacious.

CONCERNING TIN.

The virtues of Tin obtain in jaundice, asclitis, and worms.

PREPARATION FOR JAUNDICE.

$\mathcal{R}$ Of Calcined Tin, $lb.j.$
Of Salt, $\mathfrak{z}v.$
Of Bean Ashes, $lb.ss.$

Reduce into Litharge by a fire of reverberation.

$\mathcal{R}$ Of the said Litharge, $\mathfrak{z}x.$
Of Alcoool of Wine, $lb.ss.$

After resolution reduce into Alkali. The dose is from six to ten or twelve grains.

PREPARATION FOR ASCLITIS.

$\mathcal{R}$ Of purged Tin, $\mathfrak{z}j.$
Of Antimony, $\mathfrak{z}ij.$
Of Filings of Cinctus, to the weight of all.

Reduce into calx by reverberation for twenty-four hours. Then

$\mathcal{R}$ Of the said Calcined Matter, $lb.j.$
Of Alcoool of Wine, $lb.j.ss.$

Reduce into alkali. The dose is from $\mathfrak{z}j$ to $\mathfrak{z}j.ss.$

PREPARATION FOR WORMS.

$\mathcal{R}$ Of Tin, $\mathfrak{z}iij.$
Of Common Salt, $\mathfrak{z}iiij.$
Of Asphalt, $\mathfrak{z}j.$

Make into a powder by burning. The dose is from $\mathfrak{z}ss.$ to $\mathfrak{z}iij.$

ADDITION IN JAUNDICE.

$\mathcal{R}$ Of the said prepared Tin, $\vartheta iij.$
Of Alipta Muscata, $\vartheta j.$
Of Bdelium, $\vartheta ij.$

The dose is from $\vartheta j.$ to $\vartheta ij.ss.$

ADDITION IN ASCLITIS.

$\mathcal{R}$ Of the said prepared Tin, $\mathfrak{z}ss.$
Of Dragon's Blood, $\mathfrak{z}ij.$
Of Liquor of Tapsus, $\mathfrak{z}j.$

Mix. The dose is $\mathfrak{z}ss.$

ADDITION FOR WORMS.

$\mathcal{R}$ Of the said prepared Tin, $\mathfrak{z}j.$
Of Colocinth seed, }
Of Plantain seed, } each $\mathfrak{z}vi.$

Make into a powder. The dose is from $\mathfrak{z}j.$ to $\mathfrak{z}j.ss.$

CONCERNING COPPER.

The virtues of Copper obtain in ulcers, wounds, worms, and ulcers of the mouth.

PREPARATION FOR ULCERS.

- ℞ Of Copper, lb.j.
 Of Immature Botrum, lb.v.
 Of Vinegar, lb.j.
 Of Sal Ammoniac, ℥ss.

Digest for a month in a closed vessel, afterwards reduce by abluion, and convert into a salt of alkali, *i.e.*, verdigris in ulcers (*sic*).

PREPARATION FOR WOUNDS.

- ℞ Of Copper, lb.ss.
 Of Distilled Turpentine, lb.j.
 Of Common Salt, ℥j.
 Of Vitriol, ℥ij.

Mix in a closed glass vessel for three months. If plates of Copper are taken and thus prepared, the best Balsam results. Afterwards take ℥j. of Flos *Æris*, and ℥j. of common oil.

PREPARATION FOR WORMS.

- ℞ Of Calcined Venus, ℥j.
 Of Water of St. John's Wort, and of Centaury, each ℥vj.
 Of Plantain Water, }
 Of Sour Wine, } each ℥iiij.

Digest for seven or eight days. Reduce into Alkali. The dose is from ℥j. to ℥iiij. or v.

PREPARATIONS FOR ULCERS OF THE MOUTH.

- ℞ Of Venus, laminated or cemented, ℥ij.
 Of Burnt White and Rock Alum, each ℥vj.
 Of Distilled Vinegar, lb.j.

Extract the Alkali for a day and night.

ADDITION FOR ULCERS.

- ℞ Of the said Flos *Æris*, ℥j.
 Of Aggripine Ointment, ℥j.
 Of Earth Worms, ℥iiij.

Make an unguent.

ANOTHER ADDITION IN COMMON ULCERS.

- ℞ Of the said Flos *Æris*, ℥v.
 Of Alum Water, ℥xv.

Make a mixture after the manner of a lotion.

ADDITION FOR WOUNDS.

- ℞ Of the said prepared Flos *Æris*, ℥j.
 Of Oil of Anise, ℥ij.
 Of Oil of the Yolks of Eggs, ℥ (imperfect quantity).

Compose an oil.

ANOTHER.

- R Of the said prepared Flos *Æris*, ʒss.
 Of the Hepatic Aloe, ʒj.
 Of Liquor *Consolida*, ʒiiij.

Make a Gum.

ADDITION FOR WORMS.

- R Of the said Flos *Æris*, ʒj.
 Of *Zuccarum Taberzet*, }
 Of Liquorice Juice, } each ʒij.ss.

Reduce to a powder. The dose is from ʒss. to ʒj.

ADDITION FOR ULCERS OF THE MOUTH.

- R Of the said Prepared Flos, ʒj.
 Of *Chelidony Water*, ʒij.
 Of *Alum Water*, ʒj.

Make a gargle or mouth wash.

CONCERNING IRON.

Iron has styptic, constrictive, and drying qualities.

PREPARATION FOR STYPTIC QUALITY.

- R Of Iron Filings, lb.j.
 Of Common Salt, lb.v.
 Of Spring Water, sufficient for incorporation.

Reduce for the space of a month, and afterwards reverberate into a powder.

Incorporation is treatment with water till a pulp is formed.

CONSTRUCTIVE PREPARATION.

- R Of Iron Filings, lb.ss.
 Of *Alum Water*, lb.j.ss.
 Of Distilled Vinegar, lb.ss.

Digest for a month. Reduce by ablution and afterwards by reverberation to a crocus.

DRYING PREPARATION.

- R Of Iron Filings, lb.ij.
 Of *Water of Vitriol*, lb.ss.

Digest for a month and reverberate into a powder.

Styptic virtue is closing and drying to fistulas and cancers. Constrictive obtains in lenteria, dysentery, and diarrhœa. Exsiccative is for phlegmatic complaints.

ADDITION FOR A STYPTIC.

- R Of the said *Crocus*, ʒj.
 Of Burnt Bolus, ʒiiij.
 Of Sealed Earth, ʒv.

Reduce to a powder. It is an incarnative for ulcers and wounds. If taken internally the dose is ʒj.

ADDITION FOR A CONSTRICTIVE.

℞ Of the said Crocus of Mars, ℥j.
Of Myrrh, ℥ss.
Of Oriental Crocus, ʒj.

Reduce to powder. The dose is from ʒij. or iij. to iiij.

ADDITION FOR AN EXSICCATIVE.

℞ Of the said Crocus, ℥iij.
Of Pomegranates, ℥j.
Of the Sap of Acacias, to the weight of all.

Make an electuary.

CONCERNING SATURN.

Saturn has an incarnative virtue.

PREPARATION.

℞ Of Lead Ashes.

Decoct with vinegar for three or four hours. This is the first preparation ; it cures wounds, and grows solid flesh. Ceruse is also made from lead if washed with water in the sun. Minium is decocted from cerussa in a kettle. All medicaments for wounds and ulcers should be prepared from metals.

CONCERNING MERCURY.

Mercury has an incarnative and laxative virtue.

PREPARATION AS AN INCARNATIVE.

℞ Of Prepared Mercury, powdered, ℥ij.
Of Aqua Regalis, ℥x.

Reduce by distillation in a bath several times a day, and convert into an oil. It is a most speedy incarnative for wounds and ulcers. It has two objections : it salivates and produces cerussa. Hence it is generally rejected and disliked. Otherwise it consolidates well and quickly.

PREPARATION AS A LAXATIVE.

℞ Of Mercury coagulated by the Albumen of Eggs, ℥j.
Of Alum Water, ℥vi.

Distil through ashes and make into a powder. The dose is from three to four or five grains. It is a potent purgative for diseases which originate from leprous humidity, such as paralysis, pustules, the varieties of gutta, and humid dropsy.

HERE ENDS THE BOOK CONCERNING PREPARATIONS IN ALCHEMICAL MEDICINE.

THE ALCHEMICAL PROCESS AND PREPARATION OF THE SPIRIT OF VITRIOL.

BY WHICH THE FOUR DISEASES ARE CURED, NAMELY, EPILEPSY, DROPSY,
SMALL POX,* AND GOUT.

TO ABOLISH THOSE ERRORS WHICH ARE USUALLY COMMITTED BY PHILOSOPHERS,
ARTISTS, AND PHYSICIANS.

THE spirit is extracted out of vitriol by means of colcothar, which is useless and of no efficacy. That which they call a phlegm is the most noble of all spirits, and all virtues should be ascribed to it.

But although the oil of colcothar is indeed of great efficacy in gravel and stone, as also in alopecia, yet it is of no use for the aforesaid diseases, to which, however, it is commonly applied.

Hippocrates, with whom almost all others agree, hands down certain stages and symptoms, which supervening epilepsy and gout must be reckoned as incurable. But since they had no acquaintance whatever with the spirit of vitriol, let their opinions go to the winds.

In the first place, the extraction of the spirit from vitriol must be effected by means of a powerful fire in an upright cucurbit, so that it may be driven into a fresh alembic, and, remaining in the athanor four days and nights, may be most skilfully passed through the reverberatory. And thus have you prepared this spirit of vitriol.

Afterwards colcothar must be distilled through a phial placed in the athanor for the space of three days over a very fierce fire of wood and coal, until there shall appear in the receiver, out of 1lb. of colcothar, 3vj., which is tintured with a scarlet colour.

This having been accomplished, the alkali is to be extracted from the *caput mortuum*, and the same having been resolved four or five times, is to be then coagulated. Thus the three things which exist in vitriol shall be extracted and separated.

PROCESS.

Proceed as follows in an epileptic disease. After each paroxysm let ℥j. be given to the sufferer. Let a dose of four grains of the oil of colcothar be

* The term *pustula* also signifies St. Anthony's Fire.

administered morning and evening in peony water. This order is to be followed up to the fifteenth paroxysm. If the paroxysms become less frequent, half the dose is to be taken for the next thirty days.

In gout a daily dose must be taken for a period of thirty days. Afterwards the afflicted part must be anointed with the spirit of vitriol till the pain is removed. If it be gout of long standing, add a fourth part of the liquor of mumia* to the said spirit.

In dropsy half a scruple of the spirit of vitriol must be administered in liquor of Serapinus, the dose being repeated three or four times, according to the stage of the disease. In the absence of the liquor of Serapinus, the liquor of crude tar must be substituted.

In the case of small pox observe this order and method. The whole seat of the disease and the part of the skin affected is to be anointed with the spirit of vitriol for nine days. But if the skin be ulcerated, let the oil of colcothar be applied in combination with its alkali, according to chirurgic method. The bandages are to be loosened after the sixth day.

The regimen and diet must be adapted to the condition of the patient, for the whole circle of disease lies in medicine and not in diet. The medicine, therefore, must be administered sedulously. So are the four diseases here dealt with fundamentally and radically cured.

AN ADDENDUM ON VITRIOL.

Alchemy has produced many excellent arts for physicians, whereby admirable cures of various diseases are effected. For this reason, therefore, in the commencement of medicine, alchemical doctors did always labour that it might become the mother and parent of many advantages. These two faculties were long cultivated together as companions, until there arose the triflers and sophistic humourists, who mingled poison with medicine, and rendered it meretricious, which medicine will still continue to remain so long as the humourists survive. I preface this that you may pay more diligent attention to the point, by reason of its great medical utility. But this is to be passed over. Wherever unskilful men rush into any art there they corrupt and defile everything, and out of a pearl make a fetid marsh. A like thing happens with regard to vitriol. At first the spirit of vitriol is taken, and is

* A PROCESS FOR MUMIA, OPPOSED TO THE ERRORS OF THOSE WHO ADMINISTER IT FOR POISONS.—Many have laboured in experiments, compositions, and recipes, whereby they might draw forth the poison into the universe, yet have they accomplished nothing. For among all things, both in experiments and recipes, it is only Mumia which brings an immediate remedy against all kinds of poisons. The method of dealing with Mumia is as follows. In the first place, cause the Mumia to putrefy in olive oil, and that for four weeks. Then separate in a retort. To each pound which has proceeded from the separation add one drachm of Alexandrine musk, and of Alexandrine theriac six ounces. Lastly, dissolve the mixture in the Bath of Mary for a whole month. You will then have theriac of Mumia. As regards its administration to the sick, give at first one ounce in oil of almonds, by way of a drink. Next see that the poisoned individual takes to a bed wherein he can sweat well, and the medicine may take effect. By this method any animal or mineral poison is expelled. Moreover, such is the virtue of Mumia, that if it have been administered before the reception of the poison, the latter will work no harm. A single dose (3) taken in the morning will obviate the possibility of poisoning during the whole day. In cases of poisoned ulcers, plague, carbuncle, anthrax, and pleurisy, give 3j., and repeat the dose at the end of six hours, when, if the sufferer has survived to take the second quantity, his recovery is assured. Lastly, there are innumerable other diseases which by this theriac are completely and perfectly cured.—*De Mumia Libellus.*

usually raised to the highest grade. By this exalted they cure epilepsy, whether it be of recent or long standing, in men and women of whatsoever condition. But here the unskilled workmen rushing in, and about to enter on a better way, have attempted to apply the virtues of vitriol to another purpose, and thus departing from the first method and arcanum, they have suffered it to expire, and then have sought oil in colcothar, which can in no wise be usefully done. For whatsoever is to take away epilepsy must have a subtle, sharp, and penetrating spirit.

For therein consists the faculty of pervading the whole body, and passing over nothing. By such prevailing or penetration the disease is attacked on its own ground, for it is certain and beyond all doubt that its seat, centre, or sphere cannot be known; hence it is inferred by the physician that there is need of those remedies which penetrate the whole body. And this is the reason why the mercenary humourists cure none, but prostitute all their learning and profession. I therefore freely affirm that in that oil which these workmen have sought there is no penetrating spirit whatever. They supply, so to speak, a mere earthiness which does not penetrate far, but where it falls there it remains. It is therefore to be regretted that, owing to their ignorance, the true process is prejudiced, and a false one is substituted. For I am persuaded that the devil has devised these things in order that health may not be restored to the sick, and that the sect of the humourists may shortly come into still greater power. To return, however, to the beginning, and to the manner in which the spirit of vitriol was invented. They first distilled the humid spirit of vitriol by itself from colcothar, then they intensified its grade by distilling it and circulating it to the highest point, as the process teaches. In this manner, the water comes to be used for various external and internal diseases, as also for the falling sickness. Thus a marvellous cure is obtained. But in the extraction they were much more diligent, for they took the spirit of vitriol, corrected as above, and distilled it from colcothar eight or ten times over a very strong fire. Thus the dry spirits were completely mingled with the humid. They continued their work until the dry spirits departed, by reason of the uninterrupted and vehement extraction. Afterwards they graded each spirit, both the humid and the dry, received in a phial together, to their terminus. They regarded this medicine as of great efficacy against diseases, and were so successful therewith that they completely confounded the humourists. But there is added unto it a certain correction by the artists by means of sublimated wine, and therefore of greater penetrating power, but it has not attained a higher grade.

But I will communicate to you my process, which I recommend to all physicians, especially for epilepsy, which has its cure in vitriol alone. Wherefore charity towards our neighbour demands that we should take greater care in case of this disease. My process is that the spirit of wine be imbibed by vitriol, and afterwards distilled, as I have said, from dry and humid spirits.

This done, I discovered that the following addition was very useful. Let the spirit of corrected tartar be mingled with the third part of vitriol, and let there be added the spirit of the theriacal water of lavender in the proportion of one-fifth in respect of the vitriolated spirits. Then let it be administered to the sick person before the paroxysm, or several times in the day. This medicine possesses a signal efficacy against the said disease, so that it is not lawful to expect a better one from Nature. Accordingly, the first process was invented and retained by the ancients with the said correction. For thus the heart and the whole virtue of Nature is attained.

But I hope that I shall not be reproved by all good persons who think of the terrible nature of this disease, which ought to move the stones to pity, for whether the vehemence and atrocity of that disease be so great or not, it would be permissible for any one to say, Cursed be all the physicians who, passing by the sick, give them no aid, like the priests and Levites in Jericho, who, deserting the wounded man, left him to be treated by the Samaritan! For they were worthy of the fire of Gehenna, from which there is no redemption, and who will admit anything else than that all these physicians, without exception, look at the disease, and yet pass by the sufferer? Who can say anything else but that they will be judged at the last day? For scarcely would they spend one penny to secure a more certain foundation for the cure of this disease. Did they strive to imitate the Samaritan, God would not then judge them, but, in consideration of their faithfulness, would manifest to them all the secrets of Nature, whereby they might assist the sick, and, although the required properties did not exist in Nature, He would create them afresh. Wherefore I testify to you, men both of high and low degree, that all the doctors have shamefully strayed; whatsoever the seducers Galen or Avicenna have concocted, they adhere to it, and weary themselves with lies. To such an extent are they obsessed by the devil that they cannot exercise charity towards their neighbours, and therefore make of themselves children of condemnation. First of all the Kingdom of God is to be sought, yet not with the Levite or the priest, but with the Samaritan.

If we are merciful, and follow the example of the Samaritan, God is with us, and He will immediately confer upon Nature a remedy not hitherto created. While men have levitical or sacerdotal dealings with the sick, God puts off the medicine, and keeps it to Himself. The sick flee to the Kingdom of God, but the physicians to the abyss of hell. The same place is prepared for both doctors and Levites. Therefore, open your eyes, there are two paths—one taken by the Levites, the other, which leads to heaven, along which the Samaritan proceeds.

That vitriolated extraction is not only excellent for falling sickness, but in the same way for cognate diseases, as swoon and trance, also for constipation and internal imposthumes, etc., and for strangulation and precipitation of the matrix. But far other than the aforesaid virtues would be discovered by diligent inquiries. The devil, whom the false physicians serve, however,

obsesses them, and he incites them, so that they cannot endure a lover of the truth. So there is an end to the health of the good.

Further, it is to be known that the aforesaid recipes for making a humid spirit of vitriol cannot be more clearly described. An artist is required to understand it, but sordid cooks can by no means grasp a matter of so much moment. It is from artists, therefore, from alchemists, and from experimentalists, that you are to expect sufficient information on all points. Similarly, we shall, by the same, be more fully instructed in the correction of the spirits of the wine. The doctors of the academies are so ignorant that they can scarcely distinguish between agaric and manna. The art and virtue of all vitriol consists in this, that the spirit of the vitriol should be properly extracted, raised to the highest grade, and by addition should be made potent to enter the penetralia where the centre, root, and seed of the disease can be found. For it is impossible to discover these places so exactly as those doctors assume when discoursing of their humours. The fundamental principle has not yet been discovered as to what makes the disease, or where it is situated, or what it is that throws a man into such a severe paroxysm. Therefore the whole operation must be committed to the arcanum alone which Nature has appointed for the disease. That arcanum will find out the disease just as the sun penetrates all the corners of this world. In short, whoever desires to act as a true physician should first of all study to be a Samaritan, not a priest or Levite. If he be a Samaritan all things of which there is need will be given him, nor will anything be concealed from him.

OF THE OIL OF RED VITRIOL.

You must know how a most blood-red and vinegar-like oil is prepared from colcothar by distillation in a retort after the alchemistical fashion. This oil the operators have regarded as more efficacious in the aforesaid diseases than the spirit itself, but erroneously. The process of preparation is well known, and need not be here described. The most important part consists in the manual work, in diligent inspection, and, finally, in suitable instruments. Also you should know concerning its virtues, that, in the first place, it is an acid matter, surpassing all acidity, so that there is nothing more acid. Next, it possesses a corrosive nature, whence it follows that it must be used with caution, as also not by itself, but diluted in such a manner as will be in harmony with the nature of the case. By reason of its acidity it is beneficial to a stomach which is free from cholera and ulcers, but not otherwise, for acidity is aggravating to ulcers. If cholera be present, a continual conflict ensues, even as between aquafortis and tartar. It will also conduce to health in the case of all fevers and loss of appetite, the same method being observed, for many virtues are ascribed to this oil, though few are confirmed by experience. Those, indeed, who have boasted of effecting marvellous cures thereby, have been proved by use to have lied disgracefully. It is useful in stone and gravel, though I know no case which has been cured by it.

In all instances it effects something, but it does not get to the root of any disease.

But with regard to surgery, understand concerning this oil that it creates severe pains, but, nevertheless, brings immediate health even in the most desperate diseases. In certain complaints it is better to distil the red oil of vitriol into a spirit, and thus a minimum quantity becomes sufficient to effect a cure. These things have been taught me by experience; the other decoctions of vitriol are of no importance.

THE WHITE AND GREEN OIL OF VITRIOL.

Out of raw vitriol there can be distilled, by descent, an oil, sometimes white and sometimes green, according to the conditions of the vitriol. The same calls for special praise. Because it is prepared out of crude vitriol, it therefore also contains the spirit of the same. It is excellent and advisable for internal diseases. The green oil is better if it be circulated and mingled with a commixture drawn from the spirit of vitriol. Let no one who possesses this despair that he has a certain and undoubted remedy for the falling sickness, and all its varieties. It should be brought to the highest grade, that it may be separated from its earthiness and its fæces by the bath of Mary, and afterwards by fire. Thus, in the bath of Mary the phlegm will be removed, the earthiness will be removed by fire, and the spirit of oil must be then collected alone that it may circulate by itself. Afterwards you may take an addition of the spirit of wine, nor is there need that many things be added. It is taken in peony water before the commencement of the paroxysm. When the spirit of the oil has searched out the centre of the disease, the paroxysm abates, creating a certain vertigo at first, but soon after the patient subsides into gentle sleep, and experiences relief. Yet it is necessary all the same to persevere with the administration of the medicine.

THE ALCHEMIST OF NATURE.*

BEING THE SPAGYRIC DOCTRINE CONCERNING THE ENTITY OF POISON.

CHAPTER I.

CONCERNING the nature and the essence of poison by which our bodies are affected, we would thus establish the foundation and the truth.

It is agreed among all parties that our bodies stand in need of conservation, that is, a certain vehicle, by the aid of which they flourish and are nourished. Wheresoever this is wanting, there life itself departs. But this, however, is equally to be borne in mind, namely, that He who built up or created our bodies, the same, in like manner, procreated the foods thereof, and that with the same facility, though not indeed in an equal perfection. I wish the matter to be understood thus: We are endowed with a body which is devoid of poison. But that which we administer by way of nourishment to our body has poison combined therewith. Thus our body is created perfect, but not also the other. Hence, observe that the other animals and fruits are for us designed as food, and so, also, as poison. They are not in themselves either foods or poisons, but, as regards themselves, and inasmuch as they are creatures, they share their perfection equally with us. When they are taken by us as food they are thus poison to us. Thus a thing becomes poison to us which in itself is by no means a poison.

CHAPTER II.

To consider the matter further, everything in itself is perfect, is made good in relation to itself, and according to its own law. But if we have regard to its external uses, it has been formed both good and bad. Understand this as follows: The ox which feeds on grass receives both health and poison, for the grass contains in itself both nourishment and medicament. In the grain itself there is no poison. Thus, also, whatever man eats or drinks is at the

* Perhaps the chief utility of this treatise will be the illustration which it affords of the extremely wide sense in which the terms Alchemist and Alchemy were applied by Paracelsus. The little work itself is derived from that portion of the *Paramirum* which is entitled *Textus Parenthesis super Entia Quinque*, and, in addition to the entity of poison, is concerned with the astral entity, the entity of seed, the entity of virtue and quality, the natural entity, and the spiritual entity. Finally, there is the entity of God. The whole constitutes a kind of general introduction to the body of exoteric medicine for which we are indebted to Paracelsus. It is to the several treatises dealing with these subjects that reference is intended in the fifth chapter.

same time both venomous and healthy. Take this statement in two ways, one concerning man himself, excluding the nature of animals and plants, the other concerning the assumption. To impress this more plainly on the mind—the one in man is the great nature, the other is the poison inserted into the nature ; and, in order that we may conclude this matter, remember that God has formed all things perfect, in so far as regards their utility to themselves, but imperfect to others. Herein rests the foundation of the entity of poison.

God, indeed, has appointed for man or for creatures no Alchemist for His own sake, but He has destined the Alchemist as one to whom we may betake ourselves if any of those things whereof we have need be imperfect. And He has done so for this purpose, that we may eat the poison which we take under the appearance and in place of healthful food, not as poison, but that we may separate and divide it from such healthful food.

What we tell you about this Alchemist do you regard with the most careful attention.

CHAPTER III.

When therefore, anything, which is, in other respects, perfect, assumes at one time the form of poison and at another that of healthful sustenance, we say, proceeding with our subject, that God has appointed an Alchemist for him who eats and uses anything which, when taken, tends as much to destruction as to health ; and this Alchemist is such an artist that he can only separate these two elements one from the other by banishing the poison to its own place, and by introducing the food into the body. In this way, as we have said above, we would have our fundamental principle understood and accepted by you. Take an illustration of a different kind. Whoever is a lord or prince is, so far as he himself goes, perfect, as a prince should be. But a prince cannot be without servants who shall minister to him in his princely character. Those servants too, are, so far as concerns themselves, perfect, but not as they stand related to the prince. To him they are as a poison, as a loss ; they receive pay from him. So understand the natural Alchemist. God has granted that science shall exist bountifully in him, as in a prince. He teaches him how to separate the poison from his ministrants and to accept the good among them. Here you will find the fundamental principle of our present subject, even though the illustration may not recommend itself to you at first. Its teaching is according to the doctrine of the wise man, where the whole is unfolded. The matter stands thus. Man must eat and drink. For the body of man, which is the temporary abode of his life, absolutely requires food and drink. Man, therefore, is compelled to take into him poison, diseases, and death itself, by means of his food and drink. So then, this argument might be used against Him who endowed us with a body and then added food in order to slay us. Learn, however, that the Creator takes nothing away from the creature, but leaves to each his own perfection. And, although one thing is poison to one and another thing to another, the Creator is not to be accused or blamed for this.

CHAPTER IV.

But in this way you will track out the Creator. If all things are perfect in themselves, and this from the settled arrangement of the Creator, according to which one serves for the conservation of the other, as when the grass nourishes the cattle and the cattle nourish man ; and if thus the perfection of one thing be to another which partakes of it now an evil, now a benefit, and thus imperfect ; then we must assume that the Creator, for the sake of enlarging His creation, arranged matters so for this reason : He determined all things should be so created that in whatever is necessary for some other thing such virtue and efficacy should be latent, that by means thereof the poison should be separated from the good for the health of the body and supply of nutriment, and that this mutual arrangement should be preserved. For example : the peacock devours the snake, the lizard, and the newt. These creatures, so far as they themselves are concerned, are perfect and wholesome, but with reference to other animals, all those mentioned are mere poison, except in the case of the peacock. And hear the reason of this difference. Its Alchemist is so subtle that the Alchemist of no other animal can come up to him. He so thoroughly and purely separates the poison from the good that this diet is innoxious for the peacock. So is it true in other respects also that to every animal is assigned that particular food which is adapted for its preservation, and besides this a special Alchemist is given who separates the nutriment. To the ostrich such an Alchemist is given who separates the iron, that is, the dung, from the nutriment, and it is not possible that this should be done for any other creature. To the salamander is given fire for food, or rather a body of fire. For this purpose it has an Alchemist appointed. The swine feeds on dung, although it is poison ; and for that reason it is extruded from the human body by the Alchemist of Nature. Nevertheless, it serves as aliment for the swine, since the Alchemist of swine is much more subtle than the Alchemist of man ; for the Alchemist of the swine separates that aliment from dung which the Alchemist of man cannot so segregate. On this account, too, the dung of swine is not eaten by any other animal. There is no other Alchemist more subtle, or who can separate aliment more cleverly, than the Alchemist of the swine. And so of others, which we advisedly omit, to make our discourse the shorter, it must be understood in like manner.

CHAPTER V.

We have already said something about the Alchemist ; and you must believe him to be appointed by God solely for this reason, that he may separate from the good that which differs from it in the body when, by the divine arrangement, it takes something into itself for the support of life. Recur now to the data elsewhere supplied, namely, that there are five things which have power over man, and whereto man is subject. These are the Astral Entity, which we have dealt with, and next the Entity of Poison. Now even though a man may be in no way affected by the stars, still he is not equally safe and secure from

the Entity of Poison, but there is reason to fear lest he may go wrong thereby. These we leave as we described them in the prefaces.* But in order that you may more easily embrace all, observe the initial principle, so that you may more clearly understand in what way the poison can or actually does hurt you. Since, then, we have within us an Alchemist placed by God the Creator in our body for this purpose, that he may separate the poison from the good, and that so we may suffer no harm, it is necessary that we should next discuss about this, namely, what is the principle and what the mode according to which all diseases issue from the Entity of Poison as well as from the other sources. In this disquisition we will pass over all that which brings no injury but some advantage to bodies, as we shall in due course make clear.

CHAPTER VI.

But first you must know that in this matter astronomers are deceived, for while pointing out the maladies of our body, they make the body fortunate and the body healthy. But if this be not the case, this one cause remains, that the remaining entities, of which there are still four, do injury to the body, and by no means the stars of themselves. Hence we rightly ridicule and explode their writings, wherein they make such lavish promises of health, and do not at the same time consider this, that there exist four other entities, of equal power with the stars. But we ought to have a game with them, for what is the good of a cat without a mouse, and what is the good of a prince without a fool? Clearly, the physiomantist has also concocted a similar history, yet he will never excite our tears. He promises health, nor does he think of the four entities of which he is ignorant. For he augurs from the sole natural entity, and says nothing about all the rest, which tickles us not a little. It is the part of a well-informed man to declare of many things those which depend upon a course, for of motions or courses there are five, of which man is only one. He who omits some of these motions and proceeds with the rest is truly a vain prophet. To divide and to speak according to division, each according as he has learnt, according to his judgment and opinion, this is extremely praiseworthy. Thus, accordingly, the pyromantic Entista delivers his judgment concerning spirits; similarly, the physiognomical Entista prophesies of the nature of man; the theological Entista of the course of God; the astronomical Entista of the stars. Each by himself is a liar, but they are true and just if they unite in one. We tell you this lest you should proceed to prophesy before you have learned the five entities of the entities. Then indeed we shall repress our laughter.

* The *Libellus Prologorum* prefixed to the *Textus Paramiri* observes that there are altogether five modes of cure, which is as much as to say that there are five medicines, or five arts, or five faculties, or five physicians. Each of these faculties, taken separately, is sufficient for the cure of all diseases. The professors of the first are termed natural physicians, for this reason, that they effect cures by the administration of contraries. Those of the second are termed specific physicians; they cure all diseases by means of the *ens specificum*. The professors of the third are called magical physicians; they effect the cure of diseases by the use of magical words and characters. The spiritual physicians are those who understand the nature of the spirits of roots and herbs, and have them under their control. The last are the physicians who heal by faith.

CHAPTER VII.

In order that you may have a fundamental knowledge of the Alchemist, know now that God has dispensed to each creature His own substance and all things which are necessary for this, not for His own regulation, but for the use of those who need those things which are conjoined with poison. That creature has within him, in his own body, one who separates the poison from whatever is applied to the body. This is in very truth an Alchemist, because in his mode of action he makes use of chemical art. He separates the evil from the good. He transmutes the good into tincture. He tinges the body for the sake of its life. He arranges and disposes all that is subject to Nature in it, and tinges it so that it turns into blood and flesh. This Alchemist dwells in the bowel, as in his instrument, with which he decocts and where he operates. Understand the matter thus. Whatever flesh man eats has in it both poison and good. In the act of eating, all things are regarded as healthful and good. Under the good, indeed, poison is latent ; but under the bad there is nothing good. As soon as ever food, that is to say, flesh, is taken into the stomach, the Alchemist, immediately fastening upon it, effects a separation. Whatever does not tend to the health of the body he puts aside in its special places ; whatever he finds good he also sequesters into its proper abodes. This is the Divine ordinance. In this way the body is preserved so that it shall not be killed by the poison of what it eats. Now, this separation is made by means of the Alchemist without anything being done on the part of man. And thus it is with the virtue and power of the Alchemist in man.

CHAPTER VIII.

Understand, moreover, after the following manner, how, in every single thing which man takes for his use there is a poison hidden under what is good. The essence is that which sustains the man. The poison, on the other hand, is that which destroys him and brings diseases upon him. And this is true of every alimentary substance, without exception, in respect of that animal which uses it. Now, physicians, attend to this ! If it be thus with the aliment of the body and the body cannot do without it, but is altogether dependent upon it, then the body simply takes the aliment, such as it is, under the twofold species of good and ill, and delegates to the Alchemist the duty of separation. Now, if the Alchemist be weak, so that with all his care he avails not to separate the poison from that part which is evil, then, from the poison and the good there arises a combined putrefaction and, eventually, a kind of digestion, and this it is which inflicts diseases of humanity upon us. For every disease in man begotten of the Entity of Poison emanates from a putrefied digestion, which ought to take place so gently that the Alchemist should perceive in it no measure of excess. But when digestion is interrupted, then the Alchemist cannot remain perfect in his instrument. So, then, corruption necessarily ensues, and this, in its turn, is the mother of all

diseases. This is what physicians ought most carefully to watch, and it should not be involved in any of your intricacies. Corruption defiles the body, and it is produced in this way. Water which is clear and limpid can at pleasure be tinged with any colour. The body is like such water : corruption is the colouring matter ; and there is no such colour which does not derive its origin from decay. It is at once the signal and proof of poison.

CHAPTER IX.

Learn this with the view of more fully following up the subject, that corruption is produced in two ways, locally and emunctorially, according to the following method : If, as we have said, there be an Alchemist present in digestion, and if in the process of separation, he succumbs to the fault of defective digestion, then in place of him there is generated putridity, which is poison. Everything putrid is poisonous for that place where it is detained, and so becomes the mother of certain and deadly poison. For putridity corrupts that which is good, and if the good be stripped of its virtue, then the evil triumphs over the good, and this good no longer appears otherwise than under the false appearance of that good which is really subject to putridity. And so this becomes the source of diseases which, in their turn, are subject to it. But know that which is produced emunctorially occurs through the failure of the expulsive nature, in the following manner: If the Alchemist expels the poison, he does so in every case by the proper emunctories ; the white sulphur by the nostrils, arsenic by the ears, dung through the anus, and so other poisons according as each has its own special emunctory. Now, if one of these poisons be hindered by the weakness of Nature, or by itself and in other ways, it then becomes the mother of the diseases which are subject to it. So, universally in all diseases two sources are patent. We will not say more on this subject.

CHAPTER X.

Moreover, as has been said above on the subject of natural Alchemy, that it is situated in every animal, on account of that separation which must take place in the bowel, listen to the following doctrine as to how, in the aforesaid manner, all other diseases also can be investigated and searched out : If the man be well and strong in respect of all entities—if, for example, he has a suitable Alchemist who separates well with appropriate instruments, reservoirs, and emunctories, then it is necessary, in addition to the instruments, to regard many other matters, especially to see that the stars are favourable, and that all the other entities are well disposed. And yet these general entities do not greatly affect us ; for assuming that they are all good and effectual, still many accidents happen to the body which either break or spoil, befoul or impede, the reservoirs or emunctories. Fire is contrary to the Nature and to the body. For this in its quality, nature, ardour, dryness, and other force, can so corrupt us that by its presence the instruments of the Alchemist are violated, and so

he appears to be of feeble powers afterwards. So, too, water itself is adverse in its nature to our body and its reservoirs, so much so that the instruments are either stopped up or perverted by it, or in some other respect altered. The same is the case with the air and with other necessary things, and also with external accidents, which are of universal power, so that they break asunder, change, and render useless the instruments and emunctories. Then, too, the Alchemist, being weak and dead, proves unequal to the accomplishment of his work.

CHAPTER XI.

But it should not escape your notice that the reservoirs, instruments, and emunctories can be corrupted through the mouth by the air, food, drink, and other things of this kind, in the following way : The air which we breathe is not without its poison, and to this we are specially subject. Concerning the quantity of food and drink, and its bad quality, which disagrees with the organism of the body, the truth is that by these means the organs are thrown out of order to an excessive degree, and that, in this way, the Alchemist is clearly disturbed in his operations. Hence ensue digestion, putrefaction, and corruption. And whatever be the properties of the poison which man takes, such a nature the bowel assumes, and, together with the bowel, all the rest of the body. Thereupon this becomes the mother of diseases in that self-same body. Hence, you physicians ought to understand that one poison and not more produces the mother of diseases. Thus, if you eat flesh, herbs, pulse, spices, and from the consumption of these poison is generated in the belly, then it is not all these foods which are the cause, but only one of them, as, for instance, the poison of the herb, or of the pulse, or of the spices. This you should consider a great secret. For if you know this thoroughly, what poison is the mother of diseases, then we will allow you with justice to be called physicians. In this way you will have discovered what remedy you ought to use ; otherwise, you will attempt this in vain. This becomes for you the foundation of the mother of all diseases, whereof indefinite numbers are reckoned up.

CHAPTER XII.

We will now communicate to you some brief information on the subject of poisons that you may understand to what and to what kind of poisons we allude. We have pointed out to you that poison exists in all foods. From food, therefore, is educed a certain entity which has power over our bodies. We afterwards explained the Alchemist who is in our bodies, who for the well-being of the body separates the poison from the food by means of his instruments and reservoirs. When this has been done, the essence passes off into a tincture of the body. The poison goes from the body through the emunctories. Whilst each operation proceeds in this way man is sound and healthy by means of the entity itself. At the same time, also, we mentioned the hostile accidents which might impinge upon the entity itself so as to destroy it. In this way it

becomes the mother of diseases. Having repeated so much, now let us speak about the different kinds of poisons. I think you now understand what the emunctories are, and how many of them there are. Reasoning from these you can get at a knowledge of poisons. Whatever exudes substantially through the pores of the skin is resolved Mercury. What is excreted through the nostrils is white sulphur. Arsenic is ejected through the ears ; sulphur through the eyes. Through the bladder there is a resolution of salt ; through the anus putrefied sulphur. Possibly your reason may seek to know under what form and appearance each of these can be recognised ; but that is a matter which our present parenthetical treatise does not include. You will gather from our book on the Human Construction of Philosophy the fundamental principles which it is necessary for a physician to know. There, too, are given at some length the appropriate remedies in many cases, such, for example, as in putrefactions, and it will be well for you to read these. In the same treatise, too, you will learn in what way poison is latent in food.*

CHAPTER XIII.

We will give you an illustration from which you may briefly learn how poison lurks under aliment ; and how it is that the condition of a substance which is perfect in itself becomes vicious and poisonous in respect of men and animals who use it. The ox is created with all appendages sufficient for its own use, its skin adapted to the accidents of its flesh, its emunctories ready to use for the Alchemist. But this illustration does not seem altogether to square with our purpose. We will give another. The ox is created, with a view to its own requirements, in that form wherein we find it ; not for man by way of nutriment in food. Mark, then ; half of that ox is a poison to man. If the ox had been created for man's sake alone, it would not have needed horns, bones, or hoofs. There is no nutriment in these ; and what is made from them does not come under the category of necessities. You see, therefore, that in respect of itself, the ox is created altogether good, nor is there in itself anything which it could do without or which it has in excess. But now, if that ox is taken for human food then man eats at the same time that which is hurtful to himself, which is, in fact, poison, but which to that ox had not been poison. This, then, must be separated from the nature of man, and the work of separation is undertaken by the Alchemist, in cases where several poisons are generated without any provision for carrying them off. By the operation of the Alchemist each poison is draughted off to its emunctories, and these are filled with such poisons. But every Alchemist among men can perform the same office as the Alchemist in the body ; no art is lacking to him. This should be an example to every one of them that as the Alchemist of Nature works so he himself should endeavour to

* This treatise cannot be identified from its title among the extant writings of Paracelsus. The matters referred to are the subject of frequent instruction throughout the medical books,

work. And if poisons are so separated that poison no longer appears, think how even from a caul is produced the most beautiful golden oil, which, nevertheless, is of all oils the most detestable. The mucus of the nostrils, too, is not reckoned a poison, but it is, nevertheless, a most accursed poison, from which arise all the diseases of distillations, and it can be easily recognised from these diseases.

PARTICLE I.

We seem to have sufficiently explained the entity of poison, namely, that it proceeds solely from that which we use as food and drink. Hence, further note that digestion is the same as corruption, if it is corrupted. Next, further, know, how every poison is generated in its place; and how in the process of time either diseases or deaths are occasioned from that poison.

PARTICLE II.

Notwithstanding, in dealing with the entity in question, we shall not explain to you the manner in which every disease originates from the above-mentioned poisons of food, which poisons are removed to their emunctories. However, to avoid mistakes, pass it over in this parenthesis, and seek it in the Books of the Origin of Diseases. We shall there clearly explain it to you according to this fundamental principle. So ye shall at once understand what are the diseases of arsenic, salt, sulphur, and mercury, according to the distribution of every form and species, just as it is fitted to itself and to the generation of diseases. Thus we desire to conclude these matters with this entity. We wish them to be understood as an introduction to all our other books.

HERE ENDS THE ALCHEMIST OF NATURE.

PART III.

HERMETIC PHILOSOPHY.

THE PHILOSOPHY ADDRESSED TO THE ATHENIANS.*

BOOK THE FIRST.

TEXT I.

OF all created things the condition whereof is transitory and frail, there is only one single principle. Included herein were latent all created things which the æther embraces in its scope. This is as much as to say that all created things proceeded from one matter, not each one separately from its own peculiar matter. This common matter of all things is the Great Mystery. Its comprehension could not be prefigured or shaped by any certain essence or idea, neither could it incline to any properties, seeing that it was free at once from colour and from elementary nature. Wherever the æther is diffused, there also the orb of the Great Mystery lies extended. This Great Mystery is the mother of all the elements, and at the same time the spleen of all the stars, trees, and carnal creatures. As children come forth from the mother, so from the Great Mystery are generated all created things, both those endowed with sense and those which are destitute thereof, all things uniformly. So, then, the Great Mystery is the only mother of all ephemeral things, from which these are born and derived, not in order of succession or continuation, but they came forth at one and the same time, in one creation, matter, form, essence, nature, and inclination.

* The whole literature of alchemy, so far, at least, as regards the Western world, appeals to the cosmological philosophy contained in the writings attributed to Hermes Trismegistus as to its source and fountain-head, and a right understanding of its mysteries is regarded by its authors as impossible in the absence of a right understanding of that philosophy. At the same time, the cosmology of the Hermetic books has at first sight nothing to do with alchemy. In the same way, the cosmological philosophy of Paracelsus does not at first sight seem to have any distinct bearing upon the alchemy of Paracelsus, and yet it is a complement of his alchemy, and is indispensable to students thereof. The editors of the Geneva folio regarded it in this light, and collected his chemical and philosophical works into a distinct volume. It is therefore advisable that readers of the present translation should have an opportunity of judging after what manner the physician of Hohenheim was accustomed to philosophise hermetically. The two most compendious treatises are here given. The Philosophy to the Athenians, that is, to the followers of Aristotle, deals cosmologically with that separation of the elements which is the subject of such frequent reference in other writings of Paracelsus. The *Interpretatio Alia Astronomiæ* is concerned with man and the sciences in relation to the greater world. It illustrates many matters which have been the subject of reference in the sections devoted to Hermetic Alchemy and Hermetic Medicine. Paracelsus is never characterised by extreme lucidity, and if his alchemy, his medicine, and his philosophy are not illustrated by each other, seeing that he intimately connected them together, their individual difficulties are likely to be increased in proportion. At the same time, it is requisite, for many reasons, that this section should be kept within somewhat narrow limits.

TEXT II.

This mystery was such that none other like it ever appeared to any creature ; this was the first matter from which all transitory things sprang ; and it cannot be better understood than by considering the urine of man. This is produced from water, air, earth, and fire. Of these, no one is like another, and yet all the elements proceed from thence to another generation, and so on to a third generation. And yet, as the urine is only a creature, there may be some difference between this and that. The Great Mystery is uncreated, and was prepared by the Great Artificer Himself. No other will ever be produced like it ; neither does it return or is it brought back to itself. For as the cheese does not again become milk, so neither does the generation hereof return to its own primal matter. For though all things may be reduced to their pristine nature and condition, still they do not go back to the Mystery. That which is consumed cannot be brought back again. But it can return to what it was before the Mystery.

TEXT III.

Moreover, although the Great Mystery appertains to all created things, sensible and insensible, still, neither growing things, nor animals, nor the like, were created therein ; but the truth about it is this, that it left and assigned to all, that is, to men and animals, general mysteries ; and to those of each sort it gave the mystery of self-propagation according to their own form, to each its own essence. And so, by a similar example, it conferred on each of the rest alike the special mystery to produce its own shape by itself. From the same origin spring also those mysteries out of which another mystery can be produced, which, also, the primal mystery arranged. For a star (*alias* stercus) is the mystery of scarabæi, flies, and gnats. Milk is the mystery of cheese, butter, and other substances which belong to this class. Cheese is the mystery of worms that grow in it. So, again, in turn, worms are the mystery of their fæces. In this way, therefore, twofold mysteries exist ; one the Great Mystery, which is the mystery uncreated. The rest, as if springing out of it, are called special mysteries.

TEXT IV.

Since, therefore, it is certain that all perishable things sprang from, and were produced by, the Uncreated Mystery, it should be known that no one thing was created sooner or later than another, or this or that by itself separately, but all were produced at one and the same time, and together. For the supreme arcanum, that is, the goodness of the Creator, created or brought together all things into the uncreated, not, indeed, formally, not essentially, not qualitatively ; but each one was latent in the uncreated, as an image or a statue in a block of wood. For as this statue is not seen until the rest of the superfluous wood is cut away, but when this is done, the statue is recognised, so with the Uncreated Mystery ; all that is fleshly, whether sensible or in-

sensible, arrived straightway at its form and species by a deliberately planned process of separation. Here no section was lost or passed away, but all found their way to their own form and essence and to their own likes. Nowhere, in any age, could sculptor be found so careful and industrious in the work of separation who by like art could utilise the smallest and most shortlived thing, and shape it into a living being.

TEXT V.

In this way it should be understood, not that a house was built out of the Great Mystery, or that all animals were brought together, piled up, and then perfected, and that the same was done with other growing things ; not so, but as a physician makes up some compound, of many virtues, though it be but a single matter, in which appear none of those virtues, which lie concealed under that particular species. So must we suppose that creatures of all kinds, which are comprised in the ether, were brought together into the Great Mystery and set in order, not, indeed, perfectly, according to their substance, form, or essence, but according to another subtle standard of perfection, which is hidden from us mortals, and according to which all things are included in one. For all of us are sprung from what is perishable and mortal, and are born just as if by the procreation of Saturn, who in his separation puts forth all sorts of forms and colours, of which not a single one shews visibly in himself. Since, then, the mysteries of Saturn exhibit procreations of this kind, much more surely will the Great Mystery have this miracle in itself ; in the separation whereof all foreign and superfluous matter has been cut away ; yet nothing has been found so empty and unserviceable as not to produce some growth or useful matter from itself.

TEXT VI.

Know, too, that in the cutting or carving of the Great Mystery different fragments fell down, and some went to flesh, of which the species and forms are infinite in number ; some to monsters of the sea, also marvellous in their variety ; others to herbs ; not a few to wood ; more still to stones and metals. As to how Almighty God carved these things, there are at least two methods of art in answering such inquiries. The first is that He constantly arranged for life and increase. The second, that it was not a single and everywhere similar matter which fell down. If a statue is carved out of wood, all the chips cut from that block are wooden too. Here, however, this was not the case ; but a separate form and motion were given to each.

TEXT VII.

In this way, distribution ensued upon the working of the Great Mystery, and the things separated from the superfluous ones shone forth. At the same time, from these same superfluities which were cut off, other and diverse things were produced. For the Great Mystery was not elementary, though the elements

themselves were latent therein. Nor was it carnal, though all the races of men were comprehended in it. Neither was it wood or stone ; but the matter was such that, whilst it embraced every mortal thing in its undivided essence, it afterwards, in the process of separation, conferred upon each one by itself its own special essence and form. Something of the same kind takes place with regard to food. When a man eats it, flesh is generated therefrom, though the food itself in no wise resembled flesh. If it be allowed to putrefy, then grass grows up from it, though there was nothing in the flesh that was like grass. And this is much more the case with the Great Mystery. For in the Mysteries it is abundantly clear that one has gone off into stones, another into flesh, another into herbs, and so on in different and infinitely varied forms.

TEXT VIII.

The separation, then, having been now made, and everything being reduced to its peculiar shape and property, so that each shall subsist by itself, then, at length, the substantial matter can be distinguished. What was fit for compaction has been compacted, the rest (so far as its substance is concerned) remaining empty and thin. For when the compaction first took place, the whole could not be equally compacted, but the greater part remained void. This is clearly shewn in the case of water. If this be coagulated, the mass or quantity of that which is compacted is small. The same takes place in the separation of the elements. The whole compaction took place—stones, metals, wood, flesh, and the like. The rest remained more rare and void, each single thing according to its own nature and the properties of the planets. And so the Great Mystery in its compaction was just like smoke which is diffused far and wide. But it does not contain in itself much substance, save a little soot. The rest of the space which the smoke occupies is pure, clear air, as can be seen in the separation of the smoke from the soot.

TEXT IX.

The principle, mother, and begetter of all generation was Separation. - It is true that men ought not to philosophise about these things beyond the grasp of human reason ; but the following is the method of learning about such things, how they come to pass. If vinegar be mixed with warm milk, there begins a separation of the heterogeneous matters in many ways. The trumphat of the minerals brings each metal to its own nature. So was it in the Mystery. Like macerated tincture of silver, so the Great Mystery, by penetrating, reduced every single thing to its own special essence. With wonderful skill it divided and separated everything, so that each substance was assigned to its due form. In truth, that magic which had such an entrance was a special miracle. If it were divinely brought about by Deity, we shall in vain strive to compass it in our philosophy. God has not disclosed Himself to us by means of this. But if that were natural magic, it certainly was very wonderful, marked by intensest penetration, and most rapid separation, the

like whereof Nature can never again give or express. For whilst that operation went on, part of the things was cleft asunder to the elements, part went to other invisible things, part went to produce vegetables, and this is deservedly held to be a singular and supreme marvel.

TEXT X.

So when the Great Mystery was filled with such essence and deity, with the addition of eternal power, before all creatures were made the work of separation began.* When this had commenced, afterwards every creature emerged and shone forth with its free will ; in which state all will afterwards flourish up to the end of all things, that is, until that great harvest in which everything shall be pregnant with its fruits, and those fruits shall be reaped and carried into the barn ; for the harvest is the end of its fruit, and signifies nothing else than the corporeal destruction of all things. The number of those fruits is, indeed, almost infinite ; but the harvest is one wherein all the fruits of creation shall be cut down and gathered into the barn. No less marvellous will be this harvest, the end of all things, than was stupendous at the beginning that Great Mystery. Although the free will of all things is the cause of their mutual affection and destruction, nothing exists without friendship and enmity ; and free will exists and flourishes only in virtues ; but it is friendly or adverse in its effects. These belong in no way to separation. This is the great divider, which gives to everything its form and its essence.

TEXT XI.

But in the beginning of the Great Mystery of the separation of all things, there went forth first the separation of the elements, so that before all else those elements broke out into action, and each in its own essence. Fire became heaven, and the chest of the firmament. The air was made mere emptiness, where nothing appears or is visible, occupying that place where no substance or corporeal matter was located. This is the chest or cloister or the invisible Fates. The water went off into liquidity, and found a seat for itself around the channels and cavities of the centre, within the other elements and the æther. This is the chest of the nymphs and sea-monsters. The land was coagulated into the earth, which is not sustained by the other elements, but propped up by the columns of Archialtis, which are the mighty marvels of God. The earth is the chest of growing things, which are nourished by the earth. Such separation was the beginning of all creatures and the first distribution both of these and of others.

* The Book of the Philosophy of the Celestial Firmament, otherwise the *Philosophia Sagax*, thus explains the *rationale* of that primal creation by which the heaven, the earth, and all creatures were made : The first body ; after the body the Rector or Moderator ; then the sensible body ; after this the King governing it ; lastly, the King ruling men. The first body is that of the upper and lower sphere ; the Rector is the living spirit which informs it, and this is the motive power. The Rector of man is the divine reason with which he is endowed.

TEXT XII.

The elements having been thus produced according to their essence, and separated from one another, so that each should subsist in its own place, and no one encroach upon another, a second separation ensued upon the first, and this emanated from the elements themselves. Thus, all that was latent in the fire became transformed into the heavens, one part being, as it were, the ark or cloister, while the other developed from it as a flower from its stalk. In this way the stars, the planets, and all that the firmament contains, were produced. But these were begotten from the element, not as a stalk with its flowers grows out of the earth. These, indeed, grow from the earth itself, but the stars are produced from the heavens by separation alone, as the flowers of silver ascend and separate themselves. Thus all the firmaments were separated from the fire. Before the firmament was separated from the fire, this fire had existed as the one universal element. For as a tree in winter exists only as a tree, but when summer comes on, the same tree, if those leaves which have to be separated are removed, still puts forth its flowers and fruits (for this is the time of gathering and of separation), so must be understood as like in all respects that ingathering in the separation of the Great Mystery, which could not any longer restrain itself or be delayed.

TEXT XIII.

To the separation of the elements there succeeded another separation from the air, made at the same time with the fire. The whole air was predestinated to all the elements. But it is not in the other elements in the way and manner of mixture. It lays hold of all kinds of things in all the elements, and seizes upon these. Nor does it occupy that which was possessed before. No mixture of the elements remained joined or united, but each separate element withdrew according to its own pleasure, in no way united or conjoined with the rest. Now, after the element had in this way withdrawn from the Great Mystery, there were forthwith distributed from it fates, impressions, incantations, superstitions, evil deeds, dreams, divinations, lots, visions, apparitions, fatacesti, melosiniæ, spirits, diemeæ, durdales, and neufareni. From this separation of the aforesaid, which had now been accomplished, there was assigned to each its own prearranged seat, and its own peculiar essence was predestinated. Thus it befell that things in themselves invisible became to us objects of our perception. No element was created by the supreme arcanum more subtle than the air. The diemeæ dwell in hard rocks. They were so created, together with the air, in vacuity. The durdales withdrew to the trees. A separation of them was made into a substance of this kind. The neufareni dwell in the air of the earth or in the pores of the earth. The melosiniæ took up their abode in human blood. The separation of them was made out of the air into bodies and flesh. The spirits were distributed into the air, which is in chaos. All the rest are, and

abide in, special places of the air, each occupying its own definite position, and being separated from the element of air, but still so that it of necessity dwells therein, and cannot change that position.

TEXT XIV.

By the separation of the elements the water was segregated to the place predestined for it. In this way, everything that was latent in its elementary virtue and property was more fully segregated by another separation, and the water was divided into many special mysteries, all of which had been moulded from the element of water. A certain part, by means of that separation, was cut off to form fishes of manifold forms and kinds ; a certain part went to form fleshy animals ; some went to salt, and no small portion to marine plants, as corals, trina, and citrones. Many also went to form marine monsters, contrary to the manner and course of all the elements. Not a few went to nymphs, syrens, dramas, lorinds, and nesder. Some went to rational creatures bearing in their bodies something eternal and propagating their kind ; some which finally die out altogether, and some which, in course of time, are at length separated. For the perfect separation of the elements has not yet been fully made. As the great harvest overwhelms us, or draws nigh year by year, new growths may emerge in the element of water. And, indeed, that separation was made at the same moment as the separation of the elements, in one day, and by the motion of sequestration. And, so, by that means everything spending its existence in the water, simultaneously and in a single moment, was created and revealed by the process of separation.

TEXT XV.

In like manner, also, when the element of earth had been separated from the rest, a terrestrial separation was made, that is to say, of all things which are, or have been, born from the earth. Four elements, in all respects alike, were latent in the Great Mystery at the time of the first creation. The same, in like manner, were also divided at one and the same time. Moreover, these were also, in like manner, divided from one another in the second separation, which is called elementary. By such elementary separation there were divided out of the element of earth, severally, sensible and insensible things, eternal and non-eternal, each being allotted its own essence and free will. Whatever was of a wooden nature therein was made wood. A second went off into metallic minerals, a third into marcasite, talc, bismuth, granate, metallic cobalt, pyrites, and many other substances ; a fourth into gems of manifold forms and kinds, and to stones, sands, and chalk ; a fifth into fruits, flowers, herbs, and seeds ; a sixth into sensible animals, of whom one part are partakers of eternity, as men, the others cut off from it, as cattle and the rest. Very many species and differences can be enumerated ; for in the terrestrial element far more species have been separated than in any other of the rest. For by

means of the semen, and of the congress of two, the father and mother, to wit, all things were propagated, and this was not arranged and predestinated after the same fashion in the other elements. Here are the gnomes and the sylvesters and the lemures, of which the one are destined for the mountains, others for the woods, and the rest only for the night. Moreover, the giants were separated to the third generation. Great essences were also distributed, forming, as it were, stupendous miracles among men, cattle, and growing things. This is a matter hard to be understood by any philosophy and so is esteemed to be brought about contrary to the serial order and the customary method of Nature.

TEXT XVI.

After that, as has been said, the four elements of things were in the beginning severally separated from one single matter, in which, however, their complexion and essence were not present—those complexions and natures emerged by that process of separation. The warm and the dry withdrew to the heavens and the firmament, each falling according to its own property. The warm and moist withdrew to the air, whereupon the warm and the moist were invisibly separated. The cold and moist was cleft asunder to the sea, and places bordering thereupon. The cold and dry degenerated to the earth and all terrestrial things. But contrarieties were originated from this separation of the elements, which appear in no respect like their elements. Among these is reckoned lime, which in respect of its nature is not fire, but originates in fire. The cause of this is, that in the course of the separation of the element, its dissolution departed too far from the fiery nature. Fire contains in itself both coldness and humidity. In fact, fire is fourfold. So, again, the colours which proceed from fire are not always alike. One fire makes a white and a lazurium colour. A dry fire makes red and green. A humid fire makes ashen and black. A cold fire makes saffron and red. For this reason one procreation is warmer than another, because the one fire was more or less graduated than the other. For fire was not only one simple thing, but some hundred kinds existed of which no one had precisely the same grade as another. There was a procreation of each one, as if it were made a certain pre-ordained mystery according to its definite subject.

TEXT XVII.

Moreover, neither did the water itself obtain the complexion of a simple species. An infinite number of waters were latent in that element, yet all were veritable waters. It is not matter of discovery for a philosopher that the element of water is only cold and moist of itself. It is a hundred times colder, and not more moist, and, moreover, this is to be referred not so much to its warmth as to its coldness. The element of water does not live or flourish only in cold and moisture of one degree; nay, indeed, it does not even exist of one degree. Some waters are springs, and these are manifold. Some are seas, which again are very numerous, and very different one from another. Some are streams

and rivers, whereof no single one is precisely like any other. Some aqueous elements were appointed to stones, as in the case of the beryl, the crystal, the chalcedony, the amethyst. Some went to plants, as the coral and amber; some to chime, as the liquid of life. Not a few went to the earth, as the liquid of the earth. Such are the elements of water, manifold in species. Those things, for instance, which grow out of the ground from seed scattered there are also referred to the element of water. So, too, those which are fleshy, as the nymphs, are referred also to the element of water. For although, in this instance, the element of water must be understood to be transmuted into another complexion, it never lays aside or oversteps the nature of the element itself, from which it proceeds. Whatever is of water, that again becomes water. So, too, whatever comes from fire again becomes fire, what comes from earth becomes earth, and what from air becomes air.

TEXT XVIII.

By parity of reasoning, too, it is plain that all things which are constituted from earth retain the nature of the same. Although mineral liquids are taken to be fire, yet they are not really so. Not even sulphur burns so much as to make it a fiery element. Indeed, the cold as well as the warm burns. That which in burning produces an ash is not the element of fire, but a fire of the earth, and that fire must not be esteemed an element. It is not an element, but only a consumption of the earth, or of its substance. Water itself can be quite as easily made to burn and to cause a conflagration. If this be so, then this is aqueous fire. Besides, the mere fact that the fire of earth burns and flames does not justify our considering it to be igneous, though it be true that it is in some respects like fire. That philosopher is at once simple and sensuous who names an element from what he perceives. The element is something widely different from such a fire as this. Why do we say so? Everything that moistens is not the element of water. The element of earth can be reduced to water, yet it still always remains earth. In the same way, whatever is in earth belongs to the element of earth. For it exists and is known by the properties of that from which it proceeded, or to which it appears like. The hard flint and the chalcedony alike emit fire from themselves. That fire, however, is not an elemental fire, but a strong expression in great hardness.

TEXT XIX.

The element of air contains within itself a large number of procreations, which, nevertheless, are all merely air. Every philosopher should know that an element does not procreate anything else save of the same kind as it is *per se*. Like is constantly produced from like. So, therefore, since the air is invisible, it cannot beget any visible thing of itself. In the same way, since it is impalpable, it produces nothing which is palpable. Thus it melosiniates

—if I may so say. If the melosinia be from the air it is air, nothing else. Still, a conjunction takes place with some other element, which, in this case, is the earth. For here a conjunction can be made from the air to form a human being, just as in all evil deeds and incantations it happens by means of spirits. The truth is the same as with regard to nymphs, who, though they are ranked under the element of water and are nothing else, can still freely have commerce with terrestrials and generate with them. A similar conjunction is made from the air. It is visible and tangible, not, however, as a procreation of the primal separation, but only a sequel of the same. As the scarabæus is produced from dung, so a monster can assume bodily shape from the aërial element with aërial speech, thoughts, and action through commixture with the terrestrial. But miracles and consequences of this kind return again to air, just as nymphs return to water, and as man by decay is reduced to earth and consumed because he was born from the earth.

TEXT XX.

In this way, then, by means of the great separation, procreations are produced, the one following from the other. But from these procreations other generations have emerged, which have their own mystery in these procreations, not, indeed, as a separation in the exact form of those before mentioned, but as an error, or an abortion, or an excrescence. Thunder arises from the procreations of the firmament, and this itself exists from the element of fire. Thunder is, as it were, the harvest of a star, at that precise point of time in which the thunder has grown mature for acting according to its nature. Magical storms arise from the air and end in the air again, not because the element of air produces them, but rather the spirit of the air. Some are conceived corporeally from fire, as gnomes are from the earth. Just in the same way, dung is produced by men and cattle, not from the earth. The lorind emerges from the naturals of the water, and is not from the water itself. From that abundance, or that error, or that harvest, many other things, too, are begotten. By impressions are born deformed men, women, and other generations like these. From fatal storms arise infections of particular districts, pestilences, and dearness of the market (famine, etc.). From dung are born scarabæi, erucæ, and dalni. From the lorind is collected or understood prophecy of that particular region, and this is in a certain way a presage of future things, stupendous, rare, and never heard of before.

TEXT XXI.

We have seen a threefold separation into threefold forms already made from the mystery. There remains, in like manner, a fourth and ultimate separation. It will be the last of all, none will come after it. Then all the others will perish, and not even the Mystery will remain. By that separation all things are reduced to their supreme principle, and that only remains which

existed before the Great Mystery, and is eternal. That, however, should not be accepted in the sense that I am to be turned into *something*, or that, in the ultimate separation *something* will be produced out of me, except by death. I am reduced to nothing, as if being produced by reason, I came forth from nothing. And when the sum total of things shall return to their principle it is well that we should know how it takes place. When they are turned to nothing, then they exist in their prime. That prime must be sought in the beginning. What that means—the going into nothingness—must be accounted one of the secrets. The soul which dwells in me was made of *something*. Therefore it does not pass into nothingness, because it is built up of this *something*. Of nothing nothing comes—nothing is generated. A figure painted into a picture, when it is there, has been certainly made of *something*. But we are not thus constituted in the æther out of something—like a picture. Why? Why, because we came forth from the Great Mystery, not from anything procreated therefrom. So we return to nothing. If the figure be blotted out with a sponge, it leaves nothing behind it, and the picture returns to its former shape. So, assuredly, all creatures will be reduced to their primeval state, that is, to nothingness. And if we would know *why* all things must be reduced to nothingness, let us learn that it is on account of the eternity that stirs within rational corporeities. Such an ultimate separation is the ultimate matter. There will be centred all the numerous procreations, permixtions, conversions, transmutations, alterations, and the like; to know the sum total whereof surpasses the scope of the human intelligence.

TEXT XXII.

Moreover, as it is certain from philosophy that all those things which minister as auxiliaries to what is perishable and mortal are themselves equally mortal with that to which they subserve, and that what is divided cannot be again conjoined—as coagulated milk is not restored to its freshness—so we must philosophise that the Great Mystery does not return to that from which it proceeded. Hence it should be realised that all creatures are a picture of the supreme arcanum, and so nothing more than, as it were, the colouring spread over a wall. So we spend our time beneath the æther. One or another may be destroyed and turned to nothingness. As a picture is liable to destruction or conflagration, so is the Great Mystery, and we with it. All creatures, together with the Great Mystery itself, perish, are wiped out, and reduced like some wood which burns down to a small heap of ashes. But out of those ashes is made a little glass; the glass is made into a small beryl, and the beryl passes away into wind. In the same way shall we be consumed, passing from one thing to another, until nothing more of us any longer survives. Such as was the beginning of creatures, such shall be their end. If from a little seed a cypress tree can be produced, surely it can be brought back again into as small a compass as that first little seed was. The

seed and the beryl are alike ; and as the beginning is from the seed, so in the beryl will be the end. The separation having been thus made, and every single thing brought back to its nature or first principle, that is, *to nothing*, then within the æther there will be nothing that is not eternal, but all will be without end. That from which the non-eternal came into existence will flourish far more widely than before the beginning of creatures. It has no frailty in it, no mortality. And as glass cannot be consumed by a creature, so neither can that eternal essence ever be reduced to nothingness.

TEXT XXIII.

When, therefore, the last separation shall be the dissolution of all created things, and one after another is consumed and perishes, from that circumstance the time of those things is recognised. For after the generation of created things there is in them no passing away. The seed of the old supplies the place of that which perishes. In this way, something eternal shews itself in mortals without any distinction, by the renewal of other seed. This the philosopher ignores. He neither admits nor takes count of any eternal seed. And yet he admits putrefaction ; in course of which that which is eternal is taken back again into the eternal. In this respect, man alone of all created things comprises in himself something eternal joined to that which is mortal. Since, therefore, on the aforesaid reasoning, the mortal and the eternal are combined, it should be known that the mortal prepares an essence in the stomach, and sustains the merit of the body. And this is so because the eternal part of man lives for ever, but the mortal part feebly dies out. And as with the body, so with that eternal part which proceeds from that body. This is the great marvel of philosophy, that the mortal part dominates and sways with its nod the eternal part itself, and this depends upon the man himself. He, therefore, in this way, is more the partner of his eternal portion than is that one from whom emanated both the mortal and the eternal parts of man. Hence it can be gathered that the mortal parts of all creatures dwell together—that is to say, the rational and the irrational parts—the one subserving the use of the other in succession, and that an eternal element is inserted into a mortal one, both dwelling together simultaneously. Whence philosophy teaches that all those things which dwell together without disagreement, without deceit or fraud, without good or evil, cannot be destroyed and consumed. But this would be the case if one were opposed to the other. In those, however, wherein the eternal does not dwell no indication is found. But those where the eternal is will not lack such indication. Now, if discord ensues in this way, the one eternal is compelled to give account to the other, and to pay what is due for injuries inflicted by the one upon the other. And when compensation regards the eternal it is not undertaken by that which is mortal ; for though bodies conciliate one another, still, if anything remains over and above here, that is eternal. So, then, is

that which alone is eternal judged in us. And whilst one demands account of the other, all the mortal parts which bear the eternal within them are compelled to die out, so that the eternal may alone survive without the concurrence of the body. So is the judgment completed. For that alone is eternal, nor is there more of it; in the final passing away all is mortal.* If, then, that which they embraced within themselves of an eternal nature thus perished, nothing remains but that it was *per se* eternal, and that it nourished and increased the mortal portion. That which profits not does not remain in the creature. All the rest is present only for the sake of the eternal. Hence it happens that, together with that which the mortal holds within itself of eternity, all those elements which sustained it perish and die out. So, then, it is clear, that the end of human affairs is in nothingness, whereto they all tend. From their essence they are separated into nothingness—that is, from something to nothing. In man, however, a perfect separation, that is, of the eternal from the mortal, is yet wanting. For here the judgment is clear which, in all things within the æther, denounces frailty. And if no reason could co-exist with frailty, there would be no passing away in creatures; all would be eternal. There is one single cause for all this, namely, that we mortals do not dwell in justice, nor do we give just judgments, nay, we have not received the faculty of judging what is eternal. This power belongs to the eternal part. And in order that we may gain this power, it is necessary that we should all be collected and come together. And so the passing away of all things is desired.

TEXT XXIV.

Since it has been said, then, that all things were created from the Great Primal Mystery, and that they pass away in like manner, it follows as an evident consequence that some such Great Mystery must exist. This is nothing more than saying that a house has been built by a word. This is an attribute of the eternal, just as it is possible for man to elicit fire where there is no fire, and from that which is not fire. The flint has no fire, though it emits fire from itself. So in the Great Mystery all Primal Mysteries were existent in a latent form and after a threefold manner, in respect of vegetative, elementary, and sensible things. The vegetative things were many hundreds, nay, many thousands. Every kind in the Great Mystery had its own specialty. With regard to the elements, there were only four. These four only had their principles. But men were innumerable. One kind were the loripedes, another the cyclopes, another the giants, another the mechili. In like manner, there are those who dwell in the earth, in the air, in the water, in the fire. So, also, every kind of growing thing had its own proper mystery in the Great Mystery, and from thence emerged all the multifarious created things. There are as many mysteries as there are trees or men. The eternal alone dominates in

* The text at this point is scarcely capable of an intelligible rendering.

man, and in the whole of his mystery, not in one more than in another. In the Great Mystery was no kind which was not infinitely formed and coloured, one differently from another. Now, all these things are to perish. What then happens we forbear to say, but—A new *Mysterium Magnum* is not possible. That would be a greater miracle than we are able even to speculate about.

THE PHILOSOPHY ADDRESSED TO THE ATHENIANS.

BOOK THE SECOND.

TEXT I.

SINCE, then, there was a something by which, in the course of separation, all created things issued forth, in the very beginning we must hold that there is some difference of gods, and that of the following kind : Since created things are divided into eternal and mortal, the reason of this is that there existed another creator of mysteries who was not the supreme or the most powerful. For that Supreme One should be the judge and the chastiser of all creatures, and should know how much had been conceded to them, seeing that they might do either good or evil, although not produced by himself. Moreover, created things are continually stirred up and instigated to evil rather than good ; they are driven by the stars, by fate, and by the infernal power ; when, if created things had issued forth from the Supreme himself, it would be impossible that we should be forced to these properties of evil or of goodness, but we should enjoy free will in all respects without any such impulsion ; whereas the creature has not wisdom enough to know good or evil, or to distinguish between what is eternal and what is mortal. For many are foolish and destitute of mind, scarce one in a thousand is wise. The greater part are false prophets, teachers of lies, masters of ignorance. They are openly esteemed foremost persons, though they are in no sense such. The cause is obvious. We are creatures who do not receive what is good and perfect from our masters, but we are chiefly built up by the mortal gods, who in the Great Mystery had indeed some power, but, nevertheless, were placed by the Eternal for judgment, both to themselves and to us.

TEXT II.

Now if, as we know by separation, the created universe consisted of four elements only, and proceeded therefrom, these four will be literally the matrices of all creatures, and are called the elements. And although every created thing is so far an element, or has a portion of an element, it is not really like an element, but like the spirit of an element. But then, too,

nothing can subsist without an element. Moreover, even the elements themselves cannot coexist. Indeed, there is nothing which consists of four, three, or two elements. Each single element exists apart ; and every created thing has only one element. It is mere blindness on the part of those who set down humidity for an element of water, or burning for an element of fire. An element is not to be defined according to body, or substance, or quality. What is visible to the eyes is only the subject or receptacle. But an element is spirit, and lives and flourishes in those things as the soul in the body. This primal matter of the elements is invisible and impalpable, but present in all. For the first matter of the elements is nothing else than life, which all created things possess. What is dead subsists no longer in any element but in ultimate matter wherein flourishes neither any taste, nor virtue, nor force.

TEXT III.

All created things in the universe, then, were born of four mothers, that is to say, of four elements. These four elements, it should be remarked, exactly sufficed for the creation of all things. Neither more nor fewer were requisite. In mortal things more than four natures cannot subsist. In immortal natures, it is true, temperaments can subsist, not elements. Whatever "elementure" (if I may use that term) exists, is dissoluble ; but, on the other hand, temperature does not involve in itself the idea of dissolution. Its condition is such that nothing can be added to it or taken away from it, nothing decays, nothing perishes. This being the mortal condition, therefore, as has been said, it can be understood that all things subsist in four natures, and each nature has the name of its element. The warm is the element of fire. The cold is the element of earth. The moist is the element of water. The dry is the element of air. The next thing to be considered is how each of the aforesaid natures is what it is peculiarly or separately. Fire is only warm, not dry, not moist. Earth is only cold, not dry, not moist. Water is only moist, and not warm, not cold. Air is only dry, and not warm, not cold. Thus it is they are called elements. They are of one single and simple nature, not of a twofold one. This declaration on the subject holds good for all created things, that an element is that which subsists with body and substance, and thus operates. The chief point to be understood on the subject of elements is that they each and all have only a single and simple nature, moist, dry, cold, or hot. This is the condition of spirits. Every spirit is simple, not double, in its nature ; and this is the case with the elements.

TEXT IV.

Now, if it should be that composites do exist in us mortals, this scarcely coincides with the opinions of the ancients. The colic comes from the element of fire. It is not compounded of heat and dryness, but it is only hot. In like manner with the other complexions. And so, if any disease be detected where

heat and dryness are combined, one can only come to the conclusion that the two elements exist, one in the spleen and the other in other members. Two elements cannot be in the same member. It is certain that in every member dwells some one element which is peculiar to it; a subject which we leave for physicians to define. This, however, cannot consistently be said, that two elements exist at the same time in the same place, or that one and the same element is both warm and moist. Such a composite is not forthcoming. The elements know nothing of a compound, for the reason already given. Where heat is there cold cannot be, nor dryness, nor humidity. So, in the same way, where cold is, there none of the others is present. The same is the case with moisture and dryness. Every element is *per se* simple and solitary, not twofold in its composition. Whatever philosophy may concede as to the possibility of conjunction of elements—as of heat with humidity—all this goes for nothing. No element of water bears heat. No heat can subsist in humidity. Every element stands by itself alone. Cold cannot of itself tolerate dryness. That subsists by itself uncontaminated. This may be said and understood of the special essence of the elements. All dryness is a dissolution of cold. Just as humidity and dryness cannot be conjoined, so much the less can coldness and dryness and humidity, or warmth or dryness meet together and co-exist. As heat and cold are contraries, so heat and cold stand in the relation of contrariety to moisture and dryness.

TEXT V.

It would be erroneous if we wished to assert that because all things are made up of four elements, they therefore necessarily exist in conjunction. Every conjunction is a composition. Since they are compounded, they cannot be the Great Mystery. Every Mystery is simple and a single element. There is a similar difference between elements and compounds. An element, as likewise a mystery, can generate a *divertallum*. A compound can generate nothing except what is like itself, as men make men. But a mystery does not produce a mystery like itself. It produces something different as a *divertallum*. The element of fire is the producer of stars, planets, and the whole firmament, and yet none of these is formed or constituted like fire. The element of water has constituted water, which is altogether contrary to the element of water. The element of water *per se* is not at all moist. It is true the element itself has this kind of moisture, that it softens stones and hard metals. But this remarkable power of softening is taken from it by substantial water, so that its virtue is not perfect. The element of air is so dry that in one moment it dries all waters. But this power is taken away and destroyed by substantial air. The element of earth is so cold that it reduces all creatures to their ultimate matter, as, for example, water to crystal and * to Dualech, animals to marble, and trees to giants. The foundation of the knowledge of the elements is to understand that they are of such remarkable and prompt activity and efficacy that nothing else like them can be found, or even conceived. The

things in which they reside are attracted and assumed by them as if it were by a fate which is corporeal, and without these has not the smallest amount of virtue.

TEXT VI.

In order more fully to understand what an element is, it should be realised that an element is really neither more nor less than a soul. Not, indeed, that it is of precisely the same essence as a soul, but it corresponds with a certain degree of resemblance. There is a difference between the elemental soul and the eternal soul. The soul of the elements is the life of all created things. Fire which burns is not the element of fire, as we see it ; but its soul, invisible to us, is the element and the life of fire. The element of fire can be present in green wood no less than in fire. But the life itself is not equally present as it is in fire. There is again a difference between the soul and the life. Fire, if it lives, burns. But if it be in its soul, that is, in its element, it lacks all power of burning. It does not follow that a cold thing must have proceeded from a cold element. It may often proceed from a warm one. Many cold things issue forth from the element of fire. Whatever grows is of the element of fire, but in another shape. Whatever is fixed is from the element of earth. Whatever nourishes is from the element of air ; and whatever consumes is from the element of water. Growth belongs only to the element of fire. Where that element fails there is no increment. Except the element of earth supplied it there would be no end to growth. This fixes it ; that is to say, it supplies a terminus for the element of fire. So, also, unless the element of air were to act, no nutrition could be brought about. By the air alone are all things nourished. Again, nothing can be dissolved or consumed unless the element of water be the cause. By it all things are mortified and reduced to nothing.

TEXT VII.

But although the elements are thus in other respects altogether invisible and impalpable, and are thus hidden from us, they have, nevertheless, the power of putting forth their own mysteries. Thus, the element of fire gives forth from itself the firmament ; not, indeed, by any corporeal method, but on the scale of the elementary essence. The sun has a body different from that which he has received from the element of fire. Nevertheless, in this same he exists essentially with heat. For his heat does not arise from his motion or his rotation ; it is from himself. Though the sun stood still and never moved, he would still put forth his heat and brightness. The crystal has given the sun from the element of fire, though it has no other body than that which it has received from the element of the fire.* For thence the elements are (if I may so say) incorporated. The sun and the other stars, in like manner,

* This literal rendering seems to be without a reasonable meaning.

derived their origin from the element of fire, but only in a red colour, in which no heat or glow, but only a kind of dead splendour, inheres. And although signs appear in the sky differing in form and species—which we do not enumerate here—still the same form is to be understood as with ourselves on earth. It is not one only but multifarious, whether known or unknown to us. When the mystery of fire was divided off, a certain something was produced, such as we see. So the stars are daughters of the element of fire, and the sky is nothing but chaos, that is, vapour exhaled from the firmament, and so fervid as to be, in this respect, indescribable. That fervour or heat it is which gives coruscations, and colours, and appearances; for in that region is the pure element of fire, as shall be pointed out at greater length in its proper place.

TEXT VIII.

In the same way as the fire put forth its different species and essences, so in like manner did the element of air. And yet there is a certain difference in the four elements as to those things which are procreated from them. Each of them produces after his kind. The firmament is like neither of the other three. Fate is from the air, and is not like those other three. Those signed by the earth cannot be in any way compared to the other three. In the same way are marine monsters related to the rest. For each single element has procreated in itself both rational and irrational things. The sky has in its firmaments rational creatures just as much as the element of earth has. In the same way, too, the fate of the air is distinct as to its signature in the matter of rationality and brutality. And the same is true of earth and of water. Who is he, then, who shall assure us as to the truth about these signed elements? Who are they that have the true faith handed down and entrusted to them, and the right way of salvation, or who alone shall possess eternity—matters which we pass by for the present? It cannot be but that human beings dwell in all four of these just as in one of them, that is, the earth. And on the subject of fate, it should be made known that its generation from the element is manifold, and yet without any body or substance, according to the property of the air (which is incorporeal), together with its habitation. For some things have it corporeally, others incorporeally, as the thing is understood.

TEXT IX.

It is perfectly well known that from one seed emerges a root, divided into many filaments. Afterwards rises a stem, then branches are suspended there; flower, fruit, and seed come forth. Exactly similar is the method of manifold procreations from the four elements. Thus, all those which are from one element cohere, as the herb is produced from one seed. Yet all these growths are not exactly like their own seed. Those things procreated from the water

are partly men, partly animals, and partly what these feed upon. One element has left its signature as both its necessity and its sustentation ; then it also gives sign of its course and its advent, which are easily recognised by the stars, not because these rule or influence us, but only because they run concurrently with us, and imitate the inner movement of our body. And no less in the element of water all those things are produced which are produced in the element of earth. The lorind is a commotion and change of this element of water. This moves itself ; and the lorind is like a comet. A monster in the water should be accepted in just the same way as an error of the firmament. So in the water a special world is to be recognised, together with its mystery, even to the end of the world. There is no beginning in these save that which is in the other elements ; nor is there any other end than is found in the other elements. The only difference is of forms, essence, and natures, accruing to them, with their signatures and elements. Thus we must understand the four worlds according to the four elements and their primary habitations. With regard to justice there is only one eternal, which is to be recognised alike in all four.

TEXT X.

In the element of earth there is much intelligence for us, because we ourselves came forth thence. Each like thing understands its like. But the understanding of the four elements flows out from philosophy. This, again, is like, flowing out as it does from the same source as that from which philosophy afterwards rises. Nevertheless, as the element of earth has procreated its signature, so have also the other elements procreated theirs. Just as we have stones, so are they not lacking in the other elements, though those stones may not be made according to the same form as ours, but in their own peculiar form and with their own special properties. The other elements have also their minerals no less than we have. The celestial firmament puts forth its floral growths as well as its mineral products, and these we reckon among miracles. Here, however, we make the greatest possible mistake, because we reckon natural processes among prodigies, and give it out like prophets that this or that appearance of the firmament portends something special, when we ought to understand that such things happen only in the ordinary course of events. But if such thing does occasionally happen we ought to believe that such was our course or condition. In the meantime, if anything suffers from the error of the elements, the other things grow uncertain too. All ought to proceed with a perfect and unimpeded motion, and though the other three elements serve us for nutriment, just in the same way do their other three serve the firmament, the air, the water, and those who dwell in them. One derives its nutriment from the other, just like many trees in a garden. And the defects and errors of the firmament can be observed by us no less than the firmament observes our defects. And the same judgment may be passed as to the rest.

TEXT XI.

That philosophy, then, is foolish and vain which leads us to assign all happiness and eternity to our element alone, that is, the earth. And that is a fool's maxim which boasts that we are the noblest of creatures. There are many worlds: and we are not the only beings in our own world. And the ignorance becomes more marked when we fail to recognise those human beings who spring from our own element, as the nocturnals, the gnomes, etc. Though they do not live in the open light of day, nor use the brightness of the firmament, but hate what we enjoy and enjoy what we hate, and, moreover, are like us neither in shape, nor in essence, nor in their sustenance; still, that is not a subject for our wonder. They were made up as they are in the Great Mystery. We are not the only beings made; there were many more whom we do not know. We ought to conclude, then, that not one simple single body but many bodies were included in the Great Mystery, though there existed only in general the eternal and the mortal. But in how many forms and species the elements produced all things cannot be fully told. But let all doubt be removed that eternity belongs to all these. In this way, certainly, many things which are now unknown will be investigated and in different ways become cognisable by us, not concerning those existences only which have the eternal element in them, but of those which sustain and nourish that eternity. For eternity may be understood in two ways. One is that of kingdom and domination; the other that of ornamentation and decoration. It is opposed to all true philosophy to say that flowers lack their own eternity. They may perish and die here; but they will re-appear in the restitution of all things. Nothing has been created out of the Great Mystery which will not inhabit a form beyond the æther.

TEXT XII.

The universal procreations indicate that all things must have four mothers, neither more nor fewer. Not, however, that this can be understood from the basis of the general demonstration concerning the present Great Mystery as it appears in the beginning according to its properties; but rather the Great Mystery is known and understood by the ultimate mysteries, and by the procreations which have gone forth having their origin in the first. It is not the beginning but the end which makes either a philosopher or a magistrate. The knowledge of a thing according to its perfect nature is only found at the end of its essence. Perhaps there might have been more elements than have been given to us. In the latest knowledge of all things, however, only four are found. And although we can, indeed, suppose that it would have been easy for God, who only created four, to have created more by the same operation; still, when we see all mortal things made up of these four only, we shall not do ill to believe that more than these would not have been well. It is reasonable to think, perhaps, that after the destruction of the four elements spoken of, certain others will come into existence essentially unlike those before mentioned; or,

that after the passing away of the present creation a new *Mysterium Magnum* may supervene, and we have a better and fuller cognition of it than we had of that which shall then have passed away. We base nothing on this idea, but to every one who would know the origin of the universe we say, that he must understand the world to have sprung from the elements; and as there are four elements, so there are four worlds, and in each exists a peculiar race, each with its own necessities.

TEXT XIII.

Though all things exist in the four elements whereof we have spoken, we could not, however, insist that there are four elements in all things, or that four elements abide in all things. The reason is this. The world which is separated and procreated from the element of fire needs neither air, nor water, nor earth. By the same argument, the world of air needs neither of the other three. The same is equally true of the earth and the air (*sic* ? water). For the doctrine of the elements does not lay it down that the world must be sustained by the four elements, but rather that everything is conserved by one element, namely, by that from which it is sprung. And although you may not deny that the firmament nourishes the world by means of its elementary forces, which are all igneous, as they descend to the earth, still that nutrition is not a matter of necessity. Neither is the world going to perish by itself, but suffices for its own sustentation, just as also any other world nourishes itself without the help of the earth. For example, the earth confers nothing on the water as respects its own proper essence, nor, on the other hand, the water on the earth. The same is the case with the air. Yet still we do not take the course hereof to be that each world exists solely, or *per se*, in its own element, but rather that the light from heaven is, as it were, something drawn from the four elements, and most noble in its full and perfect properties. But let no one on this account imagine that the sun received his brightness and his motion from the element of fire, since neither the planets did this, but rather from an arcanum. The splendour of the firmament irradiating the world emanated, not from the element of fire, but from the arcanum. The earth of itself gives Tronum, the water Turas, and the air Samies. These proceed, not from the element, but from the arcanum, and are present in the element. In the arcanum the four worlds agree in this way, that they are useful to each other in turn, afford mutual nutriment, and sustain one another; not, however, from the nature of the elements, for they are themselves elements.

TEXT XIV.

That man lives, sees, hears, and the rest, is due not to the elements, but rather to the arcana, and especially to the monarchy. Such is also the case with other creatures. The sole entertainment and nutrition is elementary. Understand that whatever is eternal proceeds from the arcanum, and is the

arcanum. Dogs die, and their arcanum remains. A man dies. His arcanum remains, and still more, his soul, which causes him to be so many degrees more worthy than the dog. The same is, in like manner, the case with all growing things. Hence has sprung up an error that in the new *Mysterium Magnum* all created things which have ever existed, will ultimately appear, not essentially, now, but in an arcane manner. We do not say that the arcanum is an essence like the immortal, but that it *is* this in its perfection. The element of fire has an arcanum in itself. From this there are added, or there flow out to the other three, light, brightness, influence, increase, but not from the element. These arcana could exist without the element itself, just as the element without the arcanum. But mark, moreover, that the element of air has in itself an arcanum from which nutriment is supplied to all the other three and to itself, not as an element from itself, but as an arcanum by means of the element. The element of earth has in itself the arcanum of permanence and fixation, which imparts to the others the virtues of duration and generation, so that nothing may perish. The element of water has the arcanum of sustentation for all the elements, and conserves whatever is in them, so that it escapes destruction. In this respect, too, there is a difference between an element and an arcanum. The one is mortal or perishable from the elements, the other permanent in the ultimate *Mysterium Magnum*, wherein all things will be renewed, yet no other things will be produced save what have been.

TEXT XV.

We come to the conclusion, then, that all the elements are not joined together, but that they are altogether aerial, or igneous, or terrestrial, or aqueous, solely and without admixture. This, also, is settled, that every element nourishes itself, or that does which is in it or its world. For this reason a medicine drawn from the element of water is of no avail for those who are from the element of earth, or any other, but only nymphs, sirens, and the like. So, also, a terrene medicine does not benefit the three other worlds, but only the animals of its own world. The same is to be said of the air; for in the air there are diseases and physicians—learned and unlearned—just as in our own world, each having its own peculiar mode. So with the fire. If it sometimes happens that nymphs copulate with terrestrials, and children are born, it is open to question whether this can happen from the possibility of ravishment. By this power other aerial beings, such as melosinæ, have intercourse with terrestrials. So, too, the trifertes are borne from the fire to the earth. Now, if three of these unfamiliar beings should come from their world to ours, as we have said, they would be looked upon as gods compared with us, on account of the vast distance between us, and the entirely foreign essence which they possess. But if a man can be carried to them, there is a corresponding power of being borne to them (*sic*). So, then, the elements have no need one of the other; only one is the ark or receptacle of another. As water and earth

are mutually separated, so, in like manner, the air and the fire each occupies a special position without any contact of the four elements, save that which is like the party-wall of a house.

TEXT XVI.

If there is at length to follow a conjunction and a gathering together in which all things shall return to their primal essence, then that will be an arcanum, and, indeed, according to the aspect or appearance of the elements. For there nothing corporeal can appear from generation, but the appearance and present exhibition of all the generations contained will supply that place, and so all those things will be known to everyone which have before been made, or shall afterwards be made, which also will be as well known as if they were seen before the very eyes ; yet, still herein is a hidden perception of the ultimate Great Mystery. And that will be known or made certain not by Nature, but from a knowledge as to the causes of the final separation of the elements and of all created things : where each one will give an account of his own death. That is the cause of the perishable, of the living, and of the permanent. For there will be one Judge who has power from the eternal, and from age to age there has been this one Judge. This, also, is the cause or origin of religions, and of the different mystæ who serve the gods, all of which customs are false and erroneous. For no other judge has ever existed except the one God, who has been the Judge from eternity. It is too impious a piece of folly to wish to worship one who is mortal, perishable, and liable to decay, in place of the Author of creation and the Ruler of the eternal. Whatever dies has no power of governing and of ruling. There is only one way and one religion, nor should others be rashly adopted.

TEXT XVII.

If, therefore, whatsoever things are created return to that unto which they were predestinated from the beginning, in that place an arcanum will be produced. For predestination is, as it were, the ultimate matter, which will be without element, and without present essence ; but that which is temporated and that which is incorrupt will the more certainly follow. For these things are not understood by the spirit, but from Nature, with this evidence that the eternal follows the mortal. For, if an insensible plant perishes, then something eternal succeeds to its place. There is no frail or fading thing in the whole world which does not substitute in its place something which is eternal. Nothing has been created void, nothing that is mortal without a succession of what is eternal. After the end of all created objects these eternal things will meet together, and be collected not only as nutriments, but as a magistracy of Nature, both in the perishable and in the eternal. And thus the eternal is a sign of the dissolution of Nature, and not the beginning of created things, and the end in all things which no nature is

without. And although, indeed, the fatal beings, such as melosinæ and nymphs, are to have something eternal behind them, yet we will not here treat of their corruption. For a manifold decay is here involved, inasmuch as there are four worlds. For decay is terrestrial, ærial, igneous, and aqueous. Each of these, with those created with it, is turned and led downwards to decay with the eternal which is left. Nevertheless, these four decays will reduce their eternal portion to one similitude, notably and visibly, not with their works, but with their essence. For each eternal thing is a single habitation, prevailing, however, in many differences.

TEXT XVIII.

We must not pass by in silence the evestrum, according to its essence ; it is either mortal or immortal. The evestrum is like a shadow on a wall. The shadow grows and originates with the body, and remains with it up to its ultimate matter. The evestrum has its origin with the first generation of everything. Everything animate and inanimate, sensible and insensible, has conjoined with itself an evestrum, just as everything casts a shadow. The trames is understood to be, as it were, a shadow of the invisible essence. It is born with the reason and the imagination of both intelligent animals and of brute beasts. To philosophise about the evestrum and the trames belongs to the very highest philosophy. The evestrum gives prophecy, and the trames gives acumen. To prophecy about what shall happen to a man or animal, or even to a piece of wood, belongs to the shadowed evestrum. What will be the method comes from the trames. So the evestra either have a beginning or have it not. Those which have a beginning carry dissolution with them, together with something eternal surviving. That which has no beginning possesses the power of sharpening the trarium in the intellect. The mortal evestrum knows the eternal. This knowledge is the mother of prophecy. For the foundation of all intellect is from the evestrum as it is extracted or elicited by the light of Nature. Thus the prophet "evestrates," that is, he vaticinates by means of the evestrum. If the spirit prophecies, that is without the light of Nature. So it is for us fallacious, liable to imposture and uncertain, as also certain and true. And in the same way the trames also, as the shadow of reason, may be divided.

TEXT XIX.

Moreover, in the dissolution of all things the evestrum also and the trames will be dissolved, but not without some relics of the eternal. So, then, the evestrum is exactly as it were the firmament in the four worlds. The firmament is fourfold, according to the four worlds, divided into four perfect essences, each world perfectly regarding its own creation, because it is itself of that nature : one in the earth from the firmament, one in the water, air, and fire respectively. But the firmament which is in the evestrum is dispersed, not

stars which are visible, but these are firmaments to the nymphs which are not stars. Neither do they use stars, but they have a peculiar and proper firmament as fates; the igneous have each their private heaven, earth, abode, dwelling, firmament, stars, planets, and other like things, which are not in the least the one like the other. As water and fire, the substantial and the impalpable, the visible and the invisible, stand mutually related to one another, so is it with matters of this kind. In these the evestrum is divided with respect to fatal things, and remains a shadow of itself after its essence from dissolution; and the evestrum after fire adheres to the igneous man, as another to the aqueous, and another to the terrene. This evestrum falsifies and deludes the world, shadowing itself by fraud from one world to another, shewing visions, splendours, signs, forms, and appearances. Hence arise the evestrum of comets, the evestrum of impressions, the evestrum of miracles. These three are the prophetic evestra and the shadowed evestra.

TEXT XX.

It is, however, firstly and chiefly, necessary that we should know this prophet evestrum. For turban is the great essence of this kind, presaging all things which are in the four worlds. For whatever is about to happen by way of prodigy, and against Nature, or against common opinion and life, is known by the prophet evestrum, which is taken, and shadows itself forth from the great turban. It is most necessary that the prophet should know the great turban. It is most difficult to be understood, and is united with reason. It is, therefore, possible for a mortal man to know the great turban even to its extreme resolution. By this all the prophets spoke; for in it are all the signs of the world. From it all evestra are born, from it the comets are shadowed, prodigious stars which arise contrary to the usual course of the heavens. From turban all impressions get their beginning, not from the firmament or from the stars. As often as something unheard of and rare is about to happen, outsiders sally forth and messengers in advance, by whom the coming misfortune is announced to the people. These presages are not natural, but they come from the prophetic evestrum. All epidemics, wars, seditions, have their presages, which arise from turban. Whoever has knowledge of the properties of evestra, he is a prophet and a seer of futurity. For the Most High does not parley with men, nor does he send down angels from His throne to announce these things in advance. They are fore-known and understood from the great turban which many pagans and Jews have worshipped as God, being blinded in their senses and intellect as to who the true God was.

TEXT XXI.

Since, then, a shadowed evester is born with every created thing, and arises therefrom, it is well to know that by means thereof may be prognosticated the fortune and life of that thing whose evestrum it is. For example,

when an infant is born there is born at the same time with it an evestrum constantly expressed in that same child, so that from the cradle to the hour of death it prophecies concerning the child, and points out what is going to happen. If it is to die, death does not arrive until the evestrum has announced it beforehand, either by knocking, shaking, or falling, or by some other warning of this kind. Whence, if the evestrum be understood, it can be presaged that this is a sign of death. Moreover, the evestrum is united with the eternal. After the death of a man his evestrum remains upon earth and gives signs whether the man is in happiness or misery.

Nor should one say, as simple folks do, that this is the spirit or soul of the man, or that the dead himself is walking about. This is the evestrum of the dead man which does not yield its place until the final end, in which all things will meet. This evestrum works signs. The gods, by their evestrum alone, have wrought miracles; and as the sun in its splendour puts forth his heat, and his nature, and his essence, so it is in our case with the presaging and prophetic evestra, in which our trust should be placed. These evestra regulate sleep and sleeplessness, the prefigurations of future events, the nature of things, reason, concupiscence, and thought.

TEXT XXII.

In this way when future events are predicted in the elements by that in which evestra dwell, there will be evestra in water, some in mirrors, some in crystals, and some in polished surfaces; some will be understood by the motion of waters, some by songs and animum; for all these things can—so to say—“evestrate.” The great and good God has a mysterious evestrum, in which are seen His essence and attributes. By the mysterial evestrum are known all that is good and all that is illuminated. On the other hand, the Damned Spirit himself has an evestrum in the world by which evil is known, together with all which violates and corrupts the law of Nature. But though these two evestrate, still they do not in any way affect our life. Only by our evestrum shall we know ourselves. In all creatures are evestra, which are in all respects prophets, whether rational or irrational, whether gifted with sense or destitute of it. The evestrum is the spirit which teaches astronomy (astrology). Not that it is known by prognostications and nativities drawn from the stars; but its essence, if I may so say, is in the evestra, and its being is in these, as an image in a mirror, or a shadow in water or on the ground. And, just as growing things increase or diminish, so is it with the stars; not because from their own nature they have such a course, and damp and cold arise from the earth, but because the essence of the earth is such. So it is shadowed forth in heaven and over different parts according to the evestrum, and not as a power.

TEXT XXIII.

Evestra of this kind will be corrupted, yet, nevertheless, they will not perish without the eternal. Nor will the evestra themselves be regarded, but

they will dwell near those to whom they belong. Whence each will be its own adviser, so that before all else it may exhort and know itself. The nature and number of evestra is infinite. These guide the sleepers, foreshadow good and evil, search into the thoughts, and accomplish the labours or the works without any bodily motion. So, then, the evestrum is a marvellous matter, and the mother of all things in prophets, in astronomers (astrologers), and in physicians. Unless the understanding thereof be sought through the evestrum there is no knowledge of Nature. As theft betokens punishment, as a cloud foretells rain, and lotium bespeaks disease, so the evestrum shews everything without any exception. By it the sibyls and prophets spoke, but, as it were, in a kind of sleep-wakefulness. In this way the evestra are in the four worlds, the one ever communicating to the other presage, image, and miracle ; and by their regeneration they will be found much more wonderful. Nor let us here omit to say that the evestrum is a remnant of the eternal, the sustainer of religions, and the mode of operation for celestial things. For happiness alone and blessedness, and the chief good, and the last judgment, move us, and instigate us the more keenly and more profoundly to search and to investigate what difference there is between these two, the true and the false ; and this must be weighed and learnt not spiritually, but naturally.

THE PHILOSOPHY ADDRESSED TO THE ATHENIANS.

BOOK THE THIRD.

TEXT I.

EVERYTHING in existence necessarily has a body. The mode and manner may be understood as being like a smoky spirit, which indeed has substance, but is not a body, nor is it tangible. But, though this be the case, still both bodies and substances can be produced from it. This may be understood from fuming arsenic ; since after the generation of a body, nothing more is seen of the fume of the spirit, just as if it had been all reduced to a body. But this is not so. Something of a most subtle nature still remains in that place of generation. Thus by the process of separation there are produced something visible and something invisible. By this method and in this mode all things are propagated. Wood has still surviving the spirit from which it has been separated. So have stones, and so all things, without any exception. Their essence still survives just as it was separated from it. Man, in like manner, is nothing else than a relic and a survival from the separated fume. But mark this, that a certain spirit existed, and from that man is made up, and is most subtle in spirit. This spirit is the index of a twofold eternity, one being the caleruthum, and the other the meritorium. The caleruthum is the indication in the first eternity. It seeks or makes for the other, that is, God. That is a natural cause because all things affect or tend towards that from which they proceeded, or those natures which have been in contact with it ; for whatever anything when building up used in the process, that the thing when it is built up desires after and pursues. And this should be understood, that a thing which has been built up does, by Nature, or by natural instinct, tend not towards its builder, but towards that from which it has proceeded. So the human body longs for the matter from which it has been separated, and not for God, since it was not taken out of Him. And that matter is the life and the habitation in which the eternal meritorium abides. So everything returns to its essence.

TEXT II.

Since, then, everything has an appetency for its source, that is, for the mystery whence it sprang, it must now be further understood that this is

eternal life, and that what comes forth from thence is mortal. None the less, however, there remains in the mortal something eternal, that is, the soul, as may be learnt elsewhere. And if a perishable thing is to return to its pristine condition, that can only be done by a conjunction of what is permanent ; then at length there is a collocation and a union of things. The form and substance, however, both of transitory and of non-transitory things, proceeds from that spirit of fume, just as hail or lightning emerges from a cloud. These are corporeal, and that matter from which they have proceeded remains invisible. So, then, it may be laid down that all things spring from the invisible, yet, without its suffering loss, for the matter has always the power of regenerating and recuperating that loss. Hence, also, it happens that the whole world will pass away like snow and return to the same essence of the spirit of smoke, and then will come together or coalesce apart from all tangible essence. In this way, it can be again re-born as at first. Hence, also, it is known that no created thing exists which has been born, but only as it has been built up or created. So, the chief good is constituted in the beginning of all things that anything shall thus proceed from the invisible and become corporeal, and then shall afterwards be separated again from its body, and once more become invisible. Then all things are again joined together and united and reduced to their primal matter. And although, indeed, they may be united, yet still they involve some distinction and difference one from the other. One is the abode of the other ; that other is the inmate of the abode. For that is the habitation of all things ; sensible and insensible alike must all return to that condition and to that place. For, whether rational or irrational, nothing is free from this change, but will return to its habitation, from which it has been separated, and there appear.

TEXT III.

So, too, every body, or every tangible substance, is nothing else but coagulated smoke. Hence it may be assumed that such coagulation is manifold. One kind refers to wood, another to stone, a third to metal. But the body itself is none other than smoke, breathing forth from the matter or the matrix in which it is present. What grows from the ground is a smoke brought forth from the liquid of Mercury, which is various, and emits a manifold smoke for herbs, trees, and the like. But that smoke, if it issues forth from its primal, or as soon as it expires from the matrix touches foreign air, is thereupon coagulated. So this smoke constantly and persistently evaporates. As long, therefore, as it is driven and disturbed, so long the thing grows, but when the ebullition ceases the smoking also ceases. This terminates, too, both the coagulation and the growth. Wood is the smoke from Derses. Therein is latent a specific from which wood is produced. Nor is it only produced from this smoke ; it may be produced also from other dersic matter. In like manner, leffas is boiling matter, from the smoke of which all herbs are gendered. For the only predestination of herbs is leffa ;

there is no other. God is more wonderful in specifics than in all other natures. Stannar is the mother of metals, furnishing the first matter for metals by its fume. Metals, in fact, are nothing but the coagulated fume from stannar. Enur is the fume of stones. In fine, whatever is corporeal is nothing but coagulated smoke, in which there is latent a specific predestination. All things, too, will ultimately be resolved like smoke; for the specific which coagulates has no power save for a definite time. The same may also be said of coagulation. All bodies will at last pass away and vanish in smoke, and will be terminated only in smoke. This is the consumption of everything corporeal, both living and dead.

TEXT IV.

Man is coagulated smoke. Only from the boiling vapours and spermatic members of the body is the coagulation of spermatic matter produced. Man, too, will be resolved into a vapour of this kind; so that death may be like birth. Moreover, we see in ourselves nothing else than that man is coagulated smoke formed by human predestination. Whatsoever, too, is taken or given forth is merely the coagulated fume from liquids. And so whatever is injected is consumed by the life on the same principle, so that the coagulation may be again dissolved and liquefied, as ice is liquefied by the sun, that it may afterwards vanish into the air like smoke. Life consumes everything; for it is the spirit of consumption in all corporeities and substances. Here, too, attention must be given to the preparation of the digested mystery; for if everything is due to return to that state from which it originated, and so anything is given forth, then it is consumed together with the life. This, however, happens only in those things which are not transmuted. Transmutation is not driven back or repressed; and some transmutation is produced by means of life. Thus, then, is transmutation altered into the frailty of the body; but, nevertheless, it is again separated from the body. For in its putrefaction, transmutation has no further power, and in putrefaction the digested mystery ensues as a consequence. In the meantime, there are mutually separated all the properties which man had in himself from herbs and other things, each returning to its own essence. Separation is, in fact, like that process by which, if ten or twelve things are mixed they are again dissevered, so that each regains its own special essence. Thus, eating is nothing else than a dissolution of bodies. Hence the materials of bodies are separated in vomitings and dejections from the bowels, which are simply foetid smoke mixed with good. Nature, indeed, seeks only the subtle, avoiding what is dense. Stones, metals, and earths—in a word, all things—are dissolved by life; nor is there any other dissolution of them by the body than that which is brought about by its life.

TEXT V.

Moreover, it is equally necessary to understand the process by which each separate thing regains its own essence. This cannot be more fitly compared

to anything than to fire, which is elicited from a hard flint, flaming and burning beyond all natural knowledge. For, as that hidden fire takes its origin and proceeds to work its effects, in the same form and appearance also is the essence led to its nature. And here reflect that in the beginning there existed only one thing, without any inclination or speciality, and from this afterwards all things issued forth. This origin exactly resembles some well-tempered colour, purple for instance, having in itself no inclination to any other colour, but conspicuous in its just temperature. Yet, notwithstanding, in that colour all colours are existent. For the other colours cannot be separated from it—red, green, blue, clay colour, white, black. Each of these colours, again, brings forth other blind colours, while yet each one is by itself entirely and properly tinted. And although many and various colours are latent in them, still, nevertheless, they are all hidden under one colour. In the same manner, too, everything had its essence in the Great Mystery, which the Supreme Architect afterwards separated. The crystal emits fire, not from a fiery nature, but on account of its hardness and solidity. It also hides in itself other elements, not essentially, but materially, ardent fire, blowing air, moistening water, and earth which is black and dry. Besides all these things it possesses in the composition of its qualities all colours, but hidden within itself, as the fire lies hid in the steel, betraying its presence neither by burning, nor by shining, nor by casting a colour. In this respect, all colours and all elements are present in everything. But how all things arrive at and penetrate to all other things, if anyone cares to know, let him believe that all these matters are brought about and cared for by Him alone, who is the Maker and Architect of all things.

TEXT VI.

Although, as has been said, Nature lies invisibly in bodies and in substances; nevertheless, that invisibility is led to visibility by means of those bodies themselves. According as the essence of each is situated, so is it seen visibly in its virtues and in its colours. Invisible bodies, however, have no other method than this corporeal one. So mark, then, that the invisibles contain within themselves all the elements, and operate in every element. They can send forth from themselves fire and the virtue of its element; and so, too, do they send forth air, as a man sends forth his breath, or water, as a man sends forth urine. They are also of the nature of earth, and sprung from the earth. Know this, too, that the liquid of the earth always boils, and sends forth on high, beyond itself, the subtle spirit which it contains in itself. From this are nourished the invisibles and the firmament itself, and this could not be done without vapour. Incorporeal as well as corporeal things need food and drink. For this reason stones come forth from the earth from a like spirit of their nature. Each one attracts its own to itself. From the same source come spectres, fiery dragons, and the like. If, therefore, invisible as well as visible are each in its own essence, this is due to the nature of the

Great Mystery, as wood acquires ignition from a light or a taper, though this suffers no loss. And though, indeed, it be not corporeal, still it needs something corporeal in order to escape death, which is produced by the wood. In the same way, all invisibles need to be sustained, nourished, and increased by some visible thing. With these, indeed, they will at length perish and come to an end, still, however, having their activity in them without any waste or loss to other things, that is to say, to the corporeal and the visible, although this is brought about by the invisible, and apprehended by the visible.

The rest (for doubtless the author advanced further) has not come down to us.

HERMETIC ASTRONOMY.

PREFACE TO THE INTERPRETATION OF THE STARS.

WRITTEN BY THE DOCTOR THEOPHRASTUS OF HOHENHEIM.

I have accounted it a thing at once convenient and reasonable that, seeing there is an order of the whole of astronomy, myself to explain the method by which it may be taught and known. It is the more needful that I should come forward because all science is completely corrupted and polluted by shameful notions, and imperatively calls for illumination by its true and genuine sense. Yet, having regard to the present times, I do not doubt that my labour will appear absurd and useless to many. I write these things by reason of those very persons—for the detection of their ignorant and random judgment. Such is the blindness of the world that it invariably prefers the name rather than that which the name signifies.

Astronomy contains in itself seven faculties or religions ; he who does not know them all is unworthy to be called an astronomer. Let each man remain in that religion or faculty wherein he occupies himself ; let the astologer deal with astrology ; he who treats of the religion of magic, let him remain exclusively a magus ; he who is concerned with divination, let him remain a diviner ; he who regards nigromancy, a nigromantic ; he who studies signatures, a signator ; he who is devoted to the uncertain arts, an incertus ; he who investigates matter, a physicist. Let not the astronomer deny that magic is astronomy, nor yet refuse the name to divination, nigromancy, and the rest. All these things are comprehended under astronomy as much as is astrology itself. They are natural and essential sciences of the stars, and he who is acquainted with them all, he is worthy to be called an astronomer. But albeit these sciences are sisters, they have heretofore been ignorant of their relationship, which it is important to recognise, so that one may not be despised by the other.

As, however, astronomy does not lead to the life which is eternal, though it may be called the highest wisdom of mortals in the light of Nature, it is

not the highest wisdom of men. Beyond this wisdom there is another given from on high, which transcends the created and surpasses by far all mortal sapience. But, you will reply, the Father made the Light of Nature and also man himself. Blessed is the man who walks in that light for which he was formed, seeing that it derives from the Father ! But what follows ? The Son gave the Light of Eternal Wisdom to man that he might also walk therein. Can one contaminate the other ? Happy is he that walks in the Father, happy is he that walks in the Son ! It is right to live in both—in one to that which is mortal, in the other to that which is eternal. For whereas the Father is not angry with the Son, neither the Son angry with the Father, how then can the Light of Nature be separated from that which is eternal ? One remains in the other. Nevertheless, these twain are separated by him who hands over to another what does not belong to himself, and speaks from his mouth that which he knows not in his heart. Each one on earth has his special predestinated gift, and it is lawful for him to work therewith. This gift in the light of Nature has regard to the neighbour. But besides this there are the gifts of the Holy Spirit—that is to say, prophetic and apostolic. Those who hunger after the goods of their neighbour possess not the divine gift, and those who speak hypocrisy have not the gifts of the Holy Spirit.

I freely confess that I have seen no prophets or apostles. I have, however, seen their writings, which dictate an eternal wisdom, and for this reason I by no means prefer the light of Nature thereto, but tread it under my feet, for the prophets have prophesied such things as no astronomer could have done. The apostles have healed sufferers whom medicine could never have restored. Therefore the relation of the physician to the apostle is the same as that which obtains between the astronomer and the prophet. What physician can restore the dead to life ? Can any astronomer prophesy as David ? Medicine is fallible, not so the apostles. But I only teach concerning ourselves as mortals in the light of Nature, with this limitation, that the wisdom of God is before all. The astronomer is acquainted with the figure, form, appearance, and essence of the heaven. The magus operates on the old and new heaven. The diviner speaks from the stars. The nigromancer controls sidereal bodies. The signator is versed in the micro-cosmic constellation. The adept in uncertain arts rules the imagination. The physicist composes. Now, those who give light on earth as torches in the Light of Nature shall shine, through Christ, as stars for ever. Wherefore let every one so consider these my sayings that he may gain the more from them than is written. The seed is cast into the earth, but it is another who giveth the increase. I, indeed, offer you the seed ; He who brings forth seed-time and harvest, may He so conduct you to the end that ye may rejoice in an abundant vine !

THE INTERPRETATION OF THE STARS.

IN order that, before advancing to definitions and proofs, I may communicate to you my full scheme, I would have you know somewhat concerning the stars. The whole machinery of the universe is divided into two parts, a visible body and an invisible body. The visible and tangible is the body of the universe, consisting of three primals, Sulphur, Mercury, and Salt. This is the elemental body of the universe, and the elements themselves are that body. The body which is not tangible, but impalpable and invisible, is the sidereal heaven or firmament. The firmament which we see is corporeal, visible, and material. This, however, is not the firmament itself, but its body. The firmament no one has ever seen, but only its body, just as the soul of man is not visible. The whole universe is thus divided into two parts, into body and firmament. Moreover, the firmament consists of two parts. One is in heaven among the stars ; the other in the globe of the earth. Hence two essences of the firmament are built up. One is peculiar to the firmament of heaven, and the other peculiar to the element of this globe and sphere. The firmament of the globe or sphere is of such a nature that out of it grows whatever the body of the earth or of the elements gives or appoints. Thus from the ground the firmament of the globe brings forth the fruits, which could not be accomplished without the firmament. And the same is the case with all things that are produced from the ground. The other firmament has its special operation in heaven, that is, it relates solely to man. Now, although both star-systems, the upper and the lower, are linked together, conjoined, united, and run one with the other, still there is this difference, that the upper stars govern the higher senses, and the lower govern growing things ; that is, the upper system arranges the animal intellect, and the lower those things which grow, springing forth from the sphere itself.

Beyond what has been already said, I shall enter upon no discussion as to the firmament of the globe, save so far as concerns its fruits and its growths. These are its philosophy. I shall put forward so much, however, with regard to the sense-producing star as will enable us to know that man is divided in himself ; namely, into the body of the globe and the body of the senses, that is into a visible, palpable body and a body that is invisible and impalpable ; or, in other words, into an elementary body of the three primals, Salt, Sulphur, Mercury, and into a sidereal body. So far as relates to the body of

man, he is merely flesh and blood. That which is impalpable in him is called spirit. Thus man is made up of flesh, blood, and spirit. Moreover, the flesh and blood are not the man, but the spirit existing in himself. The spirit of man is wisdom, sense, intellect; and these are the man. The body is mere brute matter. The spirit is subjected to the stars, and the body is subjected to the spirit. So the star governs the man in his spirit, and the spirit governs the body in the flesh and blood. That spirit, however, is mortal, since it is not the soul. The soul is supernatural, and I do not speak of that here, but only of that which, being created in Adam, trenches on Nature, that is to say, flesh, blood, and this spirit. Whoever, therefore, is not reborn dies, and cannot sustain that spirit, but is carried off to death. So, then, there is a certain conjunction of the star and the man, of the elements and the man. It is a single conjunction, and a single alliance, of such a nature that no partition or separation can occur. All which can happen is that the soul departs, and is separated, that it leaves what is produced by the machinery of the world, and takes to itself what is eternal. This I point out in order that the star may be rightly comprehended among the things that are above and in the globe of the world; whilst, at the same time, it may be duly understood how each constituent part has been united in man. In this way the agreement and the operation of the star, one with another, will be understood, and we shall have ascertained what effect the external stars can have on man, and also what those things which are in man do in external things. For it is true that the external stars affect the man, and the internal stars in man affect outward things, in fact and in operation, the one on the other. For what Mars is able to effect in us, that also can the man effect in himself if he restrain himself in his manly operations. Thus are the double stars related one to the other. Man can affect heaven no less than heaven affects man.

And now we have to discuss the medium between the principal stars and the body. There is one star which governs all things; in man the animal intelligence, in brutes sensation, in the elements their operation. The star is the one supreme thing created from destruction or dissolution; and it is that in Olympus which has all these things under itself. Its office is to operate in man, to operate in elements, to operate in animals, to turn and to change their senses and their mind. Now, it is impossible to do this without a medium. This same medium is and must be a star situated in those things where the supreme operates. By this medium is produced an effect on the substance and on the body. Let us illustrate the matter by an example. If Mars is to act on a man, that cannot be done without a medium, which shall serve as the material star. By means of this Mars acts. Thus, if the higher star is to act on a parrot, it is necessary that there should be in the parrot a star as a medium by which the superior star acts. Hence it is clear that there is some star in man, in birds, and in all animals; and whatever these do, they do by the impulse of the higher influence which is received from the constellation, and regulates the unequal concordance.

Moreover, there is a similar star also in the elements, as in the earth, and that an efficacious one. That star receives an impression from the higher star, and then of itself acts on the earth, so that there is drawn forth from the earth whatever exists or lies hid in it. The same is the case with the element of water and the rest. So a person is first of all an astrologer from the higher star, and another from the star of men. There is an astrologer from the star of the elements, and there is an astrologer from the star of animals. In this way there are four astrologers of the elements, two of the stars of men and animals respectively, which make six ; and then one of the superior star, which is the seventh. Besides these there remains yet another astrology born of the imagination in man, superior to all the rest, and standing eighth in order.

This, like the others, has been neglected and passed over by astrologers ; but whoever would be accounted an astrologer must have a perfect knowledge of all the eight. But, although those who are skilled in particular departments ought not to be despised, yet they cannot act universally. The star is divided into eight parts ; one is effective, six are subject to it ; the eighth is in itself effective and like the first, nay, in some respects it is superior to, and more excellent than, the first, as will hereafter be more clearly shewn, when we speak of the new heaven and firmament. But it is only right that the celestial astronomer should know also about the rest. Now, these intermediate stars act, follow one another, and agree, so that nothing shall be predicted from the higher star, with the accomplishment of which the lower star interferes and produces something else, be it better or worse.

Hence, it is clear that astronomy was always highly valued by the ancients from the time of the Deluge up to the birth of Christ.

All species of Astronomy, it is well known, were highly cultivated. In the time of Christ, however, this ceased ; and it is (? not) matter for regret that under Christ this should have occurred, because the Father had determined by His mighty love that men should confine their thoughts to Him, and that useless things should be omitted ; and yet many of these things originated and grew up under Christ and afterwards inundated the whole world. In order to understand this, I would have you know that Christ taught eternal wisdom, and took care for the soul, not without a purpose, but that the image of God might be promoted to the kingdom of its Creator, and so the lower wisdom might be neglected while the higher might be more actively cultivated. Although, therefore, in this book I write these things like a heathen man, I profess myself a Christian. The heathen, however, can rejoice in the Father who is not opposed to the Son ; and he is not really a heathen if he walks in the light of Nature. The wisdom of Christ is better than all the wisdom of Nature. I myself avow this, that one prophet in a single hour speaks more certainly and more truly than all the astrologers in many years, and one apostle far excels in truth all the magicians.

What could resist the school of those who spoke with tongues of fire ? And yet, though these gifts were possessed, a certain sect rose

up in the time of Christ speciously boasting an eternal wisdom which they did not possess, though it grew and spread abroad. This sect cut itself off from the noble science of astronomy, and took its place much as dung might take the place of fruit. Hence it occurred that, in course of time, not only the foundation and light of eternal wisdom, but also the true astronomy itself was obliterated, and the entire light of Nature at length corrupted and obscured. This was a lamentable evil and sin. Woe to those who sin against the Holy Spirit as do these of whom I complain! I confess that it is better to speak from God than from astronomy; it is better to heal from God than by means of herbs; better to preach from God than from false prophets, which is the sin against the Holy Ghost. What comes from God is not halt or maimed, but has, as they say, hands and feet. What comes from Nature is, for the most part, worm-eaten and decayed. All things are not from God; but some are from Nature. All are not from Nature, but some from God. If the magi, the astronomers, the signators, the necromancers, the incerti, the diviners, should give up their science and follow the prophets, the apostles, and especially Christ Himself, who could impute it to them for a fault that they aspired to the greater from the less, from Nature to Christ? Yet we cannot but lament that they did not penetrate to that school which spoke with the tongues of fire, though they had almost lost the light of Nature. Hence it happens that they thoroughly detest both kinds of wisdom.

Concerning the stars, I lay it down that they it is which confer all animal intelligence. As the body is conferred by the globe, in the same way is the intellect conferred by the star. One cannot exist without the other. I am forced to admit that it repented the Father that He had made man, whom the Son regenerates. It is therefore wiser to be in communion with the Son than with the Father, though the light of the Father must not be abandoned. For the Father is not opposed to the Son, nor the Son to the Father. Woe to him who sins against the Holy Spirit! I acknowledge that man is dust; for he was taken from the elements. What are the elements? Nothing. What is man? Nothing. Better is it then to follow, not that which is nothing, but that which is something. But when it comes to recognising the wondrous works of God, it cannot be but that I shall feel a difficulty. For the gifts of God are given to the Prophets, are given to Apostles, and to Saints. But so also those gifts are bestowed on astronomers and on physicians. All are by God and from God. Whatever is pre-destined to Prophets and Apostles will succeed. May that too succeed which is pre-destined to astronomy and to medicine, but all by means of God and of His operations! It is not everything that regards what is eternal or that regards even Nature; everything looks to its own. What I have to say of man, of animal, of elementary body, or of wisdom from the stars, is strictly true; and since man remains as he was formed at the beginning, I describe him as such, making in this place no mention of the new birth. Still, if the old birth and the new could not coexist, I would not describe the one or the other, but would vote all things vain. In the

meantime, as to the accusation that I, being a Christian, treat a heathen topic, if the Father and the Son be agreed, and the one exist in the other, I would hope that this fact need cause no strife with any person ; and unless, indeed, opposition were raised by that sect which has darkened the light of Christ as well as the light of Nature, and so brought it about that between two stools one comes to the ground, any one would readily undertake to write on these matters. In the meantime, if the renovation of the world takes place, then will be brought to pass the saying that was uttered by the eternal Virgin, "He has filled the hungry with good things ; and the rich He has sent empty away."

THE END OF THE BIRTH, AND THE CONSIDERATION OF THE STARS.

BY DR. THEOPHRASTUS HOHENHEIM.

CONCERNING THE MASS AND THE MATTER OUT OF WHICH MAN WAS MADE.

IT follows next in order to consider how it comes about that external causes are so powerful in man.

It must be realised, first of all, that God created all things in heaven and on earth—day and night, all elements, and all animals. When all these were created, God then made man. And here, on the subject of creation, two remarks have to be made. First, all things were made of nothing, by a word only, save man alone. God made man out of *something*, that is to say, from a mass, which was a body, a substance—a *something*. What it was—this mass—we will briefly enquire.

God took the body out of which He built up man from those things which He created from nothingness into something. That mass was the extract of all creatures in heaven and earth, just as if one should extract the soul or spirit, and should take that spirit or that body. For example, man consists of flesh and blood, and besides that of a soul, which is the man, much more subtle than the former. In this manner, from all creatures, all elements, all stars in heaven and earth, all properties, essences, and natures, that was extracted which was most subtle and most excellent in all, and this was united into one mass. From this mass man was afterwards made. Hence man is now a microcosm, or a little world, because he is an extract from all the stars and planets of the whole firmament, from the earth and the elements; and so he is their quintessence. The four elements are the universal world, and from these man is constituted. In number, therefore, he is fifth, that is, the fifth or quint-essence, beyond the four elements out of which he has been extracted as a nucleus. But between the macrocosm and the microcosm this difference occurs, that the form, image, species, and substance of man are diverse therefrom. In man the earth is flesh, the water is blood, fire is the heat thereof, and air is the balsam. These properties have not been changed, but only the substance of the body. So man is man, not a world, yet made from the world, made in the likeness, not of the world, but of God. Yet man comprises in

himself all the qualities of the world. Whence the Scripture rightly says we are dust and ashes, and into ashes we shall return; that is, although man, indeed, is made in the image of God, and has flesh and blood, and is not like the world, but more than the world, still, nevertheless, he is earth and dust and ashes. And he should lay this well to heart lest from his figure he should suffer himself to be led astray; but he should think what he has been, what he now is, and what hereafter he shall be.

Attend, therefore, to these examples. Since man is nothing else than what he was, and out of which he was made, let him not, even in imagination, be led astray. The knowledge of the fact tends to force upon him the confession that he is nothing but a mass drawn forth from the great universe. This being the case, he must know that he cannot be sustained and nourished therefrom. His body is from the world, and therefore must be fed and nourished by that world from which he has sprung. So it is that his food and his drink and all his aliment grow from the ground. The great universe contributes less to his food and nourishment. If man were not from the great world but from heaven, then he would take celestial bread from heaven along with the angels. He has been taken from the earth and from the elements, and therefore must be nourished by these. Without the great world he could not live, but would be dead, and so he is like the dust and ashes of the great world. It is settled, then, that man is sustained from the four elements, and that he takes from the earth his food, from the water his drink, from the fire his heat, and from the air his breath. But these all make for the sustentation of the body only, of the flesh and the blood.

Now, man is not only flesh and blood, but there is within him the intellect which does not, like the complexion, come from the elements, but from the stars. And the condition of the stars is this, that all the wisdom, intelligence, industry of the animal, and all the arts peculiar to man are contained in them. From the stars man has these same things, and that is called the light of Nature; in fact, it is whatever man has found by the light of Nature. Let us illustrate our position by an example. The body of man takes its food from the earth, to which food it is destined by its conception and natural agreement. This is the reason why one person likes one kind of food, and another likes another, each deriving his pleasure from the earth. Animals do the same, hunting out the food and drink for their bodies which has been implanted in the earth. Now as there is in man a special faculty for sustaining his body, that is, his flesh and blood, so is it with his intellect. He ought equally to sustain that with its own familiar food and drink, though not from the elements, since the senses are not corporal but are of the spirit as the stars are of the spirit. He then attracts by the spirit of his star, in whom that spirit is conceived and born. For the spirit in man is nourished just as much as the body. This special feature was engrafted on man at his creation, that although he shares the divine image, still he is not nourished by divine food, but by elemental. He is divided into two parts; into an elemental body, that is, into flesh and

blood, whence that body must be nourished ; and into spirit, whence he is compelled to sustain his spirit from the spirit of the star. Man himself is dust and ashes of the earth. Such, then, is the condition of man, that, out of the great universe he needs both elements and stars, seeing that he himself is constituted in that way.

And now we must speak of the conception of man, how he is begotten and made. The first man was made from the mass, extracted from the machinery of the whole universe. Then there was built up from him a woman, who corresponds to him in his likeness to the universe. For the future, there proceeds from the man and the woman the generation of all children, of all men. Moreover, the hand of God made the first man after God's own image in a wonderful manner, but still composed of flesh and blood, that he may be very man. Afterwards the first man and his wife were subjected to Nature, and so far separated from the hand of God that man was no longer built up miraculously by God's hand, but by Nature. The generation of man, therefore, has been entrusted to Nature and conferred on one mass from which he had proceeded. That mass in Nature is called semen. Most certain it is, however, that a man and woman only cannot beget a man, but along with those two, the elements also and the spirit of the stars. These four make up the man. The semen is not in the man, save in so far as it enters into him elementarily. When, in the act of conception, the elements do not operate, no body is begotten. Where the star does not operate, no spirit is produced. Whatever is produced without the elements and the spirit of the stars is a monster, a mola, an abortion contrary to Nature. As God took the mass and infused life into it, so must the composition perpetually proceed from those four and from God, in whose hand all things are placed. The body and the spirit must be there. These two constituents make up the man—the human being, that is, the man with the woman, and the semen, which comes from without, and is, as it were, an aliment, something which the man has not within himself, but attracts from without, just as though it were a potion. Such as the principle of food and drink is, such is also that of the sperm, which the elements from without contribute to the body as a mass. The star, by means of its spirit, confers the senses. The father and mother are the instruments of the externals by which these are perfected. In order to make this intelligible, I will adduce an example : In the earth nothing grows unless the higher stars contribute their powers. What are these powers? They are such that one cannot exist without the other, but of necessity one must act in conjunction with the other. As those without are, such are those within, so far as man is concerned. Hence it is inferred that the first man was miraculously made, and so existed as the work of God. After that, man was subjugated to Nature, so that he should beget children in connection with her. Now, Nature means the external world in the elements and in the stars. Now it is evident from this that those elements have their prescribed course and mode of operation, just as the stars, too, have their daily course. They proceed in their daily agree-

ment, and at particular epochs Nature puts forth new ones. Now, if this form of operation—if the father and mother—with this concordance meet together for the work of conception, then the fœtus is allotted the Nature of those from whom it is born, namely, of the four parents—the father, the mother, the elements, the stars. From the father and mother proceed a like image and essence of flesh and blood. Besides this, from their imagination, which is the human star, there is allotted the intellect, in proportion wherein the concordance and constellation have exhibited themselves. So, too, from the elements there is allotted the complexion and the quality of the nature. So, too, from the external stars their intelligence. As these meet, the influence which is stronger than the others, preponderates in the fœtus, or else there is a mutual comingling of all. Thus man becomes a microcosm. The father and mother are made from the universe, and the universe is constantly contributing to the generation of man. In this way, there is constituted a single body, but a double nature, a single spirit, but a twofold sense. At length the body returns to its primal body, and the senses to the primal sense. They die, pass away, and depart, never to return. The ashes cannot again be made wood, neither can man from that state in which he is ashes be brought back so as to be man again.

Now we have traced the generation of man to this point as a general and universal probation of the whole of astronomy, in order that it might be understood from thence why the astronomer studies and gets to know men by the stars, namely, because man is from the stars. As every son is known by his father, so is it here; and this science is very useful if a man knows who is from heaven, from the elements, from father and mother. The knowledge of the father and mother lies at the root. The knowledge of the elements pertains to medicine. The knowledge of the stars is astrological. There are many reasons why these cognitions are useful and good. Many men are mere brutes, and yet make themselves out angels. Many speak from their mother, calling themselves Samuels or Maccabees. Many in their earthly complexion fast and pray, and call themselves divine. Many handle those things which are not really what they are said to be. Anyone who is an astrologer knows what that spirit is which speaks and is seen. It is matter for regret that many hesitate between the two lights, culling and stealing from each in order to make themselves conspicuous. The spirits are known, indeed, to each, but in a different way, and this should not be so. But though things are thus, man is the work of God, but one only is His very son, that is, Adam. Others are sons of Nature, as Luke in his genealogy recounts of Joseph, that he was the Son of Helus, which Helus was the son of Mathat, which Mathat was the son of Levi, and so on back to Adam; yet there is no mention of the son of God. Thus man is a son in Nature, and does not desert his race, but follows the nature of his parents, the stars. Now, he who knows the father and mother of the stars and of the elements, and also the father and mother of the flesh and blood, he is in a position to discuss concerning that offspring,

concerning its nature, essence, properties, in a word, concerning its whole condition. And as a physician compounds all simples into one, preparing a single remedy out of all, which cannot be made up without these numerous ingredients, so God performs His much more notable miracle by concocting man into one compound of all the elements and stars, so that man becomes heaven, firmament, elements, in a word, the nature of the whole universe, shut up and concealed in a slender body. And though God could have made man out of nothing by His one word "*Fiat*," He was pleased rather to build man up in Nature and to subject him to Nature as its son, but still so that He also subjected Nature to man, though still Nature was man's father. Hence it results that the astronomer knows man's conception by man's parentage. This is the reason why man can be healed by Nature through the agency of a physician, just as a father helps a son who has fallen into a pit. In this way Nature is subjected to man as to its own flesh and blood, its own son, its own fruit produced from itself; in the body of the elements wherein diseases exist; in the body of the spirit, where flourish the intelligence and reason; and the elements, indeed, by means of medicine, but the stars by their own knowledge and wisdom. Now, this wisdom in the sight of God is nothing; but the Divine wisdom is preeminent above all.* So the names of wisdom differ. That wisdom which comes from Nature is called animal, because it is mortal. That which comes from God is named eternal, because it is free from mortality. These two parts, therefore, seemed to me necessary to be treated before I commented upon astronomy itself, so that from these universal proofs the whole foundation might be the more easily gathered.

The following are the numbers, religions, and faculties of the whole of astrology, which are treated naturally and artificially. Neither more nor fewer than these exist essentially and spiritually. Their names and differences are as follows:—i., Astrology; ii., Magic; iii., Divination; iv., Nigromancy; v.,

* In an exceedingly abstruse treatise on The Foundation of Wisdom and the Sciences, Paracelsus thus delivers himself upon the subject of sapience and knowledge: Whosoever undertakes a treatise on the foundation of wisdom, the same before all things should admonish or teach the reader concerning the origin of the sciences and of sapience. So also the physician who has decided to write concerning diseases must first explain from what foundation he writes, and the author whom he follows, as also how he teaches, in order that the same may be proved in the case of diseases. For out of these the probity and truth of his doctrine and science can be judged: Similarly, we who are about to treat of the foundation of the sciences and the arts must necessarily teach their origin, whence they have proceeded, and whence they are to be learned. Having done this, we must proceed to explain the matter itself. This book treats not of corporal matters, but of things invisible, that is, of reason itself. Hereof I have been impelled to write, seeing that many persons before me have supposed many kinds of wisdom, whereas, so far as regards man, there is only one wisdom; for how can one carpenter differ from another carpenter when both construct the same house, both use the same axe, and both have one method of building? There is one compass. Concerning this, it must be stated in a treatise on science that two compasses are not to be used, for the compass is one and not two. In the same fashion, the carpenter, the quarryman, and the bricklayer can use no compass different from this. Thus the house of wisdom neither can nor ought to be established except upon one foundation. And as the builder's art is defined by one circle, one number, one line, one square, so also through all methods there is one wisdom; and as the distribution takes place from one circle into a triangle, quadrangle, etc., which, however, are all one circle, the same is to be understood concerning the distribution of sapience. So also, as heaven, earth, air, and water use one and the same line, thus according to one line all wisdom is educed and extended. And as all men and all things are numbered by one number, so there is one number of wisdom itself, nor is any other beyond it to be taken. But inasmuch as a line is drawn by a free hand, yet by no means a correct one, or a circle, also by no means accurate, is described by hand, etc., so also lines, circles, and other figures proceed from sapience, but are by no means correct. For such sapience is by no means a true circle, quadrangle, or line. Hence I have determined to treat shortly of the foundation of science and wisdom, whence they proceed, what they are, and who bestows or imparts them. Artificers are greatly in need of the knowledge

Signature; vi., Uncertain Arts; vii., Manual Arts. What will be handled in each religion, and what the religion itself is, seek in the sequel.

ASTROLOGY.—This science teaches and treats concerning the whole firmament, how it stands with the earth and with man according to the primæval order, and what is the connection between man, the earth, and the stars.

MAGIC.—This science brings down and compels heaven from above to stones, herbs, words, etc. It teaches also the change of one thing into another, as well as the knowledge of the supernatural stars, comets, etc., and what their signification is.

DIVINATION.—This science is from heaven to man without any formal institution, so that he knows how to speak of things future, present, and past, though he has never looked into those things himself, and speaks nothing save what heaven impresses upon him. This science is most of all seen among simple persons.

NIGROMANCY.—This treats of sidereal bodies, which are without actual body, flesh, and blood. This operation stands related to the necromancer as a servant to his master, the latter commanding the former.

SIGNATURE.—This science teaches one to know the stars, what the heaven of each may be, how the heaven has produced man at his conception, and in the same way constellated him.

UNCERTAIN ARTS.—These sciences are without any principles on which they rest, or from which they proceed, and are ruled by the imagination, offering a new spirit and a new firmament by which they work.

MANUAL ART.—This science teaches the preparation of instruments for all astronomy, and with slender material expresses or comprises the form of the stars, and brings heaven and earth into one figure.

For the sake of fuller understanding I will add how many species each religion has, in this way:—

of such foundation, for what else is sapience but an art or science which one man has derived from another. He who by counsel flourishes in prudence, what has such a man learned except the art of provident wisdom, which another man does not know? Thus, the artificer has a skill in regulating the fire in which the tailor is completely wanting. This, therefore, is his art. Hence in different persons there are different arts. What, therefore, is science save art? It becomes this art to proceed out of a circle, out of a line, out of a number, for this gives a mode, and thus a mode obtains in arts. From his individual art the turner derives his special mode, and this also is true—the line, the circle, etc., give a mode of wisdom, and the said mode is wisdom itself. Further, sciences are distributed after many methods, nor could they all consist in one. One man knows one thing, and one another. No person can know and accomplish everything. Who is familiar with, who performs all things? And as no one perfects two labours in one labour, but it is necessary that one thing only should be performed at one time, so the case is the same with the arts and sciences. For the sciences are so extensive and so profound that they cannot be contained and held by one brain. One part is given to one, a second to another, etc. For as in one street of a city there are many gold beaters, in another many shoemakers, and in a third many tailors, so there is an analogous distribution of the sciences. Now, all undertakings proceed from one fount; from one fount flow all works and all sciences. Their ramifications are distributed like fruit on a tree, none of which can so separate itself as to deny that it was produced with the others from the same tree. If a guide and teacher be needed in this kind of wisdom, so that the source of a writer's instruction may be known, it becomes right and just that I should divide this discourse into two parts. The sapience of man is twofold—one relating to the soul, the other to the body. Having made this distinction, it is necessary that we should understand the animal, that is, the corporeal, and also, so to speak, the mental, that is, the eternal. But as we have elsewhere described the origin of the animal man, so here we shall chiefly concern ourselves with the man which is spiritual, and here is explained the invisible source of science and wisdom.—The rest of the work, which contains several treatises, and is at the same time only of a fragmentary nature, attributes, as might be expected, all wisdom to God, for man has nothing of himself. Man, however, is the heir of heaven, and the world exists solely for his benefit. It further divides wisdom into the animal and the angelical, and affirms that men themselves are angels, and are before all heaven and all angels.

Astrology has three species, as referring to man, the inferior bodies, animals.

Magic has six species. It belongs to comets, images, gamahei, characters, spectres, incantations.

Divination has five species, dreams, brutes, the mind, speculation, phantasy.

Nigromancy, of which there are three species, material visions or spectres, astral spirits, and inanimate, phantastical bodies, that is, those assumed by the dead or by lifeless things.

Signature has three species, chiromancy, physiognomy, and proportion.

Uncertain Arts, of which there are four species, geomancy, pyromancy, hydromancy, ventinina.

Manual Art has five species, arithmetic, geometry, cosmography, instrument, sphere (a mathematical instrument).

The Interpretation of the Species according to each religion.

ASTROLOGY—THE FIRST RELIGION.

This science embraces three species in which it is occupied. It operates against man, against elements, against animals. For since heaven and the lower bodies are mutually connected, the heaven teaches us to know the lower bodies by means of a figure which represents the whole heaven. From this figure is inferred the property of the inferior bodies, and what effect heaven produces in those inferior bodies.

MAGIC.

OF COMETS. This species teaches us to recognise all these supernatural signs in the sky, and to understand what they signify. Of this class are comets, halos, and the other figures of the sky. This science is founded on the Apocalypse, on dreams, and on the saying of Christ, "There shall be signs in the sun, moon, and stars." Since all these signs are supernatural, they refer not to astrology, but to magic.

OF IMAGES. This science represents the properties of heaven and impresses them on images, so that an image of great efficacy is compounded, moving itself and significant. Images of this kind cure exceptional diseases, and avert many remarkable accidents, such as wounds caused by cutting or by puncturing. A like virtue is not found in any herbs.

OF GAMAHEI. These are stones graven according to the face of heaven. Thus prepared they are useful against wounds, poisons, and incantations. They render persons invisible, and display other qualities which, without this science, Nature of herself cannot exhibit.

OF CHARACTERS. These species are words which are either spoken or written. They have power against all diseases, which they also avert. They divert misfortune and all accidents, they set free prisoners so that they are loosed from their chains, and produce those effects which Nature itself is not able to bring about, but only magical science can accomplish.

OF SPECTRES. This species exhibits the likenesses of men, so that something appears which is not really present. These visions with their signs are produced by night, not by day, and lack the body, blood, flesh, soul, and spirit of man.

OF INCANTATIONS. This species teaches how to turn men into dogs, cats, etc. It teaches a man how to convert himself into all kinds of appearances and forms. It renders people invisible, changes the minds of men at the will of the artificer, impels, leads, and directs impressions and generations according to his pleasure.

DIVINATION.

DREAMS. If anything is presented to a person by means of a dream, be it present, future, or past, be it knowledge, a treasure, or any other secret, it bears reference to this art. It can direct the stars to a dream, so that anything may be thereby revealed.

BRUTES. This species teaches us to distinguish the prophecies which come from animals, so that man may see and understand what the heaven does or is about to do. It operates also in fools, in animals, and in other simple beings.

THE SOUL. This species refers only to the mind of man, so that by chance and not by premeditation it is suggested to the mind of man what he ought to do. This species is of great importance, and should be studied among the very first by man, so that he may know what the mind suggests to him from its true foundation.

SPECULATION. If any one carefully weighs and speculates, and, by means of a strong imagination, finds what he seeks, it ought to be referred to this species. It arises from the stars, which are occupied about man and teach him.

PHANTASY. If any one in mere sport finds out or learns anything, this also is from the star, when it is matured. This often reveals many things such as treasures, mines, and others which are hidden, operating without any previous knowledge or investigation, and benefiting him who does not seek it.

NIGROMANCY.

VISIONS. This species sees in crystals, mirrors, polished surfaces, and the like, things that are hidden, secret, present or future, which are present just as though they appeared in bodily presence.

ASTRAL SPIRITS. This species teaches how to deal with sidereal spirits separated from the body, so that they may be compelled to serve men like slaves.

Inanimates are men without a soul produced by the stars, dwelling and conversing with men and doing the same as they.

SIGNATURE.

CHIROMANCY, by which the star is exhibited in man with that appearance in which the heaven was at the time of his nativity. It appears in the hands, feet, and other lines and veins of the body, shewing themselves differently in different bodies.

PHYSIOGNOMY. This species teaches how to know a man by his countenance, manners, and gestures. This also has for its cause the hour of birth, which signs a man, and by those signs forms his nature.

PROPORTION. This species judges the properties from the general habit of a man, whether he be lame, too tall, too short, etc.

UNCERTAIN ARTS.

GEOMANCY. This science is practised with a free mind without foundation or certain knowledge or signs (*tesseræ*). It agrees with astrology.

PYROMANCY. This species is fortune telling by fire. By fire is seen what is the motion of the heaven, what its nature and condition. In this the moon is principally consulted.

HYDROMANCY. This species teaches how to see in water certain secret and hidden things, closed and sealed letters, and persons who are travelling in distant countries, whether they are living or dead. This operation proceeds from the constellation of the new firmament, by means of imagination.

VENTININA. This teaches how to determine from the wind what the future state of the heaven will be as regards man, whether good or bad, fruitful or sterile, and other similar things in the future which cannot be determined by Nature.

MANUAL ART.

ARITHMETIC. This species teaches how to find the number of heaven and earth in the stars and the like.

GEOMETRY teaches how to measure the height of heaven and earth, and of the things contained in them.

COSMOGRAPHY teaches the situation and distance of all things, the manners and nature of peoples.

INSTRUMENTATION. This species teaches how to make instruments, with which is known how heaven and earth are connected.

SPHERE. This species teaches how to learn by means of an instrument what is the knowledge and correspondence of heaven and earth.

With this brief discourse I have endeavoured to describe the different species of religions that astronomy itself may thus be more rightly understood. All these make up astronomy. But how each one may be proved is afterwards described, with this view, that it may be clear that astronomy is no inconsistent or mendacious science, but that it is based on a solid foundation drawn from the light of Nature itself; which, indeed, is necessary for establishing all truth and knowledge.

PROOF IN ASTROLOGICAL SCIENCE.*

Having treated of the generation of man we must now deal with his sustenance, and in this way astrology will be sufficiently proved. There is a certain congenital virtue in man which attracts into man from the external

* The proofs in astrological science, magic, and divination are wanting in the treatise, and the deficiency has been supplied from another work, the *Explicatio totius Astronomie*, which duplicates the Hermetic Astronomy (*Interpretatio alia Astronomie*). It has been thought advisable at this point to compress somewhat the prolixity which further obscures the original.

sphere. Now, from that which is attracted man is sustained, and he is well and ill according to that which he has attracted. The attractive virtue is twofold, one of the elementary body, the other of the sidereal body. The desire of man for sustentation is to be understood as follows: The rays of the external sphere penetrate to us; the internal economy of man accomplishes the rest. Thus the sphere extends its fruits from the radix even to the outward locust. Hence it follows that there is a certain nature, namely, hunger and thirst, which is implanted in us and compels us to eat those fruits. So do the rays of this sphere enter us. Now, even as the food of the physical body comes to us from the elements, so is the sidereal body supplied by the constellation with all science, all arts, all prudence. Man is formed in such a manner that he should derive all his knowledge in the same way as he gathers fruit from a tree. Thus originates music, the metallic art, medicine, agriculture: whatsoever the earthly body requires, that he finds in the wisdom of the stars, and all wisdom, whether good or bad, is derived to him from the stars. Two things only, namely, justice and holy scripture, proceed immediately from the Holy Spirit. In the stars then is the whole light of Nature founded. For as man seeks food from the earth in which he was born, so also does he seek it from the stars in which he is likewise born. Thus the wisdom to which he is born is twofold—one is animal—but of the other Christ said, "For this I was born," as if He had affirmed "I was born in the Eternal Wisdom." The wisdom of earth should be employed only over carnal matters; the other and higher wisdom should be learnt and employed according to the words of Christ.

Now, the sidereal wisdom is foolishness before God, whence comes that saying: The wise man rules the stars, in the sense that eternal wisdom governs the animal. Thus natural wisdom is given to the body and not to the soul. Those things, therefore, which concern the soul are by no means to be polluted by the light of Nature. This must only be used with Nature. By the light of Nature all arts and operations have been invented. In the mansions of the planets there are workmen who have taught all other workmen, and they, indeed, are the best of all, for they have their arts implanted from birth. These, were they men, would everywhere forge iron and handle it as if it were wax. Mortals as yet have not learnt this arcanum, but they would do so did they drink from the true fountain. So also masons dwell in the habitations of the planets, from whom all other masons learn, and if they did this fully all matter would be plastic in their hands. Thus the firmament formed by God is our perfect instructor in all the arts if we refer to their true source. Thus, too, the palmary physician is in the firmament, who is acquainted with all diseases, and even sees those things which are hidden from our eyes. God created him such that he might beget physicians on earth. Now, concerning evil sources, there are unskilled artificers in heaven even as on earth. This ignorance and clumsiness may be discerned even by the animal wisdom, which is given for this end, that the good and

not the bad may be chosen. So does the natural light lead up to the higher light. Further, Lucifer in heaven made himself other than he was created, together with his companions, and the same thing can also take place in the stars. Hence contrary conceptions may arise, adverse and perverse arts. We must not, therefore, believe every spirit, since of spirits there are two kinds, even as there are two kinds of angelic intelligences—those who remained as they were and those who fell from their first estate. Astronomy is important, in that it teaches us to discern between these two kinds of spirits. This same science also contains a great arcanum, nor can anything be learnt without it. Wisdom is eternal and natural. The eternal is immutable and constant; the natural, from its mutable conception, generates a false spirit which misinterprets scripture. But if astronomy is acquainted with this, and if, indeed, nothing is so hidden as not to be revealed thereby, who shall not extol it with the highest praises?

It has already been shewn after what manner man was made, how he possesses hunger and thirst, an elementary and sidereal body, to produce an appetite for nourishment, and finally that he tends to that which was implanted in him at conception. Hence it follows that such virtue, nature, property, and condition, and finally all the concordance and constellation, can be described by the astronomer, for in this way various nativities are constituted, and hidden things are prognosticated. In all who live according to Nature nothing is hidden from the astrologer, and thus for the generation of man a figure of heaven is erected, in order to know the properties of the stars, as also the particular mode. Understand, therefore, concerning astrology that it knows the whole nature, wisdom, and science of the stars, according as they perfect their own operation in conception and constitute an animal man. The astrologer can easily describe a man or an animal by reason of such a conjunction and concordance. But if astrology be fundamentally and properly known, and the nativities of infants be erected rightly according to the mode of the influence, may evils will be avoided which would otherwise be occasioned by the unpropitious constellations.

PROOF IN THE SCIENCE OF MAGIC.

In the first place let us define the nature of Magic. It is that which brings celestial virtue into the medium, and thence is able to perfect its own operation. The medium is the centre. The centre is man. By means of man, therefore, the celestial force can be transmitted into man so that in man may be found such an operation as the constellation itself can produce. Moreover, in magic there is a further operation which it performs itself while exercising its art, that is to say, while the nature itself of the constellation does that which the magus ought to do. If the magus be himself the medium and centre, and, what is more, be capable of performing the operation of the constellation for man by means of man, it is in addition given to this art to produce another medium which is to be understood as a subject, by which

subject that operation is just as well performed as by man, who is the true medium. Thus in magical science there exist two operations, one which Nature herself produces, selecting man as the instrument, and as the recipient of her influence, whether bad or good, the other operates by means of arbitrary instruments, such as statues, stones, herbs, words, also comets, similitudes, halos, and any other supernatural generation of the constellation. Thus Nature herself is able to prepare her magical powers and perform her own operations by their means, as, for example, when something extraordinary takes place amidst a rude populace and is referred to miraculous agency, whereas it is only Nature who has worked magically.

Whatsoever Nature is able to accomplish in a foreign body, the same also can man accomplish, if he direct his operation so that conception can be attained, namely, the image, having neither flesh nor blood, and being like to the comet, so that the words and characters possess their own virtues equally with medicaments. It is, in like manner, possible to bring about such a condition in herbs and gamahei, that they become like to the planets and the dwellers therein. Now, it is no matter for astonishment that man accomplishes such things, for if it be true, as the scripture says, that ye are gods, we shall certainly be superior to the stars. If the stars as a fact are found to govern the majority of men, that is because men have abdicated their power as gods; few, indeed, are those who have exercised gifts such as those of the apostles and saints. The difference between the saint and the magus is this, that one operates by means of God and the other by means of Nature. Magic is a sublime science, and by reason of its operations is very hard of attainment. We must have regard to the word of Christ, which passes not away, when He said; "If ye believe, ye shall accomplish more things than these." Now, if we can exceed that which is accomplished by Christ, we can also exceed that which Nature accomplishes, seeing that she was created on our account and is therefore in our power. The wise man rules Nature, not Nature the wise man. For the same reason we can accomplish more than the stars. In us, then, should abound so great a wisdom that we shall thereby control all things, not only firmamental virtues, but also living animals which yet are much stronger than man. The will of man extends over the depth of the sea and the height of the firmament.

Nature herself is a magus. If about to announce anything, she creates for herself messengers, such as comets and other celestial signs. The magus man is comparable to the physician. The physician knows the hidden virtues of herbs, but the magus the hidden potencies of the stars. The physician extracts the virtues of herbs, and produces a remedy which is small in weight but represents the powers contained in a whole field of vegetation. The magus can transfer the powers of a whole celestial field into a small stone, which is called the gamaheus. As the physician infuses herbal virtues into the sick man, and so heals his disease, so the magus infuses into man the heavenly virtues just as he has extracted them. Medicines are renewed

yearly, but the stars have their exaltations in place of a summer. The sun is the highest grade of diurnal light, plus the congenital heat which belongs to it. How shall this light and heat be brought downward by means of man into a subject, so that its light will be intolerable to the eyes and sense shall scarcely be able to endure its heat? This takes place in the sphere of the crystal, which then is termed Beryl.

If the Magus can draw down virtues from heaven and infuse them into a subject, why should we be unable to make images conducive to health or disease? If poison, and the rest, can arise from earth, it can issue also from heaven. But why should not similar things take place in the case above, whether the subject be images, herbs, stones, or woods? The birth corresponds to what is sown in the constellation, and it is not man alone who operates such things; Nature also variously exercises herself. But if it be possible to Nature, why not also to man? Let Nature be an example to us. As she works we must follow in imitation. Herein lie hidden medical science, all artifices, all arts, all animal industries. It frequently happens that Nature advances some person beyond the knowledge he can derive from man, who also by skill and industry surpasses all the rest. Such a man is born like the comet, which differs from other stars. Thus it becomes possible that the Magus also, by means of magic science, may produce such an industrious man like a comet. These are the mysteries and the great things of God. The firmament, by means of the magi, exhibits the glory of God. By means of the magi out of Satra and Tharsis, by the ascendant of Christ in Bethlehem, is made manifest whatsoever the firmament and heaven do reveal in the Arcana of God.

PROOF IN THE SCIENCE OF DIVINATION.

Astronomy creates herself, and from herself performs astronomical operations which do not require art and industry. This mostly takes place among those who are of a good and honest disposition, as also temperate. The ancients preserved both their bodies and souls from pollution, so that they might more successfully perform operations of this kind in themselves. This is divination. When men, having no knowledge of astronomy, perform such operations, they are considered miraculous, and the operators are regarded as gods. The operation is revealed by dreams, by the soul, by speculation, and by animals. Divination was of much importance among the ancients. It is a part of astronomy, but it is not a science, for the operation occurs spontaneously. It is often said in common parlance: "My angel told me this." Here the operation is called an angel, as if it took place by God; it is ascribed to the angel, as if to a medium between God and the man. At the same time, the whole operation is merely celestial. Now this is the origin of divination. Man possesses a sidereal body united with an external constellation. These two communicate when the sidereal body is not affected by the elementary. In sleep, when the elementary body is quiescent, the sidereal body performs its functions. Hence arise *insomnia*, according as the

constellation operates them, and as the constellations are badly or well disposed, so also are the *insomnia*. When the constellation and the sidereal body are favourably co-ordinated, future things are truly predicted. In this manner, also, many remedies have been discovered which prevail over different diseases, also hidden treasures and other concealed things, so that scarcely anything can be compared to this very great science. The firmament foreknows all future things, nor does anything escape its knowledge, whether of things past or things present. If a sidereal body of this kind be found suitable by the constellations, and if the constellations be prepared, many marvels are manifested, both present and past. In this manner old men and women, unendowed by any knowledge, as it were by their simplicity and fatuity, have often made prophecies which the event marvellously verified.

In the same way, also, many have become learned men, who, having attained a suitable sidereal body, have sedulously exercised themselves in their native influence. Hence it happens that they at last draw down upon themselves the influence of their native constellation, just as rays from the sun. So an admirable science, doctrine, and wisdom are discovered, yet is the whole animal alone, not from on high, but taken from the stars alone. Heaven being thus constituted, and producing for itself a sidereal body, there arise many great minds, many writers, doctors, interpreters of Scriptures, and philosophers, according as each is formed from its constellation. Their writings and doctrines are not to be considered sacred, although they have a certain singular authority, given by the constellation and influence, by the spirits of Nature, not of God. Operations of this kind sometimes proceed from the mind of man in a stupendous manner, when men, changing their heart and soul, would make themselves like to the saints, being made such by a drunken star; whereas wine changes man, so also these are changed. It is, therefore, worth while to understand this sort of astronomy. Intoxicated writers of this kind lead many astray; they are wanderers in the Spirit of God as well as in the Light of Nature, flitting about like dreams. Many things are done by these which yet are of no moment, nor can be understood by others.

The force and efficacy of the constellations impresses itself upon brute animals, for whatsoever lives contains in itself the sidereal spirit, and wherever the operations are, there they are manifested. So the clamour of peacocks presages the death of their owners. For no man dies without the previous indication of portents. When a man is about to die the constellation within him loses its operation, and this loss takes place by means of a sign or a great mutation. So the stars shuddered at the death of Christ. From motions taking place in Nature, the death of every man can be prognosticated. Knockings in houses will sometimes precede the death of some occupant, yet these are not the work of spectres, but are natural operations, which in this manner are accomplished in men by means of the stars. The stars singularly sympathise with man, for man has been so formed by God that the whole

firmament is consensitive with man, and out of compassion gives its presages to his grief.

PROOFS IN NIGROMANCY.

Regard, in due order, nigromancy, so that it may be possible to learn and judge sidereal spirits and those who have no soul. The judgment is directed to that whereof we proceed to speak. The man who buries a treasure in the earth and hides it has all his mind intent upon that treasure. If he dies, his elementated body is buried, his sidereal body withdraws from it, and walks about on the earth up to the time when its decay is complete. This body carries about with it the thoughts and the heart of the dead man. Hence, as may be inferred, it keeps itself in the neighbourhood of that place where the treasure has been buried, about which the heart of the dead man was anxious. Such sidereal spirits are constantly seen at or near the place where such treasure is. The same thing occurs in other matters about which anybody has been anxious with the whole desire of his heart, whether it has been food, or drink, or debauchery, gambling, or hunting. In all these things the spirit acts for the imagination of that heart, and it does the same thing in a shadowy way after death, until the star consumes that spirit also, as the elements have consumed the body. Hence it follows that the necromancers get to know these sidereal spirits and to ascertain for what reason they are walking about in one place or another. In the same way, they explain the nature of lemures, giants, and gnomes. Nigromancy is the philosophy of spiritual sidereal bodies, and of inanimate beings who are, nevertheless, human, as onagri, nymphs, lemures, etc. The man who busies himself about these is a necromancer. The same is the case with exorcists who adjure bodies and inanimate beings of this kind. They differ from necromancers in this respect, that the exorcists are occupied with bodies obsessed by the devil, while the necromancers find their occupation, both naturally and philosophically, with those who are not obsessed. The ignorance of men has confounded exorcism with necromancy, and taken them to be one and the same. However, their distinction has now been settled. Moreover, I have determined to say nothing about exorcists here; it will be better to relegate them to the devil, whose servants they are. But I would wish to commend necromancy to you as a remarkable natural science, which produces some marvellous effects, since by means of sidereal spirits are laid bare the very hearts of men, shewing how they are inclined, what they long for, and what their ambitions are.

It is, moreover, pleasant and delightful to rightly understand nigromancy. The knowledge of nymphs, also the discovery of lemures, gnomes, and giants, is very subtle and ingenious. Indeed, the philosophy of these four inanimate generations is a truly noble one, which many babblers oppose and prefer their own nonsense to it. Since God is wonderful in all His works, it is more than likely that, one of these days, the temerity of these people will be brought out into the light of day, and, in God's own good time, branded openly. Moreover, necromancers use beryls because, in respect of astral spirits, they have

some familiarity with magicians in the way of visions, but the magi do not admit these. The causes of this fact will be noticed in these treatises. In the present discourse it has been made sufficiently clear what nigromancy is, and what is its subject-matter.

PROOF IN THE SCIENCE OF SIGNATURE.

God has enriched the light of Nature with such ample gifts that even one who is not addicted to the light can know all things that are therein. Is not this a great thing which external signs offer to man's knowledge? And God has arranged it so. Possibly you wonder how this can be done. Let the following example put an end to your wonder. The carpenter is the seed of his house. Whatever he is, such will be his house. It is his imagination which makes the house, and his hand which perfects it. The house is like the imagination. Now, if such be the property of imagination that it makes a house, Nature also will be an imagination making a son, and making him according to its imagination. So the form and the essence are one thing.

Whatever anything is useful for, to that it is assumed and adapted. So if Nature makes a man, it adapts him to its design. And here our foundation is laid. For everything that is duly signed its own place should properly be left; for Nature adapts everything to its duty.

If any lord or prince builds a city he so builds and arranges all the walls, towers, citadels, and the rest, that they shall as closely as possible suit his design. If man does this, how much more shall Nature, which is higher than man? It makes one man lame, because it is going to use such an one for lame purposes. It makes another blind, he being destined for blind purposes. In one word, whatever it requires any one to be, such an one it produces.

This, then, being the custom of Nature, that it produces such a man as it wishes, those vestiges will be clear and plain in the man. By these vestiges is meant whatever Nature is going to use such a man for.

Since Nature, therefore, works thus openly and puts forth its work in public, it is right and convenient that some one should be met who sees what sort of a person Nature has in each case prepared and produced, that is, how it opposes a rascal to an honest man, and sets a man-wolf over against a shepherd.

A signature, then, is that which has to do with the signs to be taken into consideration, whereby one may know another—what there is in him. There is nothing hidden which Nature has not revealed and put plainly forward.

Rightly, therefore, should its proper place be given to signature, because it is a part of astronomy, for this reason, that the star builds the man up at its own pleasure, with the marks belonging to him. What is going to be tinged with black Nature makes black, what blue, it makes blue; that which is going to sting is made a nettle, and what is to purge is made an equisetum, what is to be used for smoothing and polishing is made a smiris. In fine, to everything is assigned its own form, by which it may be known for what purpose that thing is made by Nature.

Whatever is in anything according to its properties, quality, form, appearance, etc., is revealed in herbs, seeds, stones, roots, and the rest. All things are known by their signature. By the signature those who are instructed trace what lies hid in herbs, seeds, stones. But when the signature is obliterated and trifles are substituted for it, then it is all over with everything, even philosophy and medicine being at fault.

The cry goes everywhere that I burn with hatred of learned men, doctors, magistrates, bachelors, senators, consuls, and the like. What is the reason? Nature has signed them too clearly. I can see what they are made of ; and I hate every house that lets in the rain.

In like manner, I am accused of disliking physicians and surgeons. Why? Just because they are not signed for their profession, but as rogues and impostors. The same is true of others also. I know plenty of them, if it were only safe to speak out.

How can I favour a man who is branded with so many stigmata and disgraceful marks as the Consul of Astorza, Niger, and of Nuremberg, Muffel? And how many others are there like them? Of course they detest this art, because it too clearly betrays bad men.

PROOF IN UNCERTAIN ARTS.

Nature puts forward a way and clear order in which man should consider what belongs to Nature and its properties. Thus astrology teaches us to know the nature of the sun by the accustomed order of the stars. So what the moon is and what her nature, the astrologer learns from her course, which he sees to be regular. The same judgment is to be passed on the other stars. In like manner, philosophy is learnt from that which appears, how Nature stands related to the earth ; hence it is ascertained that the method of philosophy ought to be the same. Thus all things have their own proof and comprehension. And so all arts, such as medicine and the rest, are conceived in a natural order. Without this order nothing can be done or brought to a perfect end.

Moreover, the uncertain arts, of which four are shewn in the table, have not this order and process, which can be materially proved and demonstrated ; but this differs from the order spoken of. With regard to this it ought to be understood that there are many things which do not indeed square with the same order, but still are not opposed to Nature. They only differ from the order of material nature, as God has settled it. But what there is besides in this order ought to be understood from the Uncertain Arts in the following manner. The firmament and new heaven are constituted by the imagination ; and it should be known that this imagination is effective, and produces many things, being marvellous in its operations. It often happens that the imagination of the parents, father and mother, confers on the offspring born in that creation a different heaven, another figure, another ascendant besides that which astrology gives. Thus it often happens that an offspring is

begotten contrary to the star, and arranged otherwise than the figure of the heavens dictates. By the force of this imagination many learned men are often born.

Nothing, therefore, ought to be accepted beforehand in the way of proof for these uncertain arts short of the operation which takes place through the imagination by means of a new heaven, new ascendant, and firmament. In proportion as this is good, strong and just in operation, so the judgments fall. Let us take an example. Speculation is the wishing to know this or that thing. This speculation produces imagination; imagination begets operation; and operation leads to judgment and opinion. Now imagination is concerned, not with the flesh and blood, but with the spirit of the star which exists in every man. This spirit knows many things: future, present, and past, all arts and sciences. But flesh and blood are crude and imperfect, so that they cannot of themselves effect what the spirit wishes. But if flesh and blood are subject to the senses, and are purged by them, then the spirit acts thereby, if only the body be consentient. These senses are supreme in the uncertain arts. It is for this reason they are called uncertain arts; for who can know what imagination is in them? What does the spirit which is given to them imagine and effect? Yet, nevertheless, the art itself is certain. But the artist who uses it may be unfit for the creation of new heavens and the generation of a firmament. Because, therefore, there is the element of doubt on these points, credence cannot be given to opinion, but one has to wait for the issues. At last, however, the force and efficacy of these things are discovered. Moreover, it is not to fight against God if the future is explored apart from him whom God has set over the nature of the firmament. Suppose, for example, that someone is going to be stabbed with a dagger. Let this be foretold to him by some other person. Premonitions of this kind have often been found true, though there might have been strong opposition. Now, if this happens by uncertain arts God himself suggests the prophecy, the prediction, and the premonition in a manifold way. So many prophets have predicted such things by dreams. It was by a dream Joseph was admonished about Mary. And since these things did not seem natural to flesh and blood, they were thought nothing of until, the event corresponding, they were believed. Now the uncertain arts, just like dreams and other revelations, are intelligible. God chooses to appear wonderful in His works. For this reason the uncertain arts are by no means to be despised, because they eventually become known by the result. God does not intend that we should always foreknow the future for certain, as can be done by the order of Nature. He wishes us to know, indeed, but sometimes to doubt; that seeing we may not see, as Christ Himself also was known, yet not known by the Jews, seen yet not seen, heard yet not heard.

It has been said above concerning the imagination that it draws the star to itself and rules it, so that from the imagination the operation itself may be found in the star. Just as a man with his imagination cultivates the earth according to his judgment, so by his imagination he builds up a heaven in his

star. The imagination of the artist in uncertain arts is the chief art and head of all. But in addition to this, imagination is strengthened and perfected by faith, so that it becomes reality. All doubt destroys the work and renders it imperfect in the spirit of Nature. Faith, therefore, ought to strengthen the imagination. Faith bounds the will.

Now, faith is threefold. There is faith in God. This produces what it believes. By faith mountains are moved, the dead are restored to life, sight is given back to the blind, the lame walk. What marvels faith produces if imagination looks to God with full faith which is unbroken and un mutilated. We find an example of this in the Saints of the Old as well as the New Testament, who, according to their belief, were made to obtain their wish, so that nothing was wanting to them. There is another faith in the Devil and his powers. Whoever has this faith, to him it happens as he believes, if only it be possible for the Devil to fulfil it. Lastly, there is also a faith in Nature, that is, in the light of Nature. He who believes in this obtains from Nature as much as he believes. Now more cannot be obtained from Nature than is given to it and conferred upon it by God. It is, then, imagination by which one thinks in proportion as he fixes his mind on God, or on Nature, or on the Devil. This imagination requires faith. Thus the work is concluded and perfected. That which imagination conceives is brought into operation.

Note an example of this. Medicine uses imagination strongly fixed on the nature of herbs and on healing. Here is need of faith that such imagination may act in the physician. If this is present, imagination conceives and brings forth spirit. The physician is spirit, not body. Hence infer that the same fact holds good in all arts. Moreover, there are physicians without imagination, without faith, who are called phantastics. Phantasy is not imagination, but the frontier of folly. These work for any result, but they do not study in that school where they ought. He who is born in imagination finds out the latent forces of Nature, which the body with its mere phantasy cannot find; for imagination and phantasy differ the one from the other. Imagination exists in the perfect spirit, while phantasy exists in the body without the perfect spirit. He who imagines compels herbs to put forth their hidden nature. So also imagination in the uncertain arts compels the stars to do the pleasure of him who imagines, believes, and operates. But because man does not always imagine or believe perfectly, therefore these arts are called uncertain, though they are certain and can give true results. The other sciences of astronomy hold their own even without faith or imagination, just as a mechanic who, if he follows his own order in working, has no need of imagination or consideration, and yet finishes his work.

But, it should be remarked, that by faith water can be crossed over without drowning or wetting; and a man without faith can do the same thing if he crosses the water by a bridge or in a ship. So also healing the sick is accomplished by means of medicine without faith; but by means of faith it is

found out what medicine is. Imagination takes precedence of all. What this discovers and gives, the other, who acts phantastically, uses.

Man is not body, but the heart is man ; and the heart is an entire star out of which it is built up. If, therefore, a man is perfect in his heart, nothing in the whole light of Nature is hidden from him. Thus from one point in Geomancy his whole will is accomplished. So, too, in Austrimancy, Pyromancy, and Hydromancy. The newly-born and self-begotten spirit shadows forth its knowledge and intelligence, in a figure and by a figure, as the man imagines, and remains firm therein without any dissolution. It is in this way the spirit of those sciences is begotten which at last operates and perfects that which is sought. The first step, therefore, in these sciences is to beget the spirit from the star by means of imagination, so that it may be present in its perfection. After that perfection is present even in uncertain arts. But where that spirit is not, there neither judgment nor perfect science will be present. Hence wonderful things are now found out in future and occult things, which are laughed at and despised by the inexperienced, who never realise in themselves what is the power of Nature in their spirit, that spirit, I mean, which is born in the manner described, and given and assigned by God for this special purpose.

To believe in the Devil leads to doubtful results, and the thing is mixed up with fraud. The reason for this is to be sought from God, who has determined that all who believe in the Devil should be or become liars like himself. But this faith in God is perfect and free from all defect. It is in Nature such as its power is. So, then, the uncertain arts are sciences, but with this condition added, that a new generation of the prophetic and Sibylline spirit shall take place by which the art and hand may be ruled and guided. Who was the inventor of these uncertain arts, I have not been able to ascertain. I know this, that these arts are very old, were held in great esteem by the ancients, hidden and handed down as special secrets. They spent their time on imagination and faith, by which they tracked out and demonstrated many consummate results. At present, so much imagination and faith do not exist ; but most men fix their minds on those things which minister to the pleasures of flesh and blood. These they follow ; to these they give their attention. These arts, therefore, even on this account, are uncertain, because man within himself is so doubtful. He who is doubtful can accomplish nothing certain ; he who hesitates can bring nothing to perfection ; he who pampers the body can attain to nothing solid in the spirit. Everyone should be perfect in that which he undertakes. So the spirit will be entire, and will conquer the body, which is nothing worth. The spirit is fruitful. This a man should have perfect within him, and put aside flesh and blood.

THE END OF THE PROOF IN UNCERTAIN ARTS.

Imagination has impression, and impression makes imagination. Therefore from impression descends imagination. Hence, it follows that what-

ever be the impression, influence, constellation, star—such is the imagination.

Hence, too, it ensues that imagination brings forth a new heaven above impression, and as the imagination, such is the figure of the heaven.

PROOF IN MANUAL MATHEMATICAL SCIENCE.

Though everything in the whole of astronomy be seen and discovered, yet there must be respectively numeration, dimension, occasion, and instrument. These are the principles of all sciences, that is to say, they are those things which concur with all sciences.

It is difficult to understand how numeration can be brought to bear in the case of stars, on account of their infinite number. The greatest part of them is never seen, or seen with difficulty, yet all of these must be reckoned in their number. It is, however, impossible for a man who only uses his eyes to count these. He who uses more than his eyes can count them, but not that other one.

The same is the case with geometry, for the measuring of height, depth, breadth, etc., is much too difficult to be undertaken by all. That is not geometry which is handed down among the seven liberal arts. Our geometry is astral, not terrestrial, and is known only to him who makes his measurement magically, not elementarily, but beyond the elements.

In like manner, the work of cosmography is material. The invention of the art itself is material, not elemental, but rather connected with nigromancy and divination. They who practise it examine the state of all things in heaven and earth, in what position they are placed and constituted, and with what conjunction they are connected. These matters are found out with so much subtlety that they will be described by-and-by with reference to the globe, instrument, and sphere.

Now, if a manual mathematician be so skilled a numberer in arithmetic, a measurer in geometry, an explorer in cosmography, an experimenter with instruments, then he may with the utmost propriety give himself out as a mathematician. Of these three departments does mathematical science consist, and these four make up mathematics. In this way the invisible body of astrology, which is known to the wise men, can be deduced.

But there are other mathematics, which only concern the Magi. They are very apt at making magical instruments, such as gamahei, images, characters. For these things, too, are instruments. The art of making them has to be sought in magic. Their preparation is part of mathematics. It is necessary, therefore, that these persons should be certain and well constellated, fit for preparing these things and disposing them in their place. That is, they must be virgins.

So, also, in Nigromancy. It is mathematical so far as making its preparation goes. Divination and signature need no mathematics. In nigromancy, however, it is necessary that an instrument of certitude, as also one regalia, and

other defensives be used; for spirits are very prone to obsession. It is, therefore, necessary that all should fortify themselves well against them, since the danger is imminent. But where that kind is (if I may use the expression) obsessible, it is worth while to know.

And so with regard to the mathematics required, as has been said, for the science of astronomy, let this be settled and determined, that herein is need for the most consummate prudence and intelligence. Nothing will be done by the common method. It is requisite that a man should be one who discovers these things in a more sublime way than by the ordinary and earthly light of Nature. There is need, I say, of a higher light, that is, of one that is above the artificial.

In this way, the mathematics in astronomy are proved by means of their own instruments, which agree with the great world. These instruments are so connected and bound up with the elements and the stars that they assume the form of a microcosm, which is itself made from the greater world, but consists of a smaller body, yet one which contains the universal world in itself like a quintessence extracted from it.

Here follow certain fragments and schedules on the same matter as the preceding.

CONCERNING THE KNOWLEDGE OF STARS.

Before all else you should be taught about the stars, what they are; for the astronomer is directed to the stars only and to nothing else. It should be known, however, in this place that elementary bodies are not concerned; also, that flesh and blood effect nothing, but only stars. In order that you may thoroughly understand this, I would have you know that man's senses are apart from his body. Whatever is not corporeal is either star or ether. But of those things which have not body there are many species in man. However this may be, man's sensation is certainly not flesh and blood. The body, therefore, is one thing and the sense another. The body is flesh and blood. The sense is soul. The soul, not the body, is the subject of astronomy. But the body is ruled by the soul. So, then, the body, too, is the subject of astronomy, because the body underlies the soul, is obedient to it, and ruled by it. Moreover, the soul is not something eternal in man; it is not the *summum bonum*, but is something mortal existing in man; it is the man built up in Adam. Since, then, the soul is subject to astronomy, and astronomy acknowledges the star alone as its lord, know that in the star there are many essences, that is, not one star, but many. It is known, also, that one star exists higher than all the rest. This is the Apocalyptic star. The second star is that of the ascendant. The third is that of the elements, and of these there are four; so that six stars are established. Besides these there is still another star, imagination, which begets a new star and a new heaven.

But although, as is now understood, there are seven stars, still the astrologer is not so conditioned as to act the astrologer in these seven. One is an astronomer of supernatural astrology; another over the ascendant;

another over the four elements, and yet another over the imagination. Each discourses of his own astrology, each one is an astrologer, and each sufficient in himself. Now, he who is an astrologer does not rest in one thing, but is conversant with all, if he does not expound his own species with which he is conversant. But that is an intolerable error which, neglecting the different kinds of stars, deals only with the horoscope, the ascendant, and the figure of the heaven. But though the rest of the horoscope should not be understood by the astrologer, this would matter little if he only confessed that these other parts were good and belonged to astrology. For there is a star of the firmament, that is, fire, which has nothing to do with the horoscope. There is a star of the earth, because the earth, no less than the heaven, has its astrologer. So water and ether equally have their own star, and in like manner the air. Let no one think there is only one star. There are more ; but beyond all that have been mentioned there is one. Beyond the fifth, again, there is another supernatural one ; and beyond this sixth, one which is hidden in man himself, making the seventh.

I speak of the seven kinds of astronomy which make up the entire man, as has been before pointed out. Moreover, these seven kinds are not under seven stars. But I say this, that astrology alone embraces these seven in itself, and hence it is necessary to understand how these seven stars are essentially conditioned. In this way a perfect astrological judgment issues forth, which can be obtained in no other way. For there must be a medium, by which the last operates, and another after the first of the four, add also in the last. I add this with the view of making quite clear what is not sufficiently insisted upon in astrology, that Mars in the sky must be thoroughly understood, which looks there like a live coal. For besides this many another exists, and, moreover, four others in the four elements, and, lastly, one in the imagination. What sort of smith would he be who could forge a horse-shoe but not a nail? What sort of a carpenter who could only cut his wood, and not join it? Science ought to be perfect in all particulars, without exception. What things should be joined, let them be joined.

In this place it should be specially considered that before the Deluge our ancestors, up to the birth of Christ, devoted themselves with constant zeal and unwearied labours to the discovery of wisdom ; and now, since the advent of Christ, all this has perished and become extinct, so that it is difficult to find any of it anywhere surviving. I will tell you the cause of this. Christ offered eternal wisdom to the world. When this was offered it was only right and just that the inferior wisdom should be repudiated, and the higher acknowledged. In this respect I confess that I write like a heathen, though I am a Christian. For by right the lower wisdom gives place to the higher. The wisdom of Christ is better than the wisdom of Nature. A prophet or an apostle is better than an astronomer or a physician. A prediction from God is better than one from astronomy. A cure wrought by God is better than one by herbs. Prophets speak infallibly. The sick are healed and the dead raised by apostles ; nor is there any deceit about these things.

Although, therefore, astronomy with its light was obliterated by Christ, who will impeach that light? And thus much farther I am commanded to say. The sick have need of a physician, but not all of them need apostles. So predictions need an astronomer, but not all need a prophet. Distribution being made, one part goes to the prophets, another to the astronomers; one part to the apostles, another to the physicians. Each has his own limitations. And so, indeed, astronomy is not taken away from or interdicted to us Christians, but we are commanded to use it in a Christian way. We are created by the Father for the light of Nature, and it is only right that we should know and practise this. We are called by the Son for eternity, whence this, too, should be known. So, therefore, the light is transferred to us from the Father as if by inheritance, and the light from God the Son here in this world to eternity. Neither hinders the other—the Son the Father, or the Father the Son. By this means man is able in both ways to learn, to know, and to work.

Having made this excursus, I end my treatise on astronomy, that you may know what the stars are, and what power the astronomer or astrologer has, in what respect the one differs from the other, and how the stars are situated. I have made mention of seven, not for the moment taking thought of one other star, which is the Signed Star of the Microcosm, so that really they should be reckoned as eight. In the following explanation and proofs all these things will be found connected together so that you will understand them.

I could wish, indeed, that those who put themselves in the place of Christ would shew themselves His real disciples. Then the light of Nature would be more rightly understood, that is, the miracles of God would be more carefully looked into. As it is, mere trifles and deceits are obtruded, in which there is no juice, no marrow, no wisdom. If folly and wickedness like this are allowed to succeed, what success can there be for the noble wisdom of Nature? In this way no consideration is given either to the wisdom of Nature or to eternal wisdom, but both lose esteem together. It is the way of the world to oppose every kind of wisdom. This being so, I thought it best not to refrain from writing, but by all means to go on. For the renovation of the world will be upon us; and then at length will be found that which is now sought after; and it will be so put before us that nothing of it will perish. It is a good thing to keep for our heirs a treasure predestinated to its special purpose. This is a real treasure, which is dug up with that end in view. Let no one think that I mean here to treat of anything save of the stars, and these are sufficiently explained, that being added which so far ends our knowledge. What we have deemed necessary we have linked together. And it should be known that the medium must be rightly understood; for without this nothing is done; this is so.

The higher star governs all lower things. Now, if there is no star in the earth, the higher star will affect nothing. But the star of the earth conceives the power of the higher star, and is capable of containing it, which else would not be the case. It is so also with the water and the rest, as we have said above.

ANOTHER SCHEDULE.

I. This threefold operation of astrology has one mode in a figure of the heaven. By this it is understood how the heaven stands related to lower things, so that a perfect judgment is able to be made.

II. COMETS. What we understand as such are newly-begotten stars, not produced at the first creation, but freshly exhibited by God. Such were the star of Christ and others like it.

IMAGES are made from terrestrial things endued with celestial powers, by means whereof they heal diseases and turn aside wounds in the case of those whom they mark.

CHARACTERS are words which heal diseases and act like images. They are drawn from the higher stars and are artificially assumed by the lower.

GROWING THINGS OF THE EARTH are like Characters and Images. Sometimes trees are brought to such a state as to put forth flowers. Sometimes these growing things are changed into frogs, serpents, owls, scarabæi, dragons, etc.

SPECTRES are visions which sometimes appear to men. They portend wars and other future evils, like comets. They should be explained magically.

DREAMS occur if the heaven and its sidereal spirit sport and joke with men, concerning the past, present, and future.

BRUTES are used when heaven works by them and foreshadows the future, so that by them we can be informed of some impending evil and misfortune.

III. THE MIND. This is when the mind itself within man expects something, good or evil. The origin of this is from heaven, which thus sways the mind, and impresses on it its good or evil fortune.

SPECULATION is when a man speculates and imagines within himself, and thereby his imagination is united with heaven, and heaven operates so within him that more is discovered than would seem possible by merely human methods.

PHANTASY is when a fool or silly person speculates, and heaven is at the same time in connection, and so operates by him that from the phantasy of a fool heavenly influence is recognised.

IV. VISIONS are apparitions artificially produced in mirrors, crystals, nails, etc.

ASTRAL SPIRITS are those which dwell in man on the earth, separable from man, and serving him, as long as they exist.

INANIMATES are men who are produced without the seed of Adam by the operation of Nature, such as are giants, lemures, nymphs, gnomes, etc.

CHIROMANCY is a science pointing out the stars by the lines in the hands, feet and other parts of the body, as we have said above in this treatise.

SCHEDULE CONCERNING THE PROOF OF MAGIC.

From what source magic proceeds, and how it interprets new signs.
"There shall be signs."

Besides, how impressions from above impinge upon lower bodies. Moreover, what effect heaven has with its signs, as earth with its medicines. In order that you may understand this source from which magic draws its interpretation, attend. All sciences, all branches of human knowledge, are from God. These sciences either come from the light of Nature, or are learnt by instruction, or are secretly instilled by God.

The first mode is that in which man learns by himself without the instruction of man. For magic is not learnt by its interpretation, unless it be spoken from on high.

The magician is born, as all arts are born, as is the case with those who find out new arts, as letters, or Montanica :—

The Magi have the new spirit, not created by this or that man. That spirit is born by asking, by searching, by knocking, out of the heart and by the spirit.

NOTE.—Whatever God says, He adds an interpreter thereto. Let none, therefore, ask, whence is this? It is from God. He, for example, has said, “There shall be signs in the sun and in the moon.” This needs interpretation. It cannot be explained by Nature, because it transcends the limits of Nature. The spirit must concur with what is said, and he who interprets this is a magician. The spirits are in the stars.

HERE ENDS THE TREATISE ON HERMETIC ASTRONOMY.

APPENDICES.

APPENDIX I.

CONCERNING THE THREE PRIME ESSENCES.*

CHAPTER I.

EVERY thing which is generated and produced of its elements is divided into three, namely, into Salt, Sulphur, Mercury. Out of these a conjunction takes place, which constitutes one body and an united essence. This does not concern the body in its outward aspect, but only the internal nature of the body.

Its operation is threefold. One of these is the operation of Salt. This works by purging, cleansing, balsaming, and by other ways, and rules over that which goes off in putrefaction. The second is the operation of Sulphur. Now, sulphur either governs the excess which arises from the two others, or it is dissolved. The third is of Mercury, and it removes that which changes into consumption. Learn the form which is peculiar to these three. One is liquor, and this is the form of mercury ; one is oiliness, which is the form of sulphur ; one is alcali, and this is from salt. Mercury is without sulphur and salt ; sulphur is devoid of salt and mercury ; salt is without mercury or sulphur. In this manner each persists in its own potency.

But concerning the operations which are observed to take place in complicated maladies, notice that the separation of things is not perfect, but two are conjoined in one, as in dropsy and other similar complaints. For those are mixed diseases which transcend their sap and tempered moisture. Thus, mercury and sulphur sometimes remove paralysis, because the bodily sulphur unites therewith, or because there is some lesion in the immediate neighbourhood. Observe, consequently, that every disease may exist in a double or triple form. This is the mixture, or complication, of disease. Hence the physician must consider, if he deals with a given simple, what is its grade in liquor, in oil, in salt, and how along with the disease it reaches the borders of the lesion. According to the grade, so must the liquor, salt, and sulphur be extracted and administered, as is required. The following short rule must be observed : Give one medicine to the lesion, another to the disease.

* The doctrine of the three prime principles being the foundation of the physics and philosophy of Paracelsus, it is the intention of this brief Appendix to exhibit that doctrine in connection with the origin of diseases.

CHAPTER II.

Salts purify, but after various manners, some by secession, and of these there are two kinds—one the salt of the thing, which digests things till they separate—the other the salt of Nature, which expels. Thus, without salt, no excretion can take place. Hence it follows that the salt of the vulgar assists the salts of Nature. Certain salts purge by means of vomiting. Salts of this kind are exceedingly gross, and, if they do not pass off in digestion, will produce strangulation in the stomach. Some salts purge by means of perspiration. Such is that most subtle salt which unites with the blood. Now, salts which produce evacuation and vomiting do not unite with the blood, and, consequently, produce no perspiration. Then it is the salt only which separates. Other salts purge through the urine, and urine itself is nothing but a superfluous salt, even as dung is superfluous sulphur. No liquor superfluously departs from the body, for the same remains within. Such are all the evacuations of the body, moisture expelled by salt through the nostrils, the ears, the eyes, and other ways. This is understood to take place by means of the Archeus from these evacuations. Now, as out of the Archeus a laxative salt comes forth, of which one kind purges the stomach because it proceeds from the stomach of the Archeus, so another purges the spleen because it comes from the spleen of the Archeus; and it is in like manner with the brain, the liver, the lungs, and other members, every member of the Archeus acting upon the corresponding member of the Microcosmus.

The species of salt are various. One is sweet as cassia, and this is a separated salt which is called antimony among minerals. Another is like vinegar, as *sal gemmæ*; yet another is acid, as ginger. Another is bitter, as in rhubarb or colocynth. So, also, with alkali; there is some that is generated, as harmel; some extracted, as scammony; some coagulated, as absinth. In the same way, certain salts purge by perspiration alone, certain others by consuming alone, and so on. Wherever there is a peculiar savour, there is also a peculiar operation and expulsion. The operation is of two kinds—that which belongs to the thing and the extinct operation.

CHAPTER III.

Sulphur operates by drying and consuming that which is superfluous. Whether this proceeds from itself or from others, it must be completely consumed by means of sulphur, if it be not subject to salts. Thus, a medicine for dropsy is made of the salts produced out of the liver of the Archeus to consume the putrefied and corrupt. But to remove the disease itself the strength of sulphur is necessary, to which diseases of this kind are subjected in virtue of their origin. Yet, it is not every kind of sulphur which will effect this purpose, and so it results from the nature of the element that every sickness produced by the nature of the body has its contrary from the nature of the element. This takes place both universally and particularly, and, consequently, from the

genera of an element the genera of diseases may be recognised. One is always the sign and proof of the other.

The same sign occurs in the case of mercury ; it assumes that which separates from salt and sulphur. Hence are produced diseases of the ligaments, arteries, joints, limbs, and the like. Hence in these diseases we must simply remove the liquor of mercury. But the ailments themselves ought to be removed by those things which are favourable and conducive to them, when proof has been obtained of the speciality of the thing in Nature.

CHAPTER IV.

The physician should understand the three genera of all diseases as follows. One genus is of salt, one of sulphur, and one of mercury. Every relaxing disease is generated from salt, as dysentery, diarrhœa, lenteria, etc. Every expulsion is caused by salt, which remains in its place, whether in a healthy or suffering subject. The salt in the one case is, however, that of Nature, while in the other it is corrupted and dissolved. Cure must be accomplished by means of the same salts from which the disease had origin, even as fresh salt will rectify and purify dissolved salt. The sulphureous cure follows as a certain confirmation of the operation in salt.

All diseases of the arteries, ligaments, bones, nerves, etc., arise from mercury. In the rest of the body the substance of corporeal mercury does not dominate. It prevails only in the external members. Sulphur softens and nourishes the internal organs, as the heart, brain, and reins, and their diseases also may be termed sulphureous, for a sulphureous substance is present in them. Let us take colic as an example. Salt is the cause of this, because this predominates in the intestines. In its dissolved state it produces one kind of colic, and when it is excessively hard it produces another kind ; for when it passes from its own temperature it becomes excessively humid or excessively dry. In the cure of colic by elemented salts the human salt must be rectified. But if a salt other than from sulphur be applied, you must regard it as a submersion of salt and not a cure of colic. Similarly, in the case of mercurial and sulphureous diseases, each must be administered to its counterpart, not a contrary to a contrary. The cold does not subdue the hot, nor vice versa, in congenital diseases. The cure proceeds from the same source as the disease, and has generated the place thereof.

CHAPTER V.

The genera of diseases are also divided into various branches, locusts, and leaves. Yet is there one cure. The mercurial disease is an instance, for mercurial liquor separates into many branches, locusts, and leaves. So all varieties of pustules are subject to Mercury, because the disease is mercurial. But some are subject to common and others to metallic mercury, some to mercury

xylohebenus, some to mercury of antimony. It is necessary, therefore, to know that liquor of mercury, which cures that which the salt of mercury dissolves, and it has also an incarnative virtue. For mercury is multiplex. In metals the liquor of mercury is like a metal; in juniper and ebony it is like wood; in marcasite, talc, and cachimia, it is like a mineral; in brassatella, persicaria, and serpentina, it is like grass, and yet there is but one mercury variously manifested. What has been said of pustules must be understood also of ulcers, of which some are cured by the mercury of persicaria, some by the mercury of arsenic, and some by the mercury of xylon guaico. Consequently, the physician should know the tree of diseases and the tree of natural substances, but of these there are indeed many. There is the tree of salt, which is twofold, namely, of rebis and of the element. There is also the tree of sulphur and there is the tree of mercury. Accordingly, the physician must guard against inserting two trees into one cure; he must remember that Mercury must be administered for mercurial, salt for saline, and sulphur for sulphurous diseases. To each malady let the corresponding remedy be applied. So are there only three medicines as there are three forms of diseases.

CHAPTER VI.

In fine, the physician should classify diseases under the name of their medicine. It is opposed to the usage of art to say that a complaint is, for example, jaundice; any rustic knows this. Let him say rather: This is the disease of Leseolus. Thus, in one word, you comprehensively express the cure, property, name, quality, disposition, art, and science thereof. For Leseolus cures jaundice and nothing else. I would persuade every one to become accurately acquainted with the trees, for he who knows not their seed is involved in fundamental errors. So also we must say that this or that is a disease of gold, and not that it is leprosy. In like manner let him speak of disease of the tincture, whence it will be evident that the complaint is one which belongs to age, for the tincture regenerates age. So also we shall have a disease of vitriol, and this is epilepsy, which is cured by the oil or spirits of vitriol. I have comprehended these matters under a theory because of the special mode from which it is first deduced and the mysteries of Nature which were hidden by alchemical authors. From these I prove my theory of the elementary in its production and the annual in its generation. Let us instance the operation and virtue of Mercury. There are many of these operations and virtues both in the elementated and the annual, which experience teaches to those who know in what things Mercury and in what things other spirits lie hidden. They also will know how to prepare that Mercury, and how to form one kind into a topaz, another into crocus Sandalius, a certain other into a spirit, and any they choose into the exaltation which best suits it. The power of flesh astringents and flesh formers for wounds proceeds from Mercury alone, in which there is no sulphur and no salt,

and the same is extracted and produced into its own pure liquor. But some Mercury is quicker in operation than others, as the Mercury in resin, which is quicker than that in mumia or tartar. The same process must be followed with sulphur and salt; the physician must understand their exaltations if he would cure his patients. I know perfectly well that Porphyrius would marvel were he to hear that Mercury becomes sapphire and a noble jasper because he has not seen it or handled it.

CHAPTER VII.

Ginger is diaphoretic by reason of the salt out of the body whereof it is made. But that virtue belongs to the fire, through which generations boil up, as is held in philosophy, and by reason of this boiling up it removes obstacles, and reduces or elevates the humours of sulphur, salt, and Mercury to the second, third, and fourth grade of ebullition. And as it is constituted out of the igneous nature of salt, so it also ascends a grade, by which grade the humidities distil through the pores and guttas. Thus purifiers perform their work by the sole force of salt, as, for example, honey. The balm of salt is situated in honey, which, consequently, does not putrefy. For balm is the most noble salt which Nature has produced.

Attractive force is of sulphurous nature or essence. Mastic is a sulphur thus produced, and so also opopanax, galbanum, and others. Nor must we accept the axiom of physicians, that it is the property of heat to attract. We should rather say that it is the property of sulphurs to attract. Hot things only attract in so far as they burn, but that which burns is sulphur, which is not fixed, and hence evaporates like gums. Laxatives also attract like a magnet from those places where they are not. But the reason why salts attract is that salt is impressed upon sulphur and coagulated by means of the spirit of sulphur. Therefore, it attracts from places more distant than itself. Thus there are aperients of sulphur, whether cold, or green, or purple red, of any fashion whatever. For it is the nature of aperient sulphur to operate and to drive before it every moveable thing which it reaches. Nor is it true, as physicians say, that it is the nature of cold to cause evacuation.

CHAPTER VIII.

What we should know about tonics is explained by the Archeus, who is like man, and remains hidden in the four elements—being one Archeus indeed, but divided into four parts. He therefore is the great cosmos and the small man, and one is like to the other. From Archeus proceeds the force of tonics. That from the heart of Archeus acts as a tonic to the heart, as gold, emeralds, corals, and the like. That which proceeds from the liver of Archeus strengthens the liver of the lesser world. Thus, neither Mercury, sulphur, nor salt, bring out this kind of healing virtue. But the heart of the elements sends it forth; from this does that flow. In the elements there is a force and potency which

produce the tree from the seed; thence it derives the strength by which it becomes erect and stands fast. So, also, by an external strength which the eyes see do hay and straw grow up. There is a like strength in animals, by virtue of which they stand and move. Moreover, there is another strength which is not visible to the eye, but is inherent and is the principle of health in the subject wherein it abides. This is the spirit of Nature, which if a thing have not, it perishes. This spirit remains fixed in its own body. The same strengthens man. In this manner does the strength in all the limbs of Archeus flow down into the lower world by means of vegetables.

APPENDIX II.

A BOOK CONCERNING LONG LIFE.*

BOOK THE FIRST.

CHAPTER I.

SINCE it is becoming to Theophrastus that he should philosophize further concerning long life, it is necessary, in the first place, and worthy to be known, in my judgment, what life is, especially immortal life, which subject the ancients completely passed over, as I believe, either because it was by them unknown, or was not sufficiently understood. Hence it is that so far they have made provision only for the mortal life. Now, I will straightway define what life is. Life, by Hercules, is nothing else than a balsamite mumia, preserving the mortal body from mortal worms and from dead flesh, together with the infused addition of the liquor of salts. Moreover, our life is long, for neither spirits nor the light of Nature affirm that it is short. The life of the ignorant is short, with art it is long. What is shorter than art? What is longer than life, at least among those who are not superstitious? Further, what is more durable, more healthful, and more vital than balsam? What is more transient, more weak, and more mortal than the physical body? Its measure varies between long and short. Why, therefore, is life long and why is it short? But that life which is of the supercelestial-physical is outside our rules. The pomp of our authority extends only over the mortal body, and is regulated, so to speak, by art unto the third terminus, unto the fourth, even unto the fifth. So much for the living body. What, then, about death, and what is death? Certainly nothing else than the dominion of balsam, the destruction of mumia, the ultimate matter of salts. The separation of immortal from mortal things produces a dissolution of the mortal

* This Appendix may be regarded as serving two purposes. The subject of long life is, of course, a highly important branch of the Hermetic Mystery, and whatever Paracelsus wrote concerning it should be included in a collected edition of his Hermetic writings. But the alternative treatise entitled *De Vita Longa* shews Paracelsus at his darkest, and, it may be added, at his worst. From beginning to end it is not only unintelligible, but almost incapable of translation. It is well that one specimen of his really arcane manner should be given to the reader, so that he may regard more hopefully the difficulties which encompass the comparatively lucid works which have preceded. The present version has been reasonably compressed, but it can only be affirmed that it interprets the original about as accurately as can be expected.

members. But this is accordingly called long life from the beginning. This also is short life, that is to say, it is said of death. Now, death is not life, but art is longer than this death. These are the dissolutions of life, also digested separations of that which is pure, of life long and healthy, both mortal and immortal, which the day of birth has united and conjoined, and that from both bodies. For every conjunction of perishable things of a diverse kind brings about dissolution, and how much more then will the conjunction of things natural with things which are beyond Nature be also followed by dissolution? For the cause of death is an empirical war, scarcely different from a duel taking place between the mortal and immortal. Disease may be compared to the javelin, and the Anthos to the breast-plate. What else is there over and above the struggle which these carry on? Herein is the fountain and origin of the generation of disease which presently death follows. Hence we understand what life is, both the mortal and immortal.

CHAPTER II.

In order to the clear understanding of what has been already said, I consider that I should next speak of the physical body. The end of the physical body is the sustentation of all those things of which we have been treating. Herein we should divide our examination after the following manner. In the first place, let its parts be considered, not only the special organs but those which are distributed over the whole body, including a right understanding of the marrows, the conditions, the uses of tendons, the forms of bones and cartilages, the nerves, the properties of flesh, the virtues of the seven chief members, bearing throughout this rule in mind. In the first place, we must thoroughly know the whole *rationale* and nature both of the physical body and the physical life. Now, the body and the life of the physical body are alike mortal. But from that which is mortal nothing can be elicited in the direction of long life, and thus with regard to the arcanum and the elixir, in this our Monarchia, neither the body nor the mortal life ought to be considered. For long life is a thing outside the body, is preserved apart from the body, and the body is inferior thereto. Moreover, when the body intervenes, a dissolution of either life takes place. On this subject the Empiric Muse and the medical sophists, following the method of the Spagyrites, preserved the body as a balsam to avoid occasioning death, whereas the balsam is the mumia of life, not of the body, forgetting, meanwhile, that death was not in life, for the death of life is nothing else than a certain dissolution of the body from the immortal. When this takes place, then the body dies. This was the mistake of Hippocrates throughout all his prescriptions, namely, that he administered to the body instead of to the soul, and that he proposed to preserve the mortal by means of the mortal. The body is a creature, but not so the life, and it is indeed nothing but the daughter of death. Therefore, from Archa descended that which is immortal.

But you will say that the Hippocratic Muse is not altogether to be referred to death. Be it so, but you will find a much easier way to health, since the Magnale has descended from above. For God gave unto Hippocrates only those things which are creatures, and among these even the chief mysteries were not imparted in their fulness. To this body God has added another body which is to be regarded as celestial, that, namely, which exists in the body of life. Hereof I, Theophrastus, affirm that this is the work and this the labour, namely, lest it collapse into the dissolution which is of mortal things and belongs to this body alone. And although dissolution can take place in that perishable body, and from this dissolution may be gathered a loss of the heavenly body, yet it cannot stand in the way of long life, by reason of the restoration which must shortly take place, so that the body may be altogether without any defect, for as fire continues to live so long as wood is present, even is it the same in the case of long life, so long as the body out of Archa is present, because the body as a body is to be preserved by the intervention of a body, which extrinsically grows strong. By means of this it is preserved. For the body is nothing else than the subject wherein the long life of the eternal body flourishes. So much for the physical body.

CHAPTER III.

It is needful that we should now state after what manner the matter of the same is to be preserved from all corruption. In the first place, whatsoever the body corrupts in itself the same is to be restored by a foreign body, that is to say, as the Monarchia of the Spagyrist does not admit, by the common nature of balsam which labours to preserve the body. For as it is impossible that wood should not be consumed by fire, so it is impossible for the body not to be at length corrupted by life. Therefore, those who are skilled in essential things, who think they can attain long life as a balsam, are the less to be heeded, since the nature of the balsam is rather to preserve the body from corruption lest there should be a vacuum in the body. For every vacuum is a disease of that place, or a sickness in the body, or, again, it is a certain atrophy of long life. For long life has place in the perfect body; in the imperfect it continually fails until it is dissolved in death. We know that the physical body can be sustained from death, and that by virtue of its innate mumia. These things have reference to a healthy life, not to a long one, which is a terminus for the physical body. But it will be worth while before we explain long life to first exhibit and ensure a healthy life. There are certain things which ward off diseases. It is to be observed, therefore, that corruption is to be removed from the body, and that which blazes forth in long life is to be again returned to the refrigerium. Wherefore, in this place the specifics of Nature which are prepared for this purpose must necessarily defend the body wasted by any disease, which is the duty of the physicians, but in long life nothing of the kind is required. And now concerning short

life. The specifics for given diseases have nothing to do with long life ; they are used solely to fortify the body. It makes little difference as to long life whether provision is made against fevers, etc. For as long as the spirit of Nature remains it preserves the celestial body, and the long life remains, together with the torture of diseases. Death here is not ready, for as long as the body is committed to the care of the physician there is death, but not the celestial body, for out of the body flows a poison into life which so inflames it that it bursts forth altogether into bad flesh, and seeing that death takes its origin from corrosives, and a certain arsenical realgar is for all, therefore it does not cease from the nature of a poison until it has satisfied its nature and consumed the body, converting it into incinerated eschara. Nor after the end will it cease from its malice therein. Therefore, a double praxis is to be begun—one to preserve life, and the other to repress the body and to alleviate it from day to day by reason of the corruption which takes place daily.

CHAPTER IV.

Whereas, by the nature of its creation, the body, and its physical life, passes as one part into the composition of the form, and because the physical body is the half, being the whole with the celestial, the physician ought to give more consideration to the question how the major physical man is to be preserved. For in the major life consists long life, but in the minor is the subject of mortality, and this is implanted according to predestination, both the body and the celestial life in the physical body, which, as an individual companion, accompanies this conjunction. Now, it is to be understood concerning predestination that there are some things which are free therefrom, and are therefore disposed according to the Divine Will, without the violation of any law. Further, when another conjunction of these two forms has been produced, of the natural, that is to say, and of that which is beyond Nature, into the form of Nature, and when it is completely elicited in the matrix that there are two fathers and one son, two mothers and one daughter, and that these four persons generate, this celestial seed produces, together with the mortal, that animal which appears when born, the elemental seed, and also the celestial at the same time. For in this place the corporal seed truly works, which also ought to be preserved in the predestination of the natural channel, for that which is beyond Nature ought to be considered in the first place, in order that by these things even those which are beyond Nature may be preserved. Thus a boy is designated as the heir of two inheritances—of the nature and of the essence which exists from Nature, according to the decree of the creation which comes forth at the same time, and of that also from him who is the parent beyond Nature, which parent rules the body and governs it. Out of the two, that is to say, from these parents, arises a conjunction of matrimony from on high. For Adam obtained nothing from his creation, nor was he made subject to ascending signs or to any other matters.

Nothing, therefore, out of the four stars can participate with man. For the stars and the homuncula are not divided, but man has received long life from that which is beyond Nature. In the first place, the physician is to be admonished in order that he may possess and use the truth, not following everywhere the figments of the unskilled, who have written most frigidly on the matter, that he should pay more attention to the things which are beyond Nature than to those which are according to Nature. Next, that he should be fairly acquainted with predestination. From this, as from a source, proceeds that monarchia which is beyond Nature rather than the specific and qualitative. Hence is spread abroad that error wherewith not a few are imbued, so that they determine to study the body, and attribute many more things thereto than of right belong to it. Wheresoever present life exists, it is not in its fulness, and therefore it exists without force. This, although it be dead, because it does not operate, is yet implanted in the body. Thus, in the case of one who holds a knife to his throat, a blow takes away long life. Whatsoever further life arises in the body is the congenital life of Nature. To this, however, attention need not be paid, but to that only which revivifies the body. Moreover, long life exists as a man with us, even as fire put among wood, whereby a man recuperates himself.

CHAPTER V.

We will discourse briefly of all these things, that it may become more clear as to what has been said concerning the parent which is beyond Nature, and is engrafted definitely on the natural, also the cause of the dual life of the natural body and the parent of that which is beyond Nature. From this it is clear that man is born of a double seed. For now from the time of Adam his complexion has changed with the nature of the generations in the flesh, by means of the importunate and unseasonable operations of persons in their contrary nature. It is clear that neither the sanguine, the melancholy, the choleric, or the phlegmatic temperament is born with us. From none of these has a complete temperament ever arisen. The physicians should now, therefore, pay no heed to the four complexions, for they did not exist in Adam, and much less then in his progeny, nor can four such diverse things co-exist. For first, as by the intervention of an unseasonable birth, the respective temperaments are corrupted, and this not without loss of children (for what is the temperament? It is the nature of the parent, and that without hot or cold, black or white); thus, also, in the body which is beyond Nature there exists a certain hereditary seed, and if two human beings of the same temperament unite, yet the supernatural semen under which both wisdom and life are hidden is never truly conjoined. There is therefore a dual marriage—one which human reason counselled, the other which is the conjunction of God. The former is not properly marriage, except as the eyes in the senses of Nature permit. In this, although a man in every way considers how he may excuse himself and his children, and require the Spirit of God to unite them, and profess to be

honourable, there is nothing but hypocrisy. The new change of locality is a proof. But the conjunction which is of God is properly marriage, and belongs to long life by reason of divorce which in this place cannot take place, a fact which none can understand without the intervention of children. For this reason many are sanctified in the womb of their mother; these are they whom God has joined, as she who was once wife of Uriah and afterwards of David, although this in all human judgment was diametrically contrary to a just and legitimate marriage. But God effected this union because either had attained a long life beyond that which is of Nature, as by heredity, on account of Solomon, who could not otherwise be born except from Bathsheba, by a meretricious power, with David. Therefore whatsoever is beyond Nature is as a treasure committed to God, a fact well known to those acquainted with the Spagyric art, and marvellously conducive to long life.

CHAPTER VI.

The practice, therefore, being divided into two, one for physical and one for long life, the physician will diagnose from the end, so far as the use of either shall come in. But of this life which is beyond Nature, whereof we are at present speaking, it must be ascertained whether it may be possible by any means to attain it in the physical life, since its sphere is beyond the powers which are accorded to Nature, and under it lie hidden the arcana of long life. For in this place the impressions which are beyond Nature are openly produced; they flow together into the supernatural life, even as the firmament passes by influx into the body which is according to Nature, and although supernatural impressions appear, yet the knowledge of them is obscure. Hence it is that they received the name of impressions from some, from others that of incantations, from others that of superstitions, while yet further names were bestowed on them according to the rules of magical art. From these proceeds that which the Greeks term *Magiria*, treating exclusively of impressions, which they call incantations and superstitions, which also belong to the supernatural body. It is important to treat of the supernatural body in relation to its impressions, because the whole of *Magia* has been perverted to a foreign use by astronomers; it has been wrongly called superstitious, and a certain medical sorcery. After the same manner they referred necromancy and nigromancy to the same source, so that each might be regarded as an idolatry, which things, unless an influence intervenes, would come at once to silence, for although the manes may answer on every side, nevertheless this does not happen without the influence which is beyond Nature, a thing which is wrongly believed to be an imposture of Satan because it is impossible to man, whereas it can be easily produced, as you see in the case of the exorcisms of fantastic spirits. The whole of cabalistical magic is contained in the separation of the body which is according to Nature from the body which is beyond Nature, and is implanted in us as an image, to be sustained

and administered, so that although absent it may establish communication between those who are widely separated, and may manifest unknown thoughts. This at the same time may be very difficult for those who are uninstructed in the cabalistic art, seeing that a great mistake has been made even by its professors, a fact which is indicated by their translations out of the Hebrew and the Canons of the Spagyrist. Hence we conclude concerning long life as follows : that out of the supernatural influence not only incantations but the arts of images and gamahei have proceeded. Philosophasters have referred this influence to the stars of the firmament, and out of the coals of heaven have feigned a Mars and Jupiter to govern that body which is beyond Nature, whereas this does not pertain to them except in regard to mortal things which have nothing to do with long life. Hence the things which are to be used for long life are to be extracted from supernatural and not from natural bodies, for the whole of that supernatural force is magic, and every magus obtains the influence which is beyond Nature, together with the body in which it inheres. The body which man bears about within him is invisible to man, as is the case with generation, etc.

CHAPTER VII.

But that you may rightly understand after what manner incantations or manes came to be considered superstitions, and how they since came to be abused, so that they ought neither to be called manes nor superstitions, know that the beginning of these things was from the Protoplast, who united a supercelestial and mortal body in his own long life. Now, every phantasy and imagination is a principle and special thing in supercelestial bodies. As the mortal body preserves itself in its own special substance, so does that supernal body in the imaginative, as phantasy is of that body, and is indeed itself a body. Whosoever would, in any sense, control a supercelestial body of this kind, must be thoroughly acquainted with the method of resisting the imagination, for the more frequently that body has intercourse with mortals, with the more peril do these things accompany the body. The protoplasts clearly overcame this, but their posterity, having no solid and perfect knowledge hereof, deceived themselves like madmen and fools, nor are they unjustly considered such. Moreover, that supercelestial body is in no wise dissimilar to the stars out of a certain fire, out of which invisible things there arises a visible cloud. Such also is the property and nature of supercelestial bodies that out of nothing they clearly constitute a corporeal imagination, so as to be thought a solid body. Of this kind is Ares. Those who ignorantly perverted, and knew nothing of the foundation upon which this art is built, feigned that there were manes, which originally were called Fate, and afterwards superstitions and incantations. Out of these supercelestial bodies both nigromancy and necromancy originated, and so also geomancy, hydromancy, pyromancy, and lastly also the arts of mirrors, the divining rod, divination by key, and innumerable other things which are classed among superstitions.

CHAPTER VIII.

But, that the physician may know all things fully, let us remark the examples of the elders who laboured very greatly in the said magic, that they might obtain long life, without any mixture of the Hermetic rejuvenescence, and without the art of Spagyric experience, being of the body alone. We see the age of Adam and Methuselah, with whom the art of magic began. It is vulgarly thought that the Protoplast was predestined to attain the greatest possible age, but that the smallest measure of years is allotted to ordinary men. The latter point is much insisted on in the schools, but is by no means to be approved. The source of Adam's longevity was magic, by means of which influence he always lived. The death of Adam is ever to be deplored by posterity, not so much because of the fall, but of the science which died with him, who alone retained the spirit of the highest life beyond that which was of Nature. Understand the same of Methuselah, who was next to Adam. There have been other men, indeed, not unworthy mention, who surpassed the ordinary length of human life, as Moses, who completed one hundred and twenty years, yet not according to the method of magic, but rather of physical life, to whom was joined so strong a nature that it attained a great age without difficulty. Like instances occur in our own days, and will be found occasionally to the end of the world. Some, again, by the help of magic, have lived to a century and a half, and yet some have attained to a life of several centuries, and that by the adjoined force of Nature, which exists fully in metals and in other things which they call minerals. This force lifts up and preserves the body above its complexion and inborn quality. Of this kind are the Tincture and the Stone of the Philosophers, because they are elicited from antimony, and, similarly, the quintessence. These and other numerous arcana of the Spagyric art are met with, which in all manners restore the body exhausted by age, return it to its former youth, and free it from all sickness, a fact which is well known to all acquainted with this monarchia.

CHAPTER IX.

There is also another way of preserving long life, which Mahomet prescribed to his disciple according to magic, and endowed him with many years ; nor did he do this from God, but from the influence which is beyond Nature. Because Mahomet, as a magus, exercised this method for the unskilled population, not for himself, he has won an immortal name. Archeus preserved his life for several years beyond a century, a thing which was laid to his discredit, and was referred to idolatry. He was equally skilled in cabalistic art with those three Sabeen magi who came, not by natural magic, but by the force of horses, to the Bethlehemites, and was acquainted not only with that which was of long life, but that which is of the intellect beyond Nature. All these things proceed from supernatural influence, which rules and governs the body. These magi were afterwards followed by those who falsely claimed for them-

selves this almost divine name, among whom was Hippocrates, who preferred rather than that his daughter should remain in her actual form, to transform her outward natural influence into a body alien from all Nature—an evident proof of the power of incantation. In the same way Serellus attained long life and studied the metamorphosis of Nature. In the conservation of that body which is beyond Nature the most part were equal to Methuselah, but they made great errors in the transformations ; their operation passed into a fantastic body, by reason of their ignorance of physical things. There are many, indeed, whose length of life will persist up to the last day. Such metamorphoses, however, take place without long life, as we see in the case of sea-wolves, who, if restored to their pristine form, again become subject to mortality. Judge also in like manner concerning the fantastic body, on the intervention of food or the osculum of man. All these things are subject to the deltic impression, but before they pass into the deltic impression death is not present, except as far as a mixed fantastic body is admitted, which produces a narcotic form, preserving even to the last day. Moreover, many have lived upon the life of another, and that according to the rule of the Deltic Nature, among whom was Styrrus, who when struggling for life is said to have attracted to himself the strength and nature of a robust young man, who chanced to stand by, so that he succeeded in transferring to himself his senses, thoughts, and even the mind itself. By this imagination Archasius is said to have attracted to himself the science and prudence of every wise and prudent man. Such is the strength of mind in which that supernatural vigour exists, that it sometimes satisfies a glowing and, what is more, a ravenous concupiscence. Hence arises that contempt of images and gamahei among those who abuse this image even to destruction. Hence are those words, characters, signs, forms, and figures of hands, imprecations and orations, which are the principal cause of incantation, and, what is more, of words which are commonly applied to wounds and other diseases. Finally, whatsoever can change into this form does so by the force of that body which, beyond Nature, is implanted in us. Further, out of those impressions which are beyond Nature arise the stars of the firmament, Venus and Saturn, and other planets, so that that influence which is beyond Nature rules and governs inferior things. Whatsoever, therefore, takes place in gamahea and imaginations, by the accession of planets and signs, all this can be transferred to the superior signs. Wherefore those bodies which are perishable can easily be set free from death by that supernatural force. Moreover, Venus and Saturn, Mars and Mercury, exercising their force in the superior firmament, have endowed the most part of mortals with immortality, and that without any human operation, by the accession of imaginations, of whom not a few exist, visible and invisible, both on earth and in the sea. Some of these have attained this point by means of Deltical impressions, not, however, the nymphs, as is the case with animal generations.

A BOOK CONCERNING LONG LIFE.

BOOK THE SECOND.

CHAPTER I.

HAVING spoken of the several arcana which restore to its pristine health a body affected by diseases, we will begin where we last left off. To finish what we handed down in former books, and to shew how the physical body may be preserved like a balsam, the particular arcana and the matter of this second book are referred to the same body. Although, then, one and the same preparation holds good, still the practice comprised in this elixir differs from that special mode of healing. In this second book the first places are held by Flos Cheiry* and Anthos. In this is comprised the arcanum of elixirs, and that by the force and virtue of the whole quintessence. At the outset, therefore, in order that each may be the more clearly noted, I will, with this view, point out in a few words what the quintessence is. Nature procreates the four elements, from which a certain tempered essence is prepared by the spagyrist, as is expressed by the Flos Cheyri.*

Now, here I think it matters little what the art of Lully teaches on this matter, since he wanders more than sixteen feet from that universal Monarchia which the Archidoxies prescribe. One thing is Extraction, another Confortation, another Melioration, to adopt the terminology of these men, of which Raymond makes mention in that treatise which is entitled "The Art of Lully," and from these he has made a false estimate of the quintessence. Since these are mere trifles rather than truths, we will pass them by in silence. But the Flower of Gold, the Flower of Amethyst, and lastly, whatever is of a transparent nature, pearls, sulphurous bodies, cachymiaë, and whatever belongs to the aluminous zerebothini, including all the genus of other things which the water produces, such as carabæ and corals,—these, I say, are all capable of forming quint-essences according to the rate of temperation which is wont to be produced by the spagyrist through the intervention of a corruption of the elements.

CHAPTER II.

Moreover, the sum total of the whole matter lies in this (since what is said in the book on the Elixir must each and all be referred to the subject of long

* Thus differently spelt in the original.

life), that universal Nature is reduced to the spagyric mixture, or temperation, which is nothing else than the goodness of Nature, in which is nothing that is corruptible, nothing of an adverse character. And yet, by another method and a different one, the same goodness of Nature is found in the tincture, according to the prescription of Nature, which exists in the Philosophers' Stone, in antimony according to the Nature of the crow, in sulphur according to the effect of the Lunary, and in the same way in other cases. Nevertheless, in all these there is one and the same temperation which among metals lurks under Mercury (I mention Mercury, which is in all metals), among gems under the crystal, among stones under the zelotus, among liquids under carabe, among herbs under valerian, among roots under sulphur-wort, among bitters under vitriol, among flints (say rather among marcasites) under antimony. Moreover, as Mercury is in all metals, so is antimony in all flints (or rather marcasites), vitriol in salt, and melissa in herbs. These are names of the tempered elixir. It should be remarked, too, that in elixirs following upon the sulphur of those substances which certain people call minerals, there is a quintessence, the Mercury of the Metals, from which is extracted the nature of the body. Cheyri prevails in Venus, Anthos in Mars; and the force and nature of these are not only that they drive away diseases, but that they preserve that body for a long life which is dependent upon the lower influence. With this view we will further say that the Elixirs of Long Life shall be embraced under many and various names, since the force of them all is one and the same. To us (if, perchance, you wonder at this mode of treatment) it has seemed good in the meantime to play with words.

CHAPTER III.

Of all elixirs, the highest and most potent is gold. We will, therefore, treat of this first. If you understand the principle of this, you will understand that of other substances which are separated from their bodies. The rest, which are not separated from the body, will be indicated below when we come to mention wine. Concerning the Elixir of Gold, then, so far as relates to practice, act thus: Resolve gold, together with all the substance of gold, as a corrosive, and continue this until it becomes identical with the corrosive. Nor let the mind revolt from this method of treatment; for the corrosive excels gold, so far as it is gold, and without the corrosive it is dead. The quintessence of gold, therefore, without the corrosive, we assert to be useless. It follows, then, that the resolution must be renewed anew by means of putrefaction, although the corrosive adheres somewhat closely. For if the force of gold is so great that it preserves the body and renders it free from all sickness, nor allows it to be corrupted, how much more itself, and that without any infection? It corrects and purifies everything that is not pure. The corrosive, therefore, in the case of gold, ought not really to be called a corrosive at all. For the force of the arcanum overcomes all poison. All realgar dies in the elixir of gold, and goes off to the tincture which excels in medicine. And thus it is

in this way that Potable Gold is produced after putrefaction. The common practice of the Spagyrist prescribes this dose, or rather a certain harmony. Lastly, you will notice about the elixir that wherever an elixir is brought to bear on anything, it so transmutes it that it remains fixed in a form similar to itself.

CHAPTER IV.

CONCERNING PEARLS.

Now, in order to give greater clearness to what we have said about the quintessence, it should be remarked that nothing is nearer to gold than pearls. You must, therefore, reduce to temperation the four elements which are in pearls, whereby exists a quintessence without any loss of substances. Moreover, if you wish to transmute pearls into a quintessence, according to prescribed rule, act after the method of a quintessence. Do not change anything except the principle, in which it is necessary there should be joined the ultimate matter which exists as first matter in finishing the quintessence of Sol. This is extracted by a prescription of the following kind: First of all reduce to liquid a lemon newly re-elevated, in which pearls have been calcined, dried, and resolved; this serves for a resolution into the element, in which resolution is no complexion whatever. There is herein an universal force like a quintessence. I cannot in this place advise you to admit that method of extraction which Archelaus prescribes, nor any other spagyric separations of that kind. The mode of transmutation given above not only restores to their former power those members which are weak, but also keeps in the same vigour those which are strong and robust. So there is much more in pearls than in other sperms; and among these I consider the most excellent are those which come from the oysters.

In this place, too, the homunculus treated of in the Archidoxies bears no small part. The necromancers call it the Abreo; the philosophers name such creatures naturals, and they are commonly called Mandragoræ. Still, error prevails on this subject through the chaos in which certain persons have involved the true use of the homunculus. Its origin is in the sperm. By means of complete digestion, which takes place in a venter equinus, a homunculus is generated like in all respects, in body, blood, principal and inferior members, to him from whom it issued. We will, however, in this place pass by its virtues, because the subject has not been dealt with, as that of pearls has, by those who are acquainted with this matter.

CHAPTER V.

CONCERNING THE EXTRACTION OF THE QUINTESSENCE FROM HERBS.

We have made mention above of that Quintessence which should be produced without any extraction, and it is necessary to regard this subject in connection with our present opinion. The quintessence cannot be got from herbs without extraction, on account of the diversity of those essences which

are included under one substance. These must be separated, so that the herb shall remain a herb and the quintessence a quintessence. Although in every herb there are four duplex elements, still the quintessence is not duplicated, but one part only. The other part, which belongs to the substance, we relegate to those arts that are special, and will treat of what belongs to the elixir. This is made quite clear by the example of melissa. Digest melissa for a philosophic month in an athanor; then separate it so that the duplicated elements appear separately, and immediately there will shine forth the quintessence, which is the Elixir of Life. Such is the case, too, with generous wine, and differently in other instances. In nepita it is bitter; in the tare, like clay; in tincium, blackish; in the hop-plant, slender and white; in the Cuscuta, harsh. In other cases it must be judged in like manner according to the prescriptions of experience.

Moreover, when this spirit has been extracted and separated from the other, behold the wine of Health! The philosophers have strenuously tried for ages to attain this; but they have never succeeded. A good part of them, followers of Raymund, have emptied several casks, in order to extract the quintessence of wine, but they arrived at nothing save burnt wine, which they erroneously used for spirit of wine. All that is necessary on this subject will be found elsewhere, in the "Philosophy of Generations." Enough to have warned the Spagyrist under what form the quintessence exists in herbs, and what it is worth while to investigate in them.

CHAPTER VI.

CONCERNING ANTIMONY.

As antimony refines gold, so, in the same way, and under the same form, it refines the body. There is in it an essence which allows no impurity to be mixed up with that which is pure. No one, even though he be skilled in the Spagyric Art, can apprehend to the full extent the power and virtue of antimony. In the beginning of things antimony was developed, and was so related to the metals, which were produced by the water, that, when the Deluge was over, its genuine force and virtue remained after such a manner that it directs itself under the form of influence, and has never lost anything of power or virtue. With due cause, therefore, we assign to this alone everything which is attributable to minerals, whereof antimony includes within itself the chief and most potent arcanum. It purifies itself, as well as other things which are impure. Nay, more, if there be nothing wholesome present, it still transforms an impure into a pure body. This has been dealt with in the exposition of leprosy; and spagyric practice makes everything clear and comprehensible. But, not to digress at undue length, let us come at once to the mode of preparing the virtue of antimony (one jot or tittle of which is better than all the texts in your possession). First of all, take care that the antimony be not corrupted, but that the total, whatever it be, remains entire,

without any loss of form, for, under this form lurks the arcanum of antimony, which should be impelled through the retort without any *caput mortuum*, and be reduced anew in a third cohobation to the third nature. Then the dose will be four grains of it given in the quintessence of melissa. To this the Archeus of the earth assigns nothing further.

CHAPTER VII.

CONCERNING SULPHUR.

It is specially difficult, yet worthy of all celebrity, to realise the power and nature of the earth which procreates balsam, the characteristic whereof is that it suffers nothing to putrefy. But think of the resins, whereof the principal ingredient is sulphur, and there is nothing which deserves greater praise. In sulphur there is a balsam which none who study the different arts should fail to remember. In it are the balsamic liquids which do not allow wine or anything dead to putrefy, but do so conserve the body that there can attach to it no evil influence, natural corruption or any impressed on it from without. None need be surprised that so great a power is in resins, or that we speak its praises beyond the balsam which grows on the earth, and but, as it were, illustrates the force and virtue of this balsam. In those which are occult much more is found than in those which are manifest. And so, too, much more is found in sulphur than in the other departments of resins. In the case of sulphur, in order that we may arrive at the method of treating it, proceed thus: Elevate sulphur by colcothar in the spagyric manner. Do this so long as the fire does not get the mastery, as colcothar is wont to do in the case of sulphur. This same fixed spirit is the balsam of the earth, concerning which we write very little in this treatise. Its virtue is made clear by experience; and, though certain gums and resins, and other substances of this class, have the same nature as balsam, still, I think that among these sulphur is the first and the best.

CHAPTER VIII.

CONCERNING MERCURY.

The Elixir of Mercury, prepared in the same way as that in which it is used for transmuting metals, avails in the very highest degree for driving away disease. Its rust, which the followers of Lully falsely call its flower, is nothing but death. As death consumes and wears away the body, so does rust affect the metal. In whatever way, then, this tincture affects it, the result will be that it ministers to long life, and the more efficaciously and powerfully in proportion as (let the expression be allowed) it reaches the grade of a poison, and the more actively and subtly its preparation has been repeated. Let no one be alarmed by those fables of Rupescissa, who, as his custom is, has written at once rashly and frigidly on this subject, namely, that, in the tincture of the body, you should altogether avoid gold and substances of that kind, which belong to Mercury, and, lastly, whatever is prepared from the

spirit of salt or of arsenic. Albertus and Thomas have approached more nearly to the tincture of mercury (the virtue whereof is of subtle sharpness, though it derives its nature from the Archeus), but in their excessive coagulation, and also in the degree of repetition wherein they have overwhelmed the whole affair, they are entirely wrong. In preparing the tincture they verge on the true tincture, as in the following opinion: As metals are transmuted and fully fixed, so also is the body in the following manner: Reduce mercury in elevation until it assumes the form of a fixed crystal; then digest it to the point of resolution and coagulation; join it with gold so that this shall produce its ferment. Then proceed according to the prescript of Hermes, and continue to the completion of the stone. The dose thereof is one grain. Its power and virtue preserve the whole body in its entirety.

CHAPTER IX.

CONCERNING THE SPIRIT OF WINE.

When I mentioned the essence of herbs above, I pointed out that it is nothing but wine, which I would have you thus understand. The spirit of wine proceeds from its substance. Wine is a subjection of this just as marrubium is of proper and native wine. In order, therefore, to get the spirit of wine as an essence, which is truly an elixir, understand thus: As a pound of persicaria sends forth ℥ij. of wine, so a pound of wine takes not more than one scruple. The rest is the phlegma of wine which has no bearing on the present elixir. Let the preparation of this essence proceed in the following manner: Digest in horse dung wine which has been poured into a pelican. Continue this for a period of two months, and you will see a thin, pure substance, like a sort of fat, which is the spirit of wine, spontaneously evolved on the surface. Whatever is below this is a phlegma possessing none of the nature of wine. The fat, put by itself in a phial, and separately digested, is of the utmost power for long life. And not only does it avail for long life, but this preparation can also be adapted to other purposes by the intervention of cinnamon, xylobalsamum, myrobolani, and other things of this kind, in the following manner: Mix, and by the use of digestion so join these ingredients that with the addition of the above-mentioned elixir and of gold, a medicine shall be prepared which removes all contractions and gives free play to the limbs.

CHAPTER X.

THE EXTRACTION OF MUMIA.

The extraction of the virtues out of mumia is made magisterially (if I may use that expression) by its mixture with the essence of wine taken from chelidony. Digest it for ten days, and distil for five. Moreover, let it be once more digested afresh until the mumia turns into a liquid. When this takes place above as well as below, these portions being separated from the

middle, add the sixteenth part of balsam from woods, and a twelfth in weight of the sealed earth of Pauludadum with the same quantity of liquor Horizontis. Digest this for its month, then shut it up and reverberate it. In this way it ascends to its highest degree. Of all those preparations which are dominated by poisons, this is the most powerful and efficacious.

CHAPTER XI.

THE EXTRACTION OF SATYRION.

Whatever has to be extracted from satyrion must be procured by means of separation. In satyrion lurks a Saturnian power which, as it were, secretly steals away and weakens the virtue which satyrion possesses, and so its exaltation reduces it by thirty grains. Hence it not unfrequently happens that when satyrion is used it fails in its effects. It is worth while, therefore, to consider how not its form but only its virtue shall be separated. This must be done in the following way: Let satyrion be digested with panis siliginis in a venter equinus for a month. When this is over, take it away from the bread, and throw away the dregs. Then let the blood of the satyrion be digested thoroughly and allowed to effervesce. When this effervescence has subsided you have obtained a medicine which leaves far behind all others for every purpose which relates to conception.

CHAPTER XII.

THE EXTRACTION OF THE FIRST METAL.

The most complete and perfect conservation of the body is attained by the First Metal; and this is so efficacious, not by the nature of its own strengthening power, but rather by virtue of the minerals which it contains. For, in order to conserve long life, it is necessary to use the prince of minerals, since minerals make up the physical body. This is the temperament which singly and alone resists corrosives, and Ares operates as much chemically as by means of the Archeus. Moreover, it blends the strongest and the weakest body in one degree. Strength, indeed, is that which exceeds the strength of Ares, and weakness is that which falls below it. That which is taken away from the stronger is conferred upon the weaker, and so each is reduced to a mean. It is done in the following way: Take the liquor of coral, in its most purely transparent form, to which add a fifth part of vitriol, which is from Venus. Let these be digested in a bath of Mars for a month. In this way the wine of the First Metal separates itself to the surface, and the vitriol of Venus lays hold of whatever dregs there may be. Thus the First Metal becomes a clear, transparent, and ruby-red wine, whereof the special virtue and power is that of all the minerals over the whole physical body.

A BOOK CONCERNING LONG LIFE.

BOOK THE THIRD.

CHAPTER I.

LEST anything should be omitted which concerns Long Life, it is proper to observe that within the testa and over and above that quintessence, there is enclosed something out of which a certain conjunction, both of the corporal and of that which is beyond the body, outside of that quintum, produces the body into long life. Concerning this understand that it is absolutely nothing and invisible. But in the body there is something exquisite which not only confers long life upon the microcosmic body, but even preserves Dardo itself whole even to the thirtieth year, and guards the anthos and the great cheyri up to the third age. This microsmic thing sustains both the anthers and the leaves which ought to remain in their own conservation throughout the whole anatomy of the four elements. Wherefore at this point the physician must note that the whole anatomy of the four elements can be contracted into a single anatomy of the microcosm, yet not out of the corporal, but from that rather which preserves the corporal. Indeed, the superquintessence sustains the quintessence itself as well as the other four. If it be proper to give it a just and true nomenclature, I may rightly call it the balsam itself out of which life is preserved, which rightly separates itself from the balsam of the body, and is such a balsam as to surpass Nature herself. This surpassing of Nature is by a corporal operation.

CHAPTER II.

But of that balsam whereof we have now spoken, which ought to produce long life, a declaration takes place in two ways—one which is secret and happens by accident, whence it follows that long life is dispensed to the majority, who yet have no idea what it is in itself. But the other mode takes place by arts, that is, by those who are able to obtain that conjunction, nor can it take place without a medium. For herein is situated the point of the matter, because in the Iliaster both long and short life are found. For that which is adjoined to herbs has its terminus ; similarly, also, there is a terminus to that which is of the water of minerals ; in the same way

tereniabin, and so also nostoch. Besides all these things such and so great is the strength and power of the conjunction itself, that everything which is produced out of the four elements is conserved above its first terminus, and that is the terminus of Iliaster, by which, indeed, we wish overcome that subtle man who says that a terminus cannot be crossed over, which, if it does not take place, and passes over, is for this and the other reason. For there are two of them, one of which cannot pass over, because the terminus is placed in the nature of the microcosm; one is in the nature of the elements, the other in that of the quintessence, moreover, also, the other is out of the last Iliaster. For these termini consist in the power of the physician, who in these can change what he wishes according to his will, except only the fixed, where he ought to expect the end together with the mutation of himself.

CHAPTER III.

Understand this Iliaster as follows, since here three virtues are found besides the quintessence. For there is the Iliaster of sanctity, the Iliaster of the *Paratetus*, and finally that great Iliaster. Of the first understand that such sanctity imparts long life, according to the industry of him who uses it; the second dispenses it by favour; the third, being bruised, consists without harm in long life. Hence consider the Iliaster comprehended in long life. All three are together subject to the microcosm, so that it may reduce them into one gamonymum; but the other is in no wise controlled, for it is acquired according to favour. With the third the case is exactly as with the Enochdiani and the Heliezati, just as it is clearly the case with Aquaster. In the first place, therefore, it has its origin from the elements, as the testa shuts up, and the superquintessence is attributed to the arcana themselves. The second is ascribed to the Magnalia, the third is out of its own specifics. Hence it follows that the dwellers in the earth, the nymphs, the undines, and the salamanders receive their long life in an alien essence. For there is a death, a time, and a will of that third Iliaster, and he it is who grants to the ear of corn that it should bear more than it would by Nature, as also the fragrance of myrrh, and the strength in Leris. This being so, the physician must consider that a conjunction of this kind takes place in a similar manner as the tree of the sea when once fixed and reduced to bondage thereby, can also become an approved and constant cheyri; so by a similar conjunction in the microcosm the same thing comes to pass.

CHAPTER IV.

But concerning that first Iliaster, understand that it exceeds a thousand species, not that one excels another, but rather for this reason, that every microcosmus has its peculiar and, what is more, perfect conjunction and virtue: so great is the virtue and potency of Iliaster that by it a dead body is preserved alive, for this reason, because that first terminus is transmuted.

This conservation of long life transcends our powers, but not those of the higher powers. Its sustentation takes place as follows—that it confers long life, yet without the expulsion of the disease. Life, indeed, it affords, but not good health, yet sometimes it affords both, being long life of the kind which proceeds from that Iliaster. It lasts for years and is extended, as, for example, to the tenth year in the case of one who ought to have died in the fifth—a thing which takes place both by reason of the superior and inferior conjunctions.

CHAPTER V.

With regard to the true Iliaster, the fact is that nothing of the kind can be reduced without signification or necessity towards the greater Iliaster, which you are to understand as follows. The greater Iliaster which is to extend long life of this kind can by no means do so where there is no place for long life. Hence observe that such a thing cannot take place without transmutation of the place as well as of the elements. That is to say, as the four mortal elements are in the testa, every moment producing a new generation, they lead forth the same to death. In another direction there is a fixed (generation) in its firmament which remains unshaken, neither causing disease nor death. Such fixed spirits suffer nothing to perish altogether, whose long life is immovable and firm even to their transmutation again into the first. The similitude is, indeed, taken out of the text because according to the fixation, as I have said, of the firmament, long life is more prolix in one confirmamentum than in another, although each arrive at their first terminus only. However, some few inhabitants accompany this kind of transmutation, so it is permissible to call it, into the tenth or even into the twelfth, whose death follows on the destruction of that great firmament, where bodies, both celestial and terrestrial, shall be shaken, yea, the supercelestial also. Notwithstanding, this takes place without any distinction of Nature, for in the first moment when such mutations happen the putrefaction of Nature commences, and that is with a still living body.

CHAPTER VI.

Now, concerning Iliaster, it is necessary, in the first place, that the impure animate should be depurated without separation of the elements; this takes place without any corporal and mechanical labour, which disposition arises according as man grades himself in mind that he may be rendered like to the Enochdiani, not that he desires the Enochdianian life, for in his mind he differs diametrically from it. Wherefore it is necessary for the microcosmus in its interior anatomy to reverberate it with a supreme reverberation. Thereby the impure consumes itself, but the fixed which is separated from the impure remains without rust. Nor yet is it a fire wherein Salamandrine essence or Melosinic or Ares could be present, but rather a retorted distillation from the middle of the centre, above all coal fire. This reverberation thus

being made, in its last terminus it exhibits the physical fulmen, just as the fulmen of Saturn and of the Sun separate from each other. Accordingly, whatsoever advances by this fulmen of long life pertains to that great Iliaster, and this fulmination and preceding reverberation in no wise remove the weight, but rather the turbulence of the body, and that by the method of diaphanous colours.

CHAPTER VII.

Moreover, from that Iliaster of the first power long life of this kind does not result, for it affords an inferior grade. Yet he it is, however, who separates in that place, and exactly as a fixed thing can preserve a thing which is not fixed, defends the microcosmus from death, seeing that its operation is not to separate, but rather by means of those perspicuous arcana it should conquer that which is undigested, lest its perdition should follow. Just so mumia, which, together with the body, proceeds from the birth, being itself good, but the body is bad and putrid. Whatsoever life, therefore, the body lives, mumia lives also from it alone, for it is its property and nature to putrefy and revert to dung, of which it is a member, and this is its continual desire. But not so the celestial mumia, for it breaks the worthless part and guards the same by its own will, lest it should ever effect that which it attempts. Wherefore the following is the tenor of the recipe : that the supercelestial mumia sustains the microcosm more than its own mumia. For as often as there is a mumia there is also another terminus. Yet neither time nor number are found in these termini, for they continue to endure till they can no longer escape a second generation. The physician must be perfectly acquainted with the fact that every first matter expels the last. Hence the generation of worms begins where the ultimate matter of the physical body shews itself. Observe, therefore, this Iliaster, that it not only does not destroy the generation of worms, but when their matter is present it does not even impede their generation—a thing which mumia should prevent.

CHAPTER VIII.

The natural mumia should be compounded out of three chief antimonies so that the foreign microcosm should govern the physical body, whether by means of the element of water or by means of its metals, salts, etc., or otherwise by means of the element of earth, as by its herbs and boleti, or in tereniabin or nostoch. For all these are mansions of the supercelestial things. Wherefore let no one be surprised that the great virtues of melissa are described everywhere. Seeing that in this a supercelestial conjunction takes place, who shall deny to it a most excellent virtue? These are the magnalia which the Bamahemi contain, and this is plainly Ilech, who, being composed out of the true Aniadus, can in no wise be removed from that elementated thing—a thing which takes place with exaltations of either world,

exactly as exaltations of the nettle burn, and the colour of the flammula radiates. Yet in exaltations of this kind their virtue can be reduced into another. Therefore learn to diagnose their exaltations as follows. They are far more potent than the nettle, and also ye may collect the same in the true May when the exaltations of Aniadus commence. For exaltations of the virtues are not only situated in the matrices, but also in supercelestial things. That were a common Idæus and of no importance who knows how to fabricate a single thing subject only to the vision, nor besides tangible things can create greater things still, but he has constructed another May where supercelestial flowers attain their exaltation, in which Anachmus ought to be extracted and preserved, even as the virtue of gold lurks in laudanum. Such, indeed, are the virtues of Anachmus: then will you truly be able to enjoy long life.

A BOOK CONCERNING LONG LIFE.

BOOK THE FOURTH.

CHAPTER I.

WE will in this place complete what has been said previously on the foundation of life, and on the life which is beyond Nature. In the first place, we exhibit to all Spagyrist the age of Adam and Methuselah, after speaking exactly of that long life which is in the hands of the highest Iliaster, according to the manner of magnalia, where more facts are to be dealt with concerning free will than we can administer out of the elements. To make these things understood more clearly we must revert to the Enochdiani. A comprehension of the nature of their influence will enable us to get at the principle of long life, even without any trouble, as was the case with S. John, whose nature comprehended not merely one age or one century. Lest I should give an opportunity to the libellous who wrest the scriptures, we will define nothing certainly in this chapter concerning the life of the highest Iliaster, whether this be present in corporal elements, or whether it lives in the quintessence where no body occurs, and where not only those live whom we have mentioned, but also those whom we thought buried in sleep. All these things I leave to be considered slowly by sublime spirits, while we have descended to these. If that highest Iliaster be impelled, or at least, if it have need of anything, he will easily attain to whatever is Enochdianic, where all our long life is collocated in its proper places in ether and in the clouds. But once for all Iliaster has satiated himself, so that henceforth he lacks nothing.

CHAPTER II.

The end of long life is contained within the limit of six or nine hundred years. Concerning the source of this life which is beyond Nature, understand as follows. There are two forces in the power of man—one natural, the other of the air, wherein is nothing corporal. Having treated sufficiently of the natural, the incorporeal force shall close our little book. Miserable in this respect are mortals to whom Nature has denied her first and best treasure (which the monarchy of Nature contains), to wit, the Light of Nature. But

herein let us not labour vainly, but in the case of philosophy since it departs and diverges from Nature, we will remember the Aniadus, nor will we make further mention of philosophy. Having, therefore, dismissed natural things, and all which has been treated of concerning things out of the elements, as also those which are latent beneath the chaos, that is, the great Iliaster, we will have recourse to what was mentioned in the first book. In order, therefore, that we may arrive at the year of Aniadin, or even further, the following rules are to be observed. Let not what we are about to say of the nymphs offend any one. Here also shall be indicated the force and Nature of the Guarini, the Saldini, and the Salamandrini, and whatsoever can be known concerning Melosina.

CHAPTER III.

But in order to make clear at the same time both the place and the body in these things, which have to be ordained and disposed according to a certain harmony, we must observe the nature of Iliaster. It preserves to a period of three hundred, or even six hundred years. Further, whatsoever out of its own nature admits also the nature of the place is brought to one conclusion, like the former century, but where they unite the nature both of the place and the body at the same time, they arrive there, and without any trouble, to the six hundredth year. Some who have reached that age might be enumerated, did not my pen hasten in another direction. There are, moreover, those who for a long time secretly and furtively are preserved to a long life, an account of whom may be omitted because they have given nothing except to Iliaster. Whatsoever does not pertain to aërial life is passed over in this place. Those, therefore, follow who have lived an aërial life, of whom some have arrived at their six hundredth, thousandth, or eleven hundredth year, a fact which can be easily understood according to the precept of the magnalia. Compare Aniadus, and that by means of the air alone, whose force is so great that the terminus of life has nothing in common with it. Further, if the said air be wanting, that which lies hidden in the capsule bursts forth. If the same shall have been filled by that which recently returns, and then is brought forward into the middle, that is to say, outside that under which it lay hidden, it still is so far hidden that as a tranquil thing it is completely unheard by anything corporal, so that there only resound Aniadus, Adech, and Edochinum. These three, and that which verges into these three, are not four but one. You will attain a very long hidden life. Such is the nature of that Aquaster, which is born beyond Nature. But if it has not been able to attain that which was latent, yet here it occasions that which was extrinsically Iliaster, etc.

CHAPTER IV.

The monarchia remain, and to this we are recalled by the great Zenio, for there is a life far different, whereunto we are constrained. When all

things have passed away the oppressor and the oppressed remain, a fact not sufficiently understood up to this present by the Aliani. Yet a time comes when all these things which we have investigated together shall pass away, from the first even to the last. As to whether a healthy life can be conjoined with a long life, note that there is a double essence, in one of which health resides, and this essence is fixed; in the other disease is centred, and this is similarly fixed. As to the place and the mutations of these things, let us not change anything. What, however, is the use of vainly lingering among those things which the light of Nature has refused to us? Wherefore he who guides us out of the desire of the mind, does not leave us gaping at what he points out. Let us then pass over what is beyond us, namely, certain creatures of a marvellously long life, and proceed to those which have no death, among whom are the Laureus, Siconius, Hildonius, and many others, whose nativity or natural death no one hitherto has attained or heard of. Add the nature and essence of those things, and how many will you find who have written anything at all about them?

CHAPTER V.

I make no account of him who by the arts of Lully vaunts himself as a Necrolicus, and inveighs against what is contained in the four Scaiolæ, announcing me as the highest Scaiolus, in order that I may commence Necroleous arts according to the manner of the cedurini. But I envy even the hydra together with the envious Scaiolæ. What shall I say in this place of those things which the sagacious muse embraces in her canons together with the matrix of the four Scaiolæ, which sleep in you, and render your temples anodynic? I occasion so great an astonishment in you that you shall come even to take heed of a poppy. But I confine myself to the cosmographic life, where both the place and the body of Jesihach appear. Further, the things I prescribe I do prescribe beyond the forces of the body and the place. Whosoever understands these things the same has a lawful claim upon the title of a spagyrist. There is no mortality in the Scaiolæ. He who lives according to their manner, he is immortal; this I prove by means of the Enochdiani and their followers. Aquaster will not invade this place. But if I be inserted among the Scaiolæ according to the manner of the Necrolii, there will be something that I might take out and lead, a thing which the Great Adech antiverts, and leads out our proposition but not the mode, a thing I leave to theoretical discussions. And in this manner Melusine departs from the nymphadidic nature, by the intervention of the Scaiolæ, to remain in another transmutation, if that reluctant Adech permit, who is both the death and the life of the Scaiolæ. Moreover, he permits the first times, but at the end changes himself, from which I gather that supermonic figments in Cyphanta open the window. But the doings of Melusine prevent these being fixed, which, being of this kind, we dismiss. But as for the nymphadidic nature,

in order that it may be conceived in ourselves, and that we may thus arrive immortal at the year of Aniadus, we take the characters of Venus. If ye recognise these things, nevertheless ye have put them to little use. But we have completed it, so that we may securely attain this life in which Aniadus dominates and reigns, and remains with that at which we ever do assist. These and other arcana are absolutely in need of nothing. In this fashion we leave and conclude long life.

HERE ENDS THE TREATISE ON LONG LIFE.

APPENDIX III.

A SHORT LEXICON OF ALCHEMY,

EXPLAINING THE CHIEF TERMS USED BY PARACELSUS AND OTHER
HERMETIC PHILOSOPHERS.

THE materials for the following vocabulary are derived partly from Paracelsus himself, that is; from other writings not included in the present translation; in part from such alchemical authors as Arnoldus de Villa Nova, Eugenius Philalethes, Ferrarius, Raymund Lully, and Cornelius Agrippa, who, however, was more magician than alchemist; and, finally, from the following sources:—

A. T. Pernety. Dictionnaire Mytho-Hermétique; Paris, 1781, 8vo.

William Salmon, M.D. Dictionnaire Hermétique; London, 1695, 12mo.

William Johnson. Lexicon Chymicum (*editio ultima*). Two parts. Frankfort, 1678, 8vo.

Dictionarium Theophrasti Paracelsi; Frankfort, 1583, 8vo.

Rochus le Baillif. Dictionariolum, a brief supplement to the Geneva folio.

Martinus Rulandus. Lexicon Alchemiæ; Frankfort, 1612, 4to.

Michael Toxites. Onomasticon sive Dictionarium Philosophicum, Medicum, et Synonymum; Argentorati, 1574, 8vo.

Gaston le Doux. Dictionnaire Hermétique; published under the pseudonym of a lover of Hermetic Truth.

The vocabulary has not only been compiled, but has, for the most part, been literally translated from these authorities, and where it speaks positively upon the mysteries of Hermetic science it must not be understood that the editor himself is speaking. While the information it contains may perhaps claim to be regarded as reasonably full, the reader must not expect to find a satisfactory explanation of all strange, *bizarre*, and unaccountable terms which are to be met with in the text. Some are peculiar to Paracelsus, and outside the sage of Hohenheim himself it would be useless to look for information. Such words as Deneas, Magdalion, and Censeturis belong to this category.

Others, less apparently recondite, are notwithstanding wholly unknown to the editor, though he may claim a wide acquaintance with Hermetic literature and its curious recipes. The Stomach of Anthion and the Aqua Caudi Magnæ Mirandæ are of this class. Some expressions and some names of substances, such as the Quintessence of Gold and of the Sun, though common to all alchemy, are not capable of more lucid interpretation by recourse to other writers, and the Index which follows this Lexicon, by collecting the references in the text, will supply all the knowledge that is likely to be gleaned concerning them. In such cases the terms have been excluded from the Lexicon, as it is obviously useless to re-dress the materials supplied by the translated treatises as lights for a vocabulary. It is useless, for example, to say that the Balm of Sulphur is the Radical Moisture of metals, unless, indeed, it were possible to explain more fully than the alchemists have elected to do what they mean by their radical moisture, especially in the metallic kingdom. It is useless to look for any real explanation of such terms; they are part and parcel of the philosophical mystery, and unfortunately their number is somewhat formidable. The First Entity of Antimony, the First Entity of Mercury, the First Entity of Salt, the special alchemical significance attaching to *Liquor Solis*, Macerated Tincture of Silver, Mercury of Life, Oil of the Sun, Philosophic Water, Precipitated Gold, Sphere of Saturn, are all of this kind, and all these have been omitted. But wherever the peculiar use which Paracelsus makes of a term is modified or illustrated in the writings of other adepts, there the term has been included; and wherever any commentator has volunteered any explanation of a word which is peculiar to Paracelsus, then that explanation has been given. A careful reader will, however, find that Paracelsus is in most cases his own best interpreter, and much of his coined or mysterious phraseology is explained by the passages which contain it. For example, there is only one reference to *Argentum Potabile*, but the term is accompanied by an explanation concerning it, which makes its presence in a vocabulary unnecessary. A similar remark will apply to Astral Gold, mentioned in the *Catechism of Alchemy*; to Abrissach, which occurs in the *Philosophy Concerning the Generation of the Elements*. In a few cases, mostly regarding unknown or recondite substances, such as *Emplastra Apostolica*, *Mucilago Lumbricata*, *Compositio Caudi*, etc., the interest attaching to the information is not strong enough to warrant the research which would have been necessary to provide it. In some instances the herbs mentioned by Paracelsus have been briefly referred to, with a view to save reference unnecessarily to other sources of information. But these are generally so accessible, and the catalogue in a Herbarium of Theophrastus would be so large, that those who wish to become acquainted with the virtues anciently attributed to Gladwin, Gentian, Ginger, Gallingall, Fumitory, Fennel, Dittany, Dodder, Cummin, Comfrey, and a hundred others, must have recourse to Gerard's *Herbal*, or some similar storehouse. That Clary is a plant of the sage genus requires no more erudition to

announce than can be derived from a popular dictionary of the English language. In like manner it is a matter of common knowledge that the term Crocus signifies any metal calcined to a deep yellow or red colour, and it would be childish to include information of this kind in a word-book of alchemical technology. In like manner, it may be taken for granted that the readers of Paracelsus are acquainted with the nature of ordinary chemical vessels, such as the Alembic, the Retort, Cupel, etc.

ABROTANUM, *i.e.*, *Artemisia Abrotanum*, the herb Southernwood, an aromatic plant.

ACETUM. Other meanings are attached to this term in alchemy in addition to the ordinary significance of vinegar. It is the mercurial water of the Sages, or their universal dissolvent, their virgin's milk, their pontic water; it is the vinegar of Nature, and although its elements are various they all come from one root.

ACTIS, possibly *Actæa*, the wall-wort, or shrubby elder of Pliny.

ADAM. The formation of Adam by God out of the earth, as described in Genesis, is counted, by the alchemists, among the great mysteries. The material was no common potters' clay, but another, and one of a far higher nature. He who knows this knows also the subject of the philosophical medicine, and, by consequence, what destroys or preserves the temperament of man. It contains principles which are homogeneous with man's life, are potent to restore his decaying virtues, and can reduce his disorders to harmony. Arias Montanus calls this matter "the unique particle of the multiplex earth."

ADAMANT. The gem *Adamas* takes origin from the element of water. As the stone called *Lasurius* is a transplanted silver, or a transplanted extraction of silver, as the topaz is an extraction from the minera of Mars, and is a transplanted iron, as the sapphire is a quintransplantation of *Lasurius*, so the *Adamas* is a second transplantation of Saturn. And they are all extractions out of the fruits of the element of water. The term also was used by the Greeks to signify the hardest metal known to them, probably steel, and also a compound of gold and steel.

ADAMITÆ. These are white stones of an exceedingly hard quality. There is also *Adamitus*, which properly is the stone in the bladder. It is sometimes written *Adamitum*.

ADECH. Hermetic Philosophers apply this name to that portion of the human body which is commonly termed the groin; sometimes also it signifies the mind creating conceptions of things with a view to their manual imitation. The invisible and interior man.

ÆTNEAN. Some alchemists apply this name to their fire because it is concentrated and natural, acts perpetually, and is not always manifest.

ÆTNÆI. These igneous spirits appear to be identical with the Salamanders which inhabit the fiery region of Nature. Paracelsus considers that the names which have been given to the Elementaries, and by which they are most commonly known, are not their true designations, which, under the circumstances, is exceedingly probable.

AGRESTA. A beverage made from apples or barberries. Paracelsus forbids it to be used by persons who are afflicted with diseases of a tartareous nature, for every acid is a resolved tartar produced out of a cold coagulate, or, otherwise, from the salts of a vitriolated minera combined with alums. Agresta is verjuice.

AGARIC is described as a medicine made from flies ; it destroys worms in the body, and acts as a tonic to the system in certain forms of plague. Agaricon is also a mushroom growing upon high trees ; it is of a white colour, and is good for purging phlegm. It was used anciently for tinder.

AGRIMONY, called also liver-wort, once used in the preparation of a medicine which was held to be a valuable tonic.

AGRIPPINE UNGUENT, probably a preparation of the Agrippum, a wild olive.

AIR. The philosophy of Paracelsus on this subject may be compared with that of other alchemists. For example, Eugenius Philalethes says that air is not an element, but a certain miraculous hermaphrodite, the cement of two worlds, and a medley of extremes. It is the sea of things invisible, and retains the species of all things whatsoever. It is also the envelope of the life of our sensitive spirit. The First Matter of the philosophers is compared to air because of its restlessness.

ALCHEMY. The following remarkable passage occurs in the *Anima Magica Abscondita* of Thomas Vaughan. It has often been made use of as evidence that the adepts had a higher object than the transmutation of ordinary metals :—Question not those impostors who tell you of a *sulphur tingens*, and I know not what fables ; who pin also that narrow name of *Chemia* on a science both ancient and infinite. It is the Light only that can be truly multiplied, for this ascends to, and descends from, the first fountain of multiplication and generation. If to animals, it exalts animals ; if to vegetables, vegetables ; if to minerals, it refines minerals, and translates them from the worst to the best condition.

ALCHEMY. The monk Ferarius defines it to be the science of the four elements, which are to be found in all created substances, but are not of the vulgar kind. The whole practice of the art is simply the conversion of these elements into one another.

ALCHIMILLA, a herb, otherwise called Lion's-foot.

ALCOHOPH is possibly *Sal Alacoph*, *i.e.*, sal ammoniac.

ALCOL. Some chemists have given this name to vinegar.

ALEMBIC. The name of this alchemical vessel has been sometimes applied to Mercury, because by its means the philosophers perform their distillations, sublimations, etc.

ALKALI. In addition to its chemical meaning, this term signifies the Vessel of the Philosophers.

ALÖEPATICUM, a medicine used in complaints of the liver.

ALOPECIA is a species of scab or mange arising in those portions of the body which are referable to Jupiter, *i.e.*, the cranium. Paracelsus ascribes the disease to the presence of the spirit of Jupiter. When that spirit is separated from its natural humours and passes into its own minera, the result in the metallic kingdom is cachimia; in trees, fungus; and in the human body alopecia. The fish known as sea-fox was called Alopecias by Pliny.

ALUM. Common alum is distinct from the alum of the adepts; the latter is their salt, which is a basis of alum, all salts, and all minerals and metals.

ALUMEN ENTALI is identical with Alumen de Pluma or Alumen Scariola. It is said to be Gypsum and Asbestos.

ALUMEN PLUMOSUM, *i.e.*, Alumen de Pluma.

ALUMEN SACCHARINUM is Zaccharine Alum.

AMALGAM. The Amalgam of the philosophers is properly the union of philosophic Mercury with the sulphur or gold of the Sages. This does not take place after the fashion of ordinary chemistry, by pounding in a mortar, or otherwise, a solid and a liquid substance. It is the conduct of the fire of the philosophers according to the proper regimen; that is to say, it is the perfecting of the work by continuous coction or digestion at an equal fire—sulphureous, covered in, and non-combustive.

AMETHYST. In addition to the precious stone which bears this name, there was a grape so called by the Greeks of which the juice was said to be non-intoxicant. There is also a herb called amethyst by Pliny, having leaves of a red-wine colour.

ANACHMUS, unknown.

ANGELICA. Paracelsus considers that Spica and Angelica are not in their origin the result of a natural generation, but of that which he terms transplantation. In other words, they are hybrids, after the manner of the mule. The Angelica Ursina, Cardopatia, or Carlina, has in its roots the peculiar quality of depriving persons of their virile strength.

ANIADUS. A term of spagyric philosophy which signifies the powers and virtues of the stars, from which we receive celestial influences by the medium of fantasy and imagination.

ANTHERA. A medical extraction made from hyacinths. Paracelsus affirms that the special astrological influences which reside in the sign of Scorpio are resisted by anthera.

ANTHOS. In old botany this term signifies the flower of rosemary; in alchemy it is the quintessence of the philosophers and their aurific elixir.

ANTIMONY. The antimony of the vulgar is to be distinguished from the antimony of the wise. They have applied this name to the sulphureous mercurial matter which forms part of the philosophical composition. By

means of their antimonial vinegar an incombustible quicksilver is extracted from the body of Magnesia. This philosophical antimony is identical with the permanent water and the celestial water, in a word, with philosophical Mercury. It cleanses, purifies, and washes philosophical gold after the same manner that common antimony purifies common gold.

AQUA METALLORUM. Trevisan explains that this is Mercury, and Braccesco states that it is a single substance.

AQUA PERMANENS. According to one interpretation, this is the Catholic Magnesia, or sperm of the world. It is also the Mercury of the Philosophers, and the water of the Sun and Moon.

AQUARIUS is Salt Nitre. It is also the alchemical symbol of dissolution and disintegration.

AQUA VISCOSA. The generation of a metallic sperm is the chief object of those who wish to perform transmutation in the metallic kingdom, and this is done by first of all converting the whole body into a thick or viscous water. Indeed, Rupescissa declares that the matter of the stone itself is a viscous water which is to be found everywhere, but if the stone itself should be openly named the whole world would be revolutionised.

ARCANUM. This term is understood by Paracelsus to signify an incorporeal, immortal substance which in its nature is far above the understanding and experience of man. Its incorporeal quality is, however, only relative and by comparison with our own bodies. From the medicinal standpoint its excellence far exceeds that of any element which enters into our own constitution. The term is applied also to every species of tincture, whether metallic, vegetable, or animal. In general Hermetic science it signifies viscous mercurial matter, or Mercury animated by reunion with philosophic sulphur.

ARCANUM OF HUMAN BLOOD. Many alchemists, both before and after Paracelsus, experimented with the blood of animals, and this not so much with a view to medicine as with the hope of discovering therein that matter of which the philosophers form their magistery. This magistery, indeed, passes sometimes under the name of Human Blood. According to Philalethes the reference is to the matter at the black stage. The name is really applied to philosophical Mercury. Even as the blood of animals nourishes their whole body, and is the principle of their physical constitution, so is this Mercury the base and principle of metals. Thus the blood of the little children who were slaughtered by Herod is pictured in the hieroglyph of Abraham the Jew and is a type of the radical humidity of metals extracted from the minera of the philosophers, which is symbolised by the children, this matter being still crude and left by Nature only on the way to perfection. The Sun and Moon come to bathe in this blood, because it is the fountain of the philosophers in which their king and queen lave themselves. Flamel, foreseeing that his allegory might receive a literal interpretation from some, warns his readers not to mistake actual human blood for the material of the stone, as it would be a foolish and abominable thing.

ARCHÆUS. According to one interpretation, this name is applied by the Spagyrist to the Universal Agent specialised in each individual ; it is that which sets all Nature in motion, and disposes the germs and seeds of all sublunar beings to produce and multiply their species.

ARCHIALTIS, or Archaltes, Archates, Archallem, the secret power of God by which the earth is held up in its place.

ARES. The occult dispenser of Nature in the three prime principles. It is that which gives form and difference to species. The word is derived from the Greek, *ἄρης*, Mars.

ARGENTUM VIVUM. The transmutation of metals, says the *Clavicula* of Raymond Lully, depends upon their previous reduction into volatile spheric argent vive. This is drier, hotter, and more digested than common Mercury.

ARLES CRUDUM. Certain little drops which fall in the month of June. Called also Hydatis.

ARISTOLOCHY. This herb, which is corruptly called Birthwort, was made into a decoction with wine and applied by Paracelsus as a healing plaster for fractures. The variety which he calls Aristolochia Acuta was used as an ingredient in the composition of an unguent for corroding ulcers. Aristolochia is supposed to promote child-birth.

ARSANECH is sublimed arsenic.

ARSENIC. The arcane sense of this term refers it to the Mercury of the philosophers, and at times to the matter of the philosophers when in the stage of putrefaction. It is stated, or supposed to be stated, in one of the Sibylline verses, that the name of the matter whence philosophical Mercury is extracted consists of nine letters. Of these four are vowels and the rest consonants. One of the syllables is composed of three letters, the rest are of two. Hence it was concluded that *Arsenicum* was the name in question, more especially as the philosophers affirm that their matter is a deadly poison. However, the matter of the stone, according to other authorities, is not arsenic, though it is the matter of which arsenic and all mixed bodies are formed. Nor can the Mercury of the Sages be extracted from arsenic, for arsenic is sold by apothecaries and the minera of Mercury is found everywhere. The name has been given by some other writers to the matter in putrefaction, because it is then a most subtle and violent poison. Sometimes it refers to the volatile principle of the sages, which performs the office of female. It is their Mercury, their Moon, their Venus, their vegetable Saturn, their green Lion, etc. The arsenic of the philosophers whitens gold, even as the common arsenic whitens copper.

ARTETIC, Arthetica, a disease which contracts the nerves, tendons, ligaments, etc., and is very enervating and prostrating.

ASCLITIS is dropsy of the stomach.

ASPHALT is, according to Paracelsus, an extraction of black succinum. It is bitumen, also a kind of petroleum, or rock oil.

ASTRUM. This term in Alchemy signifies the fixed and igneous substance,

the principle of multiplication, extension, and all generation. It tends of itself to generation invariably ; but it acts only in so far as it is excited by the celestial heat which is diffused everywhere. The term also represents the highest virtue, power, and property acquired by the preparation of a given substance. The Astrum of Sulphur is sulphur reduced to an oil which far exceeds the virtues of natural sulphur. The Astrum of the Sun is the salt of the Sun reduced to an oil or water. The Astrum of Mercury is sublimated Mercury. The name is also given to the alcools or quintessences of things.

ATHANOR. In exoteric chemistry this is a square or oblong furnace communicating on one side with a tower. The tower is filled with coals ; when these are lighted heat is communicated to the furnace by a funnel. The same name is applied analogically to the secret furnace of the philosophers, wherein a fire is always maintained at the same grade. It is unlike the vulgar athanor ; it is actually the matter itself animated by a sophic fire which is innate therein, and is developed by art.

ATRAMENT. At the period of Paracelsus this term seems to have included all varieties of vitriol, chalcanthus, flower of copper, chalcitis, misy, sory, melanteria, etc.

AURATA. The fish called gilt-head by Quintillian.

AURICHALCUM. Brass, copper, ore, etc., *æs montanum*, extracted from cuprine stone. More correctly, Orichalcum.

AURIPIGMENTUM. The body of orpiment is composed of Sulphur, its coagulation is from Salt, its brilliance from Mercury. It is of a petrine and metallic nature, yet it is neither a metal nor a stone. Paracelsus, *De Elemento Aquæ*.

AURUM POTABILE is either the Oil of Gold, or gold reduced to a liquor without a corrosive. The Golden Calf, which was ground to powder, sprinkled upon the waters, and given to the children of Israel to drink, has been regarded as an allegory of the philosophers' potable gold.

AUSTROMANCY is a method of divination by the winds. It is, apparently, a branch of the science of Aeromancy, which, says Agrippa, divines by aerial impressions, by the blowing of the winds, by rainbows, by circles about the moon and stars, by mists and clouds, and by imaginations in clouds and visions in the air.

AXUNGIA is the fat of animals which was made into an oil and used as an unguent for wounds. The axungia of human beings is said to have been most efficacious, and next thereto that of the cock and capon. The only useful axungia from fishes was that obtained from the Thymallus.

AZOC. Mercury of the Philosophers, not vulgar and crude quicksilver, simply extracted from the mine, but a Mercury extracted from bodies by means of argent vive. It is an exceedingly ripe Mercury. It is with this substance that the philosophers wash their Laton ; it is this which purifies impure bodies with the help of fire. By means of this azoc there is perfected that medicine which cures all diseases in the three kingdoms of Nature. It is made of the Elixir.

AZOTH also signifies Mercury. When the philosophers say that fire and Azoth suffice for the Great Work, they mean that Mercury prepared and well purified, or philosophical Mercury, are enough for the beginning and the completion of the whole labour, but the Mercury should be extracted from its minera by an ingenious artifice. Bernard Trevisan says that everyone beholds how this minera is changed into a white and dry matter, having the appearance of a stone, from which philosophical argent vive and sulphur are extracted by a strong ignition. Azoth has many names:—Astral Quintessence, Flying Slave, Animated Spirit, Ethelia, Auraric, etc. It will be seen that Azoth and Azoch are terms used interchangeably. They also stand for the universal medicine, which is arcane to the world, the sole true remedy, the physical stone, and also, according to some writers, they signify the Mercury of any metallic body.

BALM. The quintessence of Mercury is called the external balm of the elements.

BALSAM. Paracelsus affirms that the composition of balsams was first discovered by the alchemists, and he refers the name itself to the artifice which is required in its preparation. Every balsam, but more especially for wounds, should be of a sweet nature, not corrosive, not attractive, but possessing a consolidative quality.

BALNEUM MARIÆ. The furnace of the Sages, the secret furnace, to be distinguished from that of ordinary chemistry. Sometimes the name is applied to philosophical Mercury. The term Bath is also given to a matter which is reduced into the form of a liquor. For example, when it is desired to make projection upon a metal, it is said that it must be in the bath, that is, in a state of fusion.

BALNEUM MARIS. In alchemy this term seems to apply both to the vessel which holds the sea-water and to the dissolution that takes place in the vessel. The *Balneum Mariæ* is a bath of warm water, and the name is still applied to a large cooking pan. The *Balneum Roris* seems an interchangeable term for the sea-bath. The term bath is also applied to the matter itself when it is in a liquid state. Circulation in the philosophical egg is also called the Bath of the Philosophers.

BALNEUM NATURÆ. Eugenius Philalethes says that this is really the philosophical fire.

BALNEUM RORIS, see *Balneum Maris*.

BAMAHEMI, unknown.

BASILISK. No one, according to Paracelsus, has any conception of the form or appearance of this animal, for the simple reason that no one can look at it without dying. According to one of his explanations it is a calf generated without a cow, that is, born of the male animal.

BDELLIUM. A plant, and also the fragrant gum which exudes from it.

BEANI. This word, which is rendered *novices* on p. 154 of Vol. II., is said to have originated in the following acrostic: *Beanus est animal nesciens vitam studiosorum.*

BENEDICTA CARYOPHYLLATA, that is, Caryophyllum, ther herb Benet or Blessed Avens. Paracelsus made use of it in tatareous complaints.

BERILLISTIC ART, *i.e.*, divination in the beryl. Paracelsus regards the the stone itself as a formation out of ice, by means of the glacial stars, which have a very great power of congelation.

BITUMEN, *i.e.*, Asphalt.

BISMUTH. As zinc, according to Paracelsus, is for the most part a spurious offspring of copper, so is Bismuth of tin. It is partly fluidic and partly ductile.

BLOOD. Some alchemists have pretended, as previously stated, that human blood is the true subject and matter of the philosophers, but others say that this is not to be literally understood, and that those who experiment with this substance in athanors will have reason to deplore their error. Blood and Human Blood are, however, by no means uncommon designations for the arcane substance of the Magistery. Philalethes says that it is applied to the matter. It is an analogical term, the allusion being to the fact that the blood in animals carries the nourishment to every part of the body, and is the principle of their physical constitution. Mercury fulfils the same function in the mineral kingdom, for it is the foundation and principle of metals.

BOLETI. Boletus is a mushroom. Bolitus is the same as Bolbiton, *i.e.*, the excrement of oxen. These explanations will, perhaps, not throw much light on the use of the term by Paracelsus.

BRASSATELLA, *i.e.*, ophioglossum.

BOCIA. Bocium, according to Paracelsus, originates out of menstrua and hæmorrhoids, in the same place in which both of these fluxes join, producing a third which is peculiar to itself.

BOLUS ARMENUS on account of its great dryness was used by Paracelsus to heal wounds.

BORAX. This is said to have been melted with natural or artificial chrysocola, and was then used as a dissolvent and purifier of metals, especially gold and silver. The best borax was supposed to come from Alexandria.

BOTIN is Turpentine.

BUFONARIA, probably Buphonon, a herb mentioned by Pliny, that is, the toadstool.

BUGLOSSUM, *i.e.*, Bugloss, or Borage.

BULLÆ. } This causes wind, says Paracelsus, and its presence often

BULLA. } indicates the beginning of colic, while in women it occasions fall of the womb. It is otherwise called Bleb, a little vesicle, or blister. Bulla is also a genus of mollusca.

CABALA. The alchemists recognise a twofold Cabala. There is that which ends always in the letter where it begins, and this is the alphabetical system, the name and not the thing; the shadow, not the substance; the mere type of the inner Cabala. Within this there is the true, ancient, physical tradition, and this also has its complement in a metaphysical part.

The greatest mystery of the Cabala, according to one account by an alchemist, is Jacob's ladder. It is affirmed further that Jacob was not asleep during his vision, except in a mystical sense, for he had passed through death. It was, however, the cabalistical *Mors osculi*, or death of the kiss, of which those who know it must not speak one syllable. The false, grammatical Cabala consists only of alphabetical rotations, and a metathesis of letters in the text, by which Scripture is wrested. The book of Abraham the Jew, which was discovered by Flamel the alchemist, is supposed to prove that the true Cabala was chemical.

CACHEXIA, a disease which, according to Paracelsus, usually supervenes upon other complaints, and in which the nutriment turns to evil humours.

CACHIMLÆ. This term is loosely applied to a variety of substances. It seems to have most generally signified the dross of metals, or an undigested metallic matter.

CAGASTRIC. There are two seeds of disease, the Iliastric and the Cagastric. The first is in the substance from the beginning, the second is generated out of putrefaction. Dropsy and gout are Iliastric; plagues, fevers, pleurisy, etc., are of cagastric origin.

CALAMUS, a sweet cane, growing in Arabia, India, and Syria. The root of the sweet flag. The resin called Dragon's Blood is obtained from a palm of the genus Calamus.

CALAMINE, a stone used in the composition of brass. Also an ore of Zinc, Cadmia.

CATAPUTIA, a plant.

CALCANTHUS and Chalcantus, see Atrament. It is copperas, vitriol, shoemaker's black, the water of copper.

CALCATRIPPA, or Consolida Regalis, a herb used by Paracelsus for the cure of ulcers.

CALCINATION is a pulverisation and purification of bodies by means of an exterior fire, either for effecting a disunion between their component parts, or for evaporating the humidity which combines them into a solid body. Calcination, corruption, and putrefaction are sometimes used interchangeably by the Spagyric philosophers, but calcination is most commonly that process which follows the rubefaction of the Stone. *Philosophic Calcination* is performed by the moist fire, or pontic water, of the Sages, which reduces bodies to their first principles without destroying their seminal and generative virtues. These, on the other hand, perish under the calcination which is performed by a vulgar fire, and this is philosophically termed the Tyrant of Nature. There are two kinds of *vulgar calcination*; the one is accomplished by an open fire, as over ashes, the other in a sealed vessel. In the first the sulphureous volatile parts evaporate, and the salts are deprived of a power and virtue which are conserved in the second. All salts extracted from such ashes crystallize.

CALENDULA, the herb marigold.

CALERUTHUM. The reversion of any substance towards its first matter.

CALX. In the language of the adepts this name is applied to all kinds of bodies when reduced to an impalpable powder, whether by the action of fire or of corrosive waters. Some say that it should only be applied to the ashes of metallic or mineral bodies, and that others should be called cinders.

CALX LUNÆ, *i.e.*, Calcined Silver, or Blue Flower of Silver.

CALX OF LEAD, *i.e.*, Red Lead.

CANTHARIDES, a herb praised by Paracelsus because it draws out the humours from ulcers. The term stands for Spanish fly, a beetle which infests corn, and a kind of fish.

CAPELLA, a young goat or kid.

CAPILLUS VENERIS, literally, the hair of Venus, a herb mentioned by Pliny.

CAPUT MORTUUM. The philosophers describe the so-called element of earth as an impure, sulphureous subsidence, or *caput mortuum* of the creation.

CARABA, see Carabe.

CARABE is Succinum, and is said by Paracelsus to be an extract of the resin of its element. In another place he observes that it is a resolved petroleum, for wherever the latter is found, there also is Carabe. This and other stones void excrement like animals. If it be cast into water which is isolated from the air, its evacuations will coagulate the water, and worms will be produced.

CARABIS IGNEUS, Cathabis, or Cathebis, the stag beetle, a prickly kind of crab.

CARBUNCLE, is called also jaspis by Paracelsus, and he describes it as a golden stone, that is, of an aureate nature.

CARDAMOMUM, an Indian spice, of an aromatic, pungent, and medicinal quality.

CARDUUS ANGELICUS, a thistle, which, according to the signatory art, has the magical marks indicating that it is a cure for pleurisy. Paracelsus says that it is to be reduced into ashes and then made into a lute.

CARDAMUM, garden cress, that is, nasturtium, especially its seed, which was bruised and eaten by the ancients, and above all, the Persians, after the manner of our mustard. *See* Cardamomum.

CARNIOLA. The virtues of this plant are regarded by Paracelsus as of a celestial rather than an earthly origin.

CASSATUM, an unhealthy or dead blood in the veins.

CEDUSINI. One of the arcane names of air is *Cedue*, and the cedusini are probably a class of ærial intelligences, or sylphs.

CELLA, the inner chamber of a bath.

CENIFICATED WINE, *i.e.*, Calcined Wine.

CENTAURY. The virtues of this plant prevail in complaints of the liver; it strengthens and cleanses the separative force of this organ. Its liquor destroys serpents.

CERATION. This name is given to that stage of the philosophical process

during which the matter passes from the black to the grey, and, ultimately, to the white colour. This is performed solely by digestion and coction without any addition whatsoever.

CEREVISSIA, that is, ale or beer.

CERUSSA, *i.e.*, White Lead.

CHALCEDONY, a stone which is said by Paracelsus to colour the water in which it is steeped. It is classed as an extract from salt.

CHAMEPITIS, the herb ground-pine, or St. John's Wort.

CHAOMANCY is substantially identical with aëromancy. It is a revelation of the stars of the air, and prognostication by means of the air.

CHAOS. Many other definitions of the Chaos are given by Paracelsus besides those which find a place among the treatises translated in these volumes. The term is also applied to the air which contains the cause of corruption. There is also a chaos in the human body, which is the motive force of all its interior operations. The universal world is in man, and that not analogically, but actually. It is also the chaos which conserves the body. Empty, immeasurable space. The rude, unformed mass out of which the world was created. The atmosphere. Finally, the term chaos is applied analogically to the matter of the work in putrefaction, because at that period the elements or principles of the stone are in such a state of confusion that they cannot be distinguished from one another.

CHEIRI is a term of various meanings. Sometimes it stands for Mercury. Flos Cheiri is the Elixir at the white, though also the essence of gold. Flos Anthos is the Red Elixir of Gold. Generally it is the flower of any vegetable or plant. Paracelsus says of it :—There is no more powerful medicine for the liver. Its blackness is sublimed away and a white substance is left, which must be drunk mixed with wine of life. It removes all hepatic corruptions. Iliastic mysteries are contained therein. Here the reference is uncertain ; it may be to the narcissus, the violet, or the yellow gilliflower.

CHELIDONY. Paracelsus calls chelidonia a constellated remedy, and names it as a powerful specific for certain ulcers which he also calls constellated. There was, moreover, a philosophic salt of chelidonia, which was medically applied by the alchemists. The same herb was regarded as a preventive of plague, and it was used as a remedy for jaundice. The plant is better known as swallowwort or celandine. Chelidonia is also said to be a secret name of gold.

CHERIO. This is described as an accident of the external elements, whether cold or hot, through which all diseases are healed. Cherionium is an unalterable nature, such as indurated crystal, which it is not possible to dissolve.

CHIMOLÆA CALCIS. This should probably read Chimoleæ Calx. Cymolea or Chymolea is a Hermetic name for sedge or reeds. Cymolia is white waste ore, white silver litharge, marl, fuller's earth.

CHIROMANCY is the beginning of Magic ; it is to that science what the alphabet is to writing. It is acquired easily, but at the same time is a most

useful and illustrious art. It is the star of natural things. For example, there is a chiromancy of the lily, and in the lily a star abides which corresponds to the nature of that flower.

CHRYSOCOLLA, gold solder, borax. Sometimes the term is used in an arcane sense and interchangeably with Argot, Rebis, etc.

CICHOREA, *i.e.*, Succory. To this plant Paracelsus ascribes a certain peculiar congenital influence which it derives from the Sun, towards which its blossoms turn invariably, and when that luminary is absent it has very little virtue. At the proper moment the congenital influence can be extracted from the flowers. After seven years its root becomes transformed into a bird.

CINERITIUM. This term has two meanings. In the first place it is an ash-pan often mentioned by Paracelsus; secondly, it is an equivalent of Regale, an amalgam of gold and silver.

CINETUS, the thickness of clouds.

CINNABAR. Further information concerning this substance is scattered through the chirurgical and medical works of Paracelsus, in one of which he seems to regard it as a form of Mercury.

CIRCULATED WINE, *i.e.*, the extracted spirit of wine.

CITRINUS is a stone which occupies a middle position between the crystal and the beryl; it is of yellow colour.

CITRINÆUS and CITRONES. See Citrinus. It is a pellucid variety of quartz.

CITRINULA, see Flammula.

CLAVELLATED. The *herba clavellata* is the herb-trinity, or heart's ease.

CLISSUS, the entire essence of a substance amalgamated into one composition. Clissus is also an occult force going and returning from one place to another, as the virtue of a root which first passes to the stem and then returns to the root. (Rochus le Baillif, in his Spagyric Dictionary.) Petrus Poterius, in the Spagyric Pharmacopœia, says, "Clissus is a certain union of all virtues in any plant, which virtues consist of the three primary substances, sulphur, salt, and mercury, such substances being severally educed from the single parts of plants."

COAGULATION. The bond of union in composites, and the common attraction between their parts. It is the rudiment of fixation. There are two kinds, even as there are two solutions. One is performed by cold, the other by heat, and each of these again is duplex, the one permanent, the other transitory. The first is fixation, the other coagulation simply: metals are an example of the first, and salts of the second.

COLCOTHAR is defined by Paracelsus as a salt. He affirms that it is a signal specific for obstruction of the fluxes.

COMPLEXIONS. The ancient opinion on this subject was most explicitly rejected by Paracelsus. In man he admits only one complexion, which has a dual mode, namely, as hot or cold. He affirms that the theory which was current in his own day deserves no consideration in diseases. At the same

362 *The Hermetic and Alchemical Writings of Paracelsus.*

time in his *Explanatio Totius Astronomiæ* he admits four complexions, not, however, in the body, but in the essence.

COLOCYNTH. Whosoever swallows two grains of the essence of colocynth shall be free from every impression of the moon and from all noxious properties present in the air. It was also recommended by Paracelsus as a cure for worms.

COLOQUINTH, *idem*.

COMPOSITION. It is held by some of the adepts that there is no perfect specific nature which is simple and void of composition save God alone. Thus the soul of man itself was compounded of an excessively tenuous fire and of the most uncompounded form of light.

COPPER. In alchemy an alternative name with Laton, signifying the matter at the black.

COPPER GREEN, *i.e.*, Verdigris.

COPULATION. In alchemical terminology this is the union of the philosophical male and female, the fixed and the volatile.

CORAL. This was used by Paracelsus as a remedy for the plague, the falling sickness, and against poison.

CORPORAL MERCURY. The innumerable recipes for corporal Mercury found in the *Manual* of Paracelsus may be illustrated by a classification which is given in his chirurgical works. He observes that there are three bodies in Mercury—that out of which it is generated, before it has become perfect; that by virtue of which it is that which it is; and that which it becomes when it is prepared by art. According to Arnoldus de Villa Nova corporal Mercury is another name for the Mercury of the Philosophers, which see.

COSTUS. The plant usually known as *herba Maria*, that is, Zedoary, passes under this name.

CRISPULA, *i.e.*, cristula, crispa, the herb called cock's-spur.

CROCUS. Hermetic chemists have sometimes given the name of Crocus or Saffron to their fixed matter when it has attained the colour of red orange.

CRUCIBLE. The alchemical crucible is described as a clay melting vessel, capable of withstanding a severe degree of heat. It had a narrow base and widened out into a round and triangular body. The cupel was a species of crucible.

CUBEÆ, a drug so-called. A small, spicy berry, something like pepper.

CUBEBS, see Cubeæ.

CYANUM and Cyanus. According to some this is a kind of blue jasper; others say that it is a turquoise or lazule. It is also the flower commonly called bluebottle. A rock bird. A blue dye or lacquer.

CUPELLA, see Crucible.

CYCLAMEN, Cyclaminus, and Cyclaminum, the herb sow-bread; a tuberous rooted plant used for garlands.

CYROGLOSSUM, hound's-tongue, a plant. The liquor of Cyroglossum is an arcanum for falling of the womb.

CYPHANTIC, unexplained.

DARDO, a term of unknown meaning which occurs only in the treatise *Concerning Long Life*.

DAURA is the same as hellebore and winter aconite. Sometimes also it is supposed to signify foliated gold.

DEALBATION, the washing of the Laton, that is, the coction of the matter until all its blackness departs and the substance remains white. It is the removal of all impurities.

DELTIC. The term Deltic impression, made use of by Paracelsus in his work *Concerning Long Life*, is another mystery in the terminology of that strange treatise. The conjecture may be hazarded that it is derived from the Greek word *Delto*, a writing tablet, when the Deltic impression would be analogical to that made upon a wax tablet by a stylus.

DENARIUS, properly the Roman denier, seven of which were at one time equal to a Troy ounce. Afterwards there were eight to the ounce. In the Lower Empire a silver denier scarcely weighed half so much.

DENARY, see Ternarius. Agrippa calls the number ten a manifold religion and power applied to the purging of souls. It possesses a divine quality; there is no real number beyond it; just as it flows back into unity so everything returns to its proper source, even the spirit unto God who gave it.

DENTARIA, toothwort.

DERSES, a certain arcane smoke or terrene vapour, which is the principle of vegetable birth and growth.

DIAGRIDIUM, a preparation of scammony and quince-juice.

DIAPENSIA, the plant alchimilla, which see.

DIATHESIS, an innate art or nature. A physical predisposition towards a given disease.

DIEMEÆ or Dienez, said to be spiritual essences which inhabit large stones.

DISSOLUTION, according to Trevisan, is the whole mystery of the art, and it is to be accomplished not, as some have thought, by means of fire, but in a wholly abstruse manner, by the help of Mercury.

DISTILLATION. Later writers agree with Paracelsus as to the variety of complicated processes in the operation of the great work. Those who would be accounted wise must labour to find out the Mercury, so that they may reduce things to their mean spermatic chaos, and may avoid broiling destruction. Futile distillation, in particular, will be dispensed with by one who remembers that sperms are not made by separation, but by composition of elements; to bring a body into a sperm is not to distil it, but to reduce the whole into one thick water, keeping all the parts thereof in their first natural union.

DIVERTALLUM, a generation of the elements, otherwise a production from metals.

364 *The Hermetic and Alchemical Writings of Paracelsus.*

DRACHUM, *i.e.*, a drachm.

DRACANCULUS, dragon's wort, or wild adder's tongue. There is a shell-fish also so called by Pliny.

DRAGON'S BLOOD. Alchemically speaking, this is the Tincture of Antimony.

DUBELCOLEPH, or Dubelteleph, a composition of white coral and amber.

DUELFCH, a dangerous and painful tartareous and porous stone which forms in the human body, especially in the bladder.

DURDALES, wood nymphs, spirits of the trees, etc.

EAGLE. This name has been applied by the philosophers to their Mercury after sublimation, firstly, on account of its volatility, and, secondly, because even as the eagle devours other birds, so does the Mercury of the Sages destroy, consume, and reduce even gold itself to its first matter. The term is also applied to sal ammoniac and to sublimated Mercury, because of their facility in subliming. Yet the reference is not to the vulgar substances, but to those of the philosophers. The *Eagle which devours the Lion* signifies the volatilization of the fixed by the volatile, or of the sulphur by the Mercury of the Sages.

EDOCHINUM, unknown.

ELECTRUM is gold, according to one interpretation, but it was not used in this sense by Paracelsus. Sometimes it is a conjunction of seven metals into one composition according to the conjunction of the planets. It is also the middle substance between ore and metal, neither wholly perfect nor altogether imperfect. It is, indeed, on the way to perfection, but Nature, having encountered hindrances, has left it. Hence the philosophers say that we must begin where she leaves off. It is called, says one account, Electrum because it is composed of two substances, and immature because it must be perfected by the operations of the artist. Properly it is the Moon of the Philosophers, sometimes called Water, sometimes Plant, Tree, Dragon, Green Lion, Shadow of the Sun, etc. Electrum is also one of the names which have been given to the Magistery at the white.

ELECTUARIES, medicinal confections.

ELEMENTS. Some of the adepts enumerate only two elements, earth, the residence of the matrix, and water, which is the mother of all things visible. Every element is, however, threefold, this triplicity being the express image of their Author, and the seal He has set upon His creatures. There is no created thing too simple, vile, or abject in the sight of man, but that it bears witness of God in respect of that abstruse mystery, His unity and trinity. Every compound whatsoever is three in one and one in three.

ELIXIR. Avicenna speaks of a duplex elixir, and the first matter from which it is produced is also duplex. The Elixir is nothing else, according to Trevisan, than the reduction of the body into mercurial water, from which water the Elixir is extracted, that is, an animated spirit. The Elixir is the second part or operation in the achievement of the sages, as Rebis is the first and the Tincture the third. There are three species of Elixirs in the

Magistry. The first is that which the ancients called the Elixir of Bodies. It is that which is performed by the first rotation. The second is performed by seven imbibitions, even to the white and the red. The third is the Elixir of Spirits and is attained by fermentation; it is also called the Elixir of Fire, and with this multiplication is accomplished.

EMBRYONATED, *i.e.*, fecundated, implanted with seed. Thus Embryonated Sulphur is a term used by the alchemists to distinguish one of their principles from the ordinary substance of sulphur.

EMUNCTORY, an opening for the escape of corrupt matter. Thus, an ulcer is an emunctorium, and so are the ordinary channels of expurgation.

ENOCHDIANI. It may be conjectured that these beings are of the race of Enoch and Elias, who were wrapt away into another world wherein they are still supposed to retain their mortal bodies. The prophets mentioned are according to mystic speculation by no means the only persons who have thus been "caught up to heaven," *i.e.*, into the unseen, without dying in the flesh.

ENS, ENTIA. The first extract of mineral natures is the *primum ens* of its kingdom. The *primum ens* of the animal world is in the blood or in the ova. It is the first matter, the seat of life and motion.

ENUR, the hidden vapour of water, out of which stones are generated.

EQUISETUM, horse tail.

ERUCÆ, a palmer, or canker-worm, also the herb rocket.

ESCHARA is dead flesh.

ESSENCE OF THE GREATER CIRCULATUM, unknown.

ESTHIOMENSIS is Lupus, St. Anthony's fire.

ESULA, the herb tithymallus, or spurge.

ETHICA, a kind of fever.

EUPHRASIA, the herb eyebright, once regarded as valuable in diseases of the eyes.

EVE. When used in a purely alchemical sense, this name signifies the mastery of the philosophers at the white stage. Adam, similarly, is the Magisterium at the red.

EYEBRIGHT, see Euphrasia.

EVESTRUM, the eternal substance of heaven. Also a prophetic spirit, which interprets the signs of coming events. Finally the double, living phantasm, or sidereal body of man.

FEL VITRI, glass gall, *i.e.*, Sandiver, a whitish salt scum cast up from glass in a state of fusion.

FERMENT. The sophic Mercury which, together with the sophic sulphur, is said by Avicenna to be the original substance from which all metals were created, is also declared to be a ferment for every body with which it is united chemically. It is the universal vivific spirit which penetrates, exalts, and develops everything. It is the grand metallic elixir, and its potencies are educed by the operation of fire. Though found in all minerals it is really a terrestrial matter, which possesses lucidity, fluidity, and a silverine colour.

Another account says that it is the fixed matter which, combined with Mercury, causes it to ferment and communicates to it the nature which it needs.

FILLA, possibly Fella, *i.e.*, a name sometimes applied to sulphur-water.

FIRE. It is said that the common chemist works with common fire, using no medium, and so he generates nothing, not working, as God does, for preservation, but for destruction. Hence he always ends in ashes. The disciple of the philosophers should use it with an intermediate phlegma, so that his materials shall rest in a third element, where the violence of fire cannot reach, but its soul only.

FIRE OF THE PHILOSOPHERS. Some adepts affirm this to be the greatest crux of the art. It is a close, ærial, circular, bright fire, which the philosophers call their sun. It causes a certain vapour to arise in the glass which contains the matter, and digests the latter by a still, piercing, vital heat. It is continuous, producing at length an alteration and corruption of the philosophical chaos. Its proportion and regimen are very scrupulous. To understand the proper degree of this fire, the generation of man or some other animal should be considered.

FIRMAMENT, a name of Lazurium. Also the upper part of the Hermetic vessel.

FIRST MATTER. The first matter, by the universal agreement of all alchemists, was existent before man and before all other creatures; it was, indeed, the mother of them all. The philosopher, in seeking it for the special purpose of his art, must avoid all common salts, stones, minerals, vegetables, and animals. It is totally impossible to reduce any particular to the first matter, or to a sperm, without philosophical Mercury, and being so reduced, it is not universal, but the particular sperm of its own species, and does not work any effects save such as are agreeable to the nature of that species.

FIXATION is a process by which a naturally volatile substance is rendered fixed. The principle of fixation is a fixed salt, and digestion at a suitable fire. Hermetic chemists say that the perfection of fixation can only be obtained by the operation and processes of the Stone of the Philosophers, that their Matter is also susceptible to it, and that the state is attained when it is brought by coction to the ruby-red colour. It is performed by a philosophical fire of the third degree.

FLAMMULA, or Citrinula, is crow's-foot.

FLOS. This term frequently occurs in Paracelsus, and it has many meanings and many variations in alchemy. It is given to the spirits which are enclosed in the philosophical matter. These spirits are so lively that it is always recommended that the fire should be applied gently, as otherwise they may burst the vessels. The name of Flowers is also applied to the different colours which appear in the matter during the process of the work. The *Flower of the Sun* is the citrine redness which precedes the ruby redness. The *Flower of Lily* is the white colour which goes before the citrine. The *Flower of the Salt of the Philosophers* is the perfection of the stone. The *Flower*

of Gold is sometimes the Mercury of the philosophers and sometime the citrine colour. The *Flower of Wisdom* is the Elixir perfect at the red. The *Flower of the Air* is dew. The *Flower of Water* is *flos salis*. The *Flower of the Earth* is the dew and the flowers. The *Flower of Heaven* is a species of manna from which an admirable liquor is extracted. Some have erroneously regarded it as the true philosophical matter. The *Flower of the Wall* is saltpetre. Philosophical *Flos æris* is the matter of the work towards the end of putrefaction, and when it begins to grow white. The *Flower of Cheiri* is essence of gold. The *Flower of Sapience* is the Elixir perfect at the red. There are also other explanations of the *Flower of the Sun and of Gold*. It is the sparkling whiteness, more brilliant than that of snow itself, which characterizes the matter at the white. It is the fixed body of the Mastery, which is not to be understood of any flowers or tinctures extracted from common gold, but of the philosophical gold only, and of the fixed portion of the composition of the Mastery by means of which the volatile part is also fixed, according to the regimen of a prudent heat and the governance of a perfect coction.

FLYING EAGLE, the Mercury of the philosophers.

FÆNO GRÆCUM, *i.e.*, Fœnum Græcum, a leguminous plant of the clover family.

FOLIATED EARTH. This is said to be the Mercurial Water in which gold is sown.

FOUR ELEMENTS. The development of things out of the four elements occurs, according to Agrippa, by the way of transmutation. Each element has two specific qualities, one of which is proper to itself, and the other is a mean by which it corresponds to that which comes after it, as, for example, fire is hot and dry, earth dry and cold. He also recognizes that each element is threefold, that so, he says, the number four may make up the number twelve; and by passing the number seven into the number ten, there may be a progress to the supreme unity, upon which all virtue and wonderful operation depend. Of the first order are the pure elements, which are neither compounded nor changed, nor admit of mixture, but are incorruptible. Through these the virtues of all natural things are brought into act. No man can declare their virtues, because they can do all things upon all things. He who is ignorant of them will never bring to pass any wonderful matter. Of the second order are the elements that are compounded, changeable, and impure, yet such as may by art be reduced to their simplicity; their virtue, thus reduced, perfects above all things all occult and common operations of Nature, and these are the foundation of all natural magic. Of the third order are those elements which originally and of themselves are not elements, but are twice compounded, various, and interchangeable. They are the infallible medium, the middle nature, or soul of the middle nature. Very few understand the deep mysteries thereof. By means of certain numbers, degrees, and orders, they contain the perfection of every effect in what thing soever, natural, celestial, or supercelestial; they are full of wonders and mysteries,

and are operative both in natural and divine magic. From and through these proceed the bindings, loosings, and transmutations of all things, the knowing and foretelling of things to come, the expulsion of evil and the attracting of good spirits. Let no man, therefore, without these three sorts of elements, and the knowledge thereof, be confident that he is able to work anything in the occult sciences of Magic and Nature. But whosoever shall know how to reduce those of one order into those of another, impure into pure, compounded into simple, and shall understand distinctly their nature, power, and virtue in number, degrees, and order, without dividing the substance, shall easily attain to the knowledge and perfect operation of all natural things and celestial secrets.

FULIGO MERCURII. The *fuligo Metallorum* is properly arsenic in alchemical symbolism, but it often stands for Mercury.

FULMINATION is the graduated depuration of metals. It is so called because the metals become brilliant and diffuse radiance from time to time during the process. A red pellicle forms above, and when it disappears little sparkles are manifested at intervals.

FUMUS is *Fimus*, *i.e.*, dung.

GALANGA, *i.e.*, Galingale or Galangal, an Asiatic plant; the roots have a hot and spice-like flavour, accompanied by an aromatic smell.

GALBANUM, a gum or liquor having a very strong smell. Derived from an umbelliferous plant.

GAMALEI, or *Gemetrei*, *Gamathei*, etc., certain natural stones which, owing to some powerful astrological influence, receive extraordinary magical impressions. There are also artificial *Gamathei* engraved with magical figures, and used for talismans.

GAMONYMUM, unknown.

GARYOPHYLLON, *i.e.*, *Caryophyllum*, the clove gilli-flower.

GEOMANCY. According to Cornelius Agrippa, who preceded Paracelsus, and was, like Paracelsus himself, a disciple of Trithemius, geomancy is an art of divination whereby a judgment may be given by lot, or destiny, to every question whatsoever. It consists in the use of certain points, arranged in figures which are in harmony with celestial figures. It can, however, shew forth no truth unless it be founded in some divine virtue. It is supposed that the hand of the operator is directed by the spirits of the earth, so that incantations and other magical rites are resorted to in connection with geomancy. The soul itself of the operator also enters actively into the process.

GLUTEN, in addition to its ordinary significance, means ox-gall. It is also the sinonium of Paracelsus which resembles the white of egg.

GLUTEN OF SULPHUR. In the three prime principles Paracelsus appears to have recognised a certain superincension, and as gluten was alchemically sometimes a name of salt, the reference may be to the innate salt which was supposed to exist in sulphur. Gluten is also Blood, Lime, etc.

GOLD, the most pure and perfect of all metals, has been called by the

adepts the Sun, Apollo, Phœbus, and other names, especially when it has been considered philosophically. Gold, as applied to the ordinary purposes of society, they term Dead Gold. *Etherised Gold* is philosophic gold. *Base Gold* is sometimes a deceptive description of the living gold of the sages. *White Gold* is the Magistry of the Philosophers attained to the white grade from which subsequently develops their orange gold and perfect redness, which alone is their true gold, their ferment, and their red smoke. *Gold in Spirit* is the gold of the sages reduced into its first matter, which they also term gold reincruded and volatilised by Mercury. When the sages tell the student to take gold, the reference is not to the vulgar metal but to the fixed matter of the Great Work, wherein their living gold is concealed as in a prison. Their 24-carat gold is their gold pure and unmixed with any foreign elements. *Volatile Gold* is the fulminating gold of Crolius. *Gold of Coral* is the matter fixed at the red. *Gold of Gum* is the fixed matter of the philosophers. *Exalted, Multiplied, or Sublimated Gold* is the powder of projection. *Vivified Gold* is gold reincruded and volatilised. *Gold of Alchemy* is the sulphur of the philosophers. *Foliated Gold* is the sulphur of the philosophers in dissolution.

GRANATE, *i.e.*, Granatum, a pomegranate.

GRAND MAGISTERIUM. The operation of the *Magnum Opus*, the separation of the pure from the impure, the volatilisation of the fixed and the fixation of the volatile one by the other, because no artist will succeed by operating separately on either. The philosophers say that the principle of their magistry is one, four, three, two, and one. The first unit is the first matter whence all has been made; the number four represents the four elements which are formed of this matter; the number three represents Sulphur, Salt, and Mercury; the number two is Rebis, the volatile and the fixed; the final unit is the stone, or that which is the result of the process and the fruit of all the Hermetic labours. In exoteric chemistry there are three kinds of magisteries, of which one has reference to the quality of the composites, the second to their substance, the third to their colour, odour, etc.

GREAT ARCANUM. Roger Bacon, or, more correctly, a treatise attributed to him, affirms that the great and supreme arcanum of Hermetic philosophy is hidden in the four elements. Espagnet says that its production requires a perfect knowledge of all Nature and art concerning the realm of metals, which is obtained by analysis of metallic principles.

GREEN LION. Philosophical chemists frequently make use of this term to signify one of the matters which enter into the composition of the Magistry. Usually it is their male or their Sun, both before and after the confection of their animated Mercury. Before confection it is the fixed part, or matter capable of resisting the action of fire. After confection it is still the fixed matter, but more perfect than before. In the first instance it is the Lion simply; it becomes the Red Lion by preparation. The Mercury is made with the first, and the stone, or elixir, with the second. The Old Lion is the fixed part of the stone, so called because it is the principle of the whole. The

Green Lion is the matter made use of for the Magistery. It is certainly mineral and derived from the mineral kingdom. It is the base of all the menstrua of which the philosophers have spoken. Of this they have composed their mineral dissolvent.

GRILLUS, or Grilla, a name of Venus, or Copper. It is also a mild species of chalcanthus used as a purgative.

GUARINI. Men who derive their life from the influence of heaven.

GUTTA ROSACEA is a red breaking out in the face.

HALCYON, the kingfisher. The fabulous bird of that name, and also the foam of the sea.

HALLEREON, the Eagle of the Philosophers.

HARMEL, the seed of the herb Rue, but it is impossible to affirm the special significance which Paracelsus may have attached to the term in his supplementary treatise *Concerning Long Life*.

HELAZATI, unknown.

HELIOTROPE, the Melissa of Theophrastus. Heliotrope, a plant which follows the sun with its leaves and flowers, *herba solstitialis*. A gem used as a lens to look at the sun.

HELLEBORE. A plant used by the ancients as a specific for many illnesses, especially for madness.

HERMES. Albertus Magnus affirms that this mysterious adept was the first who discovered the grand magisterium.

HERMODACTYLUS, the wild saffron, or, according to some, dog's-bane.

HILDONIUS, an unknown hierarchy of elementary spirits.

HIPPURIS, the herb horse-tail, or shave-grass. The hipparus is a kind of lobster.

HIPPUS, or Hippeus, is a kind of crab-fish, the sea horseman.

HIRUNDINARIA, or Hirundinina, swallow-wort.

HONEY. A name given to the philosophical dissolvent.

HOP-PLANT, that is, Lupulus.

HUMIDITY OF THE PHILOSOPHERS. Arnoldus de Villa Nova says : I tell thee further that we could not possibly find, neither could the philosophers before us, anything that would persist in the fire, save the unctuous humidity. A watery humidity easily vapours away, its earth remains behind, and its parts are separated because their composition is not natural. Unctuous and viscous humidities are hardly separable from those parts which are natural to them. A treatise attributed to Albertus Magnus assumes that all metals are composed of an unctuous and subtle humidity, intimately incorporated with a subtle and perfect matter.

HUMULUS, a plant of the hop genus. See Hop-plant.

HYDROMANCY, according to Cornelius Agrippa, performs its presages by the impressions of water, its ebbing and flowing, increase, depressions, tempests, colours, etc. To this must be added the visions that are seen in the water.

HYDROMEL. A kind of meal. Honey diluted with water.

HYPOSARCHA, *i.e.*, Hypersarcosis, fungous or proud flesh.

ILECH. This term seems identical with Ileias and Ileadus. The *primum Ilech* is the beginning. The supernatural Ilech is the supercelestial conjunction and union of the stars of the firmament with the stars of things below. The great Ilech is the star of medicine. When we take medicine we assimilate this star. Crude Ilech is a composition of the three principles, Salt, Sulphur, and Mercury. It seems also to be elemental air.

ILIASTER, Ileias, Eliaster, Iliadum, etc., the first chaos of the universal matter, constituted of Sulphur, Salt, and Mercury. The prime principle. Called also Ilion.

ISOPIC ART, see Ysopus, etc.

JACINTH; from this stone a medicine called Antera was extracted.

JACULATION, a darting or casting.

JESICHACH, or Jesahach, is supernatural.

KING. A name used in two different senses by the philosophers. Most commonly it is the sulphur of the sages, or philosophical gold, being an allusion to vulgar gold, which is called the king of metals. Sometimes it is a name of the matter which enters at the beginning into the composition of Mercury, and is the first fire thereof, that fixed grain which has to overcome the mercurial cold and volatility. It seems to be used in both these senses by Basil Valentine in his Twelve Keys. Subsequently he applies the name of King to perfect sulphur and even to the powder of projection. The King is also identical with the Lion. When referring to the powder of projection it is said that the King so loves his brethren that he gives them his own flesh to eat, and thus makes them all kings like himself, that is to say, gold.

KIST, an uncertain weight. It may be of fifteen grains, or four pounds. It also signifies two measures of wine, or half a gallon.

KYBRICK, or Kibric, a name given to the stone. It signifies also the father and first matter of Mercury and all fluids.

LAC VIRGINIS. A name given to the Mercury of the philosophers. It is also mercurial water, and the vinegar of the philosophers. The Mercury of the philosophers, under the form of a milky water in the humid way. It has further been applied sometimes in the dry way when the matter has been brought to the white.

LAPIS LAZULI, *i.e.*, lazulus, the azure or lazule stone.

LATERINE OIL, an oil obtained from bricks.

LATON, copper, or brass, but also a certain state of the philosophical matter when the red colour has appeared, but is not yet permanently acquired. It is, further, a name of electrum. The blood of the Laton is that dry water which is extracted from the virgin earth of the sages.

LAUDANUM. This name is said to be used by Paracelsus in another than the ordinary sense, and to signify a specific for fevers which was a compost of gold, corals, pearls, etc. Another writer says that it is a medicine beyond all praise,

made out of two substances, than which nothing more excellent can be found in all the world, and whereby almost every disease is cured.

LAUREUS. This, apparently, is a race of wood spirits. Compare *Laurus*, a laurel.

LEFFAS, the occult vapour of the earth, the principle of vegetable life and growth, that is, the predestination of plants, the sap of plants. See Derses.

LENTIGO, a freckle, pimple, or spot on the face.

LENTOR, a clammy or gluish humour.

LIGUSTICUM, lovage of Lombardy.

LILI. One author says that this is in general any matter from which a good tincture can be made, as, for example, antimony. The *lilium* of Paracelsus is the extraction of a tincture from metals.

LIMBUS. The spagyric philosophers for the most part identify the Limbus with ancient chaos. It has been described as a huddle of matter wherein all things were strangely contained. Some regard it as uncreated, but if otherwise, then it was an effect of the Divine Imagination, acting beyond itself in contemplation of that which was to come, and producing its passive darkness for a subject on which to operate. It also stands for the universal world, with the four elements thereof.

LIMBUS OF MAN. At death the earthly parts of man return to the earth, but the celestial portion departs to a superior, heavenly Limbus, while the spirit goes back to God who gave it.

LIME, see Calx.

LION'S-FOOT, see Alchimilla.

LIQUOR HORIZONTIS, probably liquor of Mercury.

LITHARGE, *i.e.*, Litharge of Silver, is the matter of the work when it has arrived at the white colour under the process of the Sages. Litharge of Gold is the Stone at the red, otherwise, the Sulphur of the Philosophers.

LIXIVIUM, *i.e.*, lye.

LOCCA, or Lorcha, the essential sweetness of the locusts of trees.

LOCUSTS. This name is applied to several different plants and trees. Paracelsus seems to have used it to signify the young shoots of any vegetation.

LORINDS, water spirits.

LORIPIDES, *i.e.*, bow-legged.

LUNARIA, moon-wort, an ingredient for love-potions.

MACHAON, possibly Macha, a flying worm.

MAGISTERY. The strength of the perfect magisterium, according to Avicenna, is one part upon a thousand, that is to say, it will transmute a thousand times its own quantity of base metal into gold. This tinging power, however, varies, and even larger quantities are mentioned by other adepts. See Grand Magisterium.

MAGNALIA, great and divine works.

MAGNESIA. This term, which is occasionally used by Paracelsus in its

alchemical, as distinct from its chemical sense, has received many explanations from the adepts. It is the matter of the stone, which the philosophers sometimes call their red, and sometimes their white magnesia. In the first preparation the chaos is blood-red, because the central sulphur is stirred up and discovered by the philosophical fire. In the second it is exceedingly white and transparent like the heavens. It is something like common quicksilver, but of such a celestial and transcendent brightness, that nothing on earth can be compared to it. It is the child of the elements, a pure virgin, from whom nothing has been generated as yet. When she breeds, it is by the fire of Nature, which is her husband. She is neither animal, vegetable, nor mineral, nor is she an extraction from these ; she is pre-existent to them all, and is their mother. She is a pure simple substance, yielding to nothing but love, because generation is her aim, and that is never accomplished by violence. She produces from her heart a thick, heavy, snow-white water, which is the *Lac Virginis*, and afterwards blood from her heart. Lastly she presents a secret crystal. She is one and three, but at the same time she is four and five. She is the Catholic Magnesia, the Sperm of the World, out of which all natural things are generated. Her body is in a sense incorruptible ; the common elements will not destroy it, neither does she mix with them essentially. Outwardly she resembles a stone, and yet she is no stone. The philosophers call her their white gum, water of their sea, water of life, most pure and blessed water ; she is a thick, permanent, saltish water, which does not wet the hand, a dry water, viscous, slimy, and generated from the saline fatness of the earth. Fire cannot destroy her, for she is herself fire, having within her a portion of the universal fire of Nature, and a secret, celestial spirit, animated and quickened by God. She is a middle nature between thick and thin, not altogether earthly, not wholly igneous, but a mean aërial substance, to be found everywhere and at all seasons.

MAGNET. Alchemically speaking, this is the dew of the philosophers.

MAN AND WIFE. Most philosophers have compared the confection of the Magistery to the generation of humanity. They have, therefore, personified the two parts or ingredients of the work, namely, the fixed and the volatile, as the male and female, man and wife, etc.

MANNA is, in some instances, the Mercury of the philosophers, called also divine manna, because they affirm that the secret of its extraction is a gift of God, as also the knowledge of that Mercury which is the minera whence it is derived.

MARCASITE. Many species were known to the old chemists, for all stones which contained any proportion of metal were so called, and even sulphureous stones, vitriolic stones, etc., were included under the same term.

MARRUBIUM, *i.e.*, the herb horehound.

MARTAGON is Silphium, a kind of lily.

MATTER OF THE PHILOSOPHERS. This has been compared to the sperm of an animal, for it is a most delicate substance, almost a living thing ; indeed,

it possesses some portion of life, and Nature produces certain animals out of it. For this reason the least violence destroys it, preventing all generation. If it be overheated for even a few minutes, the white and red sulphurs will never essentially unite and coagulate. On the other hand, however well the work has been begun, should it grow cold for so short a space as half an hour, it will come to no good end afterwards.

MELIGIA, probably Melisea, *i.e.*, motherwort, a kind of manna or balsam, obtained by a magisterial process upon vegetables. Meliagris is frittany.

MELLILOT, the *dulcis et mellea lotus* of Ovid, called *Sertula campana* by Pliny. The herb mellilot.

MELISSA, see Meligia.

MELONA, ? Melina, a drink made of honey.

MENSTRUUM. This term is used in a very arcane manner by some alchemists, who speak of the menstruum or matrix of the world, wherein all things are framed and preserved. It is a certain oleaginous and ethereal water.

MERCURIAL LIQUOR, a balsam of things in which all health resides. It is most potent in tereniabin and nostoch.

MERCURY. According to Arnoldus de Villa Nova, the Mercury of the philosophers is an aqueous, cold, and moist element. This is their permanent water, the spirit of the body, unctuous vapour, blessed water, virtuous water, water of the wise, philosophers' vinegar, mineral water, dew of heavenly grace, virgin's milk, corporal mercury, etc. All these names signify one only thing; out of this all the virtue of the art is extracted, and, according to its nature, the tincture, both the red and the white. Mercury, by another account, is composed of a metallic and fluidic earth. There are as many Mercuries as metals, which can all combine with the fluidic earth, and this in such a manner that separation is impossible. The whole secret of Hermetic philosophy and the Great Work consists in the wonderful sympathy between those Mercuries and this earth. *Dissolving Mercury*, used by spagyric philosophers for the reduction of metals, minerals, vegetables, and all bodies to their first matter, is of three kinds: Simple dissolving Mercury; composite dissolving Mercury, which is properly their true Mercury, and common Mercury, or that which is extracted from metals. Simple Mercury is a water extracted according to the principles of their art from a matter, the true name of which they have carefully concealed under an infinity of false descriptions. *White Mercury of the Sages* is the stone at the white. *Red Mercury* is the magistery perfect at the red. *Universal Mercury* is the animating spirit diffused throughout the universe. *Crude Mercury* is the dissolvent of the sages, not that vulgar quicksilver which is called crude mercury by chemists. *Preparing Mercury* is this same dissolvent, which prepares soluble bodies for their development into the perfection of the magistery.

MERCURY OF LUNA. Flamel directs that the Mercury of the Moon should be taken with that of the Sun, and cherished over the fire in an alembic. It

must not be a fire of coals or wood, but a bright, shining fire, like the sun itself; its heat must never be excessive, but always of one and the same degree. Thus is performed the plantation of one into the other.

MERCURY OF SOL. The unctuous humidity of the philosophers is called water of silver and water of the moon, but it is really, say others, the Mercury of the Sun, and partly that of Saturn. Indeed, it is an extract of the three metals, and without these it can never be made.

MERITORIUM, a tavern.

MICROCOSM. Sir George Ripley, a celebrated English alchemist, describes the stone as a triune microcosm. Proportion must be studied in its composition. The matter itself is found everywhere. It flies with fowls in the air, swims with fishes in the sea, it is discerned by the reason of angels, and it governs man and woman.

MINERA. The alchemists mention a minera of man as well as of metallic things. It is also the First Matter of the Philosophers' Stone. It is water and not water, earth and not earth, the Damascene earth, the subject of art, and that also of which God made use in Nature.

MITHRIDATIC, pertaining to mithridate, an old antidote against poison.

MOREE, Moro, Mores, a kind of abscess.

MORPHEA, see Morpew.

MORPHEW, or Morphea, a species of leprosy.

MOTHER OF METALS, *argentum vive*, *i.e.*, live silver.

MUMIA. Whatsoever when killed has the power of healing diseases. Hence Mumia of the elements is the balsam of the external elements. *Mumia transmarina* is manna. *Mumia versa*, according to some opinions, is liquor of Mumia.

MURIA, brine or salt water. Also stinking menstruum.

MYROBOLANUM, the Egyptian bean, a fruit used by apothecaries in the manufacture of precious ointments; an oil is obtained from the kernel.

MYSTERIUM MAGNUM. This is used by the alchemical philosophers in another sense than that of Paracelsus. The operation or confection of the great work is called a mystery of the philosophers, because they discover it only to their most intimate friends. Some also refer under this name to the first matter of the work, because that is the most concealed portion of all their writings.

NECROLICUS. As Necrolia and Necrolica are medicaments which prevent death and preserve life, so it is reasonable to suppose that a Necrolicus is the administer of their medicines. But he is also a person who has written learnedly on any subject.

NENUPHAR, a generic name of the elementary spirits of the air. It also signifies a water lily.

NEPITA, the herb net, or catmint.

NEUFARINIS, a generic name of elementary spirits.

NOSTOCH, the efflux of a certain star, according to Paracelsus. It is

deposited on the earth in summer, appearing like a yellow fungus, but in consistency it is like a jelly. Some say it is wax.

OGERTUM or Ogertinum, *i.e.*, Orpiment.

OIL OF THE PHILOSOPHERS. Though oil simply so called has nothing to do with the Great Work, and must not be used in confection, the name has been applied to the matter during that period when it has assumed an oleaginous colour and viscosity. This is when it is undergoing putrefaction in the philosophical egg. Oil of the philosophers also signifies the Secret Fire of the Sages. What is termed by some alchemists *Blessed Oil* is incomcombustible, philosophical oil, the sophic sulphur, also the stone perfect at the white, or red, because it runs and melts before the fire like butter. *Oil of Nature* is the prime salt which is the basis of all salts. It is called oil because it is unctuous, melting, and penetrating, and oil of Nature because it is the base of all the individual substances in the three kingdoms, and is their material conserver and restorer. It is the best, the most noble, the most fixed, and at the same time the most volatile before its preparation. When it is sought to be employed by art, it must be brought from the fixed to the volatile, and from the volatile to the fixed: to solve and to coagulate is the whole work. *Essential Oil* is the volatile sulphur of the philosophic metals; it is their soul, the male, the Sun, the gold of the sages. *Oil of Saturn* is the matter of the philosophers at the black stage, because their matter in putrefaction is called lead. *Oil of Sulphur* is also sometimes the matter at the black stage. *Incombustible Oil* is the mastery at the red, so called because of its fixation. *Live Oil* is the mastery at the white. *Vegetable Oil* is oil of philosophical, not vulgar, tartar.

OIL OF IRON. The Sulphur of the Philosophers at the red.

OLIBANUM, an inspissated sap, or gum-resin.

ONAGIR, *i.e.*, Onager, the wild ass.

OPOPONAX, the juice of the panax, or herb all-heal.

PANIS SILIGINIS, or Panis Siligineus, white bread, or fine manchet.

PANNUS, a cloth or bag.

PARATELUS, of unknown signification, but the text of the treatise *Concerning Long Life* makes it barely possible that it is a corruption of Paraclete.

PART WITH PART, a composition of equal parts of gold and silver.

PEACOCK'S TAIL. The matter of the work at that moment when the colours in the tail of the peacock manifest on the surface.

PELICAN. An alchemical vessel, so called after the bird of that name. The body tapers towards the neck, which is bent round, and the tube returns into the body.

PENTAPHYLLUM, the herb cinquefoil.

PERI-PNEUMONIA, inflammation of the lungs.

PERSIAN FIRE, a scorching and spreading ulcer.

PER SCOBAM, possibly per scobem, from *scobs*, any powder that comes of sawing, filing, etc.

PERSICARIA, the herb culerage or peachwort.

PETROSELINAR, a kind of parsley growing among rocks.

PHILOSOPHERS' STONE. This is one, says Arnold de Villa Nova, and he adds that it can be extracted from all bodies, including common quicksilver. The first physical work is the dissolution of the stone in its own Mercury, so as to reduce it to its first matter. Jacob Böhme describes the philosophers' stone as dark, disesteemed, and grey in colour.

PHILOSOPHICAL EGG. While the majority of chemists have supposed that the sages applied the name of Philosophical Egg to the vessel in which they enclose their matter for coction, and have consequently shaped it like an egg, this does not represent the idea or the sense of the sages, although at the same time such a shape is the most convenient for circulation. The egg of the philosophers is not that which contains; it is that which is contained; that is, the true vessel of Nature. Therein the philosophic chicken is concealed, which the internal fire of the egg, excited by the warmth of the hen, vivifies by degrees, and gives life to that matter of which it is the root, whence there is at length born the philosophical infant which perfects and enriches his brethren. Again: the egg signifies most commonly the actual matter of the mastery, which contains the Mercury, Sulphur, and Salt, even as the ordinary egg is composed of the white, the yolk, and the pellicle.

PHILOSOPHICAL MONTH, *i.e.*, the period required for chemical digestion.

PHLEGM. When this term is made use of in connection with the operations of alchemy, it signifies a certain aquosity or vapour given off from the matter of the work, becoming white in the process of distilling. It is for this reason that the same name is applied to the stone and to philosophical Mercury in the grade of the white.

PHŒNIX, the fire in the quintessence, the physical stone.

PISA, a mortar.

POCALE, a measure of wine.

PRUNELLA, *i.e.*, Prunellus, the bullace-tree.

PUTREFACTION. The corruption of the moist substance of bodies by a defect of heat, or, otherwise by the action of a foreign fire on the matter. It is in this sense that the spagyric philosophers say that the matter of their stone is in putrefaction when the heat of the extrinsic fire setting into action the internal fire of the said matter, the two act in concert thereupon, separating the humidity which binds its parts, and after several circulations in the hermetically sealed aludel, reducing the matter into dust.

PYROMANCY is divination by the impressions of fire, by comets, by fiery colours, by visions and imaginations in the fire. Capnomancy, or divination by smoke, is an art mentioned by Agrippa as allied to Pyromancy.

QUARTA, probably a measure containing five ounces of wine and four and a half ounces of oil.

QUARTATION, an old method of testing gold. In melting, nine parts of silver

were added to one of gold, and both were resolved by aquafortis, which held the silver in solution, and the gold settled at the bottom.

QUINTESSENCE. Paracelsus, though possibly the first, was by no means the last of the alchemists to describe the term quintessence as a misnomer. Eugenius Philalethes affirms that there is no quintessence, no fifth principle, except Almighty God. There is a quartessence which is a moist and silent fire, which passes through all things in the world and is Nature's chariot, the mask and screen of the Almighty. Wheresoever God is there this train of fire attends Him. It was this fire which was manifested to Moses on Mount Sinai. According to another authority, the terms quintessence, specific, magnetism, bond, seed of the pure elements, etc., are all synonyms of one substance, a subject wherein the form abides. It is a material essence, which encloses an operative and celestial spirit. Others say that it is the fifth principle of composites, comprising the finest portion of the four elements. The *Quintessence of the Elements* is the Mercury of the Philosophers.

RABELOIA, the roots of the larger ranunculus.

RAINWATER. This is the common soft water, mentioned sometimes by Paracelsus.

REALGAR is red orpiment.

REBIS. Among other meanings attached to this curious term, it is said to be the last matter of things, and this may be understood either literally, as excrement, or philosophically, as opposed to the first matter. Alchemically, it is the fixed and the volatile.

RECTA CROA, *i.e.*, flos sectæ croæ, flower of the crocus, an extract of chelidony leaves. Also flower of the nutmeg.

RED LION. The spagyric philosophers have given this name to the terrestrial and mineral matter which remains at the bottom of the vessel after sublimation of the spirits, called eagles. This Red Lion is also called Laton.

REDUCTION. This is the retrogradation of a substance which has reached a certain degree of perfection to a degree of a lower order. The reduction of metals into their first matter is their philosophic, not the vulgar, retrogradation into their proper seed, that is to say, into a Hermetic Mercury. It is also called reincrudation, and is performed by the dissolution of the fixed by its proper volatile, from which it has been made.

REGULUS, literally, the little king.

RELOLLEA, arcane virtues, called also relolleum.

RUBEDO DE NIGRO, a red substance, extracted by art from black lime.

RUBIFICATION. The process under which the philosophical matter passes from the white to the red stage.

RUBY. With the philosophers this sometimes means the magistery at the red. So also their precious ruby is the powder of projection.

SAGÆ. The saga is properly a witch, sorceress, or wise woman. The sagani are the elementary spirits.

SAGAPIN, a Persian gum-resin.

SALAMANDER. In alchemical terminology this name is sometimes applied to the philosophical matter, and then the term Blood of the Salamander signifies the red state. More usually it is the redness which appears in the recipient in the distillation of nitre and vitriol.

SALT. This substance was supposed by the alchemists to consist of a small quantity of sulphureous earth and a large proportion of mercurial water. It was the substantial matter of bodies, of which the form was Sulphur. Three chief species were distinguished, the nitrous, the marine, and the vitriolated, to which some add the tartareous. The marine was regarded as the most important. From this salt volatilised comes Nitre, from Nitre comes Tartar, and from Tartar, when cooked and digested, comes Vitriol. There was also another classification as volatile, mean, and fixed Salt. *Fusible Salt* is the Matter of the Sages cooked and perfect at the white; it was so called because it is actually a salt which melts like wax when placed upon a plate of red hot metal. *Salt of Metals.* Some investigators, taking this expression literally, have imagined that the Matter of the Philosophers was a metallic substance reduced into a salt or a vitriol, but the reference is to the Magistery at the white, because even as salt is the principle of the vulgar metals, so that of the Sages is the root of the first matter of philosophical metals. *Red Salt* is the red Sulphur of the Sages. *Salt Alacoph* is Sal Ammoniac. *Bitter Salt* is Alkali. *Salt of Greece* is Alum. *Indian Salt* is the Mercury of the Sages. *Salt of Bread* is marine or common salt. *Salt of the Sages* is Sal Ammoniac, the natural kind, or philosophic Nitre, but the true Salt of the Sages is their Matter at the white. *Acid Salt* is philosophical Mercury. *Salt Adram* is Sal Gemmæ, also called *Salt of Cappadocia.* *Burnt Salt* is the Matter at the black stage. *Salt of the Earth* is the Mercury of the Sages. *Salt in Flower* is the Mercury of the Sages, or the Dry Water of the Sages. *Salt of Glass* is the Mercury of the Sages. *Fixed Salt* is the Sulphur of the Sages. *Honoured Salt* is the Matter of which the Hermetic Mercury is made. *Salt of Saturn* is lead reduced to a salt. *Sea Salt* is the Mercury of the Sages. *Spiritualised Salt* is the philosophers' spirit of salt. It is their Mercury prepared by Hermetic sublimation. *Universal Salt* is the Mercury of the Sages.

SAL ANATRON, salt nitre, red salt of the Indies. It is also called *Sal Andaron.*

SALDINI, also called Rolamandri, are igneous men, otherwise essences of the race of the Salamander.

SAL GEMMÆ is Hungarian salt. It is also called *Sal Nominis* and Salt of Hungary.

SALT NITRE, see Salt.

SAL PEREGRINUM is very probably another name for the alchemical Salt of Tartar.

SALT OF TARTAR, white calcined tartar.

SAMECH, tartar, or salt of tartar; also the healing power of all wounds.

SANDARAC, a bright red colour used by painters ; it is found in mines of gold and silver ; some call it red arsenic. There is another species made of burnt ceruse ; also red lead. Another name is cerinth.

SAPPHIRE. The philosophers have given this name to their mercurial water.

SATURN, *i.e.*, Lead. This metal is said by Isaac the Hollander to be the first matter of the philosophers. It is also a name for the philosophical matter in putrefaction. It is further the Adrop of the Sages or the Azotified Vitriol of Raymond Lully. Finally, it is a name sometimes confusedly applied to ordinary copper.

SATYRION, or Orchis, the herb ragwort, or priest-pintle.

SCARIOLÆ. The fourfold spiritual powers of the mind, corresponding to the four elements and the four cabalistical wheels of fire of that chariot which took up the prophet Elias. They are soul emanations or faculties, fancy, imagination, speculation, etc. These under religious sanctification become instruments for the attainment, not merely of long, but of eternal life.

SCORIÆ. Impurities separated from minerals and metals during fusion.

SEALED EARTH, a red earth.

SEED. The seed, or first matter of the Stone, says the Persian alchemist, Rachaidibi, is outwardly cold and moist, but inwardly hot and dry. Rhodion, the instructor of Calid, says that it is white and liquid, but afterwards it becomes red. It is the flying stone, aërial and volatile. It has one virtue inwardly and another outwardly. See *Sperm*, First Matter, etc.

SEPARATION. This process, so often referred to by Paracelsus, is also mentioned by pseudo-Hermes, who has these significant words: Know, ye that are children of the wise, the separation of the ancient philosophers was performed upon water, which separation divides the water into other four substances.

SEPULCHRE, the glass vessel which contains the matter of the philosophical work; the dissolvent of the sages; the black stage of the matter.

SERPIGO, a tetter.

SERUM, whey, buttermilk.

SICONIUS, unknown, a race of elementaries.

SILIGO, a species of corn.

SMAGMA, called also both Smegma and Smigma, is a detersive substance.

SMIRIS, Smyris, a stone with which glaziers cut glass, and with which lapidaries polish gems.

SPAGYRIC SCIENCE is that which teaches the division and resolution of bodies, with the separation of their principles, either by natural or violent means. Its object is the alteration, purification, and perfection of bodies, that is to say, their generation and their medicine. It is attained by solution; success is impossible if their construction and principles are ignored, because these serve for dissolution. The heterogeneous and accidental parts are separated with a view to the intimate reunion of the homogeneous portions.

Spagyric Philosophy, properly so-called, is the same as Hermetic Philosophy.

SPATHUS, or Spatha, a pounding instrument.

SPATULA, or Spathula, a broad and flat instrument, like a slice. It is used in certain furnaces for regulating the heat. A damper.

SPELT, *i.e.*, German grain, a kind of wheat.

SPERM OF THE WORLD, that is, catholic magnesia. It is said to be very salt, extremely soft, somewhat thin and fluid, having no relation to ordinary salts, a sperm that Nature herself draws out of the elements without the help of art. Man may find it where Nature leaves it, it is not his office to make the sperm, nor to extract it; it is already made, and wants nothing but a matrix, with heat convenient for generation.

SPHERE OF THE SUN, the dual matter of the stone, the heaven, *i.e.*, the quintessence.

SPODIUM, ash of gold, but sometimes applied to pompholix and to a kind of tutty.

SPREAD EAGLE. In common chemistry this represented sublimed sal ammoniac, and, in the Hermetic sense, it was the volatilisation of the matter.

STEEL. The steel of the philosophers is a subject of frequent reference, and it has caused many persons to seek the philosophic stone in this substance, but in vain. The steel of the sages is the wine of their philosophic gold, a spirit pure above all, an infernal and secret fire, most volatile in its nature, and the receptacle of superior and inferior virtues.

STELLIO, an eft or newt.

STIBIUM. In the first place, black lead and its derivatives; secondly, a name of antimony; thirdly, a certain stone found in silver mines.

STOMACH OF THE OSTRICH. The chemical philosophers give this name to their dissolvent or philosophical Mercury.

STONE OF THE PHILOSOPHERS. The Rosicrucian philosophers say that in the impregnable fortress of truth is contained the true and undoubted Philosophers' Stone, that treasure which, uneaten by moths and unstolen by thieves, remaineth to eternity, though all things else dissolve, set up for the ruin of many and the salvation of some. To the crowd this matter is vile, exceedingly contemptible and odious, but to the philosophers it is more precious than gems or gold. It loves all, yet it is well-nigh an enemy to all; it is to be found everywhere, yet scarcely anyone has discovered it. It is the one thing proclaimed by veritable philosophers, which overcomes all, is itself overcome by nothing, searches heart and body, penetrates everything stony and solid, strengthens all things delicate, and establishes its own power on the opposition of that which is most hard. It is the way of truth, and there is no other path to life. It is the true medicine, rectifying and transmuting that which is no more into that which it was before corruption, even into something better, and that which is not into that which it ought to be. The gold of the philosophers with which the wise are enriched is not that gold which is coined.

STORAX CALAMITA. Storax is a sweet incense or gum.

STRUTHIO, an ostrich. Soap-wort, used for cleaning wool, a chaplet of this flower.

SUBLIMATION is the purification of the Matter by means of dissolution and reduction of the same into its constituents. It is not the forcing of the Matter to the top of the vessel, and then maintaining it separated from its *caput mortuum*, but its subtilization and purification from all earthly and heterogeneous parts, imparting to it a degree of perfection not previously possessed, or, more correctly, its deliverance from the bonds which bind it, and hinder its operation.

SULPHUR VIVE. This substance, which is one of the profound mysteries of alchemy, is identical with the red sulphur of the philosophers. Some persons, led astray by Hermetic symbolism, have gone to work on native sulphur, assuming it to be the true matter of the art, but though this name is applied to it, the reference is really to that substance when it has attained the perfection of the red or white. It is then the true philosophical sulphur, and, according to Raymond Lully, is not to be sensibly distinguished from the true Mercury, which has no connection whatsoever with common sulphur. Mention is also made of a white sulphur, which some say is Mercury educed from potentiality into activity by the operations of the Magistery and following the principles of the Medicine of the First Order. It may be noted in this connection that Sulphur of Vitriol is the Soul of Vitriol, and so also with Mars, Sol, etc. Black Sulphur is Antimony; unctuous Sulphur is another name for the Sulphur of the philosophers. Narcotic Sulphur of Vitriol is an extract of Vitriol which is described by Beguin; Paracelsus himself regarded Vitriol as the best of all anodynes. Ambrosial Sulphur is a natural red Sulphur, very transparent and met with in large lumps. Green Sulphur is the Sulphur of the Sages. What the alchemists call True Sulphur is the fixed grain of their matter, the true internal agent which acts upon, digests, and cocts its own proper mercurial matter wherein it is enclosed. Sulphur Zarnel is another name for philosophical Sulphur. The Sulphur of Nature is yet another. Some, however, apply it to the matter at the white. One author says that it is the essential menstruum made from Mercury and spirit of wine seven times rectified, which dissolves the calx of the Sun and Moon, or at least, extracts their tincture, with which gold is nourished by a simple yet secret series of operations. But there is some doubt on this point. Universal Sulphur is affirmed to be the Light from which all particular sulphurs proceed.

SULPHUR-WORT, *i.e.*, Peucedanus.

SUN AND MOON. The influence of Paracelsus on the later alchemists is shewn very clearly in their speculations concerning Luna and Sol; as for example: The Sun and Moon are two magical principles, the one active and masculine, the other passive and feminine. As they move so move the wheels of corruption and generation. They naturally dissolve and compound, but properly the Moon is the instrument of the transmutation of the inferior

nature. There is no compound in Nature which has not a little sun and a little moon, a Son of the heavenly Sun, and a Daughter of the celestial Moon. What is performed by the great luminaries for the conservation of the great world, is analogically accomplished for the microcosm by the lesser luminaries. The little Moon is our incombustible, eternal oil, the receptacle of the little Sun, which is a fire. These are the Sol and Luna of the philosophers, not gold and silver.

SUPERMONIC, *i.e.*, enigmatical.

SYLVESTERS, the fauns of classical mythology.

SYPHITA PRAVA, St. Vitus's Dance.

SYPHITA STRICTA, the fantastic spirit of sleep-walkers.

SYRONES, pimples or boils on the hands.

TALC. The older alchemists have often made reference to what they term an Oil of Talc, to which they have attributed so many virtues that subsequently chemists have exerted all their power to compose it. They have calcined, purified, and sublimed the matter in question, but have met with no success. The reason is that the term was used allegorically, and that the reference was to the Oil of the Philosophers, the elixir at the white.

TANACETUM, the herb tansey.

TAPSUS, *i.e.*, Tapsos, a kind of herb.

TARTAR, a name applied to the mastery at the white stage.

TAURUS ♄. This zodiacal sign represents asphalt or bitumen in alchemical symbolism.

TENTIGO PRAVA, ? a severe stiffness, or contraction.

TERENIABIN. A variety of manna.

TERNARY. The author of *Anima Magica Abscondita* observes that some philosophers who, by the special mercy of God, attained to the Ternarius, could never, notwithstanding, obtain the perfect medicine. Elsewhere in the same treatise he says that this Ternarius, being reduced by the Quaternary, ascends to the magical decad, which is the exceeding single monad, in which state it can perform whatsoever it pleases, for it is united thus, face to face, with the first eternal, spiritual Unity.

TESTA, potsherd, tile, brick ; also a metallurgical term, signifying bloom. But it seems to have had another meaning in the treatise *Concerning Long Life*. It is said to be the skin of man's body.

TESTÆ OVORUM, egg shells.

THERIAC. Any antidote to poison.

THRONUS, *i.e.*, Thronum, a flower or herb used as drugs or charms.

THUCIA, tutty.

TIBIA, the shank or shinbone.

TIGILLUM, a funnel, a crucible.

TITHYMAL, the sea lettuce, wolf's milk, or milk thistle. Also spurge, euphorbia ; many kinds were known to the ancients. Physicians used the juice or berries as a purgative.

TRAGACANTH, probably Trajanthes, a species of *Artemisia*. Also gum dragant, a low shrub. The astragalus, whence the gum tragacanth.

TRANSMUTATION. The soul of man is affirmed by the alchemists to possess an absolute power in miraculous, that is, in more than natural transmutation.

TRARAMES. Spirits who are not seen but heard only, as rapping or throwing spirits.

TRIFERTES, the same as salamanders.

TRIPPLICITY. Besides the triplicity, which exists in the elements and in all created subjects, there is another more obscure and mystical triplicity, which is recognised by adepts. Without this the former cannot be attained. These three principles are the key of all Nature. The first is one in one and one from one; it is a pure white virgin, and next to that which is most pure and simple. It is the first created unity, the bride of God and of the stars, through which as a medium all things were made, and are still made, both in things natural and in things of art. The second principle does not differ from the first in substance or dignity, but only in complexion and order. The third principle is not, properly speaking, a true principle, but rather a product of art; it is a various nature, consisting of superior and inferior powers. It is the magician's fire, the Mercury of the philosophers, the microcosmus and the Adam.

TRINES, possibly Triones, the constellation called Charles's Wain.

TRIPOLIS. Tripolium is the herb called turbit or blue daisy.

TRITORIUM, a vessel for grinding, mortar, or pestle.

TRONOSIA, that is, Tronossa, honey-dew.

TRONUS, same as Tronosia.

TRUPHIT, the principle of development in every metal, a secret virtue of minerals.

TURBITH, a root much used in medicine to purge off phlegm. Mineral Turbith is sweet, non-corrosive, precipitated Mercury.

TUTIA, see Thutia.

UNIONS. The term *unio* or union was applied to the pearl, because though many are found in one shell, not one is exactly like another.

UNIVERSAL MEDICINE. Most recipes of the adepts given for the preparation of the absolute elixir, are more obscure even than Paracelsus, as, for an example: Take ten parts of celestial slime; separate the male from the female, and each afterwards from its earth, but physically, mark you, and with no violence. Conjoin after separation in due, harmonic, vital proportion. Straightway the soul, descending from the pyroplastic sphere, shall restore, by a vivific embrace, its dead and deserted body. The conjoined substances shall be warmed by a natural fire in a perfect marriage of spirit and body. Proceed according to the Vulcanico-magical theory till they are exalted into the fifth metaphysical rota. This is that world-renowned medicine of which so many have scribbled, and yet so few have known.

VALERIAN, the great set wall.

VENTER EQUINUS. According to an explanation of Paracelsus the Venter Equinus is the digestive power.

VESSEL OF THE PHILOSOPHERS. Geber describes this instrument as a round glass vessel with a flat round bottom. This and all other simple explanations concerning it are supposed to be wholly deceptive, and it is regarded as one of the most profound mysteries of all alchemical art. A treatise attributed to S. Thomas Aquinas says that there is but one vase, one substance, one way, and one only operation.

VERBENA, the herb Vervain.

VERTO, a weight equivalent to the fourth part of a pound.

VESSEL OF HERMES, see Vessel of the Philosophers.

VICTORIALIS is probably Victoriola, the Alexandrian laurel, or tongue-laurel. Paracelsus refers to its magical powers, and says that the lorinds can be made to manifest by means of it.

VINUM ARDENS. According to Paracelsus the correction of Vinum Ardens is by distillation as long as it will ascend, for the removal of the aqueous part.

VINUM ESSATUM, wine impregnated with the virtues of herbs or other substances.

VIRGIN MERCURY and Virgin Sulphur. According to one explanation these are the heaven and earth of Moses.

VITISTA, *i.e.*, St. Vitus's dance. Paracelsus terms it a disease of the imagination.

VITRIOL. The philosophers apply this name to their green or crude matter. Their White Vitriol is the magistery at the white. Their Red Vitriol is their sulphur perfect at the red. Metallic Vitriol is the salts of metals.

VUA, that is, Uva. This is firstly the grape, and stands, by an extension of meaning, for the vine itself. Analogically it is any bunch or cluster. There is also a swelling of the uvula which passes under this name. Finally, there is *uva quercina*, a concretion occasionally found at the roots of oak-trees, possessing medicinal properties, especially in dysentery.

VULCAN is said by Paracelsus to be the master of the alchemists and spagyrist.

WATER. So early as the days of the Greek author Theophrastus, the origin of metals is said to have been referred to water. The same writer mentions that Callias, an Athenian, endeavouring to make gold, brought his materials into cinnabar.

XYLOBALSAMUM, the wood of the balsam-tree.

YLE, wood; timber; the matter or stuff of which a thing is made; the raw unwrought material, whether wood, stone, or metal. In chemical signification, a simple substance, a base matter; as a principle of being, first found in Aristotle, and frequently later in philosophical writers,—usually as opposed to the intelligent principle.

YSOPUS.

YSOPAIC ART.

VOL. II.

} The art of smelting and fusing.

YLIADUM, Yliadus, Yleidus, etc. The interior spirit which informs the members of every body. Outwardly it generates health, but inwardly disease in humanity. It also leads on to the crisis in diseases. Disease is the resolution of the Yliadus. The reason of this seems to be that the interior spirit contains many species of salts. The resolution of arsenic in the body causes plague; the resolution of ogertinum, or orpiment, causes pleurisy; the resolution of vitriolated salt causes another disorder which Paracelsus describes as a disease characterized by a paroxysm, by swellings of the throat, and ulceration of the tongue. Elsewhere Paracelsus says that Yleidus is elemental air, and that its obstruction in any part of the body occasions disease. There is an Yliadus of the elements and one also of man.

YRCUS. The male coney, or rabbit. The blood of this animal was supposed to soften glass and flints when pounded and made into a paste therewith. It had also a similar effect upon other crystalline substances. It is written Hircus by the ignorant. It should be noted in this connection that *cuniculus*, that is, the word which usually signifies coney, also stands for the long pipe attached to a still or a furnace.

ZELOTUM is Petrine Mercury.

ZINCTUM, or Zinetum. Paracelsus describes this as a little known metal, of a peculiar nature and seed. Many metals are adulterated therein. It is of itself fluxile, for it is generated from the flux of the three prime principles. It is fusible but not malleable. He states that he is unacquainted with its ultimate matter. It is akin to quicksilver, and it does not admit of combination with other metals.

ZINIAT. Ferment.

ZONNETI GNOMI. These are fantastic bodies.

ZWITTER, a species of Marcasite; also roasted ore.

NOTE.—*Some explanations contained in the foregoing Vocabulary concerning known substances are not in correspondence with modern knowledge, and it should be understood that they represent chemical science during the period of Paracelsus and of Alchemy.*

INDEX.

 Coagulation, i. 154; coagulation and resolu-
 tion, i. 53 *n.*
 Cobalt, i. 254.
 Cobleta, i. 109.
 Cœlum Philosophorum, ii. 22.
 Cœruleum, i. 162.
 Cohobation, i. 153.
 Colcothar of Vitriol as a coagulate of Mer-
 cury, i. 54.
 Colic, i. 264; ii. 264, 319.
 Colocinth, i. 229; ii. 59, 146.
 Colophonia, ii. 59.
 Comets, ii. 295, 313.
 Combustion of Minerals, i. 311.
 Complexions, ii. 117, 150, 172.
 Conservation, ii. 118.
 Copper, i. 224, 278, 336; medical virtues of,
 ii. 228, 229.
 Coral, nature of, i. 17; species of, 17 *n.*;
 quintessence of, ii. 24; magistry of, 53;
 medical uses of, ii. 214, 215.
 Corporal Resin, ii. 17.
 Cosmography, ii. 297.
 Crocus of Copper, i. 142.
 Crocus of Iron, i. 140, 200 *n.*, 274; ii. 35.
 Crocus of Mercury, i. 200 *n.*
 Crocus of Sol, i. 144.
 Crow's Head, i. 68.
 Crystal, whence extracted, i. 18; to what
 referable, 18 *n.*; coagulation of, *ib.*;
 theory of conjuration in, 14, 225; medical
 uses of, ii. 216, 217.
 Crystalline, i. 268.
 Cyamus, ii. 138.
 Cyanean Stone, i. 158.
 Cyclopes, ii. 261.
 Cyphanta, ii. 346.
 Cyroglossum, i. 189.
 Dalni, ii. 258.
 Danewort, i. 230.
 Dardo, ii. 339.
 Daura, ii. 119.
 Death, the Mother of Tinctures, i. 138; death
 twofold, 146; death not caused by dis-
 ease, ii. 108.
 Degrees, two only, ii. 172; elementated de-
 grees, *ib.*; rules of, 174; degrees of herbs,
 ib.; of heat and cold, 175; concealed
 degrees, 176; first degree of heat, 181,
 183; second degree of heat, 182; first
 degree of cold, 182; second degree of
 cold, 183, 184; third and fourth degrees
 of heat, *ib.*; grade of health, 187; grades
 of spagyric industry, 190; degrees in re-
 lation to disease, 192, 193, 194; grades
 of disease, 197.
 Deneas, i. 218.
 Deltic Nature, ii. 331.
 Dentaria, i. 189.
 Derses, ii. 278.
 Destruction a perfecting agent, i. 4.
 Diana of the Wise, i. 298.
 Diemeæ, ii. 254.
 Digestion, i. 153.
 Diocletian, destroyer of Spagyric books, i. 19.
 Dioscorides, ii. 155, 156.
 Distillation, i. 151.
 Divertallum, ii. 265.
 Divination, i. 185; stars of, 191; science of,
 ii. 294, 295, 296, 301, 302.
 Divining Rod, i. 185.
 Domor, i. 202, 203.
 Doses, ii. 196, 197, 198.
 Drachum, i. 233.
 Dramas, ii. 255.
 Dreams, ii. 296, 313.
 Dropsy, i. 197 *n.*
 Dualech, ii. 265.
 Durdales, ii. 254.
 Dust of Metals, i. 308.
 Earth, element of, i. 221; philosophy of, 228;
 separation of, ii. 21.
 Edochinum, ii. 345.
 Electrum, i. 107, 108, 114; ii. 103, etc.
 Elementary Gold, i. 301.
 Element, one only, ii. 11: long life consists
 in equilibrium of elements, ii. 122.

- Element of the Sun, ii. 130.
 Elias the Artist, i. 27.
 Eliphas Levi, i. 288.
 Elixir, notable, 335, 336; elixir at the white, *ib.*; elixir from Luna, *ib.*; what elixir is, ii. 99; a ferment, 69 *n.*; conservation by, 71; quintessence the fourth elixir, 75; subtlety the fifth elixir, *ib.*; propriety the sixth elixir, 76; elixir of Nature, 154; elixir of gold, ii. 333.
 Ellebore, ii. 59.
 Emerald, a defence of chastity, i. 17; whence derived, 17 *n.*, 224, 243; quintessence of, ii. 24, 130.
 Emerald Table of Hermes, i. 19.
 Enigmas of alchemy, ii. 97 *n.*
 Enochdiani, ii. 340, 341, 344.
 Ens, ii. 112.
 Enur, ii. 279.
 Erucae, ii. 258.
 Estimation, i. 173; ii. 120.
 Eternal Mystery, ii. 4.
 Euphrasia, i. 189.
 Eurys, i. 218.
 Evestra, i. 193; ii. 273, 274, 275.
 Exaltation, i. 152 *n.*

 Faeces, i. 297.
 Faith and Divination, i. 185 *n.*
 Falling Sickness, ii. 111, 128, 158.
 False Processes for the Stone, i. 55.
 Fatacesti, ii. 254.
 Fel Vitri, i. 163.
 Ferments, secret of, i. 70.
 Fire, purges imperfections, i. 4; especially in the prime substances, 4 *n.*; generation of metals by fire, 5 *n.*; virtues of, 42 *n.*, i. 211; the subject of art, 74; not an element, 74 *n.*; manifold nature of, 75; ultimate and primal matter of everything, 90; separation of elements from, ii. 20; its fourfold nature, 129; a twofold fire, 129.
 First Entities, ii. 84, 131, 132, 133, 134, 135, 136.
 First Principle and ultimate matter, i. 91.
 Fishes, separation of elements from, ii. 18.
 Fistula Cassiae, i. 137.
 Fixation, i. 153.
 Fixation of spirits, i. 309, 310.
 Fixed Augment, i. 326.
 Fixed Oil, i. 313.
 Fixed Substances, separation of elements from, ii. 20.
 Flaccum, ii. 41.
 Fleshly Substances, separation of elements from, ii. 18.

 Flos Aëris, i. 199.
 Flos Cheiri, ii. 332, 333.
 Flying Eagle, i. 40, 286.
 Fortunatus, ii. 83.
 Foundation of Philosophers, i. 321.
 Four Complexions, ii. 126, 127.
 Four Elements, ii. 84.
 Four Humours, ii. 127 *n.*
 François de Nation, i. 299.
 Freising, i. 322.
 Fuligo Mercurii, i. 139, 149.
 Fulmination, i. 274.

 Galen, i. 20, 36, 73; ii. 81 *n.*, 82, 98, 99, 162, 169.
 Gall, ii. 23.
 Gamahea, i. 51; varieties of, 51 *n.*; ii. 295.
 Gamandria, i. 230.
 Gamonymum, ii. 340.
 Garyophyllon, i. 134.
 Geber, i. 57, 59, 67, 298.
 Gems, manner of their origin, i. 16 *n.*; generation of, 126; transmutation of, 158; 233, 243, 255; sulphur of, 269; medical uses of, ii. 216, 217.
 Generation, two-fold, i. 120; ii. 6 *n.*; how originated, i. 296.
 Genestum, ii. 157.
 Gentian, i. 229.
 Geomancy, i. 171, 189; stars of, 190; ii. 297.
 Geometry, ii. 297.
 Giants, i. 125, 162; ii. 261.
 Glass, i. 162.
 Gnomes, ii. 258.
 Gold, how generated, i. 111; growth of, 129; sulphur of, 266; calx of, 276; Mercury of, 278, 292; astral, elementary, and vulgar, 301; solution of, 313; separation from the cup, 316; quintessence of, ii. 8, 26, 28; difference between quintessence and potable gold, ii. 28 *n.*; magistry of, 48; fifth essence of, 74; first entity of, 131; medical uses of, 225, 226.
 Golden Herb, i. 129.
 Gout, ii. 111, 128, 130.
 Gradation, meaning of the term, i. 31 *n.*; number of gradations, 31.
 Granate, i. 255; ii. 130.
 Grasses, separation of elements from, ii. 20.
 Gravel, ii. 130.
 Great Architect, i. 295.
 Great Artificer, ii. 250.
 Great Composition, ii. 90.
 Great Mystery, ii. 249, 250, 251, 252, 253, 254, 255, 258, 259, 261, 262, 265, 269, 271, 272, 280.
 Green Lion, i. 38.

- Gyphus, i. 162.
- Halcyon, ii. 129, 132.
- Hamuel, son of, i. 65.
- Hare's-foot, i. 143.
- Heaven of the Metals, ii. 89.
- Heliazati, ii. 340.
- Heliotrope, i. 189, 249.
- Hellebore, ii. 130.
- Hepatica, i. 189.
- Herbs, separation of elements from, ii. 18 ; seven species of, 191.
- Hermes, i. 19, 21, 65, 70, 85, 125, 148, 284, 298 ; ii. 110, 155 ; Apocalypse of, i. 23.
- Hildonius, ii. 346.
- Hippocrates, i. 29, 73 ; ii. 169, 324.
- Hippuris, i. 189.
- Homunculus, i. 124 ; ii. 120, 334.
- Honey, i. 134 ; ii. 74.
- Hyacinth, ii. 138.
- Hydromancy, i. 171, 190, 193 ; ii. 297.
- Hydromel, i. 134.
- Hyle, i. 297.
- Hypericon, i. 134.
- Hyposarchæ, ii. 111.
- Iliaste, *see* Iliaster.
- Iliaster, i. 201, 203, 204, 205, 206, 210, 216, 226, 297 ; ii. 179, 180, 339, 340, 341, 342, 344, 345.
- Images, ii. 295.
- Imagination, i. 122, 123, 173 ; ii. 7, 117, 120.
- Imbibition, i. 153.
- Impressions, i. 174 ; ii. 117.
- Inanimates, ii. 313.
- Incantation, ii. 119, 296.
- Instrumentation, ii. 297.
- Iron transmuted into copper, i. 28 ; to cut iron with iron, 309 ; to harden iron, 316 ; oil of iron, ii. 67 ; medical virtues of, 229, 230. *See also* i. 188.
- Jacinth, i. 17 ; akin to the carbuncle, 17 *n.* ; ii. 130.
- Jaspis, sulphur of, i. 266.
- Jaundice, ii. 111, 127.
- Jean d'Espagnet, i. 299.
- Jeshihach, ii. 346.
- John Fabricius, i. 299.
- John de Rupescissa, i. 57, 67, 117, 195.
- Juniper, essence of, ii. 26.
- Jupiter, not a quintessence, i. 6 ; elements of, 6 *n.* ; Jupiter and Cinnabar produce Sol, 15 ; Mercury of, 280, 281.
- Lac Virginis, i. 54, 55.
- Laton, i. 164.
- Laureus, ii. 346.
- Lavation, i. 153.
- Lavender, quintessence of, ii. 26.
- Lazuleum, i. 158.
- Lazurium, i. 143, 184 ; sapphires of, 224.
- Lead, properties when molten, i. 77 *n.* ; test of, 313. *See* Saturn.
- Lemures, i. 193.
- Leprosy, ii. 116, 128, 130.
- Leris, ii. 340.
- Leseolus, ii. 320.
- Life, a spiritual essence, i. 134 ; a veil of the three principles, 134 *n.* ; twofold in man, *ib.* ; definition of, ii. 323.
- Light without fire, i. 316.
- Lili of Alchemy, i. 22 ; putrefaction of, 23 ; the subject of the Tincture, 24 ; desiccation of, 27 ; phenomena of, *ib.*
- Limaria, i. 249.
- Limbus of the Microcosm, i. 66.
- Litharge, i. 162 ; litharge of gold, 184 ; medical virtues of, ii. 201, 202, 203.
- Lixivium, i. 308, 310.
- Lizards, a process for Sol, i. 309.
- Long life, what it depends on, ii. 118.
- Lorinds, ii. 255, 258, 268.
- Loripides, ii. 261.
- Lotones, ii. 197.
- Luna and her properties, i. 8 ; constituents of, 9 *n.* ; Luna out of Venus, 27 ; Mercury of, 278 ; projection of, 313 ; digestion of, 316 ; gradation of, 319 ; Luna developed into Sol, *ib.* ; augmentation of, *ib.* ; Luna and Venus, 335.
- Lunaria, i. 53.
- Lute of Hermes, ii. 46.
- Lydian Stone, i. 277.
- Mace, i. 229.
- Machaon, i. 29.
- Macrocosm, quintessence of, ii. 36 ; 289.
- Magdalion, i. 215.
- Magi, who they were, i. 49 ; classes of, 50 *n.* ; 51, 116.
- Magic, celestial and malefic, i. 50 *n.* ; its origin, 52 ; instruction of, ii. 294, 295, 296, 299-301, 313, 314.
- Magiria, ii. 328.
- Magistry, what it is, ii. 48 ; magistry and quintessence, 48, 49 ; Magistry of the Blood, 50 ; extraction of from metals, *ib.* ; from pearls, corals, and gems, 51 ; from Marchasites, 53 ; from fatty substances, 54 ; from growing things, 55 ; from blood, 57 ; 86.
- Magnalia of Nature, i. 29 ; ii. 340.

- Magnesia of the Philosophers, i. 117; Magnesium and Saturn produce Luna, i. 15; Magnesia and Antimony, i. 8.
- Magnet, i. 17; its power over diseases, 17 *n.*; phenomena of, 132; life of, 136; mortification of, 145; attractive virtues, ii. 59; medical uses of, 216.
- Magnum Opus, i. 201 *n.*
- Man the true quintessence, i. 52 *n.*; created from the Limbus, 66 *n.*; exemplar and type of all things, ii. 148; conception of, 291.
- Mandragora, ii. 334.
- Mania, ii. 128.
- Manna, i. 137, 193; ii. 74, 130.
- Manual Art, ii. 294, 295, 297, 309, 310.
- Marble, Sulphur of, i. 266.
- Marcasites, lixivium of, transmuted into Venus, i. 28; their generation, 109; 223, 256, 266; separation of elements from, ii. 16, 50; magistery of, 53; medical uses of, 203, 204.
- Mars, his properties, i. 7; component elements of, 7 *n.*; sulphur of, 266; Mercury of, 280.
- Martagon, i. 53.
- Mastic, ii. 59.
- Matrix, i. 233.
- Matter of the Philosophers compared to a golden tree, i. 54.
- Matter of the Stone, its colours, i. 54; 64; rule of its discovery, 65; Sol and Luna the Matter of the Stone, *ib.*; ii. 112.
- Matter, ultimate, i. 237, 240.
- Mechili, ii. 261.
- Medicine of Metals, i. 28.
- Meligia, i. 227.
- Melosiniae, ii. 254, 258, 271, 273, 346.
- Menstruum, i. 301.
- Mercurialis, i. 249.
- Mercurius the wisest of the Philosophers, i. 66.
- Mercury, two genera, i. 5 *n.*; congelation of, 12; warm nature of, 14; extraction of heat of, *ib.*; coldness of, *ib.*; Mercury the body of every precious stone, 17 *n.*; coagulation of, 53, 54; conversion into Luna, *ib.*; Mercury in metallic counterfeits, 57; fixed oil from, *ib.*; tincture of a supreme secret, 81 *n.*; mortification of, 142; precipitate of, *ib.*; calcination of, 143; dual Mercury, 297; fire of, 301; Mercury of the Philosophers, 119, 250, 298; sulphur of, 107; Mercury of gold, 196; the sperm of Sol and Luna, 65; body, spirit, and soul of, 66; coagulation by lead, 45 *n.*; Mercurius vivus, 12, 117, 118, 119, 126, 149, 164, 165, 308; corporal Mercury, 187, 320, 321, 323, 326; Mercury transmuted into Luna, 307; into Sol, 307, 308; into a stone, 308; coagulation of, 311; calcination of, 314; preparation with marcasites, *ib.*; Mercury from Jupiter and Saturn, 320; Mercury of Saturn, 320, 324, 328; Mercury of all metals, 320; Mercury from all bodies, 320, 328; Mercury of the body, 323, 324, 325, 326, 329, 330, 331, 332; Mercury of Jupiter, 326, 333; Mercury of Luna, 328, 329, 333; metals connected with Mercury, 318; Mercury of Sol or Luna, 330; extraction of Mercury of the Moon, 332; water of Mercury, 334; malleable Mercury, 336; fixation of, *ib.*; Mercury of life, ii. 29, 30, 50, 90; the third arcanum, 38, 43; medical uses of, 230. *See also* i. 195, i. 36, i. 288, i. 293; ii. 125 *n.*, 336; Mercurial water the first beginning of metals, i. 90.
- Meritorium, ii. 277.
- Mesne, ii. 99, 156.
- Metals, not devoid of life, i. 117 *n.*; generation of, 125, 248; regeneration of, 126; radical moisture of, 290; transmuted into stones, i. 16.
- Microcosmus, consists of four elements, ii. 3 *n.*; contains all minerals, *ib.* *See also* ii. 289, 318.
- Migdalio, ii. 129.
- Mineral Menstruum, i. 299.
- Minerals, method of seeking, i. 15; ultimate matter of, 90; minerals out of arsenic, 315; augmentation of, *ib.*; antimoniacal minerals, *ib.*; reduction of the miner, *ib.*
- Minium, i. 143; ii. 124.
- Mixture, spiritual mixture and communion of the metals, i. 9.
- Monstrous Births, i. 121, 122.
- Monstrous growths, i. 173, etc.
- Moon, digestion of, i. 315; quintessence of, ii. 26.
- Morphea, ii. 53.
- Morsus Diaboli, i. 189.
- Mucilage, i. 243.
- Multiplication, i. 317.
- Mumia, i. 131; mumia and man, 131 *n.*; mumia and balsam, *ib.*; mumia and sweet Mercury, 169; extraction of mumia, ii. 337.
- Muria, i. 160.
- Must, magistery of, ii. 56.
- Myrrh, i. 272.
- Mysterium Magnum, i. 201 *n.*
- Narcissus, i. 130.

- Natural Magic, ii. 252.
 Necrolicus, ii. 346.
 Necromancers, i. 185.
 Necromancy, i. 171; necromancy and nigromancy, 171 *n.*, 190, 193.
 Nedeon, i. 233.
 Nenuphar, i. 230; ii. 174.
 Nesdar, ii. 255.
 Nesva, i. 20.
 Neufarini, ii. 254.
 New Birth, necessity of, i. 20.
 Nigromancy, ii. 294, 295, 296, 303.
 Nitre, i. 100, 197.
 Nymphs, ii. 253, 255, 258, 271, 273, 274, 340.

 Oil of Coral, ii. 143.
 Oil of Jupiter, ii. 141.
 Oil of Marchasite, ii. 142.
 Oil of Mars, ii. 35, 140.
 Oil and Salt of Pearls, ii. 144.
 Oil of the Philosophers, i. 314.
 Oil of Salt, ii. 143.
 Oil of Saturn, ii. 180.
 Oil of Silver, ii. 140.
 Oil of the Sun, i. 38; ii. 28.
 Oleaginous substances, separation of elements from, ii. 17.
 Oleum Laterinum, ii. 70.
 Olympian Spirit, i. 116.
 Ophioglossum, i. 189.
 Orchis, *see* Satyrion.
 Orpiment, medical uses of, ii. 211, 212.

 Paracelsus, sprung from Helvetia, i. 19; a prince of philosophy and medicine, *ib.*; chosen by God, 20; monarch of arcana, 21; his experiments in Istria, 29; born of Nature, 39; his academia, 96; *see also* i. 285; ii. 163, 170.
 Paradise, fruits of, i. 228; no death in Paradise, ii. 115, 116.
 Paratetus, ii. 340.
 Parsnip, i. 229.
 Passage of the Red Sea, i. 298.
 Part with Part, i. 55, 59, 164, 166, 312.
 Pearl, not a stone, i. 17; produces milk in women, 17 *n.*, 156; special virtues of, ii. 53; magistery of, 52.
 Pelican, ii. 74.
 Penates, i. 93.
 Pentaphyllon, i. 189.
 Perforata, i. 189.
 Perpetual Water, i. 319.
 Persica, i. 230.
 Persian Fire, i. 259, 269.
 Petfoliata, ii. 189.
 Petroleum, ii. 173.

 Phantasy, i. 173; ii. 296, 313.
 Philosophers' Egg, ii. 93.
 Philosophers' Stone, ii. 29; the second arcanum, ii. 40, 100.
 Philosophers' Tree, i. 129.
 Philosophic Man, i. 66.
 Philosophical Stone, i. 294.
 Philosophic Sun, i. 71.
 Phoenix and Iliaster, i. 40 *n.*, 286.
 Physical Stone, i. 301, 303.
 Physiognomy, ii. 297.
 Pigmies, i. 125.
 Plato, i. 56; ii. 155.
 Pleurisy, ii. 130.
 Poison, concealed in all thiogs, ii. 160; grades of poison, ii. 189; nature and essence of, 237; alchemy of poison, 238; entity of poison, 239; the natural alchemist as a separator of poison, 241.
 Polydorus, i. 67.
 Ponderations, magical art of, i. 71.
 Porphyrius, ii. 321.
 Potable Gold, ii. 28, 51, 106, 130.
 Potable Silver, ii. 51.
 Potherbs, i. 229.
 Precious Water, i. 319.
 Primal Matter, ii. 29; the first arcanum, 39, 40, 125; ii. 125.
 Promised Land, entrance into, i. 298.
 Proportion, ii. 297.
 Protoplast, *see* Adam.
 Prunella, i. 189.
 Purging, simples for, ii. 188.
 Pustules, ii. 128.
 Putrefaction, the beginning of generation, i. 120; many kinds of, 121, 153; putrefaction and transmutation, ii. 279.
 Pyrites, i. 167.
 Pyromancy, i. 171, 190, 193; ii. 297.
 Pyxis, i. 336.

 Quicksilver, generation of, i. 44 *n.*; how rendered ductile, *ib.*
 Quintessence, i. 5; its principle, 5 *n.*; the divine quintessence, 52; correction of, ii. 22; formula of, 28; quintessence from metals, 30; from marcasites, 31; from salts, *ib.*; from stones, gems, and pearls, 32; from growing things, 33, 334; from spices, 34; from eatables and drinkables, 35, 85; quintessence of oil, 139; of silver, 140; of antimony, 141.
 Quince, quintessence of, ii. 41.
 Quintessence of the Sun, i. 199; ii. 12.
 Quintessences, ii. 120.

 Radical Moisture, i. 290; ii. 125, 126, 128, 132.

- Raymond Lully, i. 53, 67, 299; ii. 335.
 Realgar, i. 136.
 Recipes, composition of, ii. 194; prescription of, 196.
 Rector of Man, ii. 253 *n.*
 Red Lion, i. 22; short way to, 23; rose-coloured blood of, 25; to be sought in the East, 27; process on, 37.
 Red Oil for fixing Luna and Sol, i. 318.
 Reduction, i. 167, 326.
 Relollea, ii. 176, 179, 181.
 Resin of the Earth, i. 265.
 Resolution, i. 167.
 Rhabarbarus, i. 229.
 Rhasis, i. 95; ii. 156.
 Richard of England, i. 67.
 Roger Bacon, i. 299.
 Royal Cement, i. 42; ii. 29 *n.*
 Ruby, i. 17, 224; ii. 130.
 Rude Stone, i. 297.

 Saffron, quintessence of, ii. 127 *n.*, 130.
 Salmanazar, i. 70.
 Sal Ammoniac, i. 195, 199; ii. 59.
 Sal Fluxum, i. 163.

WORKS ON ALCHEMY AND HERMETIC SCIENCE,

PUBLISHED BY

JAMES ELLIOTT & CO.,

TEMPLE CHAMBERS, FALCON COURT, FLEET STREET, LONDON, E.C.,

Produced under the Editorship of

MR. ARTHUR EDWARD WAITE,

AUTHOR OF "*The Real History of the Rosicrucians*"; "*Lives of Alchemystical Philosophers*";
"*The Occult Sciences*"; "*The Mysteries of Magic*," etc.

PRICE TWO GUINEAS.

In two volumes, small quarto, cloth extra, gilt; pp. xii., 358,
and viii., 322.

The Hermetic Museum

Restored and enlarged, most faithfully instructing all the Disciples of the Sopho-Spagyric Art how that Greatest and Truest Medicine of the Philosopher's Stone may be found and held.

Now first done into English from the rare Latin original, published at Frankfort in the year 1678. The illustrations reproduced in fac-simile by a photographic process.

This curious storehouse of Hermetic Science comprises twenty-two choice treatises on the Mysteries of Alchemy, and the composition of the Medicine of the Philosophers, namely:—

The Golden Treatise concerning the Philosopher's Stone.
The Golden Age come back.
The Sophic Hydrolith, or Water Stone of the Wise.
The Demonstration of Nature.
A Philosophical Summary.
The Path of the only Truth.
The Glory of the World, or Table of Paradise.
The Generation of Metals.
The Book of Alze.
Figures and Emblems concerning the Philosopher's Stone.
The Practice and Keys of Basil Valentine.
The Ordinal of Alchemy.

The Testament of John Cremer, sometime Abbot of Westminster.
The New Light of Alchemy.
The Sulphur of the Philosophers.
An Open Entrance to the Closed Palace of the King.
A Subtle Allegory concerning the Secrets of Chemistry.
The Metamorphosis of Metals.
A Short Guide to the Celestial Ruby.
The Fount of Chemical Truth.
The Golden Calf.
The All-Wise Doorkeeper.

While affording to the modern student of Hermetic Doctrines a unique opportunity of acquiring in English a representative collection of the chief alchemical writers, this edition of THE HERMETIC MUSEUM claims consideration at the hands of the historian and archæologist as a contribution of real value to the early history of chemistry. The translation is the work of a gentleman who has had a live-long acquaintance with alchemical literature, and has been subjected to careful revision by another expert in Hermetic antiquities.

The original edition of this work, under the title of *Museum Hermeticum*, was published at Frankfort in 1625, and contained only nine treatises. The edition of 1678, from which the present translation has been made, is of incomparably more value to the student, although, scarce as it is, it is not so uncommon as the first, which is seldom or never with. Some particulars concerning both editions—the *Museum Hermeticum* and the *Museum Hermeticum Reformatum et Amplificatum*—will be found in the alchemical catalogue of Lenglet du Fresnoy.

N.B.—This Edition is limited to 250 copies, numbered and signed.

Crown 8vo., printed from old faced type, on antique laid paper, cloth extra, price 10s. 6d. Engraved title, and plates of alchemical vessels.

The Triumphal Chariot of Antimony.

BY

BASIL VALENTINE

(sometime Canon of Erfurt).

With the Commentary of THEODORE KERCKRINGIUS, the Physician.

Translated from the Latin edition, published at Frankfort in 1685. Now first done into English, with biographical and critical introduction.

 Collectors already possessed of the *Practica* and *Twelve Keys* of Basil Valentine, contained in the HERMETIC MUSEUM, recently published in English, will welcome this addition to the translated writings of the great Benedictine adept.

"Everyone is acquainted with the remarkable discoveries relative to Antimony which are contained in the celebrated work of Basil Valentine, *Currus Triumphalis Antimonii*. The German alchemist had so thoroughly investigated the properties of this metal, scarcely indicated before him, that we find many facts stated in his treatise which in our own day have been brought forward as modern discoveries. In the same work Basil Valentine specifies many other chemical preparations of the first importance, such as spirit of salt, or our hydro-chloric acid, derived after our own manner from marine salt and oil of vitriol (sulphuric acid). He gives the method of obtaining brandy by the distillation of wine and beer, rectifying the product of the distillation on calcined tartar (carbonate of potass). He even teaches the extraction of copper from its pyrites (sulphur), by first of all transforming it into vitriol of copper (sulphate of copper), with the help of moist air, and afterwards plunging a bar of iron into the aqueous dissolution of this product. This operation, which Basil Valentine was the first to describe, was often profitably made use of by alchemists at a later date; but, not understanding the fact of the precipitation of metallic copper, they mistook it for a transmutation of iron into copper, or at least for a commencement of a transmutation which could be perfected by art. . . . One may regard this alchemist as having been the first to obtain sulphuric ether, which he prepared by distilling a mixture of spirit of wine and oil of vitriol. In a word, there were few chemical preparations known to his period concerning which Basil Valentine has not registered some valuable facts."—LOUIS FIGUIER, *L'Alchimie et les Alchimistes*.

Crown 8vo., printed from old faced type, on antique laid paper, cloth extra, illustrated with symbolical designs, photographically reproduced. Price 12s. 6d.

The Pearl of Great Price.

A NEW TREATISE CONCERNING THE TREASURE AND MOST PRECIOUS
PHILOSOPHER'S STONE;

Or the Method and Procedure of this Divine Art; being observations drawn from the works of Arnold, Raymond, Rhasis, Albertus, and Michael Scotus. Now first published by Janus Lacinius the Calabrian, with a copious Index.

Translated into English from the much-prized edition of Aldus, which appeared, with the privilege of Pope Paul III. and the Senate of Venice, in 1546.

The *Pretiosa Margarita Novella* is supposed to be a "faithful abridgment" of a work entitled *Margarita Pretiosa*, which appears to have circulated in manuscript in Italy during the first half of the fourteenth century, but does not seem to have been printed. It was written by Pietro Bono, who enjoys high repute as an adept in the art of Alchemy; and the present version, which has been subjected to a searching revision, is edited with an introductory analysis of the various Hermetic books which are attributed to this author. The *Pretiosa Margarita Novella* has special interest as one of the earliest books which appeared in print on Alchemy.

AN ENGLISH ALCHEMIST.

Edward Kelley

THE ENGLISHMAN'S TWO EXCELLENT TREATISES CONCERNING

The Philosopher's Stone,

TOGETHER WITH

The Terrestrial Theatre of Astronomy,

TRANSLATED FROM THE FIRST HAMBURG EDITION OF 1676, AND EDITED WITH
A BIOGRAPHICAL INTRODUCTION, AN ACCOUNT OF KELLEY'S RELATIONS
WITH THE CELEBRATED DOCTOR DEE, AND A TRANSCRIPT
OF THE SO-CALLED BOOK OF SAINT DUNSTAN.

Crown 8vo., printed from old faced type on antique laid paper,
cloth extra, price 7s. 6d.

"The transmutations of Kelley are attested by several writers, including Gassendus. The most authenticated and remarkable . . . is that which took place in the house of the Imperial physician, Thaddeus de Hazeck, when, by the mediation of a single drop of the red oil, Kelley transmuted a pound of mercury into excellent gold, the superabundant virtue of the agent leaving in addition at the bottom of the crucible a small ruby. Dr. Nicholas Barnaud, the assistant of Hazeck, an alchemical writer whose works are as rare as they are reputable, was a witness of this wonder, and subsequently himself manufactured the precious metal, the *désir désiré*, with the assistance of Edward Kelley."—*Lives of Alchemystical Philosophers*.

Crown 8vo., printed from old faced type on antique laid paper,
cloth extra. Price 12s. 6d.

A Golden & Blessed Casket of Nature's Marvels.

CONCERNING THE BLESSED MYSTERY OF THE PHILOSOPHER'S STONE.

Containing the Revelation of the Most Illuminated Egyptian King and Philosopher, Hermes Trismegistus: translated by our German Hermes, the Noble and Beloved Monarch and Philosopher Trismegistus, A. Ph. Theophrastus Paracelsus. Also Tinctura Physicorum Paracelsica, with an excellent explanation by the Noble and Learned Philosopher, Alexander von Suchten, M.D., together with certain hitherto unpublished treatises by this author, and also other corollaries of the same matter as specified in the preface. Now published for the use and benefit of all sons of the Doctrine of Hermes.

By BENEDICTUS FIGULUS OF VTENHOFEN.

In Preparation.

Crown 8vo., printed from old faced type, on antique laid paper, cloth extra.

PRICE ON APPLICATION.

Turba Philosophorum.

The most ancient of Western Treatises on Alchemy and the Great Work, the subject of continual reference by all later adepts, ranking second only to the writings of Hermes Trismegistus, and recognised as a final authority in the "practice of the philosophers."

While it has been the subject of innumerable commentaries and of the most pious veneration on the part of Hermetic students, this curious fountain-head of alchemical literature has never been previously translated. A very careful version, containing both of the accepted recensions and the most important of the varied readings in the different printed editions, and in available manuscripts, is now preparing, and a limited number of copies will shortly be issued to the public. The elucidations of selected commentators will be added to the text, and in the introduction prefixed to the work an attempt will be made to trace the history and influence of this archaic *Colloquium Sophorum*.

Crown 8vo., printed from old faced type on antique laid paper,
cloth extra, price 7s. 6d.

Collectanea Chemica :

Being certain select treatises on Alchemy and Hermetic Medicine,
by EIRENÆUS PHILALETHES, FRANCIS ANTONY, GEORGE STARKEY,
SIR GEORGE RIPLEY, and ANONYMOUS UNKNOWN.

Contents :

The Secret of the Immortal Liquor called Alkahest.
Aurum Potabile.
The Admirable Efficacy of the True Oil of Sulphur Vive.
The Stone of the Philosophers.
The Bosom Book of Sir George Ripley.
The Preparation of the Sophic Mercury.

The Hermetic Tracts comprised in this volume are printed from a quarto manuscript belonging to the celebrated collection of the late Mr. Frederick Hockley, who was well known among modern students of the secret sciences not only for the resources of his Hermetic Library, but for his practical acquaintance with many branches of esoteric lore, and for his real or reputed connection with the numerous but unavowed associations which now, as at anterior periods, are supposed to dispense initiation into occult knowledge.

We wish to thank the staff of the British Library and Bodleian Library for their assistance in preparing this volume. Folios from Sloane MS 307 have been reproduced with permission from the Trustees of the British Library, for which we are duly grateful.

"...the nature of angels and spirits...is neither inscrutable nor interdicted. ...it is no more unlawful to inquire the nature of evil spirits, than to inquire the force of poisons in nature, or the nature of sin & vice in morality." *The Advancement of Learning*, 2nd Book, VI, 2, Bacon 1605.

Introduction

The four manuscripts transcribed in this book are highly significant manuscripts in the history of magic. In researching them we have come to a number of conclusions about:

- a) The precise methods used in angel magic both by Dr John Dee and other practitioners both before and after him.
- b) The origin of these methods, which shows little or no practical line of demarcation between evocation and invocation.
- c) The line of transmission from magician to magician of these techniques which appears to partly re-write the history of Western Magic, specifically with reference to the transmission of the final angelic invocations of Dee.
- d) In tracing this line of scholar magicians we have discovered that in every age some of the most prominent players were major members of the establishment, politicians, lords, legislators, and even royalty.
- e) A small part of just one of these manuscripts (Sloane MS 307) was used as *Book H*, the key to the Enochian system, by founding and higher-grade members of the Golden Dawn. Even this small extract was later suppressed. The Golden Dawn only used part of Dee's magical techniques. Here for the first time is printed the whole key to the Enochian system as originally discovered by the senior initiates and founders of the Golden Dawn.

Traditional Approaches to Western Magic

First we need to look at how the history of magic has been viewed in Western Europe over the last thousand years. It has almost always been explained or examined in one of five basic ways:

1. By assembling a collection of biographies of magicians or isolated historical events like Faust's pacts, Cellini's evocations or Mesmer's parlour tricks.
2. By associating magic with Neoplatonism or the Hermetic texts that circulated in Europe during the Renaissance. This academic approach looks at magic as if it was a cultural trend, a poor relation of science, or the discredited remains of pagan practice and philosophy.
3. By associating magic with movements like Rosicrucianism, the Illuminati or Freemasonry, and from that association implying a continuous history of hidden brotherhoods up to and beyond the Hermetic Order of the Golden Dawn. This was a popular Victorian view.
4. By looking at magic from the perspective of its persecutors, as exemplified in the witch trials. This approach also includes the Faustian view that magic consists of selling one's soul to the devil, a view popularised and promoted by the church, and a theme that was later taken up in literature.
5. By examining the craft of village cunning men and wise women, and the development of local witchcraft and leechcraft. From the mid 20th century this strand blends into modern witchcraft, which draws its substance from a number of other sources as well.

None of these approaches (with the exception of modern witchcraft) says much about the actual magical practices used by magicians, what happened to their workbooks, what practical results they obtained, and how they handed this knowledge on. Let us examine each in turn:

1. The first approach consists of simply supplying a series of biographies of well-known real and fictional magicians such as Faust, Abramelin, Dee, Barrett, Crowley or even Casanova. This gives the impression that romantic individuals cropped up every so often, and that there was no continuous history of the subject, in

Practical Angel Magic

the same way as there is for example a continuous history of art, architecture or literature. All too often we see gaps of decades, even centuries, between each episode. Most Victorian histories, including that of Eliphas Levi, fall into this category.

2. The second approach, and one often taken by scholarly writers like Frances Yates, is that magic is part of the gradual evolution of human knowledge. These writers explain magic as if it was part of a late flowering of Neoplatonism, or the result of the injection of Christianised Kabbalah into the mainstream of European thought by the likes of Pico, Reuchlin and Bruno, rather than something which had been established just as strongly long before these cultural influences reached Renaissance Europe.

The usual thesis is that magic fell out of use, or certainly out of respect, from the coming of the Age of Enlightenment in the early 17th century onwards, and from thence forward science became the main pursuit of the intelligencia. This view is contradicted by the facts, not only by Newton's well-known interest in alchemy and angelic theology, but by records of the consistent and carefully documented practice of magic right up to the current time.

3. The third, and one of the more appealing views of magic, was that it was the rationale of a number of well known societies and fraternities who passed on its practice from one century to another. This transmission of magical theory and practice however has not been via secret societies, except in a few scattered instances. On the whole, Rosicrucians, Freemasons and Illuminati were not magical groups, nor were their members magicians, except in a private capacity.

The vast literature concerning secret societies like the Illuminati, Masons or Rosicrucians, clearly shows that they were in most cases more concerned with fraternal networking and political causes than with magic. If the history of Masonry, for example, is examined closely it will be seen that the system of elevation by degrees, passwords and secret handshakes made more social, political and commercial sense than magical sense. French Masonry was heavily intertwined with politics, and the Rosicrucian movement hoped to create a climate for the formation of a political utopia among the intelligentsia of Europe, particularly in the Germanic states.

The only exception to this was the Hermetic Order of the Golden Dawn founded in the late 19th century, where the practice of magic took precedence over the other two objectives. Although these

Practical Angel Magic

Masonic activists of late nineteenth century England did find Masonry a useful way of preserving secrecy about their magical activities.

If we eliminate the modern (late 20th century) Rosicrucians' rosy view of history, which justified the inclusion of anyone they fancied, like Bacon, Newton or Shakespeare, as a member of their Fraternity, merely upon the basis of supposed sympathetic interests, then we are left with the letters and correspondence circulating at the time of the founding of the movement soon after 1612. From these you can clearly see that the Rosicrucians were much more concerned with a new political order, plus a bit of alchemy and the new Paracelsian medicine, than they ever were with the invocation of spirits or angels.

Aaron Leitch convincingly says of the Rosicrucians:

"It is most likely that the Brotherhood did not exist in any tangible sense. The Rosicrucians claimed to meet only at an "Invisible College" - and there are many subtle hints to suggest that this was meant as an allegory. The Rosicrucian manifestos were addressed to all free thinkers and spiritual seekers in the world; especially those who yearned for the dawning of a new age, the advancement of learning, and freedom from the oppressive Roman Church. The Invisible College was the common ground within the hearts of all who sought such goals. There is no known historical philosopher or Hermetic mystic, who we would call 'Rosicrucian' today, who ever claimed membership to such an Order."

It is safe to say that the handing down of magical technique has not occurred via the Rosicrucians, except in the sense that the movement united men of a like mind, some of whom were also interested in magic.

4. Of all the approaches, the fourth is perhaps the most misleading as it draws its information from those who were most interested in persecuting magic. We look below in more detail at the attitude of the Church to magic. The idea that the practitioner of magic would sell his soul for knowledge or power has been around since the Middle Ages, but especially flourished under French and Italian Catholicism when grimoires like the *Grimoirium Verum* and the grimoire of so-called *Pope Honorius* made their appearance. These rely for their rationale upon the catholic view of damnation, rather than mainstream techniques of magic. The aim of most serious magicians was knowledge and not the endangerment of their soul. 'Pope Honorius' incidentally has no connection with

Practical Angel Magic

Honorius filius Euclid who authored the *Sworn Book*.

5. The fifth approach looks at magic primarily from the local village wise woman and cunning man perspective, where a few (sometimes elderly and eccentric) occupants eked out a living constructing and deflecting charms, or providing herbal medicines. Some of the excellent writers who best exemplify this approach are Norman Cohn and Keith Thomas in *Religion and the Decline of Magic*. Thomas explains¹ that "popular magic and intellectual magic were essentially two different activities, overlapping at certain points, but to a large extent carried on in virtual independence of each other. Most of the magical techniques of the village wizard had been inherited from the Middle Ages, and had direct links with Anglo-Saxon and classical practice".

Such techniques were certainly passed on often by inheritance, but did not tend to enter the studies of the learned or more highly placed members of society, where the 'style' of magic was completely different. Thomas continues, "It was relatively uncommon for such persons to possess books, or for their activities to rest upon a body of self-conscious theory".

Modern witchcraft dating from the 1950s, as sponsored by such luminaries as Cecil Williamson, Gerald Gardner, Alex Sanders and Jim Baker is too recent and too eclectically constructed to throw light on the early development of magic, and so is excluded from this discussion. Of course the modern witchcraft movement draws on many of the above strands for its substance and has mixed many of these together.

Almost all of these studies look at magic from the outside. None of these approaches does justice to the evolution of magical technique in Western Europe as a separate and valid field of study that was practiced alongside astronomy, chemistry, physics or geography by some of the best minds of each age. The nature of angels (which seems irrelevant in our currently irreligious age) was just as important a study as the geometry of lenses or the mathematics of astronomy.

We feel that magic is worthy of such study, and we can demonstrate that in every age some of the best minds including clergy, scientists, lawyers, senior politicians, statesmen, and even royalty, right up to the present day, have been deeply involved in its study.

¹ *Religion and the Decline of Magic* page 271.

Practical Angel Magic

Definition of Magic

Magic is concerned with practical techniques for communicating with angels, demons (or daemons), spirits, and elementals, and questioning them or compelling them to assist the practitioner in very specific ways. We would like to group all of these entities (as they often were grouped in the 15th and 16th century) under the category of 'spiritual creatures', meaning entities not inhabiting the physical plane.

This is a much more useful distinction than that forced upon them by the doctrines of Christianity, where there is concern to separate the angels who 'fell' from those who didn't. In any case Christianity has always been confused about the theological status of elementals and other non-human spirits. The King James version of the Bible translated the words for all of these various creatures, which were quite distinct in the Latin and Hebrew texts of the scriptures, simply as 'devils', a slackness of the translators that has caused much confusion, bigotry and misery over the centuries.

Modern pagan movements have attempted to broaden the definition of magic. For example the gods and goddesses of various pantheons have been included in the list of spiritual creatures available for invocation. However, in the context of ceremonial magic, these entities were not often invoked *per se* by European magicians before the end of the 19th century. Since the Renaissance, the gods of the Greek and Roman pantheons were seen as part of the general literary and artistic heritage and education of post-Medieval Europe. To quote Daniel Driscoll, "in accepting astrology, Medieval Europe accepted the major gods of the [Greek/Roman] pagan pantheon; the pagan gods simply became...in philosophical terminology 'secondary causes'." Magicians like Ficino or Campanella invoked the planetary forces, rather than the ancient gods or goddesses associated with the planets.

Gods of pantheons outside of Greece or Rome hardly figured in the Renaissance intellectual landscape, or were conveniently re-classified as demons. Such a fate befell Ashtoreth (the Phoenician goddess of love and increase) and Baal (her Phoenician consort) both of whom turn up later as demons in grimoires such as the *Goetia*.

Other views have obscured the world view of early practitioners of magic. In the second half of the 20th century it was popular to subscribe to a psychological interpretation of magic, to the effect that entities such as demons are just 'dissociated complexes' or

Practical Angel Magic

some other part of the vocabulary of theoretical psychology. Strangely this idea was probably initiated by Aleister Crowley's ultra rationalist introduction to his edition of the *Goetia* in 1912, long before Carl Jung's theories became popular. It is quite possible that this rationale was written by Crowley with his tongue firmly in his cheek, but more likely he was overcompensating to prevent the *Goetia* being rejected out of hand by his primarily Victorian readers. Crowley's later writings show that he thought of such entities as having considerably more independence of existence than he ascribed to them in this particular introduction. But this pernicious view, embellished by Jung's theories, still colours some modern thinking about magic.

To understand the thinking of magicians of earlier periods, you should not allow your views to be clouded by this particular theory that has been popular for so short a period. By making magic appear solely subjective, a lot of the 'sting' was taken out of the subject, and it has consequently been embraced by New Age thinkers. However, we do not subscribe to the idea of magic as either a form of access to the sub-conscious mind or as a form of therapy, and this idea certainly did not colour the theory or practice of pre-20th century magicians at all. In fact all of the theories of modern psychology are much more shallowly rooted than the age old theoretical framework of traditional magic.

In defining magic in terms of 'spiritual creatures' it may be objected that nobody believes any more in the objective existence of angels or demons on the grounds that if they are invisible, they must not exist, and are therefore not worthy of study. There are however many subjects that rely completely on belief in the invisible. Modern belief in such invisibles as radio waves, quasars or protons is endemic, and prefaced *only* on a theoretical framework, rather than on direct experience. All these things are known only through their effects, and none known by direct experience. The theory behind magic also relies upon the observation of effects. Magic has however also had, over the centuries, many instances of direct experience. The whole point of magic was not just to produce an effect, but often to move the invisible cause into the realm of the visible effect. It is therefore not logical to dismiss one set of beliefs (magic) but not the other (physics) on the grounds of invisibility, especially as both have measurable effects.

Lastly, some might instead argue that practitioners of magic are simply deluded by a sophisticated form of wish fulfilment. If magicians were simply gullible fools gratifying their own fancies,

Practical Angel Magic

then you would expect to see a succession of successfully self-serving visions and comfortable answers. This is not the case: many answers received from 'spiritual creatures' are not as comfortable as expected, and often mischievous and uncooperative 'deceiving spirts' arrived rather than the expected angels. This suggests the action of an external agency rather than the results of self-delusion.

Practical Angel Magic

Dualist View of Magic

Dualism is the perception that the world divides neatly into black and white, good and evil. This has led to concern about the difference between what has been called 'black magic' and 'white magic'. The difference has often simplistically been put down to good or bad intentions. In almost all cases the basic techniques of evocation or invocation are the same, and the operator's intention has little or no effect beyond defining the objectives of the ritual. In practice the type of entity called through by such techniques could be angel, demon or spirit, regardless of the intention or piety of the practitioners. So if the techniques and the results were the same, then for the practicing magician there was no question of a distinction. It is only a later interpretation imposed from outside which insisted upon a supposed difference characterised as black or white magic.

Dualism was the legacy of the increasingly repressive grip of Christianity. Adam McLean, in his excellent introduction to *A Treatise on Angel Magic* highlights the effect of introducing dualism into magic:

"Before this period [the Renaissance] magicians could work naturally to invoke spirits without any great inner qualms. They saw that such spirits were, after all, part of God's creation and worthy of the occultist's attention... [but] from that time on...the magician's healthy relationship to the realm of spirits, his personal exploration through ritual of the spiritual world, becomes diseased by a concern about 'evil'."

This is no more apparent than in John Dee's *Spiritual Diaries* (*Libri Mysteriorum*), where despite his undoubtedly pious intention to conjure angels, he often finished up talking with 'divells', 'deceivers' or other stray spirits. This caused him, and Kelly, a lot of heart searching, but they persisted. Dee's desire to talk with angels was driven by his belief that the angels alone would be able to give accurate answers to his probing questions, 'because they were closer to God'. His concern was one of degree of wisdom, knowledge and accuracy, rather than theology.

The fine theological distinctions between angels, demons and spirits were in practice of little use, and sometimes the baser spirits still appeared, treating Dee's painstaking pious prayer-filled preparations with the same reverence as the protagonist in the old joke: 'what happens when you show a cross to a Jewish vampire?'

Practical Angel Magic

The roots of this problem lie partly in the distinction between 'devil' and 'demon'. This distinction is *very* clear in the Greek (*Septuagint*) and Latin (*Vulgate*) versions of the Bible, but has been totally destroyed in the Protestant versions of the Bible, especially the King James version. The crux of the issue is the meanings of the two Greek words *daimon* and *diabolos*. These two terms are totally distinct and never confused in the Greek originals of the New Testament or the Greek translation of the Hebrew and Aramaic of the Old Testament.

Diabolos always translates the Hebrew words TzR or STN, Satan the name for the tempter or god's spiritual 'adversary'. But *daimon* translates a number of Hebrew words that apply variously to Pagan deities, apparitions, spirits, and even satyrs. The root of *daimon* is *daio* which means 'to distribute fortune', and it should never have been confused with the word for the ultimate spiritual adversary.

Diabolos occurs in the Bible just thirty-five times, while *daimon* in various forms occurs more than seventy times. English translations have confused these two terms totally, translating *both* as 'devil'. *Diabolos* is definitely a different word. This has led to the confusion that has lumped all sorts of 'spiritual creatures' with the Devil himself, a categorisation that they do not deserve any more than angels do.

In fact Calmet, and a number of other theologians, were of the opinion that demons are identical with apostate angels. As such we are simply left with a range of 'spiritual creatures' of varying degrees of veracity and knowledge, including angels, spirits and demons, which are quite separate from the Devil himself. This confusion did not arise till the King James version of the Bible appeared in English. In a pre King James world, this is how John Dee and other scholar magicians perceived them.

It bears repeating that under the same king, some of the most ferocious English witch persecutions ever seen were launched.

Practical Angel Magic

Aristocratic Connections

The aristocracy has been an enduring thread throughout the history of ceremonial magic in England, from the 12th century to the present day. One of the amazing things about this type of magic is that, at every period it has attracted the very highest echelons of society, from English kings and queens, like Henry IV and Elizabeth I, who definitely owned and read grimoires, through titled Barons and Lords, including several Chancellors of the Exchequer and at least one Master of the Rolls, all of whom indulged in the practice of angel invocation, and who owned extensive libraries of rare manuscripts on these subjects. Queen Elizabeth even discussed, with John Dee, the detailed contents of a grimoire that she had inherited from Henry IV.

There was also a flourishing parallel tradition of local village wise women and men who practised 'wort cunning' and drew up charms, but the practice of angelic and demonic invocation was to a very large extent confined to the hands of the upper and professional classes. These techniques of invocatory angel magic have been passed on, not from local village witch to witch, not through secret fraternities, not as part of neo-Platonic or alchemic studies, but from one scholar magician to another, and quite often in a limited geographic area.

One of the strangest coincidences that we discovered whilst researching these manuscripts was the number of angel magicians who had connections with Worcester in Worcestershire. Almost all the main practitioners of angel magic in the 16th and 17th century (except the Napiers) came from nearby.

Just to instance a few:

John Dee had one of his rectory 'livings' located at Upton upon Severn, in Worcester, upon which he depended financially. This living was taken from him when he left England for the Continent, having absentmindedly forgotten to have the Queen's seal affixed to it.

Edward Kelly was born in Worcester, and went to Worcester College at Oxford.

Thomas Coke, who was the alchemy assistant to the 'Wizard Earl' Henry Percy Northumberland, and worked for a period for John Dee, also came from Worcester.

Practical Angel Magic

Elias Ashmole (who collected and preserved Dee's manuscripts and practiced angel magic himself) accepted the position of Commissioner for Excise at Worcester on 8th December 1645, after turning down a number of other more suitable positions in other areas. He was introduced to this position by John Heydon, himself interested in angel magic, who also had Worcester connections, and who wrote *Theomagia*, one of the now neglected books on magic.

Baron Somers and Sir Joseph Jekyll, angel magicians who we will meet in more detail later in this book, both came from and had their family seats and lands in the Worcester area.

A number of other participants in angel magic were also connected with this region. This connection even survives into the 20th century with Gerald Yorke, who had his family seat at Forthampton just south of Worcester. He was very knowledgeable about angel magic, and was the person responsible for collecting and preserving many of Aleister Crowley's papers, including those on Enochian magic. Interestingly he was also for a period the Dalai Lama's representative in the UK.

In the early 1970s, Gerald Yorke kindly granted access to all of these papers to one of the present authors. Another recipient of Gerald's generosity was Robert Turner, who in turn dedicated his edition of Dee's angel magic grimoire *De Heptarchia Mystica* to Gerald. So the Worcester angel magic tradition lives on.

Part 1 - A Short History of Angel Magic in England

Sources of Angel Magic in the Grimoires

The idea of invoking angels goes back a very long way to pre-Christian times. Even Jesus was thought by many people to have used the magic of angels to perform his miracles. One early Christian father, Gregory Thaumaturges wrote that it was commonly believed that "Jesus was a Magian;² He effected all these things [his miracles] by secret arts. From the shrines of the Egyptians He stole the names of angels of might." Gregory goes on to refute this view. The reason why he was thought to have stolen the names of angels, is in order to use these angels in his magic. As always, possession of the true name of a spiritual creature gave the magician power over that creature.

Angel magic survived the Middle Ages in grimoires in both Latin and Hebrew. Surprisingly, by the 12th century, the practical techniques of angel magic are almost all rooted in early grimoires, which until recently have usually been associated by scholars and modern practitioners exclusively with demonic magic.

The four hundred years from the 13th to 17th century is a period where the grimoire or handbook of practical ceremonial magic dominates magical procedure. Perhaps the most important grimoires of this period were, from our point of view, the *Sworn Book of Honorius* [*Liber Sacer sive Juratus*], and the *Lemegeton* [which includes within it the *Goetia*, the *Art Theurgia Goetia* and the *Almadel*]. The oldest of these grimoires is probably the *Sworn Book*.

The Sacred or Sworn Book of Honorius

One of the earliest and most influential grimoires was *Liber Sacer sive Juratus*, which literally means *The Sacred or Sworn Book of Honorius*. The book was considered sacred by its author and many of its owners because it contained techniques for calling the angels, and for achieving the Beatific vision. The author is not the Pope Honorius of later Faustian grimoires but an altogether more interesting figure called 'Honorius filius Euclid of Thebes'.

² A magician.

Practical Angel Magic

The most familiar Euclid is Euclid of Megara³ who devised the basic theorems of geometry that all schoolchildren used to be obliged to learn. Honorius, the author of the *Sworn Book* is referred to as the son of Euclid of Thebes (probably the Thebes⁴ in Greece not that of Egypt). This is not the same Euclid, but a more shadowy figure who may well have originally written in Greek.

The book opens with the mention of a convocation or meeting at which 811⁵ Masters of magic assemble to decide how to resist a papal plan to persecute magicians. This meeting, which caused the *Sworn Book* to be written, drew its adepts from as far afield as Athens, Tholetus (Toledo) and Naples, the later city being where the convocation was held.

The *Sworn Book* was written by Honorius at the request of this group of 811 Master Magicians, to preserve their secrets, and allegedly with the help of the angel Hocroell⁶. Even at this point we see magicians soliciting the help of angels in *intellectual* endeavour, a theme that will continue to repeat itself over the next 800 years. The date of composition of this grimoire is definitely before 1249⁷, and the most likely date being during the papacy of Gregory IX (1227-41) a pope who attempted to suppress magic and persecute magicians, as he saw them as a threat to the authority of the church. They were a threat because they purported to converse directly with angels!

Three centuries later John Dee owned a copy of the *Sworn Book*, and undoubtedly drew upon it for the design of his key sigil, the *Sigillum Aemeth*. Perhaps it was also the source of the idea that prayers made to the angels could result in communication from such beings with superior knowledge and intelligence.

It is also very suggestive that John Dee gave his first public lectures on Euclid of Megara, and in fact contributed a Mathematical Preface

³ We will refer to the geometer as Euclid of Megara, as that is how he was known in Dee's time, although subsequent scholarship has discovered that the geometer and the philosopher of Megara were not the same person.

⁴ Modern day Thivall. Interestingly Thebes is only about 40 km from Megara, in Greece.

⁵ The number 811 has a symbolic meaning being the Greek numeration of IAO, a Gnostic god name associated with Abraxas [I=10, A=1, O=800]. Although IAO was in use in a number of works on magic, it tends to suggest a Greek rather than a Hebrew origin for this grimoire. Some manuscripts state the number was 89 magicians.

⁶ Possibly an angel of the zodiacal sign of Leo.

⁷ William of Auvergne, Archbishop of Paris, made two references to the *Sworn Book* in his book *De Legibus*. Therefore it has to have existed before his death in 1249.

Practical Angel Magic

to the first edition of Euclid which he helped translate (with Henry Billingsley) and publish in English in 1570. Euclid resurfaces much later in 1651, when significantly a certain Captain Thomas Rudd (1583-1665) published just the first six books of the geometry of Euclid of Megara together with the same Preface by John Dee.

Both Rudd and Dee (who owned a copy) would have been familiar with the *Sworn Book* of Honorius son of Euclid of Thebes. Is it possible that their interest aroused in Euclid of Megara may have initially been caused by a confusion of this Euclid with the Euclid of Thebes?

In Dee's efforts to get intellectual satisfaction from the angels, piety and cleanliness were paramount considerations. This grimoire stresses the purity of its intent, and not just in order to preserve its owners from possible ecclesiastical prosecution. In the opening paragraphs it says "it is not possible that a wicked and unclean man could work truly in this art; for men are not bound unto spirits, but spirits are constrained against their will to answer clean men and fulfil their requests." This is a very important point. And later it explains that "we call this book the *Sacred or Sworn Book* for in it is contained 100 sacred names of God and thus [it is] sacred, for it is made of holy things...it was consecrated by God."

For Dee, the *Sworn Book* was very important. It was not just concerned with the invocation of angels, but was the origin of the *Sigillum Aemeth* (or *Sigil of Truth*) that is the key diagram engraved on the wax tablets used on his Table of Practice, and on the wax tablets used as supports under its legs⁸. This *Sigil*, which has a complex geometry, and should be coloured according to very specific rules, may even pre-date the *Sworn Book*. It also appeared in one of Kircher's books. The *Sworn Book* is therefore a prime example of a grimoire which provided some of the basic rationale, equipment, diagrams and techniques of angel magic.

The *Sworn Book* was very influential amongst a wider circle of Elizabethan intellectuals, and it is interesting to note that Ben Jonson (1573-1637), the playwright contemporary of Shakespeare, was also the owner of one of the main surviving manuscript copies of *The Sworn Book*.⁹ It is well known that Jonson was interested in and well informed about alchemy, which can be seen from the detail in his play *The Alchemist*. However it is not so well known that he

⁸ These tablets are still preserved in the British Museum, and can be seen today.

⁹ British Library manuscript Sloane MS 313.

Practical Angel Magic

was also interested in and practiced the angel magic contained in the *Sworn Book*.

Giordano Bruno, who visited Dee, and probably read his copy of the *Sworn Book* when he was in England in the early 1580s, actually incorporated into his book on the Kabbalah, a character called 'Onorio' from Thebes: probably a sly reference to Honorius of Thebes.

Heptameron or Magical Elements

This book by Peter de Abano (1250-1317), may have been written around 1300, towards the end of his life. It contains the Latin versions of conjurations to be found in the *Goetia*, and therefore is probably one of the sources of that important grimoire. The *Heptameron* was first printed in English in 1655¹⁰, but was undoubtedly known to Dee perhaps in the Latin version of 1496. Like the *Goetia*, but unlike some of the other grimoires, it emphasises the importance of an inscribed circle on the floor, "for they are certain fortresses to defend the operators safe from the evil Spirits".

One of the interesting contributions that this grimoire makes to the contents of the present book is its list of angelic powers and objectives. These are very similar to those listed in the present work, and the source of some very interesting transcriptional mistakes in the manuscripts of the present work.

Armadel, Arbatel, Almadel

Note that the *Armadel*, the *Arbatel*, and the *Almadel* are three distinct and different grimoires despite the similarity of name. We will deal with them in order.

*Armadel*¹¹ might be the name of the author but it is more likely to be a common noun. This grimoire has been very influential in the history of angelic invocation. It opens with the seals of 7 angels: Michael, Anael, Raphael, Gabriel, Cassiel, Sachiel, and Samael, the first four¹² of which also appear on the opening page of Dee's manuscript of his very first *Liber Mysteriorum*¹³. Dee thought that

¹⁰ The *Heptameron* was contained in the 1655 English edition of the *Fourth Book of Occult Philosophy* which was reprinted by Askin Publishers in 1978.

¹¹ A translation of a 17th century French manuscript of this grimoire by S L MacGregor Mathers was edited by Francis King and published by RKP in 1980. That edition seems however to be a bit scrambled in terms of the order of its chapters.

¹² Together with Uriel.

¹³ This begins in December 1581.

Practical Angel Magic

the relatively unknown angel Annael (Dee spelt it with a double 'n') was the angel presiding over the whole world (at least during Dee's lifetime) and therefore the ruler of Michael, Gabriel, Raphael and Uriel, the angels of the four quarters, and the angels with whom Dee was most keen to communicate.

The *Arbatel* dates from 1575 and is also entitled *De Magia Veterum*. John Dee is known to have owned a copy of the *Arbatel*, to which he makes several references in his *Libri Mysteriorum*, especially to the spirit Och [one of the so called Olympic spirits who also occurs in other grimoires]. The *Arbatel of Magick* was included in Agrippa's *Fourth Book of Occult Philosophy*¹⁴

However the most interesting of these three grimoires from the point of view of angel magic is the *Ars Almadel*. This first appears in a 15th century manuscript in Florence¹⁵. 'Almadel' might be a word of Arabic derivation, with *Al-* being the definite article 'the', plus *madel* or *mandel*. Words from the major invocation¹⁶ of the *Almadel* also appear in Dee's Enochian calls, suggesting that either Dee or Kelly may have used and adapted material from the *Almadel*. The *Almadel* invocation: "I [am] the servant of the highest the same your god Adonai Helomi & Pine" parallels Dee's Enochian "Lap zirdo Noco MAD Hoath laida" which translates "for I am the servant of the same your God the true worshipper of the Highest".¹⁷

In addition, Dee and other practitioners of angel magic have utilised magical equipment that was made of wax. The magic of the *Almadel* is worked using a fascinating piece of magical apparatus called an 'almadel' or possibly a 'mandel'. This is a square tablet of white wax, with holy names and characters written upon it with a consecrated pen. Its surface is inscribed with a large hexagram, which covers most of the top of the tablet, with a triangle in the centre. Four holes are drilled through the tablet, one in each corner. More wax from the same source is then used to fashion four candles; each with a small protrusion of wax (like a 'foot'), half way up the length of the candle.

The four candles are placed in candlesticks, and positioned in a

¹⁴ This volume contained just two essays by Agrippa plus two of the grimoires mentioned above, another geomancy, and a commentary on spirits, a total of six separate books. A complete modern typeset edition of the *Fourth Book of Occult Philosophy* is due to be published in 2005 by Nicolas Mays.

¹⁵ Florence II-iii-24.

¹⁷ From Sloane MS 3191 48 *Claves Angelicae* first Call.

Practical Angel Magic

square pattern with the 'feet' all facing inward. The almadel itself is then placed between the candles, so that it rests on the four 'feet' and is thus elevated above the surface of the table of practice. A small golden or silver talisman is then placed in the centre of the almadel. An earthenware censor is placed on the table directly underneath the almadel.

No less than four almadels must be made, each with its own four candles and an earthen censor. Each is ascribed to a different 'Altitude' or 'Chora', and there is a different colour for each of the four Altitudes. The same golden seal can be used in the operation of each of the Altitudes.

The colour of the almadel belonging to each Chora¹⁶ differs:

first Chora	=	lily white.
second Chora	=	red rose.
third Chora	=	green mixed with a white silver colour.
fourth Chora	=	black mixed with a little green.

Once you have chosen which angels (and thus which Altitude) you wish to work with, you set up the almadel, light the candles, and burn mastic in the censor. The smoke will rise against the bottom of the wax tablet, and is forced to pass through the four holes. So you have candles surrounded by channelled smoke as your arena for the manifestation of the angel. It is within this smoke, and upon the almadel and its golden talisman, that the angel in question should manifest.

The equipment described by the angels for use in Dee's Enochian system of magic include an engraved wax tablet used as a support for the scrying stone in which the angel manifests (as well as four smaller tablets as support or insulation for the legs of the Table of Practice). It would seem that Dee's angel scrying equipment was therefore very much part of the *Almadel* grimoire tradition.

Art Theurgia Goetia

This book is the second part of the *Lemegeton*. This grimoire draws some of its angel seals from the first Book of Trithemius'

¹⁶ Although this word is usual translated as Altitude it is probably from the Biblical Greek word, *chora* that means 'an empty expanse, a room or a space or territory (including its inhabitants)'. It is interesting to speculate that 'altitude' might correspond to 'aethyr' as well as to 'chora'.

Practical Angel Magic

Steganographia, which was written around 1500 although not published till 1606. The *Theurgia Goetia* is a very interesting name for a grimoire, as it incorporates in one title the evocation of spirits (*Goetia*) and the invocation of angels or other divine beings (*Theurgia*), helping to confirm our observation that the techniques of both these procedures are almost identical. Most importantly, the *Theurgia Goetia* gives the key method for calling and manifesting spiritual creatures, with details of the sort of deserted location required by the practitioner, and the use of the crystal stone.

Art Pauline

This forms Part III of the *Lemegeton* or *Lesser Key of Solomon*. The key angel magic idea derived from this grimoire was the idea of a wax 'Table of Practice' which no doubt helped in the concept or the creation of Dee's Holy Table.

Trithemius (1462-1516)

Trithemius was a very important influence on John Dee and many other magicians of his period. He was the mentor of Henry Cornelius Agrippa who wrote the *Three Books of Occult Philosophy*, a book that was probably the most influential and comprehensive book on magic ever written. He not only wrote a short but important text on the invocation of angels into a crystal, but also the *Steganographia*, or the art of concealed writing, which doubles as an intriguing text on angel magic. Dee was so concerned to secure a manuscript copy of this, that he paid a very high price for one.

Simon Forman (1552-1611)

The life of Simon Forman in some ways chronologically paralleled that of John Dee, but at a much less respectable level. Forman was primarily an astrologer and physician, however he too became involved in angel magic in 1589. He got so proficient at it that in Easter 1590, he even wrote his own guide to angel conjuration, with formulas for deriving angelic names, and prayers used to call them.

Enough has been said to demonstrate the continuity of tradition between the magic of the grimoires and the angel magic of John Dee. Let us now look at Dee's application of these different magical strands.

John Dee, Elizabethan Magus

John Dee [1527 - 1609] is the name that first comes to mind when the subject of angel magic comes up, but in fact he was only one of a long chain of relatively well-known English scholars, lawyers, lords and literary men whose taste for angel magic caused them to keep their own diaries of 'Actions with Spirits'. Dee's story is too well known to bear repeating here, but a few events need to be drawn out to show how he fits into the line of transmission.

Dee's character is summed up by the motto on his Coat of Arms, which appears at the end of his *Letters Apologeticall* that was published in 1599. The motto was *veritas praevalebit*, or 'truth prevails'. This sums up Dee's attitude to all his work. He was not concerned with appearances he believed fervently in the truth.

When popular opinion whispered about his being a sorcerer, Dee actually requested King James I to try him for sorcery, so that the truth would come out. Considering that James I was very adverse to any hint of witchcraft, Dee must have been either very certain that the truth would prevail. Or maybe it just betrayed a naïve trust in the perspicacity of the English legal system.

According to his own note (in Sloane MS 3188) he began his interest in angel magic and scrying in 1569 when he was 42. His first experiments consisted in invoking the archangels Raphael and Michael. From that date till his death in 1608 he pursued knowledge through communication with angels and spirits, as well as through the more conventional means of book collecting, experimentation and discussion with his peers. His own output of words was considerable. As we explain in the Bibliography, he was capable of keeping as many as three parallel diaries going at the same time, plus the writing of numerous books and correspondence. We however are interested in the survival and subsequent transmission of just one of his most secret books.

Tale of a Chest: the survival of four key books

Some years after Dee's death in 1608 a sale was held of his remaining books and furniture. At this sale was John Woodall (1570-1643) a 'Paracelsian surgeon' who later recognised and helped abate the causes of scurvy. One of the most influential medical books of the time was *The Surgeon's Mate*, written by John Woodall and first published in 1617. This was the first textbook in any language for the guidance of ship surgeons on long voyages.

Practical Angel Magic

Unique when it was published, *The Surgeon's Mate* is neither a comprehensive surgical nor a complete medical treatise, but a textbook to guide novice physicians and inexperienced surgeons who might be expected to treat medical and surgical emergencies peculiar to ships far from land for prolonged periods of time and under tropical conditions. Although Woodall's text was written chiefly for young sea surgeons, it was addressed to a much wider readership because of its treatises on gunshot wounds, gangrene and the plague. The book gained immediate success and was reprinted in 1639, 1653 and 1655. Because it was so universally used by ship surgeons sailing around the world, most of the copies were worn out or lost at sea in the course of time and only eleven copies are now known to exist of the many that were printed.

Woodall's other appointments included election as surgeon to St. Bartholomew's Hospital in 1616, and the promotion in the Barber-Surgeons Company to Examiner in 1626, Warden in 1627 and Master in 1633. At St. Bartholomew's he was a colleague of Sir William Harvey, the discoverer of the circulation of blood.

The year 1626 was noteworthy both for reform and Woodall's pocket. First, the Privy Council decided to pay the Barber-Surgeons Company fixed allowances to furnish medical chests for both the army and navy; and second, the Company requested Woodall to supervise their provision, in addition to his long-standing commitment to supply the East India sea chests.

Despite his dismissal as Surgeon General to the East India Company in 1635 for economic reasons, he retained a monopoly on supplying the Company's medical chests until 1643, the year of his death at about the age of 73, presumably in London¹⁹.

Woodall was obviously a man obsessed by chests, particularly travelling ones, so it is not surprising that at the sale of Dee's goods he bought a particularly fine cedar wood chest 'about a yard & half long' (1.37 metres) with a 'lock & hinges, being of extraordinary neate worke'. Now this chest had a substantial secret draw which neither Woodall nor the next 3 owners were aware of, which is very strange considering Woodall's professional familiarity with chests.

When John Woodall died in 1643, the chest passed to his son Thomas Woodall, Sargeant Surgeon to King Charles II. Ironically John Woodall was also an intimate friend of Elias Ashmole, and so

¹⁹ See 'John Woodall. Paracelsian Surgeon', in: *Ambix* 10 (1962), 108-118.

Practical Angel Magic

it is almost as if the contents of the chest were destined to eventually reach Ashmole's hands, but failed to do so at this point in time. Instead Thomas Woodall sold the chest, along with other household goods, to a 'joyner' (a carpenter who specialised in furniture) whose shop was on a corner of Adle Street²⁰ in the city of London.

Map of London in 1593 at the peak of John Dee's career. Adle Street is visible at the top right.

Robert Jones was a confectioner, who lived at the sign of the Plow (a public house) in Lombard Street, near to the present Bank of England. One day in the same year that Thomas Woodall died, he was taken shopping by his wife Susannah Jones, in search of 'household stuff'. They visited Adle Street and bought the chest from the joiner's shop.

²⁰ Adle Street used to be a westerly continuation of Silver Street, now disappeared. It is now called 'Addle' street and is not far from the Thames.

Practical Angel Magic

Twenty years after they bought the chest (in 1662) Susannah and her husband were moving it from its usual place when they thought they heard 'some loose thing rattle in it' at the bottom right hand end. Mr Jones therefore "thrust a piece of iron into a small crevice at the bottom of the chest, and thereupon appeared a private drawer, which being drawn out, therein were found divers Books in manuscript, and papers, together with a little box, and therein a Chaplet of olive beades, and a cross of the same wood, hanging at the end of them"²¹.

They had found Dee's secret drawer and in it Dee's most precious manuscript books, papers and his olive wood rosary, 54 years after Dee's death. However they did not consider the books to be of any value, as they could not understand them. In due course their maid used up about half of the papers to light fires²², and for other household uses. When the Joneses finally noticed this they decided to keep the rest of the books and papers rather more safely. It is intriguing to think, that despite the quantity of Dee's manuscripts which have survived the intervening 400 years, that a goodly proportion were destroyed by this unfortunate serving maid [from our calculations, perhaps as many as seven of the 28 manuscript books written by Dee were so destroyed].

Two years later Robert Jones died. A year later in 1666 the Great Fire of London burned out the area where they lived. The chest was too heavy to move, and so it was also destroyed by the fire, but Mrs Jones had the good sense to carry the books out of her house with the rest of her household goods, to the nearby open fields of Moorfields²³ about a mile away. After that she took much greater care of the books.

A few years later, Mrs Jones re-married, this time to a Mr Thomas Wale, one of the Warders in the Tower of London. She took the remaining books and papers with her. Mr Wale was however more curious about the papers and books than her first husband, and so sent them to his good friend the antiquary Elias Ashmole (1617 - 1692). Ashmole was an important scholar and collector of the period. It was later Ashmole's collection of artefacts that was to form the basis of Oxford's Ashmolean Museum, whilst his books helped augment the Bodleian Library in the same city.

²¹ Ashmole's note written at the front of Sloane MS 3188.

²² To light 'pyres', not to make pies as rendered by one commentator.

²³ Not 'Moon fields' as one commentator would have it.

Practical Angel Magic

In fact it was Ashmole's servant Samuel Storey who collected the parcel of Dee's manuscripts from the Wale's house on 20th August 1672 and delivered it to Ashmole who was then staying with Dr William Lilly at Hersham [near Esher] in Surrey.

Lilly was a close friend of Ashmole's, a well known astrologer, and also a practitioner of angel magic.

You can imagine Ashmole's reaction when he discovered that this collection of manuscripts contained four of Dee's key angel magic books in manuscript. He subsequently painstakingly copied these out by hand.²⁴

Dee's Key Manuscripts

The manuscript books in the chest were:

1. *Libri Mysteriorum I - V*
2. *The 48 Claves Angelicae*
3. *Liber Scientiae, Auxilii & Victoriae Terrestris*
4. *De Heptarchia Mystica (Collectaneorum Liber Primus)*, and
5. *A Book of Invocations or Calls*

The first manuscript was Dee's Spiritual Diaries for 1581 to 1583, a day-to-day record of his scrying with Edward Kelly²⁵. The other four were the fruits of that scrying.

Ashmole later bound the last 4 books up in one volume (Sloane MS 3191), which were therefore separated from the day by day scrying of the Spiritual Diaries, as he could see that they were the end result of Dee's system, rather than the painstaking scrying that produced it.

On the 5th September the same year (1672) when Ashmole had returned to London, Thomas Wale called upon him, at his office in the Excise Office in Broad Street (just a short walk from where his wife had originally found the chest). They made a deal and Ashmole exchanged a new copy of his *Institution, Lawes & Ceremonies of the most Noble Order of the Garter* for Dee's five manuscript books. Ashmole undoubtedly got the better part of the bargain, and, probably feeling a little guilty, also offered Thomas Wale's son a job as one of his Deputies at the Excise Office (the predecessor of the

²⁴ These copies by Ashmole are now Sloane MS 3678 in the British Library.

²⁵ Now published as *John Dee's Five Books of Mystery*, edited by Joseph Peterson, Weiser, 2003

Practical Angel Magic

modern government department of Customs & Excise) for the then good salary of £80 per year.

Of the 4 manuscripts that Ashmole bound together, three are now well known (see the Bibliography for details of their modern editions), but the last book has remained obscure.

A Book of Invocations or Calls

The last of the books found in the chest is the one of importance to us. This last manuscript was described by Ashmole (in Sloane MS 3188) as "a booke of invocations or Calls, beginning with the squares fill[e]d with letters, about the black cross". It does not have a title, but is sometimes referred to as the *Booke of Invocations or Calls*, or by the title of the table found at the beginning, *Clavicula Tabularum Enochi*, or as *Tabula Bonorum Angelorum Invocationes*. It is also sometimes referred to and as *The Book of Supplications or Invocations*. All these are different names for the same manuscript.

It was written in Latin and had just over 9000 words, and as we shall see below, is in fact the immediate predecessor of the manuscript that is here transcribed, which is more than ten times longer. The Latin manuscript is now bound up in the British Library as part of Sloane MS 3191 and begins at folio 58r with the opening lines:

"Fundamentalis ad DEVM Supplicatio, et Obtestatio pro Angelorum Bonorum, benigno, habendo Ministerio"

This is however only the title of the first prayer. This manuscript consists of:

- a. A circular diagram of the 49 Angelorum Bonorum or Good Angels.
- b. Two Angelic Tables containing 624+20 letters, from which were drawn a number of angelic names and names of god. The first table in the manuscript is marked as incorrect, and the second table noted as corrected Die Luna [Monday] 20 Aprilis, 1587 by the angel Raphael. These tables are the key to the whole manuscript²⁶.

²⁶ This corrected Table appears again in only one of the manuscripts of our present book, which is Sloane 307. In this form it represents the most correct version of this table, from Dee's point of view, and is in many ways different to the uncorrected version copied by Mathers and presented in the published Golden Dawn papers, and many later books on Enochian Magic based on these.

Practical Angel Magic

c. An opening 'Fundamental Prayer to God and entreaty for the benign ministry of the Good Angels. This, like the following invocations, *specifically includes Dee's name as the supplicant*²⁷:

"I, John Dee, your unworthy servant...most humbly and faithfully ask you to favour and assist me..."

This inclusion makes it certain that these were the invocations that Dee prepared or received and which he used for his own personal invocations.

d. A list of the names of the 24 Seniors²⁸ assembled from the central 20 letters of the preceding Angelic Table. These 24 Seniors are grouped according to the 4 compass directions, East, South, West and North, 6 per direction²⁹. The manuscript includes four Addresses or prayers to the Six Seniors of each of the four compass directions

e. Next there are lists of 128 lesser Good Angels (together with an equivalent number of corresponding Malevolent angels to balance them). It is instructive that although later writers have characterised Dee as high minded and only interested in angels of light, in fact when you get to the heart of his system you see that he is equally prepared to deal with both Good and Malevolent spiritual creatures, without being unduly worried by the dualism introduced by the Church's thinking on the subject.

For Dee it was a question of getting accurate information, and in doing so he saw that the universe was balanced, not lob-sided. Each group of 16 angels (plus 16 malevolent angels) was qualified to perform certain specific tasks, or give specific information.

This list of angelic competencies is important for several reasons. First it led to some scribal errors, which have enabled us to identify the relationship of the three manuscripts used in the transcription of the present book. Secondly it is interesting to see the list of magical objectives in which John Dee was interested, and for which these angels were supposedly skilled³⁰. In brief these were:

²⁷ This feature does not occur elsewhere amongst Dee's papers. Therefore these invocations were obviously of the utmost personal importance to him.

²⁸ 'Seniors' is a term mentioned by Dee as being specifically derived from *Revelations*, the Apocalypse of St John. In fact it appears as the 24 'elders' in chapter 4, verse 4 of the King James Version (which was only published after Dee's scrying sessions). Dee seems as interested in *Revelations* with its frequent mention of angels, as Aleister Crowley was in it, with its mention of the Beast 666.

²⁹ An interesting, but probably coincidental, similarity is that the main ring of the Chinese feng shui compass is also divided in the same way into 24 equal sectors.

³⁰ See also Appendix 1.

Practical Angel Magic

- i) Medicine and the cure of sickness (or in the case of the 16 malevolent spirits, the bringing of sickness).
- ii) The discovery, collecting, use and intrinsic powers of metals, also the combining of stones and their powers [in short alchemy in the widest sense].
- iii) Skill in Transformations.
- iv) Comprehending the species and uses of the living creatures in each of the four Elements.
- v) Skill in dealing with mixed natures and other natural secrets (Natural Magic).
- vi) Changing of place.
- vii) Mechanical Arts
- viii) Understanding the secrets of all men, including their inclinations, actions, circumstances, and good or evil deeds.

This list is strangely limited, and indicative of Dee's desire to use the angels to further his scientific knowledge. The last objective could however have been of use in Dee's brief as an 'intelligencer' or spy.

The Present Manuscript

It is clear that the present manuscript is a working expansion of the *Book of Invocations or Calls*, the last of the four manuscript books found in Dee's secret chest. It is for this reason that we have gone into so much detail concerning its provenance.

Someone had access to this manuscript either before it was 'lost' to the world in the chest in 1608, or after it was recovered in 1662. They translated its contents out of Latin and then expanded the invocations more than tenfold. They also included considerably more explicit detail as to how the angelic names were derived from the Table, and how they were to be used. Also, very importantly, whilst Dee included both the correct and an uncorrected Table of the Good Angels at the front of the Latin manuscript, the present English text discards the incorrect material and just provides the corrected Table of Practice. This Table thus supersedes all other versions of these Tables, and particularly those used by the Golden Dawn. The Golden Dawn version, via Regardie has been subsequently repeated by many modern authors. The cells in the Tables in those books sometimes include both correct and incorrect letters within the same square. It is clear that Dee did not do this.

Practical Angel Magic

Dating and Du Bartas

In the first page of the prologue to the present manuscript, mention is made of a writer called Du Bartas and his works, and elaboration is called for to provide further context for the manuscripts. Guillaume De Salluste, Seigneur Du Bartas, lived from 1544-1592. In 1578 at the age of 34 he published his seminal work *La Semaine; ou, Creation du Monde* a hugely successful epic rhyming poetic work describing creation and the early Biblical tales of *Genesis* over a period of seven days, but mirroring the Creation from a Protestant viewpoint.

La Semaine was translated into Latin and many modern European tongues and widely distributed, being a 'blockbuster' bestseller of its time. This was probably the best-known literary treatment of the Fall story before Milton's, which eclipsed it. The Fall story of course helped to introduce the problems of duality into the practice of magic. *La Semaine*'s seminal influence on his classic work the *Inferno* was acknowledged by Dante Alighieri.

During the period 1579-92 Guillaume De Salluste worked for the French diplomatic service, being stationed between the courts of Queen Elizabeth I of England, King James of Scotland, and the King of Denmark, a position that was doubtless helped by the widespread influence of *La Semaine*. De Salluste also published a translation into French of Ovid's *Metamorphoses* in 1586, which has magical overtones, and a work entitled *Urania or the Heavenly Muse* in 1589.

It is very easy to speculate that this influential figure would have been interested in, and quite possibly involved with magicians of the time, as he certainly moved in the same circles as John Dee. Because our present text specifically mentions Du Bartas, it provides us with a tentative dating. As 1605 was the first publication date in English of *La Semaine*, this is probably the earliest date the present manuscript could have been written³¹. At that date, Du Bartas would have been a controversial reference, and therefore most likely to have been included if the manuscript was written just after 1605.

The Contents of the Manuscript

It seems from examination of changes and corrections in both

³¹ Of course it is possible that the present author might have seen an earlier French edition.

Practical Angel Magic

manuscripts, that Sloane MS 307 is the earlier manuscript, and that Sloane MS 3821 is a copy made for Elias Ashmole. Sloane MS 307 is the only manuscript which contains the key table at the beginning, and therefore it is likely to have been the original copy. The handwriting of a few pages of prayers at the end of Sloane MS 3821 is certainly Ashmole's. Ashmole had painstakingly copied many of Dee's works himself.

In the front of Sloane MS 3821 is a contents list written in another 17th century hand. This clearly shows that *The Practice of the Tables* is just the first part of this manuscript, and the rest, though apparently related, is not part of it. In fact the later section clearly relates to another set of magical operations which we plan to cover in a future volume in this Sourceworks of Ceremonial Magic series.

It is worthwhile transcribing the items in this contents list. Numbering has been added to provide clarity:

- 1 The Practise of the Tables – folio]. 1.
- 2 Operations of the East Angle of the Air by Invocation made to the Royal Spirit Oriens – folio]. 217³².
- 3 Celestial Confirmations of Terrestrial Observations by certain select powerfull Contractures[?] drawn from the Seven Sarzod[?] Intelligences – folio]. 245.
- 4 Humble Supplication to Almighty God³³ - folio]. 281.
- 5 Enoch's Prayer³⁴ - folio]. 286.
- 6 Michael Nostradamus's Epistle to his Son in his *Book of Prophecies* from Salon [dated] Mar 1 1555 and to Henry the 2^d King of France June 27. 1558³⁵ – folio]. 297.
- 7 A Select Treatise as it was first discovered to the Egyptian Magi...from ancient to modern Ages – folio].323.

³² This consists of operations for each of the four Angles of the Table (under the jurisdiction of Oriens, Paymon, Egin and Amaymon) and operations for the 7 days of the week running from Saturn to Venus in the traditional weekly order. This has a different folio sequence, and has not been included in the present work, but will form part of a future volume.

³³ This prayer is in Ashmole's handwriting.

³⁴ This prayer is in Ashmole's handwriting.

³⁵ Not too much importance should be attached to the inclusion of these two transcriptions of Nostradamus' letters (which were available in print anyway) as it was common practice amongst collectors' bookbinders to sometimes bind completely unrelated material in the same volume.

Practical Angel Magic

The original folio numbers listed in this contents list have since been superseded by a Library renumbering. The renumbering however obscures the separateness of these items, which is clear here.

We know that Sloane MS 307 is the earlier manuscript, and that Sloane MS 3821 is a copy made by Elias Ashmole. The text of both is parallel till folio 158 of Sloane MS 3821. Therefore the material after this folio number was added later.

At this point Sloane MS 307 ends, but Sloane MS 3821 continues with further Operations for each of the four Angles of the Table (under the jurisdiction of Oriens, Paymon, Egin and Amaymon) and operations for the 7 days of the week running from Saturn to Venus in the traditional weekly order, which is not at all like the structure of the first part. Also as we have seen, although the modern folio sequence continues uninterrupted, an earlier folio numbering sequence begins at folio 1 with the Operations of the East Angle, confirmation of the separate nature of this item.

After this are bound in two prayers transcribed by Ashmole. These are addressed respectively to Almighty God and the prophet Enoch, and as they were obviously used by Ashmole in his own angel magic, so they have been here transcribed.

The Author of the Manuscript

The question then is who created Sloane MS 307, which is in effect an extensive expansion of the original Dee manuscript found in Dee's chest. Tentatively we would like to suggest that one strong candidate is Thomas Rudd.

In 1570, just one year after Dee took up invoking the angels, a certain 'T.R.' who may have been Thomas Rudd³⁶ was involved in the transcription and publishing of Johann Weyer's *Pseudomonarchia Daemonum*³⁶. This book, a seminal magical text of the period, has the same roots as the *Goetia*, as it replicates fairly closely the list of the 72 spirits of the *Goetia*. It is also a source of some of the techniques of angel magic.

There were at least another two Thomas Rudds during this period, and because of the similarity between their interests it is likely they were father and son. At least one, and possibly both, knew Dee.

The first Thomas Rudd, who was a doctor, lived from 1583 to 1656. On 19th October 1605, just three years before Dee's death, Thomas

³⁶ Johann Weyer (1515-1588) was a pupil of Henry Cornelius Agrippa.

Practical Angel Magic

Rudd wrote a letter to Dee about alchemical vitriol. It is conceivable that Dee also shared his work on angel magic as well as alchemy with the young Rudd. If so, then this Rudd may have made a copy of the *Book of Invocations or Calls* before Dee's death. Certainly Dr Thomas Rudd was heavily involved in angel magic. This suggests a creation date for Sloane MS 307 between 1605 and 1608.

In 1651, Thomas Rudd published an edition of Dee's *Mathematical Preface* to Euclid. It is tempting to think this is the son of the Thomas Rudd who knew Dee. This Thomas Rudd styles himself as 'Captain'. This would tie in with a considerable knowledge of navigation, which was another of Dee's well known areas of considerable expertise and interest. It can hardly be a coincidence that not only is the mathematical preface to this work written by Dee, but the book published by Rudd is an edition of Euclid.

Yet another book on geometry (this time the geometry of gunnery) was published by Captain Thomas Rudd in 1668. It is very likely that Captain Thomas Rudd was the son of Dr Thomas Rudd, and that both of them had a serious interest in the practice of angel magic.

Because of his association with Rudd, it is worth mentioning Peter Smart. Smart, who flourished around 1699-1714, was the copyist who transcribed some of Thomas Rudd's manuscripts³⁷ at the end of the 17th century, and who also claimed to have transcribed one of Dee's manuscripts.³⁸

A second candidate for the authorship of Sloane MS 307 is Richard Napier, rector of Great Linford (a relative of John Napier, the inventor of logarithms) who was also definitely a practitioner of angel magic and who met Dee through their joint interest in mathematics. He dined with Dee on at least one occasion³⁹. Napier was a pupil and colleague in astrology and magic of Simon Forman. As a result of this dinner with Napier, Dee and Forman also met and dined some 24 days later.

Dee's patron Queen Elizabeth I had died just the year before and Dee was feeling his mortality, and probably looking for someone to whom he could pass his work and precious manuscripts and books.

³⁷ Harley MSS 6481-6486.

³⁸ More likely to have been a manuscript *owned* by Dee, rather than written by him. This was later published under the very misleading title *The Rosicrucian Secrets of Dr John Dee*.

³⁹ 2nd July 1604.

Practical Angel Magic

So Napier might have had access to his precious *Book of Invocations or Calls* during this period.

This helps with the dating of Sloane MS 307 which was therefore probably expanded from Dee's manuscript either:

a) Between 1605 and before Dee's death in 1608, by someone like Rudd or Napier whom Dee saw as a potential collaborator, or

b) After the discovery of Dee's chest in 1662 but before Ashmole's death in 1692, by someone who had never met Dee.

Because of the topicality of the Du Bartas reference, the first of these two possibilities is definitely the most likely.

Practical Angel Magic

Aristocratic Angel Magic after the Sixteenth Century

After Dee's death in December 1608,⁴⁰ a number of his books and manuscripts were scattered (except the four key manuscripts hidden away in the chest). By 1626, Dee's library was pillaged, but the remainder was still unsold due to ongoing litigation. Some of Dee's books and manuscripts were finally acquired by Sir Robert Cotton, who, after his death in 1631, left them to his son Sir Thomas Cotton.⁴¹ Amongst these was the manuscript of the later *Libri Mysteriorum* that was published by Casaubon as *A True & Faithful Relation...*⁴²

Around this time, copies of grimoires such as the *Lemegeton*, the *Armadel* and the *Ars Notoria*⁴³ that had been known to Dee in manuscript form began circulating and even appearing in print, attesting to an increasing interest in angelic and demonic evocation. Robert Turner, who lived 1620 - 1665(?), and who should not be confused with the late 20th century Robert Turner who had the same interests, began translating and publishing a number of these grimoires. Several of them were published in 1655 as part of the *Fourth Book of Occult Philosophy*⁴⁴ which was attributed to Agrippa.

Elias Ashmole (1617-1692)

Ashmole is the man more than any other, who we can thank for the preservation of Dee's work, and who in his own right attempted a series of experiments in angel magic based on Dee's techniques. In 1646 Ashmole met the astrologer William Lilly (1602-1681) and they became firm friends, staying for long periods at each other's houses. They soon began to share their interests in both astrology and magic and were later to experiment together with some of the techniques of angel magic. Ashmole was eager to learn all he could about these techniques. Lilly knew, and may have introduced Ashmole, early in their relationship, to someone called William

⁴⁰ Edward Fenton suggests that Dee died instead on 26 February 1609 on the basis of John Pontoys' diary entry which shows a death's head and 'Jno Dee [shown as a triangle], hor[a] 3.a.m.' Pontoys was the beneficiary of Dee's library, and this entry is just as likely to have been the record of a post mortem appearance of Dee to Pontoys in a dream, especially considering the carelessness with which Pontoys appears to have treated Dee's library.

⁴¹ Some 69 years later these were in turn left to the British Museum.

⁴² First republished by Askin Publishers in 1973.

⁴³ Published 1657.

⁴⁴ Published in 1655 and reprinted in 1978 by Askin Publishers.

Practical Angel Magic

Hodges who regularly called the angels Raphael, Gabriel and Uriel⁴⁵.

Ashmole also received a number of Simon Forman's papers, after his death (probably including his detailed manuscript on angel magic) from the son of Sir Richard Napier, who inherited them from Richard Napier, the rector of Great Linford, who in turn was Forman's pupil and colleague.

Ever interested in practical results, on 27th September 1652 Ashmole writes "I came to Mr. Jo. Tompson, who dwelt near Dove Bridge; he used to call [i.e. summon spirits or angels], and had [angelic] responses in a soft voice".

In 1659 Meric Casaubon published *A True and Faithful Relation...* which consisted of Dee's later *Libri Mysteriorum*. Although he had been interested in angel magic for over 20 years it was strangely not till around 1670 that Ashmole borrowed some of Dee's original manuscripts from Sir Thomas Cotton.

The year after Meric Casaubon died in 1671 was the turning point for Ashmole. On 1st August 1672 his servant brought the 4 manuscripts hidden since 1608 in Dee's secret chest to Ashmole, as we have related above. He was staying with Lilly at the time. You can imagine how they eagerly devoured these manuscripts together. A few months after on 26th October 1672, Ashmole began to painstakingly transcribe Dee's early Spiritual Diaries, or *Libri Mysteriorum*. Simultaneously Ashmole began his own Actions with Spirits that he persisted with till at least 1676. The record of these experiments still exists and contains details of a number of interesting, and often very physical, poltergeist and other magical phenomena.

On 13th August 1674 Ashmole records triumphantly that he has completed his transcription of Dee's early *Libri Mysteriorum*. In the same year the British Museum, which was to be the final resting place of these manuscripts, was founded. The BM, as it has been affectionately called by generations of scholars had its origins in the collections of the Royal Society. It is amusing to note that this organisation, which is credited with the founding of experimental and scientific method in England, has also become the eventual custodian of the most important manuscripts and traditions of angel magic in England.

⁴⁵ see Lilly's *History*, 1774, pp. 49-50.

Baron Somers of Evesham (1651-1716)

John Somers (or Sommers) was Lord Chancellor of England. It is no surprise to discover that he was born near Worcester. He was the eldest son of John Somers, an attorney in a large practice in that town, who had formerly fought on the site of the Parliament. After being at school at Worcester he was entered as a 'gentleman commoner' at Trinity College, Oxford, and afterwards studied law under Sir Francis Winnington, and joined the Middle Temple. He was the author of a major reference book of the time, the *History of the Succession of the Crown of England, collected out of Records, &c.* His interest in the descent of the monarchy reflected Dee's interest in proving that Elizabeth I was heir to the titles of various lands other than England.

In May 1689 Somers was made Solicitor-General, and became King William III's most confidential adviser. He was soon after appointed Attorney-General, and in that capacity strongly opposed the bill for the regulation of trials in cases of high treason. On the 23rd of March 1693, Somers was appointed Lord-Keeper, with the then very significant pension of £2000 a year,⁴⁶ and at the same time was made a Privy Councillor. He had previously been knighted. Somers then became the most prominent member of the Junto, the small council that comprised the chief members of the Whig party. When William III left in 1695 to take command of the army in the Netherlands, Somers was made one of the seven lords-justices to whom the administration of the whole kingdom was entrusted during his absence.

In April 1697 Somers was made Lord Chancellor, and was created a peer with the title of Baron Somers of Evesham (a town very near Worcester). His connection with, and financing of, the notorious pirate Captain William Kidd adds an interesting dimension to his character, but caused a parliamentary vote of censure. The vote went in his favour. On the subject of the Irish forfeitures another parliamentary attack was made on him, with a motion being brought forward to request the king to remove Somers from his counsels and presence for ever; but this was also rejected by a large majority. However in consequence of the incessant agitation William finally requested Somers to resign; this he refused to do, but gave up his seals of office to William's messenger. In 1701 he was impeached by the Commons on account of the part he had taken in the negotiations relating to the Partition Treaty in 1698, but the

⁴⁶ Eighty pounds a year was considered a good income.

Practical Angel Magic

impeachment was voted upon, and later dismissed.

On the death of the king, Somers retired almost entirely into private life. From then on he devoted himself to his other passion, angel magic. In fact it is recorded in the catalogue entry for Sloane MS 3821, that he was one of the owners of the manuscript here transcribed. He took a totally scientific interest in many things including angel magic.

His scientific approach is confirmed by the fact that he was president of the Royal Society from 1699 to 1704. He was made president of the council of the Royal Society in 1708 upon the return of the Whigs to power, and retained the office until their downfall in 1710. He died on the 26th of April 1716. Somers was never married, but left two sisters, of whom the eldest, Mary, married Charles Cocks, whose grandson, became the second Lord Somers.

Sir Joseph Jekyll [1663 – 1738], Master of the Rolls

Somers' second sister married Sir Joseph Jekyll, who in turn inherited many of Somers' magical books and manuscripts, including Sloane MS 3821. He also lived in Worcestershire, and took up Somers' interest in angel magic. Jekyll was also an eminent lawyer, like Somers, and appointed Master of the Rolls. He owned a number of manuscripts by Dee and many others about angel magic, many of which he had inherited from Somers. On his death his huge library was sold by auction on 21 January 1740. You can appreciate its size from the fact that the auction lasted for sixteen days. One of the keenest bidders at this auction was Sir Hans Sloane.

Sir Hans Sloane [1660-1753]

The present manuscript Sloane MS 3821, plus almost all the other key angel magic manuscripts were bought by Sir Hans Sloane at Sir Joseph Jekyll's sale. Sloane was an ardent collector, but also fascinated by magic and scrying. He also knew Somers well, and shared his interest in angel magic, as is proved by the correspondence between them⁴⁷. Sloane has always been looked upon as merely a collector, but in fact he was passionately interested in the magical techniques preserved in the manuscripts he collected.

⁴⁷ Sloane MS 4042 f.159 and Sloane MS 4061 ff. 27-33 consist of letters from John Sommers to Sir Hans Sloane dated 1710.

Practical Angel Magic

Goodwin Wharton (1653-1704)

One of the most important Whigs of the time was Goodwin Wharton who definitely knew Somers (and also probably knew Jekyll), and who rose, after many false starts, to eventually become Lord Admiral.

Wharton was described by Keith Thomas ⁴⁶ as "continuously engaged in a treasure quest for which he enlisted sprits, fairies and the latest resources of contemporary technology". He is even credited with inventing diving gear to try and raise sunken treasure.

His kinsman, Richard Wharton, was not known to share Goodwin's talent for speaking to angels and disembodied spirits, but got involved with his many commercial and speculative ventures, especially searching for sunken treasure, and showed that he was equally zealous in looking for treasure and profit.

In 1683 a friend of Goodwin Wharton shared with him "a method, which he had found among his father's papers for conversing with good angels." Wharton does not say who this was in his Diaries, but it is an intriguing possibility, and some evidence, that it might have been William Lilly's son, thus connecting Wharton's first efforts at angel magic with our present manuscript. After this initial encounter, Wharton became more serious about angel magic, and learned his angel magic from a contact of Mary Paris, his long term companion, seer and bedfellow. His association with Mary Paris was a saga that in some respected reflected Dee's relationship with Kelly. Communication with other spiritual creatures, including the Queen of the fairies, was part of Wharton's passionate interests encouraged by Mary Paris. However such interests did not prevent him, and may even have helped, his final promotion to Lord Admiral of England.

Foundation of the British Museum

Sir Hans Sloane's angel magic manuscripts arrived in the British Museum in 1753, upon Sloane's death, forming the Sloane collection in what is now the British Library. At this point the passing on of these angel magic manuscripts from one scholar magician to another ceases. But a wider range of readers and scholar magicians now had access to these key manuscripts.

⁴⁶ Keith Thomas in *Religion and the Decline of Magic*, p. 281.

Resurgence of Magic: The Impact of the Golden Dawn

Magical practice resurfaced at the end of the Nineteenth century in the form of an organisation known as the Hermetic Order of the Golden Dawn, whose members numbered amongst them many well know names such as W B Yeats, the poet, Florence Farr the actress, and Annie Horniman the tea heiress. To understand where the Golden Dawn sprung from we have to pick up the angel magic thread again.

Frederick Hockley (1808 – 1885)

In the nineteenth century, one of the most influential angel scryers was Frederick Hockley. He was part of the direct line of transmission of angel invocatory techniques, and owned and used Thomas Rudd's 18 Angelic Calls. His scrying generated 30 volumes of conversations with angelic beings. Hockley in turn influenced the late 19th century founders of the Golden Dawn. He was friends with both Kenneth Mackenzie and the Reverend W. A. Ayton, a colleague of Wynn Westcott within the SRIA (Societas Rosicruciana in Anglia).

Hockley is credited, in the History Lecture written by Westcott for members of the Hermetic Order of Golden Dawn, along with Mackenzie and Eliphas Levi, with being one of the adepts who influenced the founding of the Golden Dawn.

It is Hockley who effectively passed the traditions of angel magic to the founders of the Golden Dawn. From Hockley, who was working with both Dr Rudd's angel magic and the *Key of Solomon*, the material was bequeathed to Kenneth Mackenzie, a freemason and member of the SRIA. Mackenzie was also a close friend of the famed French occultist Eliphas Levi (Louis Alphonse Constant) and the Reverend Ayton. Ayton also worked with Mackenzie in the Society of Eight, an occult order founded by Mackenzie in 1883. Another member of the Society of Eight was Frederick Holland, who was also a member of SRIA, and interestingly gave Mathers his first instruction in the Kabbalah.

Reverend William Alexander Ayton (1816-1909)

Ayton was one of the early members of the Golden Dawn. He was 72 when he joined, and brought a wealth of knowledge and experience with him to the Order. Mathers introduced Ayton to W B Yeats, the poet, with the words "He unites us to the great adepts

Practical Angel Magic

of the past", referring to his friendships with both Kenneth Mackenzie and Eliphas Levi.

Ayton was a strict vegetarian, being a member of the Vegetarian Society, which also required abstinence from alcohol and tobacco of its members. It was Ayton who actually married Mathers to Mina Bergson. Ayton had known Wynn Westcott for some years when he joined the Golden Dawn, and remained in touch with him after leaving in 1903. He was also one of the chiefs of the Stella Matutina from 1903 until his death in 1909.

Wynn Westcott (1848-1925)

Wynn Westcott was one of the three founders of the Golden Dawn. Many people have credited S.L. MacGregor Mathers with being the main creator of the rituals of the Golden Dawn, but in fact Westcott was probably just as active, certainly on a day to day basis.

The creation of the Golden Dawn has been well documented elsewhere⁴⁹ and does not need to be outlined here. Westcott was already well-established as an occultist by this time, having become a member of SRIA in 1880, and knowing such figures as Ayton and Kenneth Mackenzie from this period. In 1892 Westcott became the Supreme Magus of the SRIA, and this position brought him into contact with other major occult figures such as Theodor Reuss, head of the OTO, who sought to start a German branch of SRIA.

By profession Westcott was the coroner for Hoxton, and this eventually forced him to leave the Golden Dawn in 1900 due to the unsuitability of his membership of the Order in the eyes of the authorities, when knowledge of it became public. However Westcott remained involved in the Stella Matutina, and in touch with many of the members. It is clear that Westcott was very popular amongst the members of the Golden Dawn, and his role in the organisation has often been downplayed, with Mathers being given more prominence, possibly because of his better known published works, not to mention his colourful life style. There can be no doubt that Westcott was supremely important in the Golden Dawn, and its downfall may be seen as being as much due to his departure as to Mathers' erratic behaviour.

Sloane MS 307 was discovered in the British Museum by one of the above, and when its importance was recognised, a partial copy of it

⁴⁹ See for example, *Magicians of the Golden Dawn* by Ellic Howe, and *The Golden Dawn, Twilight of the Magicians*, by R.A. Gilbert.

Practical Angel Magic

was used by Alan Bennett, Wynn Westcott, Frederick Leigh Gardner, Ayton, and other higher grade members of the Hermetic Order of the Golden Dawn. However to simply say this, ignores the major line of descent of information through the prominent magicians of the nineteenth century which we have already detailed, who may well have also been aware of the manuscript.

Only a small part of Sloane MS 307 was transcribed as *Book H*, and the G.D. members who used this transcript did not seem to be aware at all of the rest of it. Nor were they aware of Sloane MS 3821, or indeed the sections of the text which we found in the 18th century Rawlinson MS D.1067 and Rawlinson MS D.1363 in the Bodleian Library.

We have included *all* of Alan Bennett's copy of *Book H* in the Appendix 3, in order to show how small a portion of the relevant material was actually used by the Golden Dawn.

Bennett also worked with Gardner, Florence Farr and Charles Rosher, in the inner working group of the Golden Dawn called the "Sphere". This group focused on areas like skrying the Enochian alphabet in the astral, which suggests that this group may have also been using *Book H*. If this were the case, then the latter two members would also have had access to copies of *Book H*. Whilst it is probable that other members of the Order had copies of *Book H*, we have only mentioned the individuals who we know definitely had access to it. The fact that it was considered an inner circle paper, and that its source was a closely guarded secret comes from the scrap of Golden Dawn cipher on Bennett's copy. The cipher simply said 'Sloane MS 307' with the numbers additionally protected from the eyes of the curious by being encoded in Hebrew.

Anyway *Book H* was lost to sight, or maybe suppressed, before the publication of the Golden Dawn papers by Israel Regardie in the 1940s. This suggests that this material may not have been passed on to members of the Stella Matutina. Subsequent work on the Golden Dawn has always used Regardie's text, and no attempt was made to restore this early Enochian paper.

Frederick Leigh Gardner (1857-1930)

Gardner did not join the Golden Dawn until March 1894, though he had been corresponding with Ayton for years prior to this, and was aware through this correspondence of the existence of the Order. He was also a member of the SRIA and the Theosophical Society.

Practical Angel Magic

By profession Gardner was a stockbroker, running his own small stockbroking firm.

Gardner rose quickly through the grades to the Second Order, but he left in September 1897 after quarrelling with various members of the group. By all accounts he was a very blunt individual. Apart from his friendship with Alan Bennett and membership of the Sphere group, his other main contributions to occultism are probably the detailed correspondence he kept, and the money he loaned Mathers to help ensure the publication of *The Sacred Magic of Abra-Melin the Mage*.

Alan Bennett (1872-1923)

Alan Bennett was an analytical chemist who suffered from chronic ill health. He was renowned through the Golden Dawn for his magical ability, and was one of the most respected (and possibly feared) members of the order. Bennett was one of the founder members of the "Sphere" group within the Golden Dawn, skrying the astral with other members like Florence Farr and Charles Rosher to learn more about the astral side of subjects like the Enochian alphabet. According to Aleister Crowley, Bennett was a "genius, a flawless genius."

In 1899 Bennett left England due to his health problems, travelling to the Buddhist monasteries of Ceylon. In 1908 he returned to England, and is credited with being the first Buddhist missionary to bring Buddhism to English shores.

The involvement of his most famous magical pupil, Aleister Crowley, with the Golden Dawn's version of Dee's angel magic is too well known to need any amplification here.

Practical Angel Magic

A sample folio from Sloane MS 307 showing the red ruling.

Part 2 - The Manuscripts

The two manuscripts transcribed in Part 3 of this book are Sloane MS 307 and Sloane MS 3821, both from the British Library. These were then checked against manuscripts in the Bodleian Library.

None of the manuscripts has a title page⁵⁰, although Elias Ashmole refers to one of the manuscripts as *A Book of Supplications and Invocations*.⁵¹

Sloane MS 307 opens with the key Table (see page 58) before starting straight in on the text. Sloane MS 3821 opens at the same point, without the Table entitled '*Clavicula Tabularum Enoch*'. The title of the Table has sometimes been used as a title for the whole manuscript.

The text contains the actual invocations of the Kings, Seniors, Angels (including evil angels) and Spirits of the Table shown at the beginning of Sloane MS 307. None of this material has ever been published in full before. Sloane MS 307 probably was written between 1605 and 1608, whilst Sloane MS 3821 is a copy made from it in the second half of that century. Both are obviously a translation and a tenfold expansion of the Latin of the Dee manuscript which is the last item in Sloane MS 3191.

These manuscripts were both written with considerable care, indicating their value to the scribe. One of the most important features of these very beautifully written manuscripts is that they supply the correct invocations to use in conjunction with the Enochian Tablets, something that has hitherto been missing from the material published on John Dee's magic, the Golden Dawn, or Enochian Magic.

Joseph Peterson's recent excellent publication of John Dee's pre-Casaubon Spiritual Diaries, the early *Libri Mysteriorum*, gives the background, in the form of the diaries, to the original scrying that produced the Enochian system. This present manuscript is the working parts of the Enochian system, as used by angel magicians continuously without a break from the 17th to 20th centuries. The

⁵⁰ Sloane MS 307 has a misleading half-title page written in a latter hand that erroneously entitles it *Clavicula Salomons*, which is one of the reasons it has not been noticed before.

⁵¹ In Ashmole MS 1790 fol. 52r

Practical Angel Magic

system did not suddenly get rediscovered by Mathers after lying fallow for three hundred years, but had been used consistently!

Clay Holden suggests that:

"Sloane 3821 is partly in the hand of Elias Ashmole. I do not know who did Sloane 307. As has been pointed out more than once, neither Dee's MSS. nor Sloane MS. 307 give elemental attributions to the Tablet of the Earth (at least not directly), nor do they use the truncated pyramids found in *Book H* and the O.'.D.'. system."

During our research we also discovered material in the Bodleian Library which is clearly derived from Sloane MS 3821. This material is found within two manuscripts, being Rawlinson D.1067 and Rawlinson D.1363. Rawlinson D.1363 contains a variant of one of the prayers and this has been included to demonstrate textual differences. Rawlinson MS D.1067 contains a unique prayer and a set of invocations which are derivative of the two sets of invocations contained within the Sloane manuscripts, merged together to give "hybrid" invocations. We have included the prayer but not the invocations as they are clearly later and merely repeat the form already given at great length.

We have used Sloane MS 307 as our primary text, and footnoted any variant wording found in the others. However it is obvious that this manuscript has been written as a fair copy of the original draft.

The scribe who wrote Sloane MS 307 obviously got tired of the repetition of some of the formulae, and instead of inserting the correct functions, began to write the special knowledge and abilities of *every* angel as only one of two possibilities:

"the knitting together of natures, and also as well the destruction of nature and of things that may perish, as of conjoining and knitting them together" or

"the true knowledge of physick⁵² in all its parts, and the curing of all diseases whatsoever: that are incident to Humane bodies".

Unfortunately these were just two of the eight possible functions of the angels. A later hand has gone through, underlining these incorrectly repeated phrases, and inserting in the margin the true functions of the angels concerned. Ashmole even inserted a table in his own hand to keep track of this.⁵³ We have indicated this change where it appears, which is more than 35 times.

⁵² Medicine.

⁵³ See Appendix 1.

Practical Angel Magic

Notes on Style used in the Manuscript Transcription

Abbreviations

Some abbreviations have been expanded for convenience of reading. Where the abbreviation "E. W. N. & S." appears in the text it has been expanded to "East, West, North & South".

The abbreviation "C.S. or G.R." has been expanded to "Crystal Stone or Glass Receptacle". This expression is a common expression in many of the manuscripts of angel magic and can be seen fully expanded in for example the *Art Theurgia Goetia*⁵⁴ where it says "you may call these spirits into a Crystal stone or Glass Receptacle, [this] being an Ancient & usual way of Receiveing & binding of spirits, This Crystal Stone must be four Inches Diameter set on a Table of Art". Likewise "C.G." has been expanded to "Crystal Glass". This clearly also shows the influence of Goetic magic on Dee's Enochian system.

The term "Essce" has been expanded to its full form of "Essence". However "&", which is used frequently through the manuscript has been maintained, as has "&c" for "etcetera".

Style

Capitalisation and punctuation have been reproduced faithfully from the manuscripts, even where they seem curious. Paragraph structure has also been kept to the original form, resulting in some very long paragraphs that we decided to preserve to maintain the flavour of the original.

In general the spelling of the manuscript has been rationalised to modern English, without interfering with the meaning. For example words like "soe" and "doe" have been transcribed as "so" and "do", "coelestial" as "celestial", and "Angell" as "Angel".

The grammar of the manuscript is reproduced faithfully, and no attempt has been made to render it into a modern English form, the text being sufficiently clear in its original form as not to warrant such alteration.

⁵⁴ See *The Lesser Key of Solomon*, edited by Joseph H. Peterson, p. 65.

Practical Angel Magic

The colouring of the original is likewise reproduced faithfully. All words printed in red ink are likewise written in red ink in the original manuscripts.

Footnotes

Where footnotes occur, the following is the standard we have adopted:

- 'Insert' or 'omit' indicates additional text or the removal of text.
- Struck-through text indicates that this occurs in addition to the text.
- A single word or phrase indicates a replacement for the word or phrase marked by the footnote.

Manuscript variants

The following abbreviation codes are used in the footnotes to distinguish between the different source manuscripts:

S1: for Sloane MS 307 (the primary text).

S2: for Sloane MS 3821.

R1: for Rawlinson MS D.1067.

R2: for Rawlinson MS D.1363.

G: for the F L Gardner copy of *Book H*.
(which is a derivative rather than a source manuscript).

[A Brief Introduction to the Use of the Tables⁵⁶]

A Brief Introduction unfolding and explaining the use of the foregoing Table or Tables of the Earth⁵⁷, as it standeth divided into four parts, East, West, North, &⁵⁸ South.

Man in his Creation being made an Innocent was also Authorized and made partaker of the power presence & Spirit of God, and a speaker of his mysteries and the society of his⁵⁹ Blessed Angels, whereby he knew all things under his Creation, naming them as they were so that in his Innocency he became holy in the sight of God, until that mighty Devil Choronzon⁶⁰ (for so is his true name) envying his felicity and perceiving that the substance of his lesser part was frail and imperfect in respect of his pure essence, began to assail him and so prevailed.

Then man, thus offending became accursed in the Sight of God, and so lost the garden of felicity⁶¹ [the true judgement of his understanding] but not utterly the favour of God and was driven forth into the Earth, which being accursed also for his sake was covered with Briars and Brambles and such like⁶², being little profitable to⁶³ him for food, unless he daily scratched and tore his⁶⁴ skin of his Back to thrust through the Thickets for a few plums, &c or hazarding his life among the devouring Tigers, and other wild Beasts of prey, being a measuring cast which of the two (in a probable⁶⁵ sense) should devour the other, But this subject being learnedly handled by Du Bartas⁶⁶ in his divine works we shall say no more thereof.

⁵⁶ Headings in [square brackets] have been inserted to clarify the structure. They are not in the original manuscript.

⁵⁷ It is interesting that although these Tables are usually referred to as Angelic Tables, here they are clearly referred to as Tables of Earth.

⁵⁸ Throughout the Gardner manuscript "&" is replaced by "and".

⁵⁹ G: "the".

⁶⁰ Choronzon appears in the guise of the original tempter in the Garden of Eden, guarding the Tree of Knowledge.

⁶¹ The Garden of Eden.

⁶² S2: Inserts "things".

⁶³ G: "unto".

⁶⁴ G: "the".

⁶⁵ G: Gives the word "profitable" here, but it has clearly been mis-transcribed.

⁶⁶ For information on Du Bartas see Part 1.

Practical Angel Magic

Now if Adam after his fall had continued in the garden of Eden his wickedness would have altered the Innocency of the place. Therefore is paradise distinguished from the Earth in respect of her⁶⁷ purity, because the Earth is said and known to be corrupted in respect of man's Sins, yet although the Earth was accursed for Adam's Sake by reason of his fall, The garden of Eden was not therefore accursed too, for that remaineth still where it was first erected & ordained by the ⁶⁸ mighty Creator in the vale of Jehosaphat⁶⁹ wherein liveth Ely, Enoch⁷⁰, and John, who shall never die &c.

Adam for his Transgression being cast out of paradise, and driven a great distance from there into that depraved world, being there as dumb & not able to speak (for during the time of his being in Paradise) he spake the⁷¹ Angelical and Celestial Language of which he also lost the benefit and was deprived of⁷² in his fall, and was never since heard of or known to⁷³ any, but some such particular persons, whom God hath been pleased to permit the same to be revealed ⁷⁴, by the converse society, and oft times familiar community between them and the Celestial Angels.

He began of necessity to speak the language which we call Hebrew (yet not the same Hebrew which is amongst us now). In which Language he declared and delivered to⁷⁵ his posterity the nearest Knowledge he had of God, his creatures, and other his manifold and bountiful mercies and Justice. And from his own self divided his speech into 3 parts viz. Twelve, Three, and Seven⁷⁶, the number whereof remaineth but the true forms & pronunciations are wanting, and therefore is not of that force and goodness that is was originally in its own dignity, much less to be compared with that Angelical & Celestial Language which Adam verily Spake during his Innocency, and wherein (by divine permission) great secrets and

⁶⁷ Note Eden is described as female.

⁶⁸ G: "that".

⁶⁹ Between Jerusalem and the mount of Olives is the vale of Jehosaphat, under the walls of the city

⁷⁰ Enoch is particularly significant, given that Enoch was supposed to be able to converse with angels.

⁷¹ G: Omits "the".

⁷² G: Omits "of".

⁷³ G: "unto".

⁷⁴ G: Inserts "unto".

⁷⁵ G: "unto".

⁷⁶ An obvious reference to the 12 Single, 3 Mother and 7 Double letters of the Hebrew Alphabet.

Practical Angel Magic

mysteries have been revealed to several holy, pious reserved, and studious men of old, but we in this latter Age being (in a manner) ever deprived of so great and inestimable a Benefit and Blessing as to converse with Celestial Angels, as not being worthy so to do, are left also as depraved in our Judgements and reasons &c. Thus when Adam offended he received punishment therefore that he was turned out into the Earth, for if he had been turned out to⁷⁷ a blessed place, then it could not be said that he was turned out, for he that is turned out goeth to⁷⁸ dishonour (for God Knowing he would offend knew also how to dishonour him). So from Innocency, through his fall, he was turned out to corruption into a prison prepared for him before: Adam being thus cast out and the Earth cursed for his Transgression, thereby bringing all misery and wretchedness into the World, which also befell all posterity and shall even so continue to⁷⁹ the end of time, for then did God suffer and permit the Spirit of malice to enter into, and have power in the world, and ever since is perfect love taken away from amongst men, who are always at variance, striving to weed & destroy one another, and so it must be, and will be to the End. And in the same instant that Adam was expelled and the Earth accursed for his sake, yet the infinite mercies of God were such, that he also put a restraint to the wicked spirits, that by their envy and malice they should not quite extinguish & destroy the admirable works of his Creation, neither by their subtle Temptations and Illusions, for lo⁸⁰, Then said the Lord of Hosts let the world have his⁸¹ time; and let there be keepers, watchmen⁸², and princes placed over her, for years months and days &c.

From hence it plainly appeareth that the world was not committed to their charge with their creation but afterwards in diverse times and offices both to God and man.

Now we are to understand that there are 4 Angels as overseers thereof, whom the Eternal God in his providence hath placed against the usurping Blasphemy, misuse, & stealth of the wicked

⁷⁷ S2, G: "into".

⁷⁸ G: "unto".

⁷⁹ G: "till".

⁸⁰ G: Omits these two words.

⁸¹ S2: "its".

⁸² The term "watchmen" clearly links to the watchtowers, and their occurrence in Enochian magic.

Practical Angel Magic

and great Enemy or⁸³ Tempter of man, the Devil, to the end, he being put out into the Earth, and permitted to Tempt and ensnare⁸⁴ the sons of man to all manner of wickedness and disobedience to Almighty God their Creator & Protector (yet this way as a Restriction), that his envious will might be bridled, The determinations of God fulfilled, and his creatures kept and preserved within the compass and measure of order, what the evil spirit doeth, the good Angels permit and what they wink at, the evil spirit wasteth, and mostly when they⁸⁵ think themselves assured then they feel the Bit⁸⁶, Thus doth⁸⁷ God and the good Angels put a snaffle⁸⁸ to the wicked. Each one of these 4 Angels is a mighty prince, a mighty Angel of the Lord, and are by him according to his divine order and decree as chief watchmen and overseers set over several & respective parts of the world, viz. East, West, North & South as (under the Almighty) their governor, protector & defender. And the Seals & Authority of whom are confirmed in the beginning of the world. And to every of⁸⁹ them belong 4 characters, being tokens of the presence of the Son of God, by whom all things were made in⁹⁰ creation, and are the natural marks of Holiness, and unto which belong 4 Angels severally, and before each one of those great Angelical Princes, is⁹¹ borne 3 Banners wherein is⁹² displayed 3 great names of God, comprehending 3, 4 & five⁹³, which in all are Twelve⁹⁴, and those Twelve⁹⁵ great names of God govern all creatures upon Earth both visible and invisible⁹⁶.

⁸³ G: "and".

⁸⁴ S2: "Ensnare".

⁸⁵ G: Inserts "(the Evil Ones)".

⁸⁶ "Bit" here refers to a horse-bit.

⁸⁷ G: "do".

⁸⁸ A snaffle is a type of horse-bit, so its use here is clearly in the context of control as when a horse is bridled.

⁸⁹ G: Omits "every of".

⁹⁰ G: Inserts "the".

⁹¹ G: Corrects the grammar, replacing "is" with "are".

⁹² Ibid.

⁹³ G: "5".

⁹⁴ Ibid.

⁹⁵ Ibid.

⁹⁶ A circular diagram showing these 12 banners appears in Sloane 3191 which was Dee's original of the current manuscript. The banners run from the East clockwise: Oro, Ibah, Aozpi, Mor, Dial, Hctga, Oip, Teaa, Pdoce, Mph, Arsi, Gaiol around a square marked 'Terra' emphasising again that these are Tables of Earth.

[The Hierarchy of Angels]

Each one of these 4 Great Angelical Princes hath 5 providential⁹⁷ Angels or guardian⁹⁸ princes attending him, under whom are Six⁹⁹ Angels called Seniors which St John remembereth¹⁰⁰ (who as their offices are &c)¹⁰¹ judge the government of their mighty Angelical King, and fulfil the will of God as it is written &c.

Under which Seniors are 4 presidential good Angels, who are dispositors of the commands of those that are the Superior governors of the four principal Angles or Quarters, East, West, North and South, over the which they are severally and respectively constituted and set over¹⁰² &c.

Under whom again are many and numberless of Aerial ministering Subservient Spirits of several offices both good and bad. All which shall be further explained in the opening & exemplifying¹⁰³ the following¹⁰⁴ Tables &c which is as followeth.

Here we have 4 Tables or Quadrangles, which are but one General Table, only divided into 4 Parts, East, West, North, & South, In the centre between these 4 Quadrangles is another little Table joined cornerly to them all, and¹⁰⁵ serveth to unite the¹⁰⁶ several parts of them together, according as they are to be diversely referred as shall be seen hereafter &c.¹⁰⁷

Each Single Quadrangular Table containeth 12 Squares athwart and 13 downwards¹⁰⁸. The Two middle lines downwards that are of

⁹⁷ S2: "Presidential".

⁹⁸ S2, G: Omits the "t" given in the original text, making the word "guardian".

⁹⁹ G: Gives the number "6" rather than writing it out in full.

¹⁰⁰ This is a reference to the book of *Revelations* chapter 4 verse 4 in The Bible.

¹⁰¹ S2: "to".

¹⁰² G: Records "attributed and set &c".

¹⁰³ G: Inserts "of".

¹⁰⁴ G: Adds "of" and omits "following". The Table appears at the beginning of the manuscript.

¹⁰⁵ G: Inserts "which".

¹⁰⁶ S2: Omits "the".

¹⁰⁷ The Table of Union.

¹⁰⁸ In short, there are four Elemental Tables, each of 12 by 13 squares. Each of these Tables is attributed to one of the four compass directions. Clockwise from the top left: East, South, West, North ???

Practical Angel Magic

black letters enclosed also within black Ruled lines, and the middle line going athwart that again composed also of black letters enclosed between two black Ruled lines and standing crosswise in the middle of the two perpendicular or upright lines make up the name of the mighty Angelical King, and the¹⁰⁹ 3 names of God displayed in the Regal Banners¹¹⁰ borne before him, being the Arms of the Ensign¹¹¹, and the names of Six¹¹² Angelical Seniors, governing in that Angle or Quarter of the compass which they are set over.

In every Lesser Angle of every Quadrangular Table standeth also black letters enclosed within black Ruled lines crosswise in form of a crucifix thus †¹¹³ out of which are collected the Names of God that call forth, and constraineth¹¹⁴ those Angels & Spirits both good & bad, that are to be gathered out of that particular lesser Angle, belonging & serving to that Quarterly Angle or Table.

¹⁰⁹ G: Omits "the".

¹¹⁰ S2: "Banner".

¹¹¹ In this context "Ensign" refers to an individual flag holder, not a design.

¹¹² G: "6".

¹¹³ G: A drawing of a 5x6 square cross is given here in the text.

¹¹⁴ G: "constrain".

Practical Angel Magic

[East Quadrangle]

The particular exemplification of all is as followeth viz As in the East Quadrangle or Quarterly Table,¹¹⁵ which is the first Quadrangle, on the top towards the left hand,¹¹⁶ The two middle upward or perpendicular black lines, the first of them from the top downward to the bottom hath these thirteen letters viz f, i, a, X, o, a, A, u¹¹⁷, t¹¹⁸, o, t¹¹⁹, a, r. The second which is the next upright or perpendicular black¹²⁰ line to it from the top down to the bottom hath these thirteen letters, a¹²¹, d, r, o, m, t¹²², H¹²³, i, p¹²⁴, o, t, g, a. The middle black line standing crosswise athwart these two upright or perpendicular black lines hath these Twelve letters, o, r, o, i, b, A, H, a, o, z, p, i – being all added together, and set crosswise in order as they stand in the Quadrangular Table. Stand thus, as in the annexed form is represented and so make the similitude of a cross.

					f	A						
					i	d						
					a	r						
					X	o						
					o	m						
					a	t						
o	r	o	i	b	A	H	a	o	z	p	i	
					u	i						
					T	P						
					o	o						
					T	t						
					a	g						
					r	a						

In the centre of this cross like example is contained the name of the

¹¹⁵ G: Opens brackets here.

¹¹⁶ G: Closes brackets here.

¹¹⁷ G: Records this letter as "v".

¹¹⁸ Note the table drawn in the text has a capital T but a small t is given in the text here.

S2, G: records it as "T".

¹¹⁹ Ibid.

¹²⁰ G: Omits this word.

¹²¹ Note the table drawn in the text has a capital A but a small a is given in the text here.

Again S2, G: records the capital "A".

¹²² G: Records this letter as "T".

¹²³ G: Records this letter as "h".

¹²⁴ Again, small p in text, capital P in table.

Practical Angel Magic

great and mighty Angelical King set as a governor, overseer, or watchman over the East angle and is thus collected.

There is (B) the fifth letter in the middle black line athwart and (a)¹²⁵ the sixth letter in the perpendicular line accounting from the top downwards and (T) the sixth letter in the second perpendicular from the top downwards and (a)¹²⁶ the fifth letter from the Right hand to the left in the said middle over thwart¹²⁷ line and (i)¹²⁸ the sixth letter ascending from the lowermost part of

the second perpendicular line upwards and (v)¹²⁹ the sixth letter ascending from the lowermost part of the first upright line standing thus, unto which six letters bring added together put the letter (a)¹³⁰ or (h)¹³¹ which two letters are concentrated with the aforesaid six letters, either of them serveth, and these seven or eight letters make up the name BATAIVA or BATAIVH, or BATAIVAH, which letters set together as they stand in the Table,

A	T
B	A
V	I
A	T
B	A
H	A
V	I

& they stand heteromaces¹³² or centrally therein thus. And this is the true name of the mighty Angelical King, watchman¹³³ and overseer of the East Angle or Quarter of the world, &c, moreover divide the middle cross line into 3 parts from the left hand to¹³⁴ the Right, and divide it into 3, 4 or¹³⁵ five¹³⁶ letters and they will make up these 3¹³⁷ words Oro Ibah Aozpi, which are the 3 great names of God borne in the 3 Banners or the Arms of the Ensigns belonging to the great and mighty Angel BATAIVA, King and governor of the East Angle.

The names of the six Angelical Seniors ruling in the East Angle under this great prince BATAIVA¹³⁸ which¹³⁹ are thus collected. The

¹²⁵ S2, G: Records capital "A".

¹²⁶ Ibid.

¹²⁷ G: "athwart".

¹²⁸ G: Records as capital "I".

¹²⁹ Ibid.

¹³⁰ Ibid.

¹³¹ Ibid.

¹³² S2. Crossed out by Ashmole, and replaced by 'Hebecomaces'.

¹³³ S2: "watchtower".

¹³⁴ G: "unto".

¹³⁵ G: "and".

¹³⁶ G: Records the digit "5".

¹³⁷ G: "three".

¹³⁸ G: Spells this with the additional H, i.e. "BATAIVAH".

¹³⁹ G: Omits this word.

Practical Angel Magic

sixth letter of the middle transverse or cross line going athwart the two upright black lines is (A) and the letters from the right hand to the left following it as it were backwards are (b.i.o.r.o.) which maketh the name¹⁴⁰ Abiuro, and it is the name of the first Angelical Senior made up of six letters, and if the letter (H) which followeth the letter (A) and is the seventh letter of the said transverse line, be added to¹⁴¹ And set before the other six letters it maketh the name Habiuo, and is the name of the said first Angelical Senior comprehended of seven letters.

Then take the aforesaid letter (A) again, (being the sixth letter in the middle transverse black line as aforesaid) and ascend upward from thence to the top or uppermost letter of the first upright black line and they are (A.a.o.X.a.i.f.) making the word Aaoxai¹⁴² which is the name of the second Angelical Senior.

Then again take the letter (H), which is the seventh letter, in the said middle transverse black¹⁴³ line, from the left to the Right and ascend from thence to the uppermost letter in the second perpendicular line and the letters are (H.t.m.o.r.d.a.)¹⁴⁴ which maketh the word Hetemorda,¹⁴⁵ and is the name of the Third Angelical Senior.

Then again take the letter (H) the seventh in the middle transverse line from the left to the Right, and the letters following it forwards and they are (H.a.o.z.p.i.) which maketh the word Haozp_i, and is the name of the fourth Angelical Senior composed of the¹⁴⁶ six letters, and if the letter (A) that standeth just next before the letter (h)¹⁴⁷ be added thereto, and set before the other six letters then it maketh the name Ahaozp_i, which is the name of the 4th¹⁴⁸ Angelical Senior composed of seven letters.

¹⁴⁰ S2: Inserts "of".

¹⁴¹ S2: "too".

¹⁴² S2: ", if".

¹⁴³ Ibid.

¹⁴⁴ G: "(H.T.M.o.r.d.A)".

¹⁴⁵ G: "Hetemorda".

¹⁴⁶ S2, G: Omits this word.

¹⁴⁷ G: Capitalises, "H".

¹⁴⁸ G: "fourth".

Practical Angel Magic

Again take the said letter (H) the seventh letter of the middle transverse line, and descend from thence downwards to the bottom or last letter in the second perpendicular line and the letters are (H.i.p.o.t.g.a.) making the word Hipotga, which is the name of the fifth Angelical Senior.

And then again take the letter (A) being the sixth letter in the middle transverse line from the Left to the Right and from thence also descend downwards to the lowermost letter in the first upright line which are these (A.u.T.o.T.a.r.) which maketh the word Autotar, & this¹⁴⁹ is the name of the sixth & last Angelical Seniors ruling in the East Angle.

The name of this great Angelical and mighty Angel or King of the East BATAIVA, upon whom all the Angels and Spirits of the four¹⁵⁰ Lesser Angles in the Quadrangle of the East, attend and give obedience, calleth out the fore recited six Seniors whose offices are to give Scientiam Rerum Humanarum et Judicium¹⁵¹, according to the nature of their parts, as in the East after one manner, In the West after another, and so of the rest according to their several gubernations¹⁵².

Now for the sixteen Servient Angels next in order under the six Angelical Seniors in this Eastern Quadrangle their names are to be collected and composed out of each Lesser Angle attendant on the greater Angle thus. In the uppermost Lesser Angle on the left hand of this Quadrangular Table, there is a small crosslike form of black letters, whose perpendicular or upright line reacheth from the top of the said Lesser Angle to the middle black transverse line that goeth athwart that Quadrangle and containeth six letters from the top downwards which are (i.d.o.i.g.o.) making the name Idoigo, the which is one name of God, which is used to call forth the subservient good Angels, who are attendant next in order under those sixteen Angels next succeeding the Six Seniors according to their graduation.

¹⁴⁹ S2, G: Omits this word.

¹⁵⁰ G: "4".

¹⁵¹ A knowledge of sciences, facts and laws. ??

¹⁵² Governors.

Practical Angel Magic

The transverse line going athwart that upright line in this Lesser Angle, being the uppermost line but one, is of five letters, & these are¹⁵³ (A.r.d.z.a.)¹⁵⁴ making the name Ardza, which is another name of God; now as the Benevolent Angels serving in this said Lesser Angle, under the aforesaid sixteen¹⁵⁵ are ruled by and called forth by this name Idoigo, so by the name Ardza they do what they are commanded, all which shall be further explained in exemplification hereafter following in their proper places.

		i		
a	r	d	z	a
		o		
		i		
		g		
		o		

¹⁵⁶This annexed Example is the form of the black letters as they stand crosswise in the uppermost lesser Angle of the Quadrangle over this lesser¹⁵⁷ transverse¹⁵⁸ are 4 red letters which are (r.z.l.a.)¹⁵⁹ setting a side or leaving out the black letter (i) standing in the middle between them, and it maketh

the name Vrzla,¹⁶⁰ and this is the substance of the¹⁶¹ first of those sixteen Angels before spoken of, bearing rule next under the six seniors in the East¹⁶² Quadrangle. Then take away the first of these Red letters which is (r) and make it the last and it maketh the name Zlar or Zodelar, (for z extended is to be pronounced zod) which maketh the name of the second of the aforesaid Sixteen¹⁶³ Angels. Again make the first letter of the second name which is¹⁶⁴ (z) the last

¹⁵³ G: Replaces "& these are" with "and they are these".

¹⁵⁴ G: Gives a small "a" for "ardza".

¹⁵⁵ S2: "and".

¹⁵⁶ G: Gives the top line as well thus:

r	Z	i	i	a
a	R	d	z	a
		o		
		i		
		g		
		o		

¹⁵⁷ G: Omits this word.

¹⁵⁸ G: Includes the phrase "upper black line".

¹⁵⁹ G: Gives a capital "Z".

¹⁶⁰ S2, G: Gives this name as "Urzla". In this period 'U' and 'V' were interchangeable letters.

¹⁶¹ G: Inserts "name of the".

¹⁶² G: "Eastern".

¹⁶³ S2: "Angles-Angels".

¹⁶⁴ G: Replaces "which is" with "the".

Practical Angel Magic

of the third name and the letters will be Larz and it maketh¹⁶⁵ up the name Larzod which is the name of the third of the sixteen Angels aforesaid. Then again by making the first of those 4¹⁶⁶ letters of this last name, the last letter thereof, then will these letters be (a.r.z.l.) which makes the name Arzel, and is the fourth of the aforesaid sixteen Angels, and the¹⁶⁷ last are the four Superior Angels bearing rule under the Six Seniors in this first lesser Angle serving to the¹⁶⁸ greater¹⁶⁹ Eastern Quadrangle, and as to the names¹⁷⁰ of these 4 Angels, and governing in this Lesser Angle serving to the greater Quadrangle or East Quarter of the Table, and thus collected and gathered together, so are the names of the other Twelve Angels set as governors and Superiors over the 3 other Lesser Angles subservient to this Quadrangle.

As for example the second lesser succeeding Angle of this eastern Quadrangle¹⁷¹ is that on the Right hand above next to this here above explained and hath in its upright or perpendicular black line these six letters (j.l.a.c.z.a.)¹⁷² making the name Jlacza,¹⁷³ which is also a great name of God, The transverse black¹⁷⁴ line whereof hath these letters (p.a.l.a.m.) which being set together as they are in¹⁷⁵ the

¹⁶⁵ S2: "makes".

¹⁶⁶ G: "four".

¹⁶⁷ G: "these".

¹⁶⁸ S2: "lesser".

¹⁶⁹ S2: "Eastern".

¹⁷⁰ S2: "of".

¹⁷¹ G: "Quarter".

¹⁷² G: Replaces the "j" with an "I".

¹⁷³ And hence G: gives "Ilacza" instead of "Jlacza".

¹⁷⁴ G: Omits this word.

¹⁷⁵ G: Gives the table with the top line included, thus:

U	T	i	p	a
P	A	L	a	m
		a		
		c		
		z		
		a		

Practical Angel Magic

P	a	L	a	m
		a		
		c		
		z		
		a		

Quadrangular Table, stand as in this annexed¹⁷⁶ exemplification is hereunto affixed¹⁷⁷.

The four Red letters over the black transverse line of this second lesser Angle of this Eastern Quadrangle are (V.t.p.a.)¹⁷⁸ making the name Vtepa,¹⁷⁹ which is the name of the fifth of the aforesaid sixteen Angels,

and the first of the four Superior Angels set over the second Lesser Angle, and governing therein next under the six Seniors.

Then as before in the example of the first lesser Angle, take away the first letter of these four, and make it the last of the name then it will be Tepau,¹⁸⁰ which is the name of the sixth of the Sixteen Angels aforesaid, and the second of the great benevolent Angels governing in this second lesser Angle.

Again take away the first letter of the second name, and make it the last, then it will be Paut, which is the name of the seventh forementioned Angels and of the third¹⁸¹ benevolent great Angels set over this second Lesser Angle.

Likewise take away the first letter of this last name, and make it the last then it will make the name Autep, which is the name of the Eight¹⁸² of the four Recited Sixteen Angels, and of the 4th¹⁸³ governing Angel set over this second lesser Angle.

The other eight Angels names are to be collected after the same manner out of the other two¹⁸⁴ lesser Angles serving in the Eastern Quadrangle. That on the left hand underneath being the third Lesser Angle successively next following to the second, being that lesser Angle on the right hand above as is aforesaid, and that on the Right hand underneath is the fourth and last of the lesser Angles serving to¹⁸⁵ this Quarterly great Angle.

¹⁷⁶ G: Replaces "this annexed" with "the".

¹⁷⁷ G: Replaces "is hereunto affixed" with "above".

¹⁷⁸ G: Gives "U" rather than "V".

¹⁷⁹ Hence G: gives "Utepa" rather than "Vtepa".

¹⁸⁰ G: Gives this word as "Tpau".

¹⁸¹ G: Inserts "of the".

¹⁸² G: Adds an "h" to make the word "Eighth".

¹⁸³ G: "fourth".

¹⁸⁴ S2: "lesser".

¹⁸⁵ G: "unto".

Practical Angel Magic

Every of the aforesaid four Angels¹⁸⁶, whose names¹⁸⁷ are thus gathered out of every lesser Angle of the greater Quadrangle wherein they are contained are great and Benevolent Angels, and bear Rule and govern¹⁸⁸ over those several Angles¹⁸⁹ successively, under whom also are several Benevolent Angels, but far more Inferior in power, yet of the same nature, as their Superiors are, under whom again are many Angels and spirits of various and different nature¹⁹⁰, both good and bad, whose offices¹⁹¹ are also manifold & various¹⁹² gradually in their orders according as divine Authority hath directed¹⁹³ and appointed, both as to good and bad effects & purposes as for examples; those Benevolent Angels whose offices are of physick, as they by their temperance and benevolence cure diseases, and by their splendidness¹⁹⁴ and celestial irradiation¹⁹⁵ preserve the Elemental Vigour, and Radical humidity of things to the¹⁹⁶ prolongation of Life & health, according to the nature of their parts, &c. So the malevolent and Evil Spirits, whose names are collected out of the same lesser Angles¹⁹⁷ from whence the good Angels names are gathered of the aforesaid offices¹⁹⁸, are opposite in nature to them, as to their malignity and envy to¹⁹⁹ the prosperity of things, for instead of curing diseases they bring them in²⁰⁰, and when permitted by the Superior powers do thereby mortify and destroy things, and by their more gross, Evil, Terrestrial and poisonous rays (being comparatively the same as their Aerial vapours of the Earth) weaken²⁰¹, In fact mortify and destroy the elemental vigour & radical moisture of things, so that if their envious will²⁰² were not bridled and restrained²⁰³, nothing in this

¹⁸⁶ S2: "Angles", probably a copyist's error, substantiated by the following "whose names are thus gathered".

¹⁸⁷ S1: Repeats the phrase "whose names are thus gathered" in the text here.

¹⁸⁸ G: "governance".

¹⁸⁹ S2: "Severally".

¹⁹⁰ S2: "natures".

¹⁹¹ S2: "also".

¹⁹² G: Inserts "and".

¹⁹³ S2: "decreed".

¹⁹⁴ G: "splendour".

¹⁹⁵ S2: "irradiations".

¹⁹⁶ S2: "prolongation".

¹⁹⁷ S2: "angle".

¹⁹⁸ The Evil Spirits are derived from exactly the same place as the Good Spirits or angels.

Dee is not as sanctimonious as he has been portrayed and knew full well that spiritual creatures of whatever hue were to be dealt with in the same way.

¹⁹⁹ G: "of".

²⁰⁰ G: Replaces "bring them in" with "cause them".

²⁰¹ G: "would".

²⁰² G: Replaces "envious will" with "envy".

²⁰³ G: Transposes this to "restrained and bridled".

Practical Angel Magic

World could be preserved, but of this matter, more shall be said &²⁰⁴ explained in its proper place.

As for (example) the names of several Benevolent Angels Subservient to those Superior Angels set over & governing in each Lesser Angle in this Eastern Quadrangle they are to be collected out of each Lesser Angle as follows²⁰⁵,

c	z	n	s
T	o	T	t
S	i	a	s
F	m	n	d

In the first Lesser Angle of this East Quadrangle, and under that black transverse line, are 4 lines of Red letters, and leaving out the black Letters in the middle upright line going between them, do stand²⁰⁶ in the

lesser Angle of the Quadrangle as in the²⁰⁷ annexed example is represented the first lines whereof hath those 4 letters c.z.n.s. making the name cezodenes which is the name of one Inferior benevolent Angel serving in this first lesser Angle of the East Quadrangle.

Then next under that, the line hath these 4 letters T.o.t.t. making the name Totet, which is the²⁰⁸ name of another subservient great Angel²⁰⁹ serving in this said Lesser Angle.

The third line hath those four²¹⁰ letters s.i.a.s. making the name sias, which is the name of another good Angel subservient to this said Lesser Angle.

The fourth and last line of this Lesser hath these 4 letters F.m.n.d. making the name Efemende, which is the name of another benevolent Angel subservient to this aforesaid lesser Angle in the East Quadrangle.

The subservient good Angels²¹¹ thereof are to be gathered out²¹² in

²⁰⁴ G: Omits "said and".

²⁰⁵ S2: "followeth".

²⁰⁶ G: Replaces "do stand" with "stands".

²⁰⁷ G: Omits "the".

²⁰⁸ S2: "a".

²⁰⁹ S2: "great".

²¹⁰ G: "4".

²¹¹ G: Inserts "of the 2nd Lesser Angle" here.

²¹² G: Replaces "gathered out" with "selected".

Practical Angel Magic

the same manner as the former is²¹³ exemplified, as thus, under the black transverse line of this 2nd²¹⁴ Lesser Angle, are also 4 lines of red letters, and leaving out these²¹⁵ black letters that stand between them in the middle upright line, do²¹⁶ stand in this second Lesser Angle as in the exemplification hereunto annexed is set forth.²¹⁷

o	Y	u	b
P	a	o	c
r	b	n	h
d	i	r	i

²¹⁸The first line of which four red letters are these o.Y.u.b. making the name oYube, which is the name of one Inferior benevolent Angel, serving to this second²¹⁹ lesser Angle.

The next or second line hath these four letters P.a.o.c. which is another name of a subservient good Angel making the name Paoc.

The third line hath these four letters (r.b.n.h.)²²⁰ making the name Vrbeneh,²²¹ which is the name of another Benevolent Angel serving to this Lesser Angle.

The fourth line hath these four letters (d.i.r.i.) making the name Duri, which is another name of a Benevolent Angel serving to²²² this second Lesser Angle.

The two other lesser Angles below those two here explained have also the like subservient good Angels attending them as these, whose names are also to be collected there out after the same manner as the former is, for their natures & offices and the²²³ calling them forth to visible apparition and verbal community shall be showed hereafter, and likewise of the malignant, Evil, envious

²¹³ G: Replaces "the former is" with "before".

²¹⁴ G: "second".

²¹⁵ S2, G: "the".

²¹⁶ G: Omits "do".

²¹⁷ G: Replaces "in the exemplification hereunto annexed is set forth" with "is set forth in the annexed form".

²¹⁸ G: Gives the table thus, with the "v" in the third row replaced by an "n".

o	Y	u	b
p	A	o	c
n	B	n	h
d	I	r	i

²¹⁹ G: Omits "second".

²²⁰ Because of the transcription error, G: gives "n.b.n.h" instead of "v.b.n.h".

²²¹ Again, the error is continued with G: giving "Nebeneh".

²²² G: Omits "to".

²²³ G: "for".

Practical Angel Magic

spirits whose names are also to be collected out of each particular, Inferior or Lesser Angle, as they are severally and respectively subject & serving to the greater Quadrangle, how to gather their names, and what their several offices are, &c, & the calling them forth &c, together with matters of concernment and some select consequences; and also what use is to be made of all, In like manner shall be set forth and explained hereafter, in their proper places, as shall follow in method.

[Table of Union]

First as to the little²²⁴ Table, standing in the centre between the four greater Quadrangles & the use thereof, it is called the Table of Union, and sheweth²²⁵ to join such particular letters as are therein, to several particular names and letters in each of the Lesser Angles contained in every²²⁶ of the greater²²⁷ Angles of the Table in general for the collecting and making up of other peculiar²²⁸ names for such proper, select, material & intricate purposes²²⁹, as they are to be attributed and Referred to exemplification, whereof followeth.

The first line containeth these letters e.x.a.r.p. serveth²³⁰ to bind the four lesser Angles of the East Quadrangle together.

The second line that²³¹ hath these letters h.e.o.m.a. serveth to bind the 4²³² lesser Angles of the second West Quadrangle together.

The third line hath these letters n.a.n.t.a. which serveth²³³ to bind the four lesser Angles of the third or North Quadrangle together.

The fourth and last line have these letters b.i.t.o.m. serveth²³⁴ also to bind the four lesser Angles of the fourth or South Quadrangle together, and note, the same that stretcheth from the left to the Right, must also stretch from the Right to the left²³⁵: observe also that the letters joining those names which may be put before the names of the four Angels set²³⁶ over and governing in each one of every particular lesser Angle of these²³⁷ four greater Quadrangles, as well from the Right as²³⁸ the left, is the name of God whereby those Angels are called and do appear: as for example, The first letter of

²²⁴ G: "small".

²²⁵ S2, G: Inserts "how" here.

²²⁶ G: "each".

²²⁷ S2: "ater".

²²⁸ G: Replaces "peculiar" with "particular" and omits "names".

²²⁹ G: Gives singular "purpose".

²³⁰ G: Replaces "serveth" with "and serve".

²³¹ S2: Omits "that".

²³² G: "four".

²³³ G: "serve".

²³⁴ G: Replaces "serveth" with "and serve".

²³⁵ I.e. these names can be read forward or backwards.

²³⁶ G: "sitting".

²³⁷ S2, G: "the".

²³⁸ S2: "to".

Practical Angel Magic

the first line of this little²³⁹ Table of Union is (e). The name of the first Angel set²⁴⁰ over the first lesser Angle of the East Quadrangle is Vrzla, take away the letter (v) being the first letter of²⁴¹ the name and put instead thereof, the said letter (c) and then the name²⁴² will be Erzla, which is the name of God which governeth and calleth forth the Angel Vrzla, and also the other three Angels that are set over the first lesser Angle of the East Quadrangle²⁴³.

The name of the first Angel set²⁴⁴ over the second lesser Angle is Vtepa.²⁴⁵ Then by adding the aforesaid letter (e) thereto before it, the name will be Eutepa, which is the name of God governing those four Angels set²⁴⁶ over the second lesser Angle of the East Quadrangle by which they are called forth and do appear.

The name of the first Angel set²⁴⁷ over the third lesser Angle is cenbar, before which the aforesaid letter (e) being added maketh it Ecenbar which is the name of God governing those four Angels whereby they are called forth and do appear.

Then again the name of the first Angel set²⁴⁸ over the fourth lesser Angle of this East Quadrangle is Xegezod, then by adding the said letter (e) thereunto²⁴⁹ before it maketh it Exegezod, which is the name of God that governeth, & whereby these four Angels are called forth and do appear, and thus are gathered the four great names of God, governing those sixteen Angels bearing rule under the six Angelical Seniors in this Eastern Quadrangle, and whereby they are called forth and do appear as aforesaid.

²³⁹ G: "small".

²⁴⁰ G: "sitting".

²⁴¹ G: Inserts "pronouncing".

²⁴² S2: "is".

²⁴³ An important formula for generating names of God.

²⁴⁴ G: "sitting".

²⁴⁵ G: Gives the name as "Utepa".

²⁴⁶ G: "sitting".

²⁴⁷ Ibid.

²⁴⁸ Ibid.

²⁴⁹ G: "thereto".

[Evil Angels in the Table of Union]

There are four letters left of the first line of this said Table of Union which are X.a.r.p. Every name sounding of 3²⁵⁰ letters beginning out of the first line, and out of those four letters is²⁵¹ the name of a Devil or Evil Angel, as well from the right and from the left, Excepting the line containing the name of every²⁵² the four Angels set over, and governing in every lesser Angle in each one of the four greater Quadrangles²⁵³ which are the sixteen²⁵⁴ great benevolent Angels, mentioned next in power, under the six Seniors in each Quadrangle²⁵⁵ severally and respectively, being the uppermost lines over every transverse black line of the lesser Angles. They are not to be made use of herein, for that²⁵⁶ they have no participation with the Evil Spirits at all in the last²⁵⁷, &c.

As for example thus. The four lines (that are under the transverse black line of the first Lesser Angle in the East Quadrangle)²⁵⁸ the names of the good subservient Angels²⁵⁹ are only to be²⁶⁰ made use of herein.

The first letters are c.z. then take the letter (X) in the Table of Union, and add it before them, it will make up the name Xcez, which is one name of an evil Spirit. The two next letters against (c.z.) on the Right hand, the other side of the upright black line going between is²⁶¹ (n.s.) making the word²⁶² nes, or Enes, then by adding the said letter X thereto before it, it maketh²⁶³ Xenes which is another name of an evil Spirit, and if the name Xcez be made backwards from the Right to the left then it will be zedocXe, which is another name of an Evil Spirit, so likewise if the name Xenes, be made backwards as aforesaid then it will be Exes which is the name also of a Devil.

²⁵⁰ G: "three".

²⁵¹ G: "from".

²⁵² G: Inserts "one of".

²⁵³ G: Inserts "(" here.

²⁵⁴ G: "16".

²⁵⁵ G: Inserts ")".

²⁵⁶ G: Replaces "for that" with "because".

²⁵⁷ G: Omits "at all in the last".

²⁵⁸ G: Inserts "are".

²⁵⁹ G: Inserts "and".

²⁶⁰ S2: "made".

²⁶¹ G: "are".

²⁶² G: "name".

²⁶³ S2: Inserts "it"; G: Omits the words "X thereto before it, it maketh".

Practical Angel Magic

The next two letters below c.z. is²⁶⁴ T.o. and the next letter to the letter (X) in the Table of Union is (a) which being added to the two said letters T.o. from the left to the Right maketh the word ATo, but being added thereto from the Right to the left then it will be Aot, which are the names also of an Evil (Spirit) or Angels of an Infernal as well as of an Aerial nature: The two next letters against T.o. and the Right hand side of the upright black line &c²⁶⁵ are T.t., the letter being added thereto, before from the left to the Right, maketh the name Atet, and being added thereto from the Right to the left as it happeneth maketh also the same name, The two first letters in the third line under the black transverse line of this first lesser Angle of the East Quadrangle is S.i. the third letter of the first line in the Table of Union (setting aside the letter (c) being the first letter of the line which belongeth only to the sixteen Angels, set as governors over these four Lesser Angles or rather of every the four lines of red letters over every of²⁶⁶ the²⁶⁷ four black transverse lines in each Lesser Angle of this East Quadrangle) and it is (r) but adding it to²⁶⁸ the two letters (s.i.) before, from the left to the Right maketh the name Resi, but added thereto from the Right to the left, maketh the name Ries, which are the names likewise of two Evil Spirits.

The two letters against (s.i.) on the other side the black upright line are a.s., the letter (r) added thereto from the Right to the left maketh the name Resa, but being added thereto from the left to the Right, maketh the name Ras.²⁶⁹ The first two letters in the last of the four lines under the over thwart, or²⁷⁰ transverse lines aforesaid of this first Angle of the East Quadrangle are f.m. The last letter in this first line of the Table of Union is P which being added to the aforesaid two letters (f.m.) from the left to the Right maketh the name Pefem, but if it be added thereto from the Right to the left, then it maketh the name Pemef, which are also the names of 2 Evil Angels or Devils.

The other two letters against them on the other side of the black upright line are (n.d.) to which add the letter (P) before from the left to the Right, and it maketh the name Pend,²⁷¹ but if the said letter (P) be added thereto from the Right to the left, then it will make the

²⁶⁴ G: "are".

²⁶⁵ G: Omits "&c".

²⁶⁶ S2: Omits "of".

²⁶⁷ G: Omits the words "of the".

²⁶⁸ G: Transposes "it to" making "to it".

²⁶⁹ S2: "but being added thereto from the left to the right maketh the name".

²⁷⁰ G: Omits the words "overthwart, or".

²⁷¹ G: Gives the name as "Pende".

Practical Angel Magic

name Peden, which are likewise the names of two Devils: And thus are gathered (the names) ²⁷² of certain Evil Spirits, which are likewise (the names) collected after the same manner out of all the other Angels ²⁷³ respectively in the table saving ²⁷⁴ only to observe that the first line in the Table of Union belongeth to the first or East Quadrangle, The second line thereof to the second or west Quadrangle, The third line thereof belongeth to the third or North Quadrangle, and the fourth line serveth to the fourth or South Quadrangle, and the first letters of every line belong properly to the Red line set ²⁷⁵ over every ²⁷⁶ of the lesser transverse or cross black lines in every lesser Angle, and as there are four Quadrangular Tables in the general Table, so the first letter of every line of the Table of Union belongeth to the first line of every Lesser Angle of that Quadrangle unto which the line is referred, as is aforesaid in the explanation of the four Angels set ²⁷⁷ over the first lesser Angle of the East Quadrangle, The other four letters in each line of the Table of Union serveth to collect, join together and make up several names both of good and bad Angels out of the four Subservient lines, which are the red lines under the transverse black line of every Lesser Angle as hath been showed ²⁷⁸ in the foregoing Example; we will give you one Exemplification more, by which it will be sufficient to understand the whole Table, and that is thus ²⁷⁹; As to the third or North Quadrangle the name of the first Angel set over and governing in the first Angle thereof is Boza, then taking the first letter of the third line in the Table of Union which is (n) and placing it before the name of the said Angel, then ²⁸⁰ it maketh the word Enboza, which is the great name of God, that governeth, and by which those four great and Benevolent Angels are to be called forth to visible appearance.

The name of the first Angel set ²⁸¹ over the second lesser Angle serving to the third or north Quadrangle is Phra or Phara, then by adding the letter (n) thereto, before the said name then it will be Enphra, or Enphara, which is the great name of God that governeth

²⁷² S1: Repeats the phrase "(the names)" here in the text.

²⁷³ G: Changes "Angels" to "Angles", suggesting a mistake on the part of the original G.D. copyist.

²⁷⁴ G: "having".

²⁷⁵ G: "sitting".

²⁷⁶ G: "each".

²⁷⁷ G: "sitting".

²⁷⁸ G: "shown".

²⁷⁹ G: "as follows".

²⁸⁰ G: Omits "then".

²⁸¹ G: "sitting".

Practical Angel Magic

those four Angels set²⁸² over the second lesser Angle, serving to the third or north Quadrangle, & by which they are called forth and do appear; The name of the first Angel set²⁸³ over the third lesser Angle serving to²⁸⁴ this north Quadrangle is Æoan, then add the said letter (n) before it, and make it Næoan, which is the great name of God that governeth those four Angels set²⁸⁵ over that lesser Angle, and whereby they are called forth and do appear.

Then again the name of the first Angel set²⁸⁶ over the fourth lesser Angle serving to²⁸⁷ this north Quadrangle is Iaom,²⁸⁸ then by adding the letter (n) before it, it²⁸⁹ maketh the word Niaom,²⁹⁰ which is the great name of God that governeth the four Angels set²⁹¹ over this fourth lesser Angle of the third or north Quadrangle and by which they are also called forth & do appear, & so it is of the rest.

The first letter²⁹² of the²⁹³ line of the Table of Union added before the name of the first Angel set²⁹⁴ over every²⁹⁵ four lesser Angles serving to²⁹⁶ the greater Quadrangle, wherein they are, maketh the name of God that governeth over every²⁹⁷ of those said four Angels, set²⁹⁸ over every said lesser Angle, unto which²⁹⁹ Quadrangle, first, second, third, or fourth, Each³⁰⁰ line of the Table of Union is properly formed³⁰¹, as aforesaid. The other four letters of each line of the Table of Union, serveth³⁰² to the four red lines of four letters

²⁸² Ibid.

²⁸³ Ibid.

²⁸⁴ G: Omits "to".

²⁸⁵ G: "sitting".

²⁸⁶ Ibid.

³¹¹ G: "line".

³¹² S2: "fourth".

³¹³ G: Replaces "is" with "has been already".

Practical Angel Magic

mighty Angelical King of the East Quadrangle, and of the three³¹⁴ great names of God borne in 3³¹⁵ Banners before him, and of the six Seniors, and of the sixteen Angels next under them, set³¹⁶ over every lesser Angle serving³¹⁷ to this greater East Quadrangle, and of some good Angels subservient to them, under whom again³¹⁸ are many benevolent Angels of inferior Orders. The collecting of whose names are omitted, being too tedious to exemplify, since this which hath been already said before, is sufficient, and also how to collect the names of several evil spirits of terrestrial & Infernal³¹⁹ natures, now shall be showed the method, how to invoke & call them forth to visible appearance.

³¹⁴ G: Inserts "or".

³¹⁵ G: "three".

³¹⁶ G: "placed".

³¹⁷ G: "subservient".

³¹⁸ G: Omits this word.

³¹⁹ S2: "infernal".

Practical Angel Magic

[Method to Invoke the Angels to Visible Appearance]

The three great names of God Oro. Ibah. Aozpi, governeth the King of the East Angle whose name is BATAIVA, and this name BATAIVA governeth the six seniors, and by which they are called forth and do appear. The name of God Erzla, governeth the four Angels set³²⁰ over the first lesser Angle of this East Quadrangle.

The name of God Eutepa, governeth the four Angels set³²¹ over the second lesser Angle of this East Quadrangle.

The name of God Ecenbar governeth the four Angels set³²² over the third Lesser Angle of this East Quadrangle.

The name of God Exgezod governeth the four Angels set³²³ over the fourth Lesser Angle of this East Quadrangle.

Then there is the middle black upright or perpendicular line, in this first lesser Angle serving³²⁴ to the great Quadrangle of the East, the which hath these six letters from the top downward, to the black line that goeth cross³²⁵ the Quadrangle i.d.o.i.g.o making the name³²⁶ Idoigo, The transverse or cross black line, whereof hath those letters, a.r.d.z.a. making the name Ardeza,³²⁷ The four subservient Angels that are under the transverse black line of this said first lesser Angle are ruled by the name Idoigo, and thereby are called forth and do appear, and by the name Ardza, they do what they are commanded: The like method is to be observed of the other 3³²⁸ Lesser Angles of this East Quadrangle.

Then for the second or West Quadrangle of the Table, the three great names of God displayed in Banners, and borne before the great Angel and mighty King of this second or West Quadrangle is to be collected out of the middle transverse black line, that goeth crosswise athwart the Quadrangle, and to be composed of three,

³²⁰ G: "placed".

³²¹ Ibid.

³²² Ibid.

³²³ Ibid.

³²⁴ G: "subservient".

³²⁵ G: Changes this to "across".

³²⁶ G: Inserts "of".

³²⁷ G: Gives the name as "Ardza".

³²⁸ 52, G: "three".

Practical Angel Magic

four and five letters after the same manner as is before taught in the first or East Quadrangle, and so likewise of the other two succeeding north and south Quadrangles.

The three great and powerful names of God governing the mighty & Angelical monarchy of the second or west Quadrangle whose name is RAAGIOS or RAAGIOSEL, are Empeh. Arsel. Gaiol. and the Royal high name RAAGIOSEL, governeth the six seniors, and by which they are called forth, & do appear.

The name of God HeTaad, governeth the four Angels set³²⁹ over the³³⁰ first Lesser Angle of the second or West Quadrangle.

The name of God HeTedim governeth the four Angels set³³¹ over the second Lesser Angle of this second or West quadrangle.

The name of God HeMagel, governeth the four Angels set³³² over the third or³³³ Lesser Angle of this second or west Quadrangle.

The name of God Henlarex, governeth the four Angels set³³⁴ over the fourth and last lesser Angle of the second and West Quadrangle of the Table, &³³⁵ by which names they are called forth & do appear.

Then there is the name of God Obegoca, which are the six letters in the upright black line of the first Lesser Angle in this second and West Quadrangle, which name Ruleth and calleth forth, the four subservient Angels under the black Transverse line, by the power whereof they do appear.

Then in the transverse line there is the word Aabeco³³⁶ by the efficacy whereof the said 4³³⁷ subservient Angels do what they are commanded.

³²⁹ G: "placed".

³³⁰ S2: "first".

³³¹ Ibid.

³³² Ibid.

³³³ G: Omits this word.

³³⁴ G: "placed".

³³⁵ S2: "and".

³³⁶ S2: "Aabego".

³³⁷ G: "four".

Practical Angel Magic

The name of God Nelapar, which are the six letters of the upright black line, Ruleth the four Angels subservient in this second lesser Angle and by the power whereof they are called forth and do appear.

And by the name of God Omebeb the five letters in the transverse line they do what they are commanded.

Then there is the name of God Maladi, in the upright line of the third Lesser Angle, by which the four subservient Angels herein are called forth and do appear.

Then there is the name of God Olaad in the transverse black line, whereby they do what they are commanded.

The name of God Jaasde,³³⁸ which are the six letters in the upright line of the fourth lesser Angle of this second and West Quadrangle, calleth³³⁹ forth the four subservient Angels in this Angle to visible apparition.

And the name of God ATAPA which are the five letters of the black transverse line, powerfully urgeth (and as it were) enforceth or constraineth them to do what³⁴⁰ they are commanded.

After the same manner and method are the other names of God, peculiarly and particularly to be collected out of the subsequent north and south Quadrangles, by the virtue, power, and efficacy, and at the nominating and pronouncing whereof, all the ministering Angels of Light Celestially dignified both servient and subservient, even from the superior to the Inferior orders, under the great King or Supreme head, and governor³⁴¹ of every Respectively general or Quarterly greater Angle according to their degrees and offices, are called forth and moved to visible appearance and so accordingly to do what they are commanded as aforesaid. As for the Evil Spirits more of them hereafter.

³³⁸ S2: "Iaaasdi".

³³⁹ G: Shortens "calleth" to "call".

³⁴⁰ G: "as".

³⁴¹ S2: Has "governeth or".

Practical Angel Magic

It is said before that the subservient Angels whose names are collected out of the four Red lines under the black transverse line, in every Lesser Angle of the Table are next in order (as servients) under the other Angels, whose names are collected out of the Red line above the black Transverse line in every lesser Angle of the Table, under which said servients, are many benevolent subservients inferior to them, and under whom again are many legions of assisting Angels more inferior to them in power and Authority; And likewise many legions of spirits more Inferior again to them³⁴² of several natures and offices both good and bad, as originally decreed by providence, who settled³⁴³ all things both Celestial, Aerial, & Terrestrial, gradation to serve and execute his commands, according to their orders, offices, natures, government and degrees³⁴⁴, wherein they are placed.

And hence it is affirmed, that Aerial & Elementary Spirits are of different and several natures, according as they³⁴⁵ were constituted and appointed in their several and respective offices, places and orders, by the first and Supreme decree of the Highest, in the observing and fulfilling his decrees and commands according to his justice and mercy, and so often times are the executioners³⁴⁶ of wrath and vengeance, yet nevertheless whom God is graciously³⁴⁷ pleased to wink at, and pass by our wickedness and so³⁴⁸ to show mercy, then they often times admonish, forewarn, and watch over us, and defend us from many dangers & perils and are benevolent and helpful unto us in any³⁴⁹ respects, according to their offices, and are³⁵⁰ as our necessity requireth.

³⁴² S2: "as".

³⁴³ G: "setteth".

³⁴⁴ G: Gives "decrees", but this is probably a copying error.

³⁴⁵ S2: "are".

³⁴⁶ G: "execution".

³⁴⁷ G: Omits this word.

³⁴⁸ G: Omits this word.

³⁴⁹ G: "many".

³⁵⁰ S2: "are".

[Of the Evil Malicious Spirits]

As to the evil malicious spirits before mentioned whose names are collected of the 3³⁵¹ letters, by joining thereunto, one letter of the Table of Union, as hath been before explained; They are thus to be called forth. Their names are collected out of those four Red lines under the black transverse line in every Lesser Angle of the Table, and by joining of one letter of the Table of Union³⁵², to two of those letters, in any line of those aforesaid lines of the Lesser Angle, either from the left to the Right, or from the Right to the left, they both serve, to one and the same purpose, being taken out and placed in such manner and order accordingly, as they are particularly referred to their proper places respectively, do make the name of a Devil, as hath been treated of, and showed by an Example elsewhere before &c.

The calling them forth is one³⁵³ this wise, as for example In the first Lesser Angle of the East Quadrangle, the upright black line thereof from the top downwards, hath the name of God Idoigo, which God³⁵⁴ calleth forth the subservient Angels of that Angle, in the black transverse line thereof is the name of God Ardza, by which they do what they are commanded: so by the name of God Idoigo, backwards and³⁵⁵ the malignant spirits whose names are made of 3³⁵⁶ letters out of³⁵⁷ this 1st³⁵⁸ Lesser Angle of the East Quadrangle to be called forth: And by the name of God Ardza backwards they do also what they are commanded, so that the names Ogiodi, causeth them to appear by the³⁵⁹ order of Idoigo, And by the name Azdra backwards commandeth them by the like order &c.

In the second lesser Angle of this said East Quadrangle is in the middle upright line thereof the name of God Ilacza, which pronounced backwards is Azcali, which name calleth forth the malignant Spirits whose names are collected of 3³⁶⁰ letters out of it, and by the name Palam,³⁶¹ which is the name Malap³⁶² backwards

³⁵¹ S2, G: Omits "the" and gives "three" spelled in full.

³⁵² G: Omits the section from "as hath been before explained" . Table of Union".

³⁵³ G: "after".

³⁵⁴ G: "name".

³⁵⁵ G: "are".

³⁵⁶ G: "three".

³⁵⁷ S2: "the first".

³⁵⁸ G: Omits this word.

³⁵⁹ G: Omits this word.

³⁶⁰ G: "three".

³⁶¹ G: Transposes this and the next name, giving this as "Malap".

³⁶² G: Transposes this and the previous name, giving this as "Palam".

Practical Angel Magic

they do what they are commanded.

The middle upright black line of the third Lesser Angle hath this name of God Aiaoi, which pronounced backwards is laoia, and this calleth forth the Evil Spirits whose names are collected of the³⁶³ 3³⁶⁴ letters of this Angle, the transverse line whereof hath the name of God Ouit, which being pronounced backwards maketh the name Tiio, whereby they are constrained to obedience &c.

The upright black line of the fourth Lesser Angle of the³⁶⁵ said Quadrangle hath this name of God Aovrrz, which backwards is Zrrvoa, and calleth forth those Evil Spirits, whose names are made of 3³⁶⁶ letters thereout.

The transverse black line hereof³⁶⁷, hath this name of God Aloai, which backward is Jaola, which constraineth them to do whatsoever they are commanded, &c.

The like Rule and method is to be observed in the other three Quadrangles of the general Table, Their offices shall be spoken of, by and by, so that for the calling forth of any Angel or Spirit³⁶⁸ either good or bad, and for their yielding obedience to do what they are commanded, the repetition of those names of God, respectively unto which they are diversely and severally referred and by which they are governed is sufficient.

The names of God that call forth the subservient Angels of each Lesser Angle of the greater Quadrangle³⁶⁹ call forth the Evil spirits whose names are made of 3³⁷⁰ letters if³⁷¹ it be³⁷² pronounced backwards, for unto them so he is a God, &c.

³⁶³ S2: Omits "the".

³⁶⁶ Ibid.

³⁶⁷ G: "thereof".

³⁶⁸ G: "spirits".

³⁶⁹ S2: "Quadrangles".

³⁷⁰ S2, G: "three".

³⁷¹ G: "of".

³⁷² G: "being".

[The General Use and Signification of the Tables]

Now as to the general use and signification of the Tables and the offices of the Angels &c & other Remarkable observations &c, these Tables (or Table) contain all human knowledge; they stretch to the Knowledge of Solomon, for out of it springeth physick, the knowledge, ³⁷³finding and ³⁷⁴use of metals, the virtues of them, the ³⁷⁵congelations and virtues of stones (they are all of one matter), ³⁷⁶the knowledge of all Elemental creatures amongst us, how many kinds there are, & for what use they are created³⁷⁷.

Air
Those that live in the Water by themselves
Earth

The property of the fire, which is the secret Life of all things, but those more particularly.

The knitting together of natures, The moving from place to place as And also as well³⁷⁸ the destruction of nature and of things that may perish as of the conjoining and knitting them together &c.

of all elemental	Serving to the	Fourth	of the	South	

creatures amongst us; how many kinds & their use in the creation as they are severally placed, in the 4 Elements, Air, Water, Earth & Fire.

By these Tables may be known the secret Treasures of the waters and the unknown caves of the Earth &c³⁸². As for example, the subservient Angels in the second lesser Angle of every greater Quadrangle, and also all the ministering servient Angels under them give the knowledge, finding and³⁸³ use of metals &c.

The Benevolent Angels of that order, will offer the passages of the Earth, unto the entrance of the senses³⁸⁴ of man (chiefly of seeing³⁸⁵) so that the Earth lying opened unto their Eyes, by the benevolent assistance of the Angels of Light, they may plainly see and discover what Treasures are in the Earth, both as to the natural mines of the Earth, and all manner of Treasure Trove³⁸⁶, and the Angels aforesaid³⁸⁷ are ministers for this purpose.

Treasure Trove or such Treasures of the Earth that is Coin³⁸⁸ and that hath been heretofore in man's possession is in the power of the Evil Spirits, whose names are made of three letters; And they can give the same to man &c.

³⁸¹ G: Omits "the".

³⁸² Using spirits and angels to find buried treasure was a common pre-occupation in the 16th and 17th century. A distinction was drawn between finding naturally occurring mineral wealth (through angels), and buried coinage or treasure trove (the latter often involving evil spirits).

³⁸³ S2: Replaces "and" with "out the".

³⁸⁴ G: "sons". Possibly a copyist's error

³⁸⁵ G: "serving" Again possibly a copyist's error.

³⁸⁶ S2: "treasures troves".

³⁸⁷ S2: "and".

³⁸⁸ G: Replaces "that is Coin" with "as is lying therein".

Practical Angel Magic

But as for the natural mines of the earth, they have nothing to do therewith, nor have any power over it at all, those treasures belong properly to the benevolent Subservient Angels, who are found in every second Lesser Angle of each Quadrangle, who (as I said before) can lay the caves of the Earth open to the Eyes of man &c, where he may see the Treasures of the Earth³⁸⁹ as they are therein contained, in and according to their several and respective natures, and properties which being known to him, then hath he the benevolent assistance, both of the good and³⁹⁰ bad Angels, to serve his necessities therewith, according to the nature³⁹¹ of their part³⁹² and offices, as to which they are concerned and³⁹³ properly referred and have power over &c.

The natures and offices of the evil Spirits aforesaid are quite contrary to those of the good Angels, as thus, the good Angels belonging to physick, they³⁹⁴ cure diseases, preserve the Elemental vigour, and humid Radicals³⁹⁵ of things natural: on the contrary the Evil spirits maliciously bring in diseases, and seek to destroy the Elemental vigour, and strength of natural things &c. The practice of all shall be showed hereafter particularly in a Treatise by it self.

Having briefly showed by an example of the first and East Quadrangle of the Table, how to collect the names³⁹⁶ of the great Angel thereof, or the mighty Angelical monarch, bearing Rule and governing the east part or point of the compass Angle or Quarter, both Celestially and Terrestrially, and of the six seniors and of many other, of³⁹⁷ governing and subservient Angels, and their natures and offices, both good and bad together with the use of all &c.

The Right understanding whereof is a sufficient precedent³⁹⁸ for unfolding the other three greater Angles or Quarters of the Table.

³⁸⁹ S2: "open to the Eyes of man".

³⁹⁰ S2: Inserts "the".

³⁹¹ G: Gives the plural form, "natures".

³⁹² S2: "parts".

³⁹³ G: Inserts "are".

³⁹⁴ G: "that".

³⁹⁵ G: Gives "Radicate" here, which is clearly a copying error.

³⁹⁶ S2: "name".

³⁹⁷ S2: Inserts "the".

³⁹⁸ G: Gives "evident" here, which seems likely to be another copying error.

Practical Angel Magic

The use of which severally are the same as in this, for the names of their princes, and the great names of God by which they are governed, and unto which they are subject and obedient, which are the Arms of the Ensigns or Banners borne before them.

The names of the Seniors and the Angels governing and set³⁹⁹ over every Lesser Angle of each greater Quadrangle, and the names of God, governing, calling forth and commanding, and of the subservient benevolent Angels officiating again under them; and the names of God commanding, calling forth, and constraining them, and of many legions of others both good and bad, are to be gathered and collected thereout, after the self same method, as is showed in the Explaining⁴⁰⁰ the East Quadrangle, and the offices also of all the Angels comprehended in the greater East Angle. Even from the superior monarch, to the most inferior subservient are the same as in this greater East Angle, so in the other 3⁴⁰¹ greater Angles Respectively. Viz, The offices and natures of the King and the Six Seniors are one and the same alike, in all the four Quadrangles of the Table, so also are the offices, and the natures of all the Angels both governing and subservient in all the lesser Angles, serving to each⁴⁰² Quadrangle. As the first lesser Angle of this East Quadrangle is of physick, and compriseth the whole body thereof in all its parts so doth the first lesser Angle in the second⁴⁰³ Quadrangle the like. And the first lesser Angle of the third Quadrangle; And the first lesser angle of⁴⁰⁴ the fourth Quadrangle the same likewise. So the Angels of the second lesser Angle of the East Quadrangle are of the same nature and offices, as are the other three lesser Angles serving to the three greater Quadrangles: and also the third and fourth lesser Angles of the west, north, and south Quadrangles are of the same nature and office⁴⁰⁵, as the third and fourth Lesser Angles of the East Quadrangle, and every way hath the same signification, only they differ in this particular, that some are East, some west, some north, and some south. A due consideration therefore ought to be had and carefully taken in calling them, always observing to invoke from such a point of the

³⁹⁹ G: "placed".

⁴⁰⁰ G: Replaces "Explaining" with "Explanation of".

⁴⁰¹ G: "three".

⁴⁰² S2: "the East".

⁴⁰³ G: Inserts "(West)" here.

⁴⁰⁴ G: "in".

⁴⁰⁵ G: Transposes from "nature and office" to "offices and nature".

Practical Angel Magic

compass or Choir of heaven where their power and abode is &c⁴⁰⁶.

And all other such concerns herein as is Requisite thereto, ought likewise to be directed to this, or that, or such and such a Quarter or Angle, East, West, North or South unto which they properly appertain and are properly referred &c. And with all is to be understood, that the other Letters of the Table thus to be collected (as aforesaid) should some hard to be pronounced for want of vowels to sound and make out each syllable, as to the pronouncing of a name proper, yet observing to pronounce every letter distinctly as if it had a vowel going before⁴⁰⁷ or following it, then it sounds well enough. And the reason of this strange kind of difference in our common Orthography⁴⁰⁸ is, that there is not a letter nor part of a letter, but is numbered and hath the same signification &c as for the practice it is⁴⁰⁹ thus.

⁴⁰⁶ An important point: invocation should be towards the correct direction, so that you do not inadvertently turn your back on the angel or spirit you are invoking. In the *Lemegeton* even more precise directions were given for the direction of invocation of each spirit.

⁴⁰⁷ S2: "as".

⁴⁰⁸ Way of writing and spelling.

⁴⁰⁹ S2: Replaces "it is" with "of it".

[The Book and the Procedure]

Let the philosopher prepare a Book of very fine paper or parchment, and write very fairly therein, as shall be here directed &c and also a handsome convenient chamber or place for practice.

Which Book must consist first of the Invocations of the names of God, and secondly of the Angels by the names of God &c. As for example, In the black transverse line that goeth athwart the East Quadrangle, there are these three great names of God thus, Oro. Ibah. Aozpi, so likewise in the second or West Quadrangle thus Empeh. Arsel. Gaiol. In the third or north Quadrangle they are Emor. Dial. Hectega, and so in the 4th⁴¹⁰ or south Quadrangle Oip. Teaa. Pedece. Four days after the Book is written the Magick Philosopher must only⁴¹¹ call upon the names of God or rather on the God of Hosts, from the four Angles or Quarter⁴¹² points of the compass, East, West, North, & South.

And fourteen days after he shall invoke the Angels by petition. And by the names of God to which they are obedient from the Angles⁴¹³ or mansions where they reside and dwell East, West, North, & South, as they are to be found in the Table &c.

The fifteenth day he shall cloth himself in a vesture made of white linen, and so have the Apparition, use and practice of the spiritual creatures, which when he hath attained to (as no doubt but he may) he may be so expert in the practical part hereof, that he need not make use of the linen vesture after⁴¹⁴, nor the book, nor to be confined to any such observations⁴¹⁵ and curiosities of places, or otherwise as was formerly commanded as to the entrance into the knowledge and practice of this Art in attaining to the society, converse, and use of the Spiritual creatures for if the philosopher can in his fifteen days Retirement & Reservation, but retain and remember the names of the Angels and the names of God, by which they are called forth, appear, and do what they are commanded, he may call upon them, converse with them, and make use of them (according to their natures and offices) without⁴¹⁶ either vestment or

⁴¹⁰ S2, G: "fourth".

⁴¹¹ S2: 'Only' is crossed out.

⁴¹² G: "Quaternary".

⁴¹³ S2: "in".

⁴¹⁴ G: Omits "after".

⁴¹⁵ G: "observances".

⁴¹⁶ S2: "Either".

Practical Angel Magic

Book or choice place, but whatsoever⁴¹⁷ or howsoever he will, or wheresoever he shall happen to be &c⁴¹⁸.

For the calls, Invocations, Invitations or petitions to be used herein, and that are to be curiously written in a select book to be made and provided for that purpose, according as is before expressed, is to be, but a short and brief speech *in verbis conceptis* as the mind shall prompt or dictate⁴¹⁹, observing the Angle or point of the Compass, wherever he shall be in respect of the poles, &c. And one thing a little extraordinary take notice of by the way, and that is thus, understand that the natures and offices of the subservient Angels of every second Lesser Angle of each greater Quadrangle of the Table, is the finding knowledge and use of⁴²⁰ metals, to gather them together &c. This is meant as to the natural mines of the Earth, for they give no money coined⁴²¹ (which is such, as hath been in use amongst men, and by them despitefully hidden from posterity, and commonly termed Treasure Trove, or hidden Treasure &c) and also as⁴²² is said elsewhere before, will lay the passages of the Earth, and the secret caves of the hills open visibly to the sight of our Eyes, that we may see and know what is enclosed and contained in the bowels thereof, and to instruct us in the use of metals in all their parts, and to serve our necessities with such of them as they have power over and can command, which are such as have not been (accomplished) amongst⁴²³ men, nor corrupted by them &c.

On the contrary the Evil Angels which names consist of three letters, and that are collected out of the said Angels⁴²⁴, have no⁴²⁵ power over the natural mines of the Earth, nor have nothing⁴²⁶ at all to do therewith, but they do⁴²⁷ keep from the discovery and use of man all such Treasures of gold and silver &c As hath been formerly in use amongst them, and (as is said) most despitefully hidden and absconded from them, in the bowels of the Earth, and is called

⁴¹⁷ S2: "wheresoever".

⁴¹⁸ The objective of many systems of magic is to be able to command spiritual creatures in an ordinary setting, without the usual paraphernalia or preparation, however one that only a really skilled magician should aspire to.

⁴¹⁹ S2: "Direct Dictate".

⁴²⁰ G: Inserts "the".

⁴²¹ G: Changes this to "neither coined money" from "no money coined".

⁴²² G: Omits "as".

⁴²³ G: "among".

⁴²⁴ S2: Sidenotes "Angles".

⁴²⁵ G: "nether".

⁴²⁶ G: "anything".

⁴²⁷ G: Omits "do".

Practical Angel Magic

Treasure Trove or hidden Treasures⁴²⁸, and those sort of Treasures the good Angels have nothing to do withal, more than to lay them open to our sight, nor have no⁴²⁹ power to serve our necessities otherwise than to discover them to us as aforesaid; but this kind of Treasure Trove are⁴³⁰ wholly kept and possessed by the malignant Angels or Spirits aforesaid, who have sole power over them, and may be commanded, or constrained to serve our necessities with them.

The calling them forth, as well as the calling forth the good Angels and the moving them to visible appearance and to constrain them to do what they are commanded, is also showed before &c⁴³¹.

Understand also that when all this shall lay⁴³² open visibly to the sight of the philosopher, and that he perceiveth and well knoweth that it is kept by a malignant spirit, and that it may probably according to common apprehension prove hard or difficult to obtain, and the philosopher should be at a near place, or at a stand, how to encounter with⁴³³, and discharge the Keeper thereof from it, so that he may peaceably and without molestation or interruption take away the same and enjoy it without any dread or fear of harm to him or any of his companions (if he hath any) or offence to God, or injurious⁴³⁴ to the soul's health or in any way's prejudicial or contrary to Religion, the Christian faith, or a good conscience &c.

Let him consider his glorification and power in his Creation, and his souls dignification as man, and how near he is the great omnipotent Archetype, as he is the very Image and Idea thereof, and as he is monarch of the World, and commandeth all such malignant Spirits, to submission, subjection and obedience, and he shall absolutely & positively conclude that they are but inferior servants and vile slaves, and unto whom he shall say, Arise begone, Thou art of⁴³⁵ hindrance, ⁴³⁶destruction and of the places of darkness, these are provided for the use of man; Thou art vanquished, thy time is

⁴²⁸ G: "Treasure".

⁴²⁹ G: Omits "no".

⁴³⁰ G: "is".

⁴³¹ G: Changes this phrase from "is also showed before &c" to "has also been shown before".

⁴³² S2: "laid"; G: "lie".

⁴³³ G: Omits "with".

⁴³⁴ G: "injury".

⁴³⁵ G: "a".

⁴³⁶ S2: "a".

Practical Angel Magic

shortened, and fully now expired, therefore I say depart to thy order Jeovah, Jeovaschah, and lo I seal⁴³⁷ you to the end; Thus shall he use⁴³⁸ the malignant spirits and Keepers of Treasure Trove, and not otherwise, and they will, nay must obey and immediately depart and thus briefly is laid open and explained the use and meaning of the Table containing the four Quadrangles East, West, North & South which is sufficient &c⁴³⁹.

⁴³⁷ G: Gives "fear" instead of "seal", but this is an unfortunate copyist's mistake, considering the context of the phrase.

⁴³⁸ S2: "of".

⁴³⁹ G: Omits "&c" and replaces it with "for this one purpose." Here ends the text of Document H of the Hermetic Order of the Golden Dawn.

The Practice of the East Table

The names of the four Kings governing the four Watch Towers set over the four Terrestrial Angles are

Bataiva King of the East. Raagios King of the West. Jezodhehca King of the North. Edelperna, King of the South.

The Regal Invocation

O Thou great, mighty, and powerful Angel of the Immortal God Bataiva, who art by the primitive⁴⁴⁰ design⁴⁴¹ of the Highest ordained, constituted and appointed, and set over the Terrestrial Angle of the East, as the only King, governor, overseer, principal Watchman, protector and Keeper thereof, from the malice, misuse, illusion, Temptation, wicked Encroachments and usurping Blasphemy of the great Enemy of God's glory and the welfare of mankind, the princes and spirits of darkness and art a snaffle to them to Restrain their wickedness, by the bit of God's boundless power and justice.

To the intent that (they being put out into the earth) their envious will might be bridled, the determinations of the heavenly God fulfilled, and his creatures kept within the compass and measure of order.

I the servant of the Highest do call upon you, O you mighty and Royal Angel Bataiva, most humbly and earnestly entreating you, In, and through these great names of the Infinite⁴⁴² and Incomprehensible God of Hosts Oro, Ibah, Aozpi, and by the virtue, power and efficacy thereof to assist and help me in these my present operations and affairs, and by the powerful permission and Authority to send and cause to come and appear unto me _____.

Residing under your Government in the Angle of the East whom I shall call forth by name, to instruct, direct & help me in all such matters or things, According to their offices, as I shall request and desire of them, both now and at all times also⁴⁴³, whensoever necessity shall require their favourable aid and assistance and such

⁴⁴⁰ S2: "primitive".

⁴⁴¹ S2: "decree".

⁴⁴² S2: "Immense".

⁴⁴³ S2: "Else".

Practical Angel Magic

their good counsel and advertisements as shall be requisite and necessary for me, and herein I most ardently and incessantly Implore and Beserch you O Bataiva, humbly desiring your friendship, and to do for me as for the servant of the most high God of Hosts Oro, Ibah, Aozpi, the Almighty creator of Heaven and Earth, and disposer of all things both Celestial, Aerial, Terrestrial and Infernal.

Names of the Six Seniors and to call them forth

Habioro¹, Aaoxaif², Hetermorda³, Ahaozpi⁴, Hipotga⁵, Autotar⁶.

O You glorious and Beneficent ⁴⁴⁴ Angels Habioro, Aaoxaif, Hetermorda, Ahaozpi, Hipotga, Autotar who are the six Angelical Seniors serving before Bataiva the great honoured and Royal Angel of the high and Immortal God of Hosts in the Terrestrial Angle of the East, I most earnestly entreat, humbly request and powerfully adjure and call ye forth to visible apparition, In and through this mighty & Efficacious name of your King and Sovereign Lord of the East Angle of the world Bataiva, and by the Ineffable power and virtue thereof, preordinally decreed by the Highest to be most firmly and solidly effectual for the calling you forth; now therefore O you Benevolent Angels Habioro, Aaoxaif, Hetermorda, Ahaozpi, Hipotga, Autotar, I adjure and call you forth, in this true and most especial name of your King Bataiva, and by the Excellency thereof, urgently and potently entreating you to gird up and gather your selves together and by divine permission, move, descend, and appear visible and friendly unto me, in this Crystal Stone or Glass Receptacle ⁴⁴⁵ and In and through the same to transmit your Splendid Rays to my sight, and your Benevolent voices unto⁴⁴⁶ my Ears; that I may plainly see and audibly hear you speak unto me, and to assist, direct, instruct, illuminate, and show forth what I shall humbly desire and request of you; O you servants of mercy Habioro, Aaoxaif, Hetermorda, Ahaozpi, Hipotga, Autotar, come away and appear visibly unto me (as aforesaid) to the honour and glory of the Omnipotent Creator and the praise of his great and holy

⁴⁴⁴ S2: "Benevolent".

⁴⁴⁵ In all the manuscripts this is abbreviated to "C.S. or G.R.", and is clearly a term derived from *The Art Theurgia Goetia*. See *The Lesser Key of Solomon*, edited by Joseph H. Peterson, p65 – "you may call these spirits into a Crystal Stone or Glass Receptacle, [this] being an Ancient & usual way or Receiving & binding of spirits, This Crystal Stone must be four Inches Diameter set on a Table of Art". This is a clear demonstration of the influence of Solomonian magic on Dee's Enochian system. Dee's stone was set on a 'Holy Table'.

⁴⁴⁶ S2: "to".

Practical Angel Magic

name. For unto this remembrance is given power, and my strength waxeth strong in my comforter; Move therefore and show your selves, open to the mysteries of your creation; Be friendly unto me for I am a servant of the same your God, the true worshipper of the Highest.⁴⁴⁷

Names of the four Angels set over the first (Table) Lesser Angle of the East and to call them forth.

Vrzla¹, Zlar², Larzod³, Arzel⁴, divine name governing Erzla.

O You glorious and benevolent Angels Vrzla, Zlar, Larzod, Arzel, who are the four Angels set over the first lesser Angle of the greater Terrestrial Angle of the East, I invoke, adjure and call you forth to visible apparition, in and through this great, Signal, prevalent and divine name of the most high God Erzla, and by Ineffable and Efficacious virtue and power thereof, whereby you are governed and called forth, it being therefore absolutely necessary, preordained (and appointed) and decreed⁴⁴⁸ to be most solidly effectual; now therefore I do most earnestly entreat and powerfully adjure you, O you benign Angels Vrzla, Zlar, Larzod, Arzel in this potent name of your God Erzla, to move, descend, appear and visibly show your selves to me, in this Crystal Stone or Glass Receptacle here before me, and in, and through the same to transmit your Rays to my sight, and your voices to my Ears, that I may audibly hear you speak unto me, and plainly see you⁴⁴⁹ and conclude me as a Receiver of your mysteries, wherefore I do urgently request and adjure you, O you luminous and amicable Angela Vrzla, Zlar, Larzod, Arzel, in this most excellent name of your God Erzla, and I (as the servant of the Highest) do thereby efficaciously move you in power and presence to appear now presently visible to me as aforesaid; O you Servants of mercy, move, Descend, personally show forth, and apply your selves friendly unto me as unto the partaker of his secret wisdom in your Creation, for why our Lord & master is all one.

⁴⁴⁷ Compare this with Dee's invocation 'Sex Seniorvm Orientalium Invitatio' in Sloane 3191, from which it is derived.

⁴⁴⁸ S2: "directed".

⁴⁴⁹ The intention is very plainly to have sight of the angels or spiritual creature in the crystal or glass receptacle.

Practical Angel Magic

Names of the 4 Angels serving to the first Lesser Angle of the East Table and to call them forth.

Cezodenes, Totet, Sias, Efermende, Divine names governing, calling forth Idoigo, & constraining Ardza.

O You Benevolent Angels of Light Cezodenes, Totet, Sias, Efermende⁴⁵⁰, who are the four servient Angels serving in the first Lesser Angle of the greater Terrestrial Angle of the East; I invoke, adjure, command, and powerfully call you forth from your orders and mansion to visible apparition, in and through this great, prevalent, signal, and divine name of God Idoigo, and by the Efficacy, virtue, and power thereof most firmly and solidly effectual, for the calling you forth, commanding you to transmit your Rays visibly to my sight,⁴⁵¹ your voices to my Ears, in and through this Crystal Stone or Glass Receptacle or otherwise to appear out here before me that I may plainly see you and audibly hear you speak unto me; Move therefore O you Benign Servient Angels of Light Cezodenes, Totet, Sias, Efermende, and in the potent name of God Idoigo, and by the Imperial dignity thereof, Descend and by divine permission, visibly show yourselves as pleasant deliverers, that you may praise him amongst the sons of men. O you servants of mercy Cezodenes, Totet, Sias, Efermende, come away and in this Ineffable and most excellent name of your God Idoigo, visibly and personally appear to the admiration of the Earth, and to my comfort, come away open the mysteries of your creation be friendly unto me, for I am a servant of the same your God the true worshipper of the Highest⁴⁵².

When the servient Angels of this order appeareth and are known, then receive them as followeth.

⁴⁵⁰ This is an example where the author of this manuscript has applied the rules and filled out and improved upon Dee's original which lists the four angels unpronounceably as 'CZNS sive CZONS, TOTT sive TOITT, SIAS sive SIGAS, FMND sive FMOND'. 'Sive' simply indicates alternatives, as if Dee was not sure of the orthography even when he reached the final fair copy of the invocations.

⁴⁵¹ S2: Inserts "&".

⁴⁵² The last 26 words are recognisably derived from the first Call of Dee's earlier system of Enochian Calls as recorded in 'The 48 Angelic Keys' or *48 Claves Angelicae*, bound in Sloane 3191. There they are translated into Enochian as 'Odo cide Qaa Zorge, Lap xrho Noco MAD Hoath Iada'

Practical Angel Magic

Welcome be the Light of the Highest whose name be glorified for his mercies endureth for ever; And O you servants of mercy and benign Angels of Light Cezodenes, Totet, Sias, Efermende, you are to me sincerely welcome, And I do in this Inestimable and divine name of your Eternal God Ardza, and by the absolute virtue, Efficacy, and force thereof, most firmly solidly, and also effectually binding, constraining you to speak Audibly unto me, and to fulfil my earnest petitions and requests, for which I am now at this time very much necessitated to call you forth, desiring your benevolent Aid & assistance in these my Temporal and Terrestrial undertakings and affairs, constraining you in this Imperial name of your Omnipotent God Ardza, and the dignity thereof, to be friendly unto me, and to do for me, as for the servant of the Highest wherein your office is apparently manifest and Efficient.

Names of the four Angels set over the second Lesser Angle of the East Table, and to call them forth.

Vtepa¹, Tepau², Paute³, Autep⁴, divine name governing is Eutepa.

O You glorious and benevolent Angels Vtepa, Tepau, Paute, Autep, who art the four Angels set over the second Lesser Angle of the greater Terrestrial Angle of the East, I invoke, adjure, & call you forth to visible apparition, In and through this great, signal and divine name of your⁴³ most high God Eutepa, and by the Ineffable and Efficacious virtue and power thereof whereby you are governed and called forth, it being therefore absolutely preordained and decreed to be most solidly effectual; now therefore I do most earnestly entreat and powerfully adjure you, O you Benign Angels Vtepa, Tepau, Paute, Autep, in this potent name of your God Eutepa, to move, descend, appear and visibly show your selves in this Crystal Stone or Glass Receptacle here before me, and in, and through the same to transmit your Rays to my sight and your voices to my ears; that I may plainly see you and audibly hear you speak unto me, and conclude and receive⁴⁴ of your mysteries, wherefore I do earnestly request and adjure you, O you Luminous and amicable Angels Vtepa, Tepau, Paute, Autep, in this most excellent name of your God Eutepa, and I (as a servant of the Highest) do thereby efficaciously move you in power & presence to appear now presently visible unto me as aforesaid; O you servants of mercy, move,

⁴³ S2: "the".

⁴⁴ S2: Replaces "and receive" with "as receivers".

Practical Angel Magic

descend, personally show forth and appear⁴⁵⁵ your selves friendly unto me, as unto the partaker of his Great Wisdom in your Creation for why our Lord & master is all one.

Names of the four Angels serving in the second Lesser Angle of the East Angle and to call them forth OYube¹, Paoc², Vrbeneh³, Diri⁴, divine names governing, calling forth Haeza, & constraining Palam.⁴⁵⁶

O You Benevolent Angels of Light OYube, Paoc, Vrbeneh, Diri, who are the four servient Angels serving in the second Lesser Angle of the greater Terrestrial Angle of the East, I invoke, adjure, command, and powerfully call you forth from your orders and mansion to visible apparition⁴⁵⁷, In and through this great, prevalent, signal and divine name of your God Haeza, and by the efficacy, power and virtue thereof; most firmly and solidly, effectual for the calling you forth, commanding you to transmit your Rays visibly to my sight and your voices to my ears, In and through this Crystal Stone or Glass Receptacle or otherwise to appear thereout, here before me, That I may plainly see you and Audibly hear you speak unto me: move therefore O you Benign Servient Angels of Light OYube, Paoc, Vrbeneh, Diri, and in the potent name of your God Haeza And by the imperial dignity thereof, Descend & visibly show your selves as pleasant deliverers that you may praise him amongst the sons of men. O you servants of mercy OYube, Paoc, Vrbeneh, Diri, Come away and in this Ineffable and most excellent name of your God Haeza, visibly and personally appear to the admiration of the Earth and to my comfort, come away open the mysteries of your Creation, be friendly unto me, for I am a servant of the same your God the true worshipper of the Highest.

The Practice of the North Table

The Regal Invocation

O Thou great powerful, and mighty Angel of the Immortal God Jezodhehca, who art ordained constituted & appointed, and set over the Terrestrial Angle of the North, by and according to the original and divine decree of the Omnipotent God of Hosts Emor, Dial, Hectega, and under whom art the only King, governor, overseer, principal watchman, protector and Keeper thereof, from the malice, misuse, Illusion, Temptation, wicked encroachments and usurping Blasphemy of the great Enemy of God's glory and the welfare of mankind, the Devil and Spirits of darkness and art a snaffle to them to restrain their wickedness by the bit of God's boundless power and justice; To the intent that (they being put out into the Earth) their envious will might be bridled, the determinations of the heavenly God fulfilled and his creatures kept within the compass and measure of order.

I the servant of the Highest do call upon you, O you (Servient) mighty and Royal Angel⁴⁸⁷ Jezodhehca, most humbly and earnestly entreating you, in and through these great names of the Infinite⁴⁸⁸ and Incomprehensible God of Hosts Emor, Dial, Hectega, and by the virtue, power, and efficacy thereof, to assist and help in these my present operations and affairs, and by the powerful permission and Authority to send and cause to come and appear unto me [Name].

Residing under your government in the Angle of the North, whom I shall call forth by name to Instruct, direct, and serve me in all such matters and things according to their offices, as I shall request and desire of them both now and at all times also, Whensoever necessity shall require their favourable Aid and Assistance, and such their good counsel and advertisements, as shall be requisite and fit for me, And herein I most ardently and Incessantly implore and beseech you O Jezodhehca, humbly desiring your friendship, and to do for me as for the servant of the most high and heavenly God of Hosts Emor, Dial, Hectega, the Almighty creator and Disposer of all

⁴⁸⁷ S2: Replaces "and Royal Angel" with "Angel Royally called".

⁴⁸⁸ S2: "Immense".

Practical Angel Magic

Names of the six Angelical Seniors and to call them forth

Laidrom¹, Aczinor², (or Aczodinator), Elzinopo³, Alhectega⁴, Elhiansa⁵, Acemliceve⁶.

O You glorious and Beneficent Angels Laidrom, Aczinor, Elzinopo, Alhectega, Elhiansa, Acemliceve, who are the six Angelical Seniors serving before Jezodhehca, the great, honoured and Royal Angel of the high and Immortal God of Hosts in the Terrestrial Angle of the North, I most earnestly request, humbly entreat and powerfully adjure and call you forth to visible apparition, in and through this mighty and efficacious name of your King and Sovereign Lord of the North Angle of the Earth Jezodhehca, and by the Ineffable virtue and power thereof, preordinally decreed by the Highest to be most firmly and solidly effectual⁴⁸⁹, for the calling you forth; Now therefore O you Benevolent Angels Laidrom, Aczinor, Elzinopo, Alhectega, Elhiansa, Acemliceve, I adjure and call you forth in this true and most especial name of your King Jezodhehca, and by the excellency thereof, urgently and potently entreating you, to gird up and gather your selves together and by divine permission, move, Descend, and appear visibly and friendly unto me in this Crystal Stone or Glass Receptacle and in and through the same, to transmit your Rays to my Sight, and your Benevolent voices to my ears, that I may plainly see you, and Audibly hear you speak unto me, and to assist, direct, Instruct, Illuminate and show forth what I shall humbly request and desire of you: O you servants of mercy Laidrom, Aczinor, Elzinopo, Alhectega, Elhiansa, Acemliceve, come away and appear visibly unto me as aforesaid to the honour and glory of the omnipotent Creator and the praise of his great and holy name: for unto this Remembrance is given power, and my strength waxeth strong in my comforter, Move therefore and show your selves, open the mysteries of your Creation, Be friendly unto me for I am a servant of the same your God, the true worshipper of the Highest.

Names of the four Angels set over the first Lesser Angle of the North Table and to call them forth Boza, Ozab, Zabo, Aboz,
The divine name governing is Enboza.

O You glorious and Benevolent Angels Boza, Ozab, Zabo, Aboz, who

⁴⁸⁹ 52: "effectually".

Practical Angel Magic

are the four Angels set over the first Lesser Angle of the greater Terrestrial Angle of the North: I invoke, adjure, and call you forth to visible apparition, in and through this great, signal, prevalent and divine name of your most high God Enboza, and by the Ineffable and Efficacious virtue and power thereof, whereby you are governed and called forth, it being therefore absolutely preordained and decreed to be most solidly effectual: now therefore I do most earnestly entreat, and powerfully adjure you, O you Benign Angels Boza, Ozab, Zabo, Aboz, in this potent name of your God Enboza, to move, Descend, appear and visibly show your selves to me in this Crystal Stone or Glass Receptacle here before me, and in and through the same to transmit your Rays to my sight and your voices to my Ears, that I may plainly see you and Audibly hear you speak unto me and conclude me as a receiver of your mysteries wherefore I do urgently request and adjure you: O you Luminous and Amicable Angels Boza, Ozab, Zabo, Aboz, in this most Excellent name of your God Enboza, and I (as the servant of the Highest) do thereby efficaciously move you in power and presence to appear now presently visible to me as aforesaid: O you servants of mercy, move, Descend, personally show forth, and apply your selves friendly unto me, as unto the partaker of his secret wisdom in your creation, For why, Our Lord and master is all one.

Names of the four Angels serving to the first Lesser Angle of the north Table and to call them forth Aira¹, Ormen², Reseni³, Jzodenar⁴, divine names governing, calling forth Angepoi,⁴⁹⁰ & constraining Vnenax.

O You Benevolent Angels of Light Aira, Ormen, Reseni, Jzodenar, who are the four Servient Angels, serving in the first Lesser Angle of the greater Terrestrial Angle of the north, I invoke, adjure command, and powerfully call you forth, from your mansions and orders to visible apparition, in and through this great, prevalent Signal and divine name of your God Angepoi, and by the Efficacy, virtue, and power thereof, most firmly and solidly effectual for the calling you forth, commanding you to transmit your Rays to my sight, and your voices to my ears in and through this Crystal Stone or Glass Receptacle or otherwise to appear thereout here before me, that I may plainly see you, and Audibly hear you speak unto me, move therefore O you Benign Servient Angels of Light Aira, Ormen, Reseni, Jzodenar, And in the potent name of your God Angepoi, and

⁴⁹⁰ S2: "Angepoi-Vnenax, constr".

Practical Angel Magic

by the Imperial Dignity thereof, Descend and visibly show yourselves as pleasant deliverers that you may praise him amongst the sons of men; O you servants of mercy Aira, Ormen, Reseni, Jzodenar, come away and in this Ineffable and most excellent name of your God Angepoi,⁴⁹¹ and personally appear to the admiration of the Earth and to my comfort, come away open the mysteries of your creation, be friendly unto me, for I am a servant of the same your God; The true worshipper of the Highest.

When there is apparition, then say as followeth.

Welcome be the Light of the Highest whose name be glorified for his mercies endureth for ever, And O you servants of mercy and benign Angels of Light Aira, Ormen, Reseni, Jzodenar, you are to me sincerely welcome, and I do in and through this Inestimable and divine name of your Eternal God Vnenax, and by the absolute virtue, Efficacy & force, most firmly, solidly & effectually binding, constrain⁴⁹² you to speak audibly unto me, and to fulfil my earnest petitions and requests, for which I am now at this time very much necessitated to call you forth desiring your benevolent Aid and assistance in these my Temporal and Terrestrial undertakings and affairs, constraining you in this Imperial name of your Omnipotent God Vnenax, and the dignity thereof, to be friendly unto me, and to do for me, as for the servant of the Highest wherein your office is apparently manifest and Efficient.

Names of the four Angels set over the Second Lesser Angle, and to call them forth Phra¹ (or Phara), Harap², Rapch³, Aphar³, divine name governing⁴⁹³ Enphra.

O You glorious and benevolent Angels Phra, Harap, Rapch, Aphar, who art the four Servient Angels set over the second Lesser Angle of the greater Terrestrial Angle of the north; I invoke, adjure, and call you forth to visible apparition, in and through, this great, Signal, prevalent and divine name of the most high God Enphra, and by the ineffable and efficacious virtue and power thereof whereby you are governed and called forth, it being therefore absolutely preordained and decreed to be most solidly effectual; now therefore I do most

⁴⁹¹ S2: Inserts "visibly".

The Title of the Following Prayer [before Invocation]⁵³²

An Humble supplication to Almighty God by these his great, powerful, and sacred names, governing every particular and each Several⁵³³ Respective Terrestrial Angle East, West, North, South. This prayer being properly Referred to the East Angle, and by changing the other names Governing the other 3 Angles in like manner and form, The same prayer serveth accordingly, (being so distinguished) for the whole &c. The which is to be said before Invocation is made for the moving and calling forth the spiritual powers of those natures orders and offices, as in the foregoing Introduction hereunto, is⁵³⁴ specified and showed forth.

The 3 sacred names of God⁵³⁵ over the East⁵³⁶ Oro, Ibah, Aozpi,
Those 3 over the West⁵³⁷ Empch, Arsel, Gaiol,
Those 3 names over the North⁵³⁸ Emor, Dial, Hectega,
Those 3 names over the South⁵³⁹ Oip, Teaa, Pedoce,

O Thou Omnipotent, Incomprehensible, Immortal, and Eternal God of Hosts Oro, Ibah, Aozpi, who amongst the most great and wonderful works of thy creation, hast⁵⁴⁰ in thy boundless & Infinite wisdom distributed the earth into four angles or Quarters, East, West, North & South And hast by thy Divine Institution⁵⁴¹ placed a most⁵⁴² mighty Regal Angel over each particular Terrestrial Angle, as King, governor, and principal Watchman there over, to protect

⁵³² R2: This prayer is also found in Rawlinson D1363, ff38-40, although it is not with any other material from these MSS, but rather prior to material on the Demon Princes and Olympic Spirits which will be covered in Volume 2 of this series.

THE Prayer, to be said before Invocation⁷⁵⁴

O beginning, And fountain of all wisdom gird up thy Loins in misery, & Shadow our [ioe] Lord be merciful unto us & forgive us our Trespasses, for That Rise up Saying there is No god, have Risen up [a...nfius] Saying Let us Confound them, our Strength is [....] Neither are our bones full of marrow, Help therefore O Eternal god of mercy, Help therefore O Eternal god of Salvation, Help therefore O Eternal god & Comfort, Who is like Unto the one [emalter?] of Immense, before whom the choir of Heaven sing, Omappa-la-man-hallelujah, visit us O God, with a Comprehending fire brighter than the Stars in your fourth heaven, be merciful unto us O God, & Continue with us, For thou art almighty, to Whom all things of thy breath in Heaven & Earth, Sing glory, Praise & Honour, Saying Come Lord for thy Mercy's Sake,

O Almighty & Everlasting the true & Living god Have mercy pity & Compassion on me & my dear Companions, Who being now on our bended knees, in all Reason of humility, obedience & faith [fill....], To serve Thy Divine Majesty, with all your gifts & graces which thou hast hitherto, Endowed us with, & with all other which of Thy most bountiful & Fatherly mercies thou wilt therefore [aid] us and bestow upon us; Lighten therefore O Lord god almighty our Eyes, & open thou our Ears, guide us Instruct & Confirm in us & unto us, our directions Judgements Understandings memories & Utterances, that we may be true & Perfect Seers Hearers declarers, & witnesses of Such things which Either Immediately of your Divine Majesty, or mediately by your Ministry of thy holy faithful Angels Shall be manifested declared or revealed unto us, Now & at all times & occasions for the admiring of thy prayer honour & glory Amen.⁷⁵⁵

Invocation or Key, moving and calling forth to visible appearance the 6 Angelical Seniors of the East Habioro, Aaoxaif, Hetemorda, Ahaozpi, Hipotga, Autotar, by the great & mighty name BATAIVA.

⁷⁵⁴ R1: This prayer only occurs in this manuscript R1. The edge of the MSS is frayed, resulting in some unintelligible words, indicated by [...].

⁷⁵⁵ R1: The prayer ends here.

O Ye glorious Angels or Angelical Seniors Celestially dignified Habioro, Aaoxaif, Hetemorda, Ahaozpi, Hipotga, Autotar, serving before the great & mighty Angel or Angelical monarch BATAIVA, in the mansion, Region, Angle, or division of the East, unto whom is given of the Highest by office Scientiam, Rerum, Humanarum et Judicium. And to declare, show forth, & reveal the same unto mankind living on Earth, whensoever you shall be called or moved thereunto, by visible appearance & verbal converse. We⁷⁵⁶ servants of the most high God, do Invoke, adjure, move, and call you forth to visible appearance, friendly society & verbal converse with us, all or some one or any of you, O all ye Celestially dignified Angels or benevolent Angelical Seniors of the East Habioro, Aaoxaif, Hetemorda, Ahaozpi, Hipotga, Autotar, In by & through, this mighty &⁷⁵⁷ powerful, great, & Royal name BATAIVA, And the most Imperial efficacy & virtue thereof. Move therefore we say, O all ye Benevolent Angels or Angelical Seniors of the East Habioro, Aaoxaif, Hetemorda, Ahaozpi, Hipotga, Autotar, And in this Royal & mighty name BATAIVA, either some one, or all, or any of you, Descend, appear, and visibly show your selves unto the sight of our Eyes, in this Crystal Glass or otherwise out of the same, visibly here before us, as the pleasure of the Highest & you his messengers of divine grace shall seem best & most fit, or requisite for us, both now & at all times hereafter, speaking plainly and showing forth unto us, by verbal converse, whatsoever is given you by office to declare, discover, and make known for the benefit of his servants the sons of men, move therefore we say, & by the signal virtue & power of all aforesaid, Descend, appear, & some one, or all, or any of you, visibly show your selves here before us, and be friendly unto us. Open the mysteries of your creation, & make us partakers of undefiled knowledge, whereunto we move you, both in power & presence, whose works shall be a Song of Honour, & the praise of your God in your Creation Amen.

Invocation or Key, moving & calling forth to visible appearance, the four Angels or Angelical powers of the Air, Celestially dignified Vrzela, Zelar, Larzod, & Arzel by the great name of God Erzela, governing and set over the first Lesser Angle or Quarter of the great Quadrangle or Table of the East.

⁷⁵⁶ S2: Inserts "the".

⁷⁵⁷ S2: Omits "&".

Practical Angel Magic

O Ye Benevolent Angels or angelical powers of the Air Celestially dignified Vrzela, Zelar, Larzod, & Arzel as governing & set over the first Lesser Angle or division (of the great Quadrangle,) of the Region or Angle of the East, unto whom is given of the Highest by office (& nature) the true knowledge of the Knitting together of natures, and also as well the destruction of nature and of things that may perish, as of conjoining and knitting them together, and to declare show forth, & reveal the same unto mankind living on Earth, whensoever you shall be called or moved thereunto by visible appearance & verbal converse. We the servants of the Highest, do Invoke, adjure, move & call forth to visible appearance, friendly society and verbal converse with us, all or some one, or any of you, O all ye Benevolent Angels or Angelical powers of the Air, Celestially dignified set over the first Quarter part of the East Angle Vrzela, Zelar, Larzod, & Arzel. In by & through, this great & powerful name of your God Erzela, & the signal virtue thereof: move therefore we say O ye Benevolent Angels or Angelical powers of the Air Celestially dignified & placed in orders (as aforesaid) Vrzela, Zelar, Larzod, & Arzel, And in this powerful name of your God Erzela, either some one, or all, or any of you, descend, appear & visibly show your selves, unto the sight of our eyes in this Crystal Glass or otherwise out of the same visibly here before us, as the pleasure of the Highest and you his messengers of divine grace & permission shall seem best, & most fit, or requisite for us, both now and at all times hereafter, speaking audibly unto us, and showing forth by verbal converse whatsoever is given you by office, to declare, discover, & make known for the benefit of his servants the sons of men, Move therefore we say, and by the signal virtue & power of all aforesaid, Descend, appear, & some one, or all of you, visibly show your selves here before us, and be friendly unto us, open the mysteries of your Creation and make us partakers of undefiled knowledge, whereunto we move you both in power & presence whose works shall be a song of Honour, & the praise of your God in your Creation Amen.

Invocation or Key moving & calling forth to visible appearance the four⁷⁵⁸ Angelical powers of Light or dignified spirits of Air Cezodines, Totet, Sias, & Efemende,⁷⁵⁹ by the great name of God Jdoigo, and also to do what they are commanded (according to their offices) by

⁷⁵⁸ S2: "Angels-or".

⁷⁵⁹ S1: This is clearly a copyist's mistake as the name is incorrectly given here as Efende and then Efemende and it is used elsewhere throughout the text. In S2 the letters "me" are added in, further suggesting that Sloane 3821 was copied from Sloane 307.

Practical Angel Magic

the name of God Ardeza, serving & set under the first Lesser Angle, or Quarter part of the greater Quadrangle or Table of the East.

O Ye Angels of Light or dignified Spirits of the Air Cezodines, Totet, Sias, & Efemende, serving in orders under superior Angelical powers your most high God by his great name Jdoigo, And doing all his commandments by his great name Ardeza as being set under, and servient spirits in the first Lesser Angle, or division of the Region, or greater Angle of the East, unto which is given of the Highest by office, the true knowledge of physick in all its parts, & the curing of all diseases whatsoever that are incident to Human Bodies, And to reveal, show forth, & give the same to mankind living on Earth, whensoever you shall be called or moved thereunto by visible appearance & verbal converse. We the servants of the most high God do Invoke, adjure, move, and call forth to visible appearance, friendly society, & verbal converse with us, All, or some one, or any of you, O all ye Angelical powers of Light or dignified Spirits of the Air, set under, & serving in the first Quarter part of the East Angle, Cezodines, Totet, Sias, Efemende, In by and through this powerful & great name of your God Jdoigo, And also do for us, whatsoever we shall request & command you by this great name of your God Arderza, and by the signal virtues thereof⁷⁶⁰ move therefore, We say O all ye Benevolent powers or dignified Spirits of the Air, placed in order (as aforesaid) Cezodines, Totet, Sias, Efemende, Either some one, or all, or any of you, Descend, appear, & visibly show your selves unto the sight of our Eyes, in this Crystal Glass or otherwise out of the same, visibly here before us as the pleasure of the Highest shall seem best, and most fit, or requisite for us, both now, & at all times hereafter speaking plainly And showing forth unto us by verbal converse, whatsoever is given you by office to declare, discover & make known, for the benefit of his servants the sons of men, move therefore we say, and by signal virtue & power of this great name of your God Jdoigo, Descend, appear, & some one, or all, or any of you, visibly show your selves here before us, In manner & form as it shall please God & you his messengers of Celestial grace accordingly (as aforesaid) And is this great name of your God Ardeza, be friendly unto us, and do for us whatsoever we shall command, effectually fulfilling all our desires according to your offices, opening the mysteries of your Creation & make us partakers of undefiled knowledge whereunto we move you both in power & presence, whose works shall be a song of Honour & the praise of your God in your Creation Amen.

⁷⁶⁰ S2: "of them".

by the signal virtue and power of this great name of your God Arzodionar, Descend appear, and some one, or all, or any of you, visibly show your selves here before us, in manner and form as it shall please God and you his messengers of Celestial grace accordingly as aforesaid, And in this great name of your God Narzefem, be friendly unto us, and do for us in whatsoever we shall command you, Effectually fulfilling all our desires according to your offices, opening the mysteries of your Creation, and make us partakers of undefiled Knowledge, whereunto we move you both in power and presence, whose works shall be a Song of Honour, and the praise of your God in your Creation, Amen.

[This is the end of Sloane MS 307. The following text is taken from Sloane MS 3821]

Humble Supplication to Almighty God⁸³¹

Enter not into Judgement with thy Servant O God, neither in thine Anger take vengeance on our Iniquities, nor chastise us in thy heavy displeasure, but spare us O Lord, be merciful unto us, pardon & forgive us all our sins, & confirm us in thy holy Spirit.

The Lord bless us, & keep us.

The Lord make his face shine upon us; & be gracious unto us.

The Lord lift up his Countenance upon us, and give us peace.

Our Father which art in Heaven, hallowed by thy Name, thy Kingdom come, thy Will be done in Earth, as it is in Heaven, give us this day our daily bread, & forgive us our Trespases, as we forgive them that trespass against us, & lead us not into Temptation, but deliver us from Evil; for thine is the Kingdome, the power & the glory, for ever & ever, Amen.

O Lord arise, help us & deliver us, for thy Names sake.

O God we have heard with our Ears, & our fathers have declared unto us, the noble, great & wonderful works, that thou hast done in their days, & in the old time before them.

We are thy people & the Sheep of thy Flock, therefore graciously hear us our humble supplications, O God, & grant our Petitions, & let thy mercy be shewed upon us, as our trust is in thee.

Glory be to the Father, & to the Son, & to the Holy Ghost; as it was in the beginning, is now and ever shall be, world without end, Amen.

O Lord shew thy mercy upon us,
And grant us thy Salvation.
From our enemies defend us O God,
And graciously look upon our Afflictions;
Pitifully behold the Sorrows of our hearts
And mercifully forgive us our Transgressions;
O Lord deal not with us after our sins,
Neither reward us after our Iniquities,

⁸³¹ This prayer and the one following are in the hand of Elias Ashmole, from Sloane MS 3821, folio 188-193. They were obviously intended to be used before skrying sessions.

Practical Angel Magic

O God make clean our hearts within us,
And take not thy holy Spirit from us,
Favourably with mercy hear our Prayers,
And let our Cry come unto thee.

Glory be to the Father, & to the Son, & to the holy Ghost;
As it was in the beginning, is now & ever shall be, world without
end, Amen.

Almighty God, who hatest nothing that thou hast made, & dost
forgive the Sins of all them that be penitent; Create & make in us,
new & contrite hearts, that we by unfeigned Repentance, lamenting
our Sins, & acknowledging our wretchedness, may obtain of thee
God of all mercy, perfect remission & forgiveness; & grant O Lord,
that we which for our evil deeds are rightly punished, by the
Comfort of thy Grace, may mercifully be relieved, through Jesus
Christ our Lord Amen.

O God merciful Father, that despiseth not the sighing of a contrite
heart, nor the desires of those that be sorrowful, mercifully assist &
accept these our prayers, & supplications, which we make before
thee, in all our troubles & adversities, whensoever they oppress us;
& defend us against all assaults of our Enemies whatsoever, that we
surely trusting in thy defence, may not fear the power of any
adversaries; & so dispose our ways O Lord, that among all the
changes & chances of this mortal life, we may ever be defended, by
thy most gracious & ready help, relief, succour & protection; &
grant O merciful God, that those Evils, which the craft & subtlety of
the Devil, or man worketh against us, may be confounded &
brought to nothing; and that we thy servants, being mercifully
defended, by thy mighty power may incessantly give praise &
thanks unto you, to the glory of thy holy Name, Amen.

Almighty God, who hast prepared, for all those that unfeignedly put
their trust in thee, such good things as do pass the understanding
of man; mercifully distil into our hearts, the Oil of Celestial
Inspiration, that we may be endowed with true Wisdom, & have a
right Judgement in all things, & may both prescribe & know what
things we ought to do, & also to be capable presently to effect the
same; & that these things which for our unworthiness we dare not,
& for our blindness we cannot ask, vouchsafe graciously to bestow
upon us, through Jesus Christ our Lord, Amen.

Almighty God, which art always more ready to hear, than we are to
pray, & art wont to guide, more than we can desire or deserve, we

Practical Angel Magic

humbly beseech thee, mercifully to have compassion upon our Infirmities; & for the glory of thy names sake, turn us from us all those Evils that we most righteously have deserved, and grant that in all our troubles, we may put our whole trust & confidence in thy mercy; & that the working of thy Grace, may in all things direct & rule our hearts, & drive away all filthy & unclean pollutions from this place, forgiving us those things whereof our Consciences are afraid, & giving unto us, that which our unworthiness dare not presume to ask, through the mercy[?] of Jesus Christ our Saviour & redeemer, Amen.

Almighty God, who hast promised to hear the petitions of them that ask in thy Son's Name, we humbly beseech thee mercifully to incline thy gracious ear, unto these our unfeigned supplications, which in all obedience we ever penitently make unto thee, & grant that those things which we have faithfully begged of thee, we may by thy fatherly goodness & permission fully obtain, to the setting forth of thy honour & glory, & the relief of our necessities, through Jesus Christ our Lord Amen.

O Lord from whom all holy desires, all good Counsels & all just works do proceed, give unto us thy humble servants, here obediently present in thy holy fear, on the Knees of humility & obedience, that grace which your world cannot give, that we may always enjoy & be comforted in thy merciful benignities, bless, guide keep protect & defend us from all evils, graciously illuminate us with true Wisdom, & fill us with thy spiritual benedictory & heavenly grace, that we may live in thy fear, & die in thy favour, & after this life, to live with thee in thine everlasting Kingdom, unto whom, & with thy Son Jesus Christ, & the Holy Ghost, be all honour glory praise & thanksgiving for ever & ever, Amen.

Enoch Prayer

O Almighty, Immortal, Immense, Incomprehensible, & most high God & Lord of Hosts, Jehovah, the only Creator of Heaven & Earth, & all things contained therein, who in thy wonderful & great work of the Creation, hast miraculously [ap]pointed out many Hierarchies, of sacred Celestial Angels & blessed Intelligences, and placed them in a most admirable order above the fiery Region; & also many other Hierarchies & Orders dignified, Elemental Ministering Spirits, or Angelical powers of Light, under the same &c: and hast appointed them all to serve thee, & obey thy commands, in every & each of their several & respective places, natures, orders & offices; & by thy gracious & divine permission, to move descend & visibly appear, unto the sons of men dwelling on Earth, whensoever they shall Invoke or call them forth, to their conduct, comfort & benefit, O thou omnipotent & perpetual full flowing fountain of eternal life, light, majesty, power, glory, goodness, clemency & paternal bounty, & of all wisdom & true knowledge, both Celestial & Terrestrial, descending by certain Rivers[?] of mercy, immediately by the holy Ghost, unto more choice & peculiar vessels of honour, & by emanations of divine Grace, immediately by the sacred Celestial Angels or blessed Intelligences to the ministering Angels, or spiritual Messengers, and medium of Light, in & by thee subjected but dignified, both Celestial & Elemental, of several & respective degrees, names, natures, orders & offices, by whose Angelical Inspiration & instruction, thou dost fatherly and freely, open the secrets of thy own self unto Man, thereby showing forth, the mystery of true Science & sapience, with its benefits & comforts, to be obtained & received in mundane affairs, & temporal Concerns &c: O most high God & father of heaven, thou knows the foundation of our fragility, our imperfections, & the darkness & weakness of our inward parts, how can we therefore speak unto them, that speak not after the voice of Man; or worthily call on thy name, considering that our imagination is variable & fruitless, & unknown to our selves: shall the Sands seem to imitate the Mountains, or can the small rivers, entertain the wonderful & unknown ways, can the vessels of fear, fragility, or that [which] is of a determinate proportion, pass up themselves, heave up their hands, or gather the Sun into their Bosoms, O Lord it cannot be. Our imaginations are great, we are less than sand; Lord thy good Angels scold us for, our proportions are not alike, our senses agreeth not, yet notwithstanding we are comforted for that we have all one God, all one beginning from thee, that we respect thee as a Creator; therefore will we call upon thy name, & in these

Practical Angel Magic

will we become mighty; thou shalt light us, & we shall become Seers; we will see thy Creatures, & ever will magnify thee amongst them; those that come unto thee have the same gate, and through the same gate, defendeth such as thou sendest: we therefore humbly beseech thee, O Almighty & most merciful God, graciously to permit thy Celestial ministering Angels, & also the Elemental dignified Powers, or Messengers [of] spiritual of Light, to dwell with us & we with them, to rejoice with us & we with them, to minister unto us, that we may magnify thy great & glorious name, & by thy most gracious merciful & divine permission, that as thou art their Light & comfortest them; so they in thee will be our Light & Comfort. Lord they prescribe not Laws unto thee, so it is not meet that we should prescribe Laws unto them. What it pleaseth thee to offer, they receive; so what it pleaseth them to offer unto us, will we also thankfully receive. Behold Lord, if we shall call upon them in thy Name, be it unto us in mercy as unto thy Servants. O Lord, is there any⁸² that measureth the Heavens that is mortal, how therefore can the Heavens enter into man's Imagination, thy Creatures are the glory of thy Countenance, whereby thou glorifiest all things, which glory excelleth, & is far above our understanding. Behold O Lord, how shall we therefore ascend into the Heavens; the Air will not carry us, but resisteth our Folly, we fall down, because we are of the Earth, therefore O thou very light & true comfort, that canst and mayest & dost command the Heavens, hear us, & have mercy upon us, & grant our requests, which we humbly make unto thee, & that thou wouldst be so graciously glorified (by thy divine permission) to send all those Celestial & Elemental dignified Angelical powers of light, that we shall call upon by Orders Names & Offices, to appear visibly unto us in this crystal Stone or Glass Receptacle⁸³ standing here before us, & that in & through the same, they may transmit their true & real presence in appearance unto the sight of our Eyes, & their voices unto our Ears, that we may plainly see them & audibly hear them speak unto us, & verbally to converse & commune with us, & to inform instruct, show forth & teach us all such knowledge & Arcanum in nature, as shall be required by us, & necessary for us, & so be friendly unto us, & do for us as for thy servants, both now at this time present, & at all other times, whensoever, & wheresoever we shall move & call them forth, for instruction, relief, comfort & assistance, in whatsoever shall be necessary for us, &c: Enlighten therefore our Eyes O heavenly God, & open thou our Ears, that we may see thy

⁸² S2: The word "thing" is crossed out in the text here.

⁸³ This classic phrase guarantees that the prayer was meant for use in invocation and skrying.

Practical Angel Magic

spiritual creatures, & have them speak unto us, quicken, illuminate & confirm in us, & unto us, our serious discretions, judgements understandings, memories & utterances, that we may be true & perfect Seers, Hearers & Witnesses of such things, which mediately by the ministry of thy sacred Celestial Angels & blessed Intelligences, & other elemental dignified Spirits or Messengers spiritual of Light, shall be manifested declared & showed forth unto us, both now & at all times whensoever necessity shall require their favourable & familiar society community and assistance, and now O all you sacred Celestial Angles & blessed Intelligences Ministers and true Light of understanding, & O you all Dignified Elemental Ministering Spirits or Angelical Powers of Light, governing this earthly fabric, & the Elements wherein we live, be friendly unto us, & do for us, as for the servants of the highest. And we further humbly beseech thee (O⁶³⁴ God) herewith to guide our tongues Reasons Senses & Judgements, & give us eloquent utterances, gravity of speech, quickness of understanding, prudence in managing, temperance in pursuing, thankfulness in receiving, & grace in using all such Instructions Institutions, matters things or affairs, of what concern soever, that shall be revealed, showed forth or given by Angelical Ministry unto us, that all may be converted O Lord to thy honour & glory, & to our worldly comfort, & benefit.

Make us O Lord humble & obedient, without contradiction, proven [?] without quarrelling, chaste without corruption, patient without murmuring, merry without dissolution, sad without dejection, ripe[?] without unpleasantness, fearful without desperation, true without doubtfulness of heart, doing good things without presumption. Give us O Lord watchful hearts, that no envious or evil cogitations may lead us away from thee, give us noble & upright hearts, that no unworthy affection nor sinister intention may draw us downwards, give us invincible hearts, that no tribulation may overcome us, give us understanding truly to know thee, diligence to seek thee, evidence to find thee, conversation to please thee, perseverance faithfully to expect thee, & assured confidence to embrace thee, & after this life to live with thee, in thy everlasting Kingdom, where there is certain security, serene Eternity, eternal felicity, & most happy tranquillity, O merciful God, we humbly beseech thee to grant these our humble Supplications & petitions, which we unfainedly make unto thee. Behold O Lord be it unto us, as in mercy it pleaseth thee, & thy holy ministering Angels, we require nothing but thee & through thee & to thy honour, & glory. Amen.

⁶³⁴ 52: The word "Lord" is crossed out here.

A note in the back of the Golden Dawn Flying Roll XVI, Book H, in Gerald Yorke's handwriting.

Appendix 2 - Golden Dawn Book H: Clavicula Tabularum Enochi

From the front pages of Gardner's copy of *Book H*⁸³⁶ it is clear that Wynn Westcott had seen and transcribed some of the material in Sloane MS 307 before August 1888, the date given in the document and that this material was subsequently copied from Gardner's copy seven years later. This early Golden Dawn paper from the collection of the late Gerald Yorke contains his note:

The following is copied from a note in the hand of W. Wynn Westcott in the back of an MS copy of Flying Roll⁸³⁷ XVI in possession of G[eo]ffrey M. Watkins, bookseller.⁸³⁸

Appendix 3 – Angel Magic from Alan Bennett's Magical Diary

This reproduction of the Golden Dawn *Book H* is included for its historical value, as there is so little of Alan Bennett's material extant. It is interesting to note that the style has actually been changed to a deliberately *faux* antique style that is not reflected in the original manuscripts, or in F L Gardner's copy of *Book H*.⁴⁴³

Of the Opening and Exemplifying of the Enochian Tablets

Here we have four Tables or Quadrangles which are but one generall Table, yette divided into foure partes, East, West, North and South. In the Center between these four Tablets is another litle Tablet joined conveniencie to them alle, and which serveth to unite ye severall partes of ym together, accordinge as they are to be diversely referred, as shall be shewed hereafter.

Each single Quadrangular Table containeth Twelve Squares athwarte by Thirteene Squares downwards: the two middle lines downwards that be of black letters enclosed between two black ruled lynes, and standing cross wise in ye middle of ye two middle perpendicular or upright Lynes make upp ye Name of ye Mity Angelicall Kynge; and Three Names of Godde: displayed in ye banners Regall which are borne before hym, beying ye armes of ye ensigne, and ye Names of Sixe Angelicall Senyors governing in that Angle or Quarters of ye Compasse wch they are sette over. In every lesser Angle of every Table stande also black letters enclosed within black ruled lynes crosswise in ye forme of ye Crosse, out of wc are collected ye Names of Godde yt calle for the and make constrained those Angells and Spirits, both goode and bade yt are to bee gathered out of that particular Lesser Angle, belonging and serving to that Quarterlie Angle or Table.

⁴⁴³ Alan Bennett copied the original form in one of his Golden Dawn notebooks between 1892 and 1894. This transcript was made from his MS in 1955. Errors have been kept in the script and the 'antique' style has been maintained exactly as the original.

Practical Angel Magic

[illegible]

The name of this Great Angelical and Mighty Angel, or King of ye East BATAIVAH upon whom all the Angels and Spirits of the Four Lesser Angies attend and give obedience, calleth forth the fore-recited Six Seniors, whose offices are to give Scientium Rerum Humanorum et Judicium according to the nature of their parts.

Now for the Sixteen Servient Angels next in order under the Six seniors in the eastern Quadrangle. Their names may be collected and composed out of each lesser Angle attendant on the greater Angle thus: - In the uppermost Lesser Angle on the left of this Quadrangle there is a small Cross of black letters whose perpendicular lyne goeth upwards from the black transverse line who goeth athwart the whole Quadrangle, upward to the top of the said lesser Angle, and containeth six letters from the Top downwards, which are I,d,o,i,g,o, making the name of God Idoigo the which is used to call forth ye subsequent good Angels, who are attendant next in order under those Sixteen Angels next succeeding the Six Seniors according to their graduation.

The Transverse line going athwart that line, making therewith the forme of ye Crosse is of five letters, and they make the Name of Godde Ardza: now those benevolent Angels which are called forth by the Name Idoigo are to be commended as to what they shall do by the Name Ardza.

This example is the form of the black letters as they stand crosswise in the uppermost Lower Angle of the Quadrangle: over this upper black transverse line are the four red letters r, z, l, a, leaving but the black letter of the Name of Godde Idoigo

Practical Angel Magic

r	Z	r	l	a	⁸⁴⁴
a	r	d	z	A	
		o			
		i			
		g			
		o			

and it maketh the name Urzla, wh[ic]h is the substance of the Name of the first of those sixteen Angels spoken of bearing rule under the Six Seniors in the eastern Quadrangle. Then take away the first of these four red letters and make it the last, and you will have the Name Zlar which is to be pronounced Zodelar, for Z extended is to be pronounced zoD and this maketh the Name of the second of the aforesaid sixteen angels. Again make the first letter of the second Name the last of the Third, and the letters will be l a r z which maketh the name of the Third Angel Larzod. And in the same process is obtained the Name of the fourth Angel, Arzodel ~~(? Arzoda T)~~ and these four are the Superior Angels bearing rule under the Six Seniores in this first lesser Angle, serving to the Greater Eastern Quadrangle. And in the same manner that the names of these aforesaid four Angels are gathered from this lesser Angle, as are gathered the remaining Twelve Names from the other three lesser Angles.

Then the Names of the Angels subservient (? T) to these are read across the upright black cross, so that these lesser Angels are Cezodenes Totet Sias Epemande (? T) And the same rules are to be constantly applied.

Now as to the small Table, called the Tablet of Union it sheweth how to join particular letters such as are contained therein to several Names and letters in each of the lesser Angles contained in each of the greater Angles of the Table in general for the collecting and making up of other particular for each proper and select material and intricate purpose as is to be exemplified.

The first line containeth the Letters E X A R P, which serves to bind together the Letters of the Great Table of the east. Observe that the name that stretcheth from the Left to the Right must also stretch from the right to the left observe also that the letters joining those names which may be put before the Names of the four Angels sitting

⁸⁴⁴ Note by copyist. Letters with a stop after them are red letters. ~~Such letters should be enclosed in a square.~~

Practical Angel Magic

over each of every lesser angle, as well from the Right as from the Left, is the Name of God whereby those angels are called and do appear, as for example, the first letter of the first line of this small Tablet is e: The Name of the first Angel sitting over the first lesser Angle of the Eastern Quadrangle is Vrzla. Take away the letter V, being the first letter (added for to pronounce that name) and add instead the E of EXARP and you have Erela erZla which is the Name of Godde wh governeth and calleth forth that Angel Urzodela, and also the other three Angels that are set over the first lesser Angle of the east Quadrangle. The Name of the first Angel sitting over the second lesser Angle is Utepa: then by adding the afore said letter e, there is obtained the Name Eutepa wh is the Name of God governing those four Angels sitting over the second lesser Angle of the east Quadrangle by which they are called forth and appear.

The Name of the first angel sitting over the third lesser Angle is CENBAR and therefore the Name ECENBAR governeth the four great Angles of that lesser Angle.

Similarly the Name of the first Angel sitting over the Fourth lesser angle is XEGEZODD, thence is obtained the Name EXEGEZOD wh is the Name of Godde governing the Angels of the Fourth Lesser Angle. And thus are gathered the four great Names of God governing those sixteen Angels bearing rule under the Six Angelical Seniors in this Eastern Quadrangle, and whereby they are called forth and do appear.

There are now left of the Word Exarp only the letters X a r p. Every name sounding of Three letters beginning out of the first line and out of these four letters are formed (sic T) the name of a devil or Angel of Evil: as well from the right as from the Left, excepting the lines containing the Names of the four great presiding Angels of each lesser Angle.

These latter are not thus to be made use of, as they contain not any participation in evil. For example. The four lines below the transverse bar of the small cross in the first lesser Quadrangle give the four names of certain subservient Angels as hath already been shewn. To any two contiguous of these letters add one of the letters X A R P from the Tablet of Union name Exarp: thus is formed the name of an evil spirit. Thus the first letters that can be so taken are C Z with which the aforesaid letter X maketh the name of the Evil Demon Xcez. And the next two letters are N S which with X maketh the name of the evil demon Xenes. Either of these names read backward maketh the name of another evil demon spirit

Practical Angel Magic

Zodecex, or Senex.⁸⁴⁵

The next letters below C Z are T o and the next letter in the Tablet of Union is A, whence is made up the Name of the demon Ato but if added from right to left it will make another devil called Aot (sic T). And so on.

Having thus shewn the manner in which many of the Names may thus be collected and formed out of the Letters of the Mystic Tablets, we shall now proceed to exemplify in what manner the Angels Archangels and evil Spirits of these tablets may be called forth into visible appearance.

By the Three secret Names of God which are borne upon the Banners of the East

Oro Ibah Aozpi

shalt thou govern the Great King of the easte, whose Name is Bataivah. And this name of the King governeth the Six Seniores: it is by this Name that they are to be called forth to visible appearance.

The Names of god Erzla, Eutepa, Ecenbar, Exegezod govern respectively the fur angels placed over the four lesser angles of the Tablet of the East.

Then there is the middle black upright or perpendicular line in this first lesser Angle, subservient to the Quadrangle of the east, which maketh the name Idoigo, which ruleth the four subservient Angels that are under the black line athwart the lesser angle: by this name Idoigo shall these lesser Angels be called forth, and before its Power do they appear, and by the name Ardza they perform that which they are commanded, the like method is to be observed with the four lesser Angels of the angles of all the Quadrangles.

Now as to the evil Spirits before-mentioned these are governed by the Name of God which governeth the Angels subservientes: from part of whose names are the demons builded up. But to command and govern and invoke these Angels, it is necessary to pronounce the said names backwards. For example: In the first lesser Angle of the ~~Great-Quadrature~~ Eastern Quadrangle the Sixteen Spirits are governed by the name Idoigo backwards, that is by the name

⁸⁴⁵ This is an interesting correction from 'demon' to 'spirit.' Alan Bennett here added the note "these are not right, see next paragraph."

Practical Angel Magic

Oziodi, and by this Name are they to be called forth. And by the Name ~~Azda~~ Ardza backwards that is Azrda, will they do as they are commanded. And similarly with all the groups of Sixteen evil Spirits in all the lesser Angles. With all these beings, the repetition of these Names is sufficient to invoke and govern them.

Now as to the general use and signification of the tables and of the Offices of the Angels and Spirits etc, and other remarkable observations: these Tables contain all human knowledge. They stretch to the knowledge of Solomon for out of that knowledge springeth physic: the findings and use of metals and the Virtues of them: congelations and virtues of stones (they are all of one Materium). The knowledge of all Elemental creatures amongst us, how many kinds there are, and for what use they were created.

Those that live in the Air, Water, Earth by themselves and of the property of Fire which is the secret of all things, but of those more particularly. The knitting together of Natures. ~~(Note in original: "By these Tables may be known the several Treasures of the waters, and the unknown caves of the North etc.")~~ The moving from place to place, as from this country unto that at pleasure lyeth in

4 Angels placed over the	First second third fourth	lesser Angle of the	East West North South	Great Quadrangle
--------------------------------	------------------------------------	---------------------------	--------------------------------	------------------

The knowledge of all mechanical crafts whatever. The secrets of the knowledge of Men. And also the destruction of Nature and of things that may perish as of the enjoying and knitting them together etc. ~~Likewise the offices of the subservient angels in each of the lesser Angles are as followeth.⁸⁴⁶~~

Likewise the offices of the subservient Angels in each of the lesser Angles as followeth. The knowledge of physic in all its branches: the knowledge and finding and use of Metalls, the congelation of

⁸⁴⁶ (Note in original: - "By these Tables may be known the several Treasures of the Waters, and the unknown caves of the Earth etc. As for example the subservient Angels in the Second Lesser Angle of every great Tablet and also the ministering servient Angels under them give the knowledge of the Finding and use of the Metals. The Benevolent Angels of that Order will offer the Passages of Earth unto the Entrance Entrance of the sons of Men (chiefly of serving) so that by the benevolent assistance of the Angels of Light they may plainly see and discover what treasure there are in the Earth. Both as to the natural Mines of the earth, and all manner of Treasure Trove.)

Practical Angel Magic

stones: Transformation, transplantation: the knowledge of all elemental creatures amongst us how many kinds there are of them and their use in creation as they are severally placed in the four elements Air Water Earth and Fire.

lyeth in	first		East
The Four	second	lesser	West Quadrangle.
Angels	third	Angle	North
serving to the	fourth	of the	South

Let the Philosopher prepare a book of very fine paper or Parchment and write very clearly therein the Invocations of the Names of God, and secondly of the Angels by the Names of God. Four days after the book is written the Magician must only call up the Names of God or rather the Lord of Hosts from the four Angles of the Compass. And fourteen days after he shall invoke the Angels by petition and by the tablet Names of God to which they are subservient. The fifteenth day he shall clothe himself in a white linen vestment and so cometh the Apparition of that Angelic Host. And afterwards it irks not to have the retirement, vesture book or special place etc.

In order to drive away an Evil Spirit guarding Treasure etc say "Begone, thou art a hindrance destruction, and of the place of darkness etc - that (treasure etc) is provided for the use of Man: thou art vanquished, thy time is fully expired, therefore I say, depart to thy orders Jeovah Jeovaschah - and lo! I saw you to the End".⁸⁴⁷

⁸⁴⁷ The following note is added in the hand of Aleister Crowley:

Note. In 1st key "Vooan spoken with them that fall". Thus 1st key used in invoking the X or other letter from tablet of Spirit with the demonic names. Probably therefore each name should be invoked letter by letter. Thus for Xns 1. Key 1 for X, 2 for n (airy file but fiery rank) Key 9. 3 for s (Watery file fiery rank) Key 12. Also Key 3 Air of Air for synthesis. This first of all (or after Key 1) while inverted pentagrams used appropriately.

Appendix 4 – Table of the Kings, Seniors and Angels

East

3 Great Names of God	Or, Itah, Aepi
Governing the King	Hatava
Governing the 6 Seniors	Hatava, Aaxat, Hetermorda, Aharzpi, Hipotga, Atofat
Name of God	Ertza
Governs the 4 Angels set over the first lesser Angle	Vrtza, Zlar, Lartzad, Arzel
Divine Names governing, calling forth & constraining	Idigo, Arlza
Names of 4 Angels serving to the first lesser Angle	Cezodenes, Totet, Sias, Etermende
Name of God	Ertapa
Governs the 4 Angels set over the second lesser Angle	Vrtapa, Iepau, Paule, Autep
Divine Names governing, calling forth & constraining	Harza, Paaam
Names of 4 Angels serving to the second lesser Angle	Oyube, Paoc, Vrbeneh, Dm
Name of God	Ertbar
Governs the 4 Angels set over the third lesser Angle	Cenbar, Enbart, Barcen, Vrcembre
Divine Names governing, calling forth & constraining	Araar, Omt
Names of 4 Angels serving to the third lesser Angle	Abemo, Nato, O'encm, Shael
Name of God	Ertgezod
Governs the 4 Angels set over the fourth lesser Angle	Ertgezod, Gezodex, Zodexge Dexgezod
Divine Names governing, calling forth & constraining	Aovararzod, Moar
Names of 4 Angels serving to the fourth lesser Angle	Acca, Enpeat, Otoi, Pemox

Practical Angel Magic

West

3 Great Names of God	Empeh, Arsel, Garil
Governing the King	Raag, os
Governing the 6 Seniors	Letarahpem, Sannou, Laaxarp, Sergaol, Igdisa, Soaxente
Name of God	HeLaad
Governs the 4 Angels set over the first lesser Angle	Laad, Aadet, Adeta, Detan
Divine Names governing, calling forth & constraining	Obegoca, Aabeco
Names of 4 Angels serving to the first lesser Angle	Paax, Toto, Eahded, Saix
Name of God	HeLedan
Governs the 4 Angels set over the second lesser Angle	Ledan, Dimet, Imted, Emtedi
Divine Names governing, calling forth & constraining	Nelapar, Omebeb
Names of 4 Angels serving to the second lesser Angle	Magem, Leoc, Vsyf, Vvov
Name of God	HeMagel
Governs the 4 Angels set over the third lesser Angle	Magel, Agelem, Gaeema, Lemage
Divine Names governing, calling forth & constraining	Malad, Olaad
Names of 4 Angels serving to the third lesser Angle	Paco, Endezen, Eipo, Exarh
Name of God	Henatex
Governs the 4 Angels set over the fourth lesser Angle	Enatex, Larexen, Rexenel, Xenelar
Divine Names governing, calling forth & constraining	Jaaasde, Atapa
Names of 4 Angels serving to the fourth lesser Angle	Expeeth, Vasa, Dapi, Renel

Practical Angel Magic

North

3 Great Names of God	Imor, Dor, He, tegi
Governing the King	Iezexen, a
Governing the 6 Seniors	Laiden, Aznot, Eznepe, Vhe, tegi, E, n, o, sa, Aen, o, ve
Name of God	Eh, e, za
Governs the 4 Angels set over the first lesser Angle	Boza, Ozab, Zabo, Aboz
Divine Names governing, calling forth & constraining	Angepa, Vnenax
Names of 4 Angels serving to the first lesser Angle	Ara, Ornen, Resen, Izodenar
Name of God	Engim
Governs the 4 Angels set over the second lesser Angle	Pira, Harap, Rapen, Aphar
Divine Names governing, calling forth & constraining	Anacen, Sunden
Names of 4 Angels serving to the second lesser Angle	Omgege, Gebal, Relema, Janel
Name of God	Naeon
Governs the 4 Angels set over the third lesser Angle	Aeoa, Oane, Aneo, Naea
Divine Names governing, calling forth & constraining	Cebalpet, Arbizod
Names of 4 Angels serving to the third lesser Angle	Opena, Dopa, Rexao, Axir
Name of God	Niam
Governs the 4 Angels set over the fourth lesser Angle	Iaon, Aoni, Onia, Miao
Divine Names governing, calling forth & constraining	Espemenir, Hpizol
Names of 4 Angels serving to the fourth lesser Angle	Mesael, Jaba, Jezexpe, Estim

Practical Angel Magic

South

3 Great Names of God	Op Teaa Pedace
Governing the King	Edelpenna
Governing the 6 Seniors	Aactpao, Adueoer, Alendood, Aapedoee, Anninaquau, Anodorn
Name of God	Bedapa
Governs the 4 Angels set over the first lesser Angle	Dopa, Opad, Paulo, Adop
Divine Names governing, calling forth & constraining	Noalmar, Ooag
Names of 4 Angels serving to the first lesser Angle	Openen, Apeste, Saw, Vabgi
Name of God	Banaa
Governs the 4 Angels set over the second lesser Angle	Anaa, Naaa, Aaan, Aana
Divine Names governing, calling forth & constraining	Vadali, Obavi
Names of 4 Angels serving to the second lesser Angle	Gemenem, Eeape, Amox, Berape
Name of God	Bepesai
Governs the 4 Angels set over the third lesser Angle	Pesac, Saccpe, Accpes, Cepesa
Divine Names governing, calling forth & constraining	Volexdo, Sioda
Names of 4 Angels serving to the third lesser Angle	Datete, Diom, Oopezod, Vigan
Name of God	B-zaza
Governs the 4 Angels set over the fourth lesser Angle	Ziza, Jzazod, Zazi, Azizod
Divine Names governing, calling forth & constraining	Arzodionar, Narzelem
Names of 4 Angels serving to the fourth lesser Angle	Adre, Sispe, Pali, Acat

Bibliography

When trying to understand the magical work of John Dee, it is essential to look at it from *his* point of view, a point of view rather removed from our own. The problem with all Dee bibliographies is that they are always drawn up from the point of view of the location of the manuscript in the present day library collections in which they reside (such as the Sloane manuscripts in the British Library).

This really tells you nothing about the contents of the manuscript. These manuscript numbers are simply the order in which Sir Hans Sloane's collection of manuscripts (for example) was catalogued, or shelved.

All commentators writing about Dee also refer to his manuscripts by their library shelf number, for example 'Sloane MS 3188'. This is fine for identification, but it is obviously not the way Dee would have looked at them, and certainly not the name Dee would have used to identify them.

To help attempt to reconstruct Dee's mindset we have below identified Dee's main works by their original title, given to them by Dee. By doing this the relationship between the different manuscripts falls into place. Of course the full library shelf mark details are given also to help you refer to them.

In addition we have rendered the manuscript titles into English so that a modern audience who are not Latin orientated will have no difficulty understanding Dee's titles. The Latin will also be provided for the sake of scholarly completeness, and for those who want to look for another or better translation.

We refer to Dee's manuscripts by the name he used for them, for example, "The First Book of Mysteries" (*Liber Mysteriorum Primus*) or "The 48 Angelic Keys" (*48 Claves Angelicae*) or "The Sevenfold Mystery" (*De Heptarchia Mystica*). In that way the listing is not hindered by continually trying to remember what is contained in a manuscript entitled 'Sloane MS 3191' for instance.

Although the Latin titles sound more impressive, we use English titles for ease of apprehension. Although Dee was fluent in Latin, by Dee's period in the late sixteenth century, Latin was often only used to provide impressive sounding titles for works that had in fact been originally composed in English.

Practical Angel Magic

We will not include Dee's books on navigation, geography, astronomy, alchemy, or the politics of the founding of the British Empire, which are well covered elsewhere. Dee's books on angel magic and similar pursuits divide into 3 classes:

1 His day-to-day diaries, much like an appointments diary that we might still use.

2 His spiritual or magical diaries, in which he meticulously recorded the scrying experiments. These contain word by word accounts of the material transmitted to him via his three main scryers Edward Kelly, Bartholomew Hickman, and Barnabas Saul, from angels, spirits, and other 'spiritual creatures' and denizens of the unseen world. Unfortunately, he destroyed some of these, especially those ranging from 1569 to 1581, believing them to be false transmissions.

3 His finished self-contained books of magical practice, derived from what he learned in these scrying experiments.

This is very much the way Dee saw his life divided, and these books and manuscripts he treated accordingly.

His day-to day diaries were openly kept, and later published as of antiquarian interest some time after his death by Haliwell, Crossley, and Bailey. Unfortunately these were in fact partly edited to remove some of the material of most interest. A modern edition of his diaries by Fenton remedies some of these omissions.

His spiritual/magical diaries from 28 May 1583 to May 1587 (with some gaps) were published by Meric Casaubon in 1659, and caused quite a stir, as well as helping to blacken and diminish Dee's reputation. These manuscripts were originally kept in the library of Sir Thomas Cotton, having been apparently at one stage rescued by him from burial in a field in Mortlake.

The balance of the spiritual/magical diaries from 22 December 1581 till 23 May 1583, were not published till almost 400 years after his death. The most complete version of these were edited by Joseph Peterson and published by Adam McLean in 1985, and again by Weiser in 2003.

In fact some of these diaries were also completely destroyed, especially a period referred to by Meric Casaubon as the 'Great

Practical Angel Magic

Chasme' in Dee's records. These spiritual diaries offer you the chance to judge the validity, quality and method of Dee's 'angelic transmission.'

His most secret works however, were the finished volumes of magical technique, in effect his grimoires, although he would not have described them in that way, his books giving instructions for practice. These were carefully written out in a fair hand, much more carefully than either of the other two categories of manuscript. In addition they were secreted in the secret drawer in the bottom of the chest where they laid hidden for more than 50 years after Dee's death. The story of this chest has been told in the Introduction. They were so carefully hidden by Dee, that even though the chest belonged at one time to an expert in chest construction, he never guessed at their existence. These works, about which Dee was so particular, are the distillation of Dee's system, and offer you the chance to understand and practice Dee's magic as he himself did.

Practical Angel Magic

Manuscript Source Material

Dee's manuscripts, some written by him, some copied for him by Kelly, and some later transcribed by Elias Ashmole, are the core of Dee's legacy of research into angel magic.

1 *His Daily Diaries:*

Bodleian Ashmole MS 423, art 122. 1543-1566.

Bodleian Ashmole MS 487-8. 1577-1600 & 1586-1601.

Published by Bailey (1880), Halliwell [1842], Crossley [1851] and Fenton (1998).⁸⁴⁸

2 *His Spiritual or Magical Diaries:*

"The Five Books of Mysteries" - *Mysteriorum Libri Quinque*:

BL Sloane MS 3188. Copied by Ashmole in BL Sloane MS 3677. 1581- 1583. Published by Peterson (2003)

"The Sixth and Holy Book of Mysteries" - *Liber Mysteriorum Sextus et Sanctus*: [with *Libri Mysteriorum VI*]

BL Sloane MS 3190, Cotton Appendix XLVI. 1583-1587 & 1607. Published by Casaubon (1659 and 1974).

"A Missing Action with Spirits" - *Praefatio Latina in Actionem*:

Bodleian Ashmole 1790, art 1. 1586. Published by Josten (1965).

3 *His Grimoires of Magical Practice:*

"The Sevenfold Mystery" - *De Heptarchia Mystica (Collectaneorum Liber Primus)*: BL Sloane MS 3191, art. 3. 1582.

Compendium Heptarchiae Mysticae: BL Add MS 36,674, fol. 167rff. Published by Turner (1983).

"The 48 Angelic Keys" - *48 Claves Angelicae*:

BL Sloane MS 3191⁸⁴⁹, art. 1. Published by Turner (1989) p.30-47.

"The Book of Knowledge, Help and Victory on Earth" *Liber Scientiae, Auxilii & Victoriae Terrestris*:

BL Sloane MS 3191, art. 2. Published by Turner (1989) p.48-58.

⁸⁴⁸ See printed books for full details of the published versions of each manuscript on page 288.

⁸⁴⁹ Copied by Elias Ashmole in BL Sloane MS 3678.

Practical Angel Magic

A Book of Supplications and Invocations (Table of Invocations to the Good Angels) – *Tabula Bonorum Angelorum Invocationes*:
BL Sloane MS 3191, art. 4. Published by Turner (1989) p.59-79.

The Book of Enoch or The Book of Speech from God – *Liber Logaeth*:
BL Sloane MS 3189, Sloane MS 2599. Bodleian Ashmole MS 422,
art 2. An unpublished book of large Enochian tables.

4 *The 17th Century Development of Dee's Angel Magic:*

"The Key to the Tables of Enoch" - *Clavicula Tabularum Enoch*:
BL Sloane MS 307, Sloane MS 3821.
Bodleian Rawlinson D. 1067, Rawlinson D. 1363.
Published in this present book.

Practical Angel Magic of Dr John Dee's Enochian Tables

Stephen Skinner has been interested in magic for as long as he can remember. He wrote, with Francis King, the classic *Techniques of High Magic* in 1976. He followed that with *Oracle of Geomancy* and *Terrestrial Astrology* which has become the standard work on Western divinatory geomancy. Books on *Nostradamus* and *Millennium Prophecies* followed in highly illustrated editions. He also edited editions of Aleister Crowley's *Magical Diaries* and *Astrology*.

In the 1970s Stephen was responsible for stimulating interest in John Dee and Enochian magic by publishing the first reprint of Casaubon's *True and Faithful Relation of What Passed for Many Years between Dr John Dee and some Spirits...* and Dr Donald Laycock's key reference book on the angelic language *The Complete Enochian Dictionary*. Stephen is also the author of eight books on feng shui, including the first one written in English in the 20th century and now lives near Singapore, where he pursues researches and experimentation in classical magical techniques.

David Rankine has been practising magic for the last 25 years and writing about it for the last 17 years. During that time he has been involved with Golden Dawn, Qabalistic and Thelemic groups, and gives regular talks and workshops around Europe. He has also written *Becoming Magick*, *Magick Without Peers*, and *Crystal Healing and Folklore*, as well as being a major contributor to the *Enhancing Your Mind, Body, Spirit* partwork series. David lives in London.
